Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. 1, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

E

[continued]

Egypt, Arab Republic of (Jumhuriyat Misr al-Arabiya). Country in North Africa at the south-eastern end of the Mediterranean Sea, with its capital at Cairo. Although its total area is close to one million km^2, its cultivated and settled area, which includes the Nile valley and delta and the oases, is only about 35,500 km^2. The two main districts are Lower Egypt (around the delta region) and Upper Egypt. Of its total population of about 68 million (2000 estimate), about 85% are Muslim, with Christians of various sects the largest minority. Most of the population is now at least partly of Arab descent, but there are some distinct ethnic minorities, notably the Nubians in southern Egypt and the nomadic Berbers in the desert areas.

The art music of Egypt since contact with Islam has been part of the mainstream of Arab music in the Middle East and is discussed along with other aspects of Middle Eastern art music in ARAB MUSIC, §I. However, Egypt's pre-Islamic musical history and its continuing popular traditions are local to the country itself and are therefore discussed under the present heading. This article also includes some consideration of the development of Arab music in Egypt during the 19th and 20th centuries.

I. Ancient music. II. Classical and popular traditions.

I. Ancient music

The importance of music to the ancient Egyptians can hardly be exaggerated. Iḥy was the god who presided over the art, but many of the greatest Egyptian deities, such as Amun, Ḥatḥor, Isis and Osiris, had musical associations. It was no accident that when describing Cleopatra at the Battle of Actium, Virgil (*Aeneid*, viii.696) has her rattling the 'native sistrum', the instrument most associated in the Roman mind with Egyptian rites. Osiris himself is dubbed 'the fair sistrum player' in a papyrus (probably 4th century BCE), containing the Songs of Isis and Nephthys, and from Dynasty 21 (*c*1070 BCE) great political influence was wielded at Thebes by the divine wives of Amun, royal princesses whose duties included playing the sistrum before the god. Although idiophones provided Egypt's earliest and most characteristic instruments, temple scenes, tomb paintings and museum collections testify abundantly to the variety and richness of Egyptian music-making. (For a discussion of the Egyptian art of cheironomy *see* CHEIRONOMY, §2.)

1. Literary sources. 2. Iconography. 3. Surviving instruments.

1. LITERARY SOURCES. Classical authors preserved many traditions about ancient Egyptian music. According to Plutarch, Thoth (Hermes) invented it (*De Iside et Osiride*, 352.3) and Osiris used it extensively in his civilizing mission throughout the world (356.13), although there were notable restrictions on its employment in his worship (Strabo, *Geography*, xvii.1.44). Plato, supposed to have studied in Egypt, extolled the excellence of Egyptian musical standards (*Laws*, 657), and Pythagoras is said to have investigated musical theory there (Iamblichus, *De vita Pythagorae*, iv). Dio Cassius (*Roman History*, xxxvii.18) stated that Egyptian music was closely connected with astrology. Plutarch commented on the significance of the sistrum's structure (*De Iside et Osiride*, 376.63) and on the fact that the inhabitants of Busiris and Lycopolis made no use of the trumpet because its braying sound recalled the god Seth (Typhon), whose colour resembled that of an ass (362.30). Diodorus Siculus attributed the discovery of the lyre to Thoth (*History*, i.16) and commented on the dangers of effeminacy through indulgence in music (i.81). Herodotus mentioned the aulos (ii.48) and an Egyptian song identical with the *linos* he knew from other parts of the Near East (ii.79; *see* LINUS). He also described the music at annual celebrations at Bubastis (ii.60). For the Ptolemaic period and later, Strabo mentioned the licentious use of the aulos (*Geography*, xvii.1.17); Athenaeus (v.201–2) referred to a choir of 600 with 300 harpers in the reign of Philadelphus (285–246 BCE), the outstanding musicianship of the Alexandrians (iv.176), and the effect one of the citizens made in Rome with his performance on the trigōnon. Important Alexandrian contributions to the Hellenistic heritage were the invention of the hydraulis by Ctesibius (*fl c*270 BCE) and the treatise *Harmonica* by Hero of Alexandria (*fl* 150 CE).

To what extent Egyptian music influenced the classical world is uncertain. The vast time-span of Egyptian history made a great impression on the Greeks and Romans, whose literature often alludes to the debt they thought they owed to many branches of Egyptian learning, including music. This evidence, however, must be treated with caution: it concerns only the latest periods of ancient Egyptian history, when Pharaonic civilization was already in decline; its elements are often fanciful and bizarre; its method is unscientific; and it is based on theories that Egyptian archaeology has so far done little to corroborate.

The literature of Egypt itself also abounds in musical references: in the last of the stories concerning King Cheops and the magicians, for example, a group of goddesses appears disguised as a party of itinerant

musicians; and the tribulations of Wenamun were alleviated only by the presence of a female Egyptian singer at Byblos. There is praise of the art on a stela of Waḥankh Intef II (Dynasty 11, *c*2100 BCE; New York, Metropolitan Museum); and the texts survive of many Egyptian songs, such as those concerning love (about 60), the shepherd's lot (in two Old Kingdom tombs) and workers in the field (e.g. in the tomb of Paḥeri at El-Kab dating from the New Kingdom), and those suitable for performance at a banquet (e.g. the Song of the Harper). Above many musical scenes are the names of the instruments played and the words sung, but there is no hint of notation.

2. ICONOGRAPHY. Throughout Egyptian history the musical iconography has been rich. The significance of prehistoric dancing figures in rock drawing or on pottery (Naqada 2 period, before 3000 BCE) is not easy to interpret, and the suggestion that the sticks held by two men on a contemporary pot from El-Amra are clappers can be only conjectural. However, there can be no doubt about the fox with an end-blown flute on the Ashmolean ceremonial palette from Hierakonpolis (Protodynastic, *c*2900 BCE; fig.1). Whether the neighbouring giraffe and ibex are in fact dancing, and whether or not Mesopotamian influence may be detected, the scene is nevertheless a playful example of the music-making that was so prevalent in Egyptian life and that can be seen depicted in at least a quarter of the 450 private tombs of the Theban necropolis.

From the time of the Old Kingdom (*c*2575–2134 BCE) the main instruments represented in the tombs are the end-blown flute played obliquely, a pipe (single or double) of the clarinet type using a single reed, and the harp; usually there are also singers and often dancers. At this period the players are mostly male, although women are sometimes seen at the harp (e.g. in the tomb of Mereruka at Saqqara, dated to Dynasty 6, *c*2323–2150 BCE, where in front of her husband the Princess Seshseshet accompanies her own song). Larger combinations include the group from the mastaba of Werirenptah (Dynasties 5–6; from Saqqara, now in the British Museum), in which two singers, apparently emphasizing the rhythm with their hands, are joined by a flautist and harpist (all male), while in a lower register four dancers face two singers (all female); and a scene in the tomb of Ibi at Deir el-Gebrawi (Dynasty 6) comprising seven male harpists. The tomb of Kagemni (Dynasties 5–6; Saqqara) may contain the earliest representation of a trumpet player, participating, perhaps, in a ritual scene.

During the Middle Kingdom (*c*2040–1640 BCE) the chamber groups tend to be smaller and to contain more women. Sometimes a singer is accompanied only by handclapping or by a harp. In Ukhḥotep's tomb at Meir (Dynasty 12, *c*1991–1783 BCE) a long end-blown flute and large harp accompany a man who sings holding his left hand against his left ear (an attitude still commonly seen in Egypt). In the tomb of Amenemḥat at Beni Hasan (Dynasty 12) three singers are accompanied by two harps, a sistrum and a rattle (the group is female except for one of the harpists), and the approximately contemporary tomb of Khnumḥotep at the same site contains the first Egyptian scene with a lyre (fig.2).

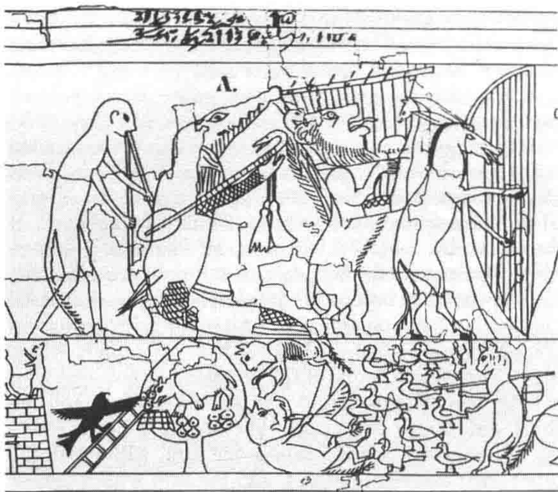
In the New Kingdom (1550–1070 BCE) new instruments of increased variety are used by the Egyptian chamber groups. The lute and lyre appear, together with a pipe of the oboe type (usually double and splayed at the distal

1. Fox with an end-blown flute (bottom left) accompanying a dancing giraffe and ibex: ceremonial palette (Protodynastic, c2900 BCE*) from Hierakonpolis (Ashmolean Museum, Oxford)*

2. Asiatic Bedouin with a lyre: painting from the tomb of Khnumḥotep (Dynasty 12, c1991–1783 BCE*) at Beni Hasan*

3. Female musicians with two lutes and a double-reed pipe: wall painting of a banquet scene (Dynasty 18, c1550–1307 BCE) from Thebes (British Museum, London)

end) with a double reed, in combination with various types of drum and tambourine and, in military scenes, the trumpet. In the tomb of Paser at Thebes, for instance (contemporary with Amenḥotep II, 1427–1401 BCE), are found an angular harp, an arched harp, a lyre and lute; certain rooms of the royal palace at El-Amarna apparently devoted to music are shown in the tomb of Ay (reign of Akhenaten, 1353–1335 BCE), where lutes, harps and lyres of various shapes and sizes seem to have been stored, with female musicians at practice on some of them. Two banquet scenes originally from Thebes (Dynasty 18, *c*1550–1307 BCE; British Museum) distinguish the two main types of Egyptian lute and show the double reeds with which the splayed double oboe-type pipes were sounded; in both instances the instrumentalist's hands appear to be crossed (fig.3). A lively dance scene from a tomb at Saqqara (Dynasty 19, *c*1307–1196 BCE; Egyptian National Museum) shows eight girls with tambourines and two others, each with two pairs of clappers or castanets (fig.4).



Many Egyptian instruments were closely associated with animals, but a papyrus in Turin (Dynasty 19) is clearly satirical in intent. On it an ass plays a large harp of the kind made familiar from 'Bruce's Tomb' (that of Ramesses III, *c*1194–1163 BCE, at Thebes); a double oboe-type pipe is in the hands of a monkey; a crocodile strums the lute, and a lion the lyre (fig.5). Of equal vivacity is a scene on a steatite bowl in the British Museum (Persian period, 525–404 BCE): five performers (three male) approach a kiosk of the goddess Ḥatḥor, one with a large round tambourine, the second with a lyre, the third with a pair of clappers, the fourth with the lower part of her dress wound round one arm, while with the other she slaps her buttocks, and the fifth with a double pipe of the clarinet type (fig.6). Herodotus's description (ii.60) of licence at Bubastis is aptly recalled.

For further illustration, *see* CHEIRONOMY, fig.1; CLAPPERS, fig.2; HARP, fig.2; LUTE, fig.4*b*; and TRUMPET, fig.1.

3. SURVIVING INSTRUMENTS. Many ancient Egyptian musical instruments still exist. Among the earliest idiophones are clappers in the Egyptian National Museum, mostly decorated with animal heads and dating from Dynasty 1 (*c*2920–2770 BCE); bearded human heads also appear in the Protodynastic period. But the commonest type of clapper (mostly of bone or wood) is in the form of a human hand with the head of the goddess Ḥatḥor below, and with the handle shaped as a forearm, an animal's body or a plant-derived architectural feature. Pairs of clappers mounted on a handle are also found, as are castanets, though only from the Late period (the 1st millennium BCE). Bronze cymbals of three main kinds (large, plate type; medium-size, cup type; small, clapper type) and crotala (small cymbals mounted on wooden or metal handles) date mainly from the Greco-Roman or

Coptic (Christian) periods. Bells, used mainly for ritual or apotropaic purposes, also came late to Egypt; they are mostly of bronze, although more precious metals are sometimes used. The body of the bell is often ornamented with a head of the god Bes or a mythological animal. Jingles and rattles (of plaited straw, for instance, or terracotta) are found rarely, but the latter date back to the prehistoric period. In the arched sistrum (usually of metal) and the sistrum in the form of a *naos* or shrine (mostly of faience), the central feature is a Ḥatḥor head. Decoration often includes a cat (sacred to the goddess Bastet) and the uraeus (the snake associated with Edjo, Ḥatḥor and Sekhmet). The ends of the metal rods used for the mounting of the sounding-plates may be shaped to represent the uraeus or a bird's head. There is a model alabaster sistrum inscribed with the titles of King Teti (*c*2323–2291 BCE) in the Metropolitan Museum (fig.7).

The earliest Egyptian membranophone is a palm-wood drum from Beni Hasan, cylindrical in shape (Dynasty 12; Egyptian National Museum); other examples are barrel-shaped and of bronze. The tambourine or frame drum has two main forms: it is either round, or rectangular with concave sides. The former type varies considerably in size and is often associated with the god Bes (e.g. a New Kingdom statuette in the British Museum) or outdoor ceremonies; a pair of richly decorated covering skins, inscribed with the name of the goddess Isis and dating from the Late period, is in the Egyptian National Museum. The rectangular kind was much used at New Kingdom banquets and was always played by women.

Less common aerophones include the terracotta rhytons characteristic of the Greco-Roman period, the two trumpets (one bronze or copper, one silver) from the tomb of Tutankhamun (1333–1323 BCE; Egyptian National Museum) with richly decorated bells, and toy instruments such as an ocarina in terracotta (Egyptian National Museum) moulded into the shape of a monkey. Surviving end-blown flutes date back to the Middle Kingdom; a damaged example from Beni Hasan (Egyptian National Museum) is 91 cm long. Larger instruments have been found, and some less than half the size. The number of

7. Model alabaster sistrum inscribed with the titles of King Teti, c2323–2291 BCE *(Metropolitan Museum, New York)*

playing holes is usually four to six (with three to eight as the extremes). The classification of pipes requiring either a single or double reed is more difficult, if only because the reeds rarely survive. Fewer instruments of the clarinet type (attested from the Old Kingdom) appear in collections than of the oboe type introduced in the New Kingdom. The Egyptian National Museum possesses a wooden box of the New Kingdom that once contained, according to the *Journal d'entrée*, four 'flûtes', two 'roseaux' (reed pipes) without holes, and a pair of straws possibly intended for the fashioning of reeds.

Of the main chordophones, the Egyptian lyre appears to date from the New Kingdom and to have been an Asiatic import. There are two types, symmetrical and asymmetrical, both with a rectangular soundbox. An example of the latter type, with fragments of the original stringing, was found at Deir el-Medina (Dynasty 18; Egyptian National Museum). The history of the Egyptian lute is similar. Of the two distinct sizes, the longer has a soundbox of wood (the earliest soundbox of this type, perhaps Dynasty 17, *c*1640–1550 BCE, is in the Metropolitan Museum), the shorter of tortoiseshell. The slender neck was usually fretted and appears to have acted both as a fingerboard and as a basis for the attachment of the strings (two or three in number and normally played with a plectrum), which were raised above the soundbox by a tailpiece. The lute of the singer Ḥarmose, found near the rock tomb of Senmut, is characteristic of the smaller type (Dynasty 18; Egyptian National Museum).

Harps may be divided into two groups, the arched or bow harp and the angular. The latter seems to have been another New Kingdom Asiatic import and appears less frequently in collections (there is a large example of uncertain date in the Egyptian National Museum); originally a right-angled triangle in shape, the instrument later tended to have three acute angles. The arched harp is attested from Dynasty 4 (*c*2575–2465 BCE) onwards and is most easily classified by the shape of its soundbox. During the Old Kingdom a soundbox resembling a shallow spoon or spade was preferred; during the Middle Kingdom a deeper, oval type like a ladle developed; and a smaller boat-shaped type is characteristic of the New Kingdom. These shapes did not supplant one another. The harps vary considerably in size and in number of strings. Museum collections provide representative examples of each type; a particularly fine model harp, perhaps from the tomb of Ani at Thebes and elaborately decorated, closely resembles the instruments illustrated in votive scenes (Dynasty 18; British Museum; fig.8).

Experiments have been carried out on the spacing of holes in Egyptian aerophones, and attempts have been made to reconstruct the stringing of the chordophones; but only in the case of the Tutankhamun trumpets and certain idiophones can there be any sure knowledge of how an ancient Egyptian instrument sounded. Many theories have been put forward, but so far they are without adequate foundation.

II. Classical and popular traditions

1. General background. 2. Arab music (i) General characteristics (ii) *Maqām* (iii) *Īqā'* (iv) Formal organization (v) Ensembles and performance practice (vi) Learning and musical transmission (vii) 19th-century overview (viii) 20th-century overview (ix) Composers and performers. 3. New music in the 20th century. 4. Western music (i) Historical background (ii) Western-inspired idioms.

1. General background. In 20th-century Egyptian conceptualizations of music, its domains and styles and the terms used to designate them are multifarious, reflecting individual perspectives, social status, political conjuncture, religious convictions, commercial interests, changing musical referents and academic concerns. Egyptian music historians and theorists and some urban musicians use the term *mūsīqā* both as a generic designation for a wide range of musical domains and as a specific term referring to Arab instrumental music, as distinct from *ghinā'*(vocal music). However, not all domains of expressive culture in which words and organized 'music sounds' are central are conceptualized as 'music'.

For most Egyptian Muslims, Qur'anic recitation (a highly elaborate vocal rendition of the holy text) lies outside the sphere of music. The Qur'an is the word of God as it was revealed in Arabic, and the ideal recitation should involve both reciter and listener in the contemplation of God's revelation. Qur'anic recitation occupies a central place in Egyptians' thoughts and daily lives, and the Egyptian style of Qur'anic recitation enjoys prestige, popularity and authority throughout the Muslim world. It is termed *qirā'a* (reading) or *tilāwa* (recitation) and is conceptualized as a unique and separate art, although it shares several of the expressive features of Arab secular music, including melodic modes, improvisation and vocal artistry. This perception is attributed by religious authorities and most Muslims to the divine nature of the Qur'anic text and the religious intent of its performance. It is maintained through the reciter's respect for the primacy of the holy text performed according to the rules of *tajwīd* (a system that governs proper recitation by regulating phonetics, timbre, rhythm, tempo, beginning and pause), and his avoidance of fixed melodies or rhythmic patterns. Many musicians began their careers as Qur'an reciters and regard Qur'anic recitation as a haven for the preservation of the essential characteristics of Arab music.

Musicians and audiences make broad distinctions between Western and Arab musics, rural and urban styles, and religious and secular vocal expressions; but the Western paradigms of art, popular and folk music are not applicable to Egyptian musical production, and there are no local terms analogous to 'art music' or 'popular music'. In Cairo indigenous musics can be conceptualized as a central sphere of overlapping and interrelated musical styles characterized by the fluidity of their musical and conceptual boundaries and by constant changes in musical content, behaviour, discourse and meaning.

Since the 1930s the phrase *al-mūsīqā al-'arabiyya* (Arab music) has been used as a generic term to designate musical idioms that are composed and performed by Arabs and that adhere to the norms of Arab music style as perceived by musicians and audiences. It replaced the term *al-mūsīqā al-sharqiyya* (oriental music). Within Arab music a number of styles, repertories and performance practices are distinguished. From the mid-19th century until World War I the terms *maghna* (singing) and *ṭarab* (a state of heightened emotion that results from an effective performance) were used to refer to a repertory, style and performance practice influenced by Turkish music and patronized by the Egyptian aristocracy and the urban upper class. After World War I, the demise of this repertory and some of the performance practices associated with it catalyzed revival efforts and engendered new conceptions and terms. In the 1930s musicians and journalists referred to the *maghna* repertory as *al-qadīm* ('old'); during the 1930s and 1940s *al-qadīm* was contrasted with *al-jadīd* ('new'), a term generally associated with a repertory and style created by Muḥammad 'Abd al-Wahhāb, who consciously embraced the influence of Western music. Various musical styles intended for the entertainment of large audiences were created in urban areas and disseminated through several media, including the musical theatre (1870s–1920s), sound recordings (*c*1904–*c*1950), musical films (1930s–1950s), radio (1934–*c*1980) and music cassettes (from the 1980s). Largely shaped by these media, many urban styles are syncretic, drawing upon elements of *maghna*, Islamic hymnody, rural styles and Western music.

During the 1960s government-sponsored revival and modernization efforts brought about another new conception and term, *al-turāth* ('heritage'). This incorporated repertory composed and recorded at least 50 years earlier from *al-maghna* or *al-qadīm*, now fixed and performed by large choral and instrumental ensembles using Western notation. With the founding of the Arab Music Ensemble in 1967, the generic term *al-mūsīqā al-'arabiyya* (first used to designate the 1932 Arab Music Conference in Cairo) acquired a specific sense synonymous with *al-turāth*. During the 1980s and 1990s the temporal boundaries and stylistic requirements of the repertory of the ensembles that revived and disseminated *al-turāth* were extended, incorporating a selection of popular vocal compositions (*aghānī*) from the 1950s and 1960s, which drew upon Western music.

Islamic hymnody (*al-inshād al-dīnī*) comprises several genres of intoned or sung religious poetry and is a vital domain of expressive culture that is intended as a form of worship. It features several characteristics common to Qur'anic recitation and Arab music, including the central role of the solo vocalist, melodic creativity, melodic modes (*maqāms*) and the precise enunciation of texts. The *qaṣīda* is the central poetic genre; the religious *muwashshaḥ* (metric song), *ibtihāl* (supplication), *madīḥ* (praise for the Prophet Muhammad) and *qiṣṣa* (story) are also part of the *inshād* repertory. There are also colloquial styles that use popular forms such as the *mawwāl* and *zajal*. Regarded as a form of worship, *inshād* is performed on numerous occasions, including annual religious holidays (notably the birthday of the Prophet), the holy month of Ramadan, saints' festivals, weddings, circumcisions and memorials. The *inshād ṣūfī* also includes choral *inshād* and is a subcategory of *inshād dīnī*, which may incorporate explicitly Sufi themes or occur in Sufi contexts. Since the early 1970s Firqat Al-Inshād Al-Dīnī, a government-sponsored group modelled on the Arab Music Ensemble, has regularly performed modernized versions of *inshād dīnī* repertory in Cairo concert halls.

Non-Muslim minorities have distinct religious musical expressions. The Coptic community is the largest minority group and has preserved a self-contained chant repertory stylistically related to Arab music. Greek, Syrian, Armenian and other Eastern Orthodox communities have also maintained distinct religious chant traditions, and Jewish chant and other genres of religious music also flourished until the departure of the Egyptian Jewish community during the 1950s.

Many musical styles and repertories rooted in or evocative of rural life have been created and disseminated in rural and urban areas. Often termed *baladī* ('country') or *sha'bī* ('folk'), this domain includes vocal genres such as the *mawwāl* and epic songs, as well as song and dance repertories central to rural social life and ritual. The term *sha'bī* has also been used by the media to identify urban popular musics that use elements of rural music styles and textual themes that focus on the daily lives of their target audiences, the Egyptian rural and urban working classes. The 'folklorized' repertories performed by formally structured groups representing particular regions or the entire country are also incorporated in a broad domain which local researchers and cultural politicians have designated *fann sha'bī* ('folk art'). This term is also applied to handicrafts and oral poetry.

Within urban areas, especially in Cairo and Alexandria, Western art music has maintained a presence since the early 19th century. Its impact on Arab music theory and practice has been particularly apparent since the early 20th century. The conceptualization of Western art music by cultural politicians and Western-trained Egyptian musicians as a 'world music' (*mūsīqā 'ālamiyya*) and the association of Western culture with modernity has legitimated a steady investment in the institutionalization of Western music since the 1930s. It has also fostered the development by Egyptian composers of contemporary Egyptian musical idioms modelled on selected 19th- and 20th-century Western styles (*see* §4 below).

Various Western popular music styles have won a following among sections of the Egyptian urban youth and have influenced developments within the more modernizing trends of Arab music.

2. Arab music.

(i) General characteristics. Arab music is prominent in urban areas, especially Cairo. Urban musicians and informed audiences consider it a source of theoretical knowledge and indigenous musical creativity. Vocal genres predominate; monophony enhanced by heterophonic accompaniment, which may include unisons and parallel octaves, is especially popular. The compositional process starts with the selection or commissioning of a text by a composer or solo vocalist who works closely with the poet; the composer is expected to use melodic invention within the appropriate *maqām* (see (ii) below) to bring out the meaning of the text.

In performance the solo vocalist (*muṭrib*; fem. *mutribah*) is supported by an accompanying ensemble. In response to an audience of connoisseurs (*samī'*), the *muṭrib* interprets both text and melody through appropriate elaboration of the *maqām*; use of modulation, ornamentation, melodic improvisation and cadences (*qafla*); and manipulation of the text through the repetition and segmentation of words and phrases. While the basic outline of the melody, text and rhythmic pattern remain unaltered, all other aspects of the musical composition are modified in performance, depending upon the performer's mood and understanding of the text and the verbal and gestural feedback that he receives from the *samī'*. An effective interpretation, which results partly from the close interactive communication between the *muṭrib* and his *samī'*, can induce *ṭarab*, a state of heightened emotion or ecstasy felt by musicians and audience that is central to Arab music performance. Within *ṭarab* culture, performer and audience are bound by a common emotional experience to which both contribute.

In Arab music the *ṭarab* aesthetic thrived in the performances of certain artists until the late 20th century. Western influences, the advent of the media and the modernization of the heritage of Arab music fostered the development of new styles and performance practices, but *ṭarab* remained a central feature of the performance of *inshād dīnī* and certain *baladī* genres.

(ii) 'Maqām'. *Maqām* (pl. *maqāmāt*) is the fundamental principle for pitch organization in Arab music and related musical domains. Literally meaning 'place' or 'position', the term designates a modal entity found throughout a vast geographical area stretching from North Africa to West and Central Asia. In contemporary Egyptian music

theory *maqām* is presented as a scale divided into two tetrachords (*agnās*; sing. *gins*) and duplicated at the octave. A scale of 24 equal tempered quarter-tones forms a collection of pitches from which many *maqāmāt* may be derived. Until the early 20th century each of these pitches was named, but subsequently European note names and European notation with some modifications were gradually adopted.

At the beginning of the 21st century *maqām* is a melody type, the characteristics of which include a hierarchy of pitches, variant intonation and specific melodic shapes that largely determine the melodic contours of improvisation and composition. Tetrachords are often used as a basic framework for melodic elaboration. Typically the lower tetrachord is developed, followed by the upper tetrachord; the melody may modulate to other *maqāmāt* before returning to the lower tetrachord of the original *maqām*. Prominence is usually given to the tonic and its octave (*daragat al-rukūz*), on which a *maqām* often begins and ends; there is at least one other dominant note (*ghammāz*), which is often the fifth degree of the scale. Characteristic melodic motifs are associated with some *maqāmāt*, especially in cadential formulae (*qaflāt*), and are used to highlight important notes. While some *maqām* degrees are fixed, others are variable; variability is designated by the generic term *sika*, which some musicians regard as a distinctive feature of specific *maqāmāt*, by regional or personal styles, tonal focus, melodic direction or aesthetic impulse during performance. A *maqām* is also distinguished by its place in the *maqām* system; when an intervallic structure is transposed, it is perceived as another *maqām* and is given another name.

Modulation plays a central role in *maqām* practice and helps to define the structure of many compositional genres. Composers and performers display their technical mastery and understanding of *maqām* aesthetics through appropriate use of modulation, which proceeds on the basis of an established system of relationships between *maqāmāt*, in which they are grouped according to their common tonics and tetrachords. Most modulations occur between *maqāmāt* with a common tonic or tetrachords; alternatively, a composer may use a common note as a pivot to move from one *maqām* to another.

In recent decades changes in *maqām* theory and practice in Egypt have reflected the influence of Western models. There has been a move towards equal temperament, and the number of *maqāmāt* in use has decreased from the 52 documented by the 1932 conference to less than 20 in the 1980s and 1990s.

(iii) 'Īqā''. Most pre-composed genres are set to rhythmic cycles (*īqā'*, pl. *īqā'āt*) that alternate strong and weak beats and silences. Each beat is represented by one of two types of drum strokes that vary in intensity; *dum* designates the deep sound produced by hitting the centre of the drum and *tek* the clear high-pitched sound produced by hitting the edge of the drum with the fingertips. In live performances percussionists add rhythmic ornamentation to the *īqā'*. Egyptian music theorists generally classify *īqā'āt* as simple (*basīṭa*; those divisible into binary units) or compound (*murakkaba*; those which have ternary or assymetric rhythmic cycles). In pre-composed vocal genres the choice of *īqā'* is influenced by the metrical structure of the song text; in turn, the *īqā'* may influence melodic structure. The number of *īqā'āt* in use has decreased from the 19 documented by the 1932 conference to less than 10 in the 1980s and 1990s.

(iv) Formal organization. Until the 1930s the *maghna* consisted of a *waṣla* (literally 'extension'), a multi-sectional 'compound form' comprising several vocal and instrumental compositions and improvisations in the same *maqām* and concluding with a climactic vocal composition, the *dawr* or *qaṣīda*. The performance of a *waṣla* usually lasted one hour; an evening (*sahra*) might include up to three *waṣlāt*.

The *waṣla* was performed by a solo vocalist accompanied by a small instrumental ensemble (*takht*) and began with a *taqsīm* on the *'ūd* (fretless short-necked lute), a rhythmically free solo instrumental improvisation introducing the *maqām* and displaying the instrumentalist's musicality and technical skills. This was followed by the *samā'ī*, an instrumental composition in cyclical form (ABCBDB etc.) played by the *takht*. A second *taqsīm* on the violin or *nay* (end-blown cane flute) followed, providing a transition to the *muwashshaḥ*, a metric vocal composition in strophic form setting a classical Arabic poem; this was performed by the chorus and accompanied by the *takht*. A *taqsīm* on the *qānūn* (trapezoid plucked zither) was immediately followed by the *layālī*, a rhythmically free vocal improvisation on the words *yā layl yā 'ain* ('oh night, oh eye'), and the *mawwāl*, a love poem in colloquial Arabic often associated with rural culture. The *waṣla* culminated with a vocal composition, usually a *dawr*, a vocal genre developed by 'Abd al-Ḥamūlī (1855–1901) and Muḥammad 'Uthmān (1855–1900), which disappeared by the 1930s. It opened with a metric pre-composed section (*madhhab*), which was usually sung by the chorus and was followed by the *dawr*, a solo section in which the vocalist improvised. Sometimes the *dawr* included a *hank*, in which the solo improvisation was punctuated by responses from the chorus drawn from the pre-composed melody. Occasionally a *waṣla* might end with a *qaṣīda* (pl. *qaṣā'id*), a quintessentially Arab poetic genre; its literary texts in classical Arabic featured hemistiches with a single poetic meter and rhyme and were through-composed. The themes of the *qaṣīda* included religious or historical topics, nature and love. The composition of *qaṣā'id* continued until the late 20th century.

The multi-sectional *waṣla* structure using a single *maqām* was well suited to the development of *ṣaltana* (the performers' total involvement in the atmosphere of the *maqām*) and the subsequent inducement of *ṭarab* in performers and audience. The *waṣla* was shortened in the 1930s as a result of time limitations imposed by the recording industry and radio, and disappeared altogether by the 1940s; but its basic structure and aesthetic continued in prominent artists' live performances of vocal genres such as the *ughniyya*. Characterized by a flexible structure, internal repetition and colloquial language, the *ughniyya* incorporated many elements of the *waṣla*; it included pre-composed instrumental introductions and interludes as well as instrumental and vocal improvisation, and provided solo vocalists with an opportunity to display their virtuosity.

Two other vocal genres developed in the 1920s and 1930s, both partly shaped by the music media. The *ṭaqṭūqa*, a strophic song opening with a refrain, was set to a short melody that was easy to memorize; its texts were in colloquial Arabic and focussed on love, marriage,

feminine beauty and political issues such as women's rights and national freedom. The through-composed *monologue* evolved from the vocal pieces of the music theatre; it used colloquial Arabic, expressing emotions such as love and sadness.

(v) Ensembles and performance practice. A *takht* (pl. *takhut*, ensemble; Persian 'stand' or 'platform') accompanied solo vocalists in *maghna* from the late 19th century until the 1930s. A *takht* consisted of from two to five male instrumentalists and a chorus of four or five vocalists known as *sannīda* ('supporters') or *tabī'* (followers). *Takht* instruments included a *qānūn*, an *'ūd*, a *nay*, a Western violin called *kamān* or *kamanja*, and a *riqq* (frame drum); leadership was usually provided by the *qānūn* player.

The solo vocalist (*muṭrib*) was the central figure in *takht* performances, which featured much solo vocal improvisation, both within composed pieces and as separate items (*layālī*). With the exception of the *riqq* that performed the basic rhythmic cycle (*īqā'*), *takht* instrumentalists provided a heterophonic accompaniment, an ornamented version of the melody that was termed *tarjama* (literally 'translation'). In addition the *takht* performed instrumental introductions and interludes within vocal compositions, instrumental compositions such as the *samā'ī* and the *bashraf*, and instrumental improvisation (*taqsīm*). The *sannīda* (chorus) sang refrains and other fixed sections in vocal compositions. Many *qānūn* players formed ensembles named after them, which could be hired to accompany solo vocalists, and some famous singers had their own *takht*s. Typical settings for performances by *muṭrib* and *takht* included weddings, festive occasions and other social gatherings in the homes of the wealthy. Live performances were characterized by the *ṭarab* aesthetic.

A female ensemble (*takht al-'awālim*) existed concurrently with the *takht*; in the the 19th century the *takht al-'awālim* performed exclusively for women and differed from its male counterpart in both style and instrumentation.

The size and composition of *takht* ensembles changed during the first quarter of the 20th century, influenced by the use in musical theatre of larger ensembles featuring western instruments. The small *takht* with its relatively limited timbral range was considered inadequate to illustrate musically the events and emotions represented on stage. Music media also supported the development of larger ensembles; during the 1930s the Egyptian State Radio Broadcast Station sponsored large ensembles as part of its policy of promoting instrumental music. Large ensembles were also used in musical films.

By the mid-1930s a new kind of ensemble named *firqa* (pl. *firaq*) had been established. The solo vocalist continued to play a central role; larger numbers of *takht* instruments (except the *riqq*) were used, and new instruments were added. In the 1930s a *firqa* typically included three or four violins, and this number increased to about 15 by the 1960s; the *qānūn*, the *'ūd* and the *nay* were doubled, and new instruments were introduced, including the *ṭabl* (drum), the cello and the double bass. Occasionally the accordion, the clarinet, the flute, the saxophone, the electric guitar and various percussion instruments might be used. A male, female or mixed chorus that might exceed 15 singers was also added to the *firqa*. In some *firqa* the *qānūn* player continued to lead, while others had a Western-style conductor.

Despite its large size the *firqa* maintained the norms of performance practice of the *takht*. The soloist played a central role; instrumentalists generally doubled the solo vocalist and a small core of them performed *tarjama*, especially during long improvised passages (*istirsāl*). *Ṭarab* remained an essential feature of performance practice.

In 1967 the Egyptian Ministry of Culture founded Firqat Al-Mūsīqā Al-'Arabiyya (Arab Music Ensemble; AME), which was dedicated to the revival and performance of *turāth*, the heritage of Arab music. The concept of *turāth* was central to the changes engendered by the AME; rather than a fixed corpus of practices, it is an ongoing creative reinterpretation of the past, in which former cultural products and practices are reconfigured and new ones are added, resulting in an essentially new form of cultural production.

The AME introduced radical changes in performance practice, establishing new aesthetic values for Arab music. Its goals and the model that it created for the performance of Arab music represented the implementation of a national cultural policy that emphasized the revival and preservation of the nation's cultural heritage and the modernization of cultural life through the emulation of Western models. 'Abd al-Ḥalīm Nuwayra (1916–85), a composer trained in Arab and Western music, conducted the AME from 1967 until 1985 and played a decisive role in constructing a model for its *turāth* performances. A chorus of up to 12 men and 12 women replaced the solo vocalist, and improvisation was eliminated. (During the 1990s the solo vocalist was reinstated in certain performances, with limited or no opportunities for improvisation). The instrumental section maintained the structure of the *firqa*, comprising about 12 violins, two cellos, a double bass, a *qānūn*, an *'ūd*, a *nay*, a *riqq* and a *ṭabla*, and the conductor was established as its leader. Using Western notation, *turāth* was transcribed from performances by older musicians and occasionally from early recordings; the instrumentalists and the conductor used the resulting 'scores', while vocalists learnt the repertory directly from older musicians or conductors and performed from memory. Instrumentalists played the melody in unison, doubling the vocalist; only the *riqq* and other percussion instruments were allowed to add ornamentation to the basic *īqā'*. The concert hall became established as the performance setting, and the norms of Western orchestral performances were observed, including fixed and printed programmes, silent listening and formalized applause. Like the *waṣla*, programmes began with an instrumental piece and ended with a large-scale vocal composition such as a *dawr* or *qaṣīda*; in between, a variety of shorter vocal compositions such as the *muwashshaḥ* and *ṭaqṭūqa* were included.

This model for the performance of Arab music had notable success in Egypt and throughout the Arab world, in which it was widely emulated (fig.9). For its supporters and audiences the AME symbolized modernity rooted in tradition, one of the pillars of Egyptian national ideology since the 1952 revolution. The AME and similar ensembles also contributed to the legitimation of cultural institutions and state authority and created a new arena for the performance of Arab music of high social status.

9. Al-Firqa Al-Qawmiyya l' al-mūsīqā Al-'Arabiyya, one of the modern music ensembles for Arab music

(vi) Learning and musical transmission. Until the beginning of the 20th century, Arab music was learned informally through listening, emulation and participation. For many musicians, participation in Qur'anic recitation and *inshād* provided an opportunity to master *maqām* and develop skill in melodic improvisation. A few prominent musicians provided private instruction for young apprentices. The importance of attentive listening was emphasized; oral transmission prevailed both in the training of apprentices and the introduction of new compositions to more accomplished musicians. Many musicians favoured the *'ūd* as a pedagogical instrument and the ideal tool for a composer.

During the early decades of the 20th century the teaching of Arab music was institutionalized. This process also involved the integration of Western music as part of the training of Arab musicians and a gradual shift towards the use of a slightly adapted form of Western notation. By the 1960s institutional training and the mastery of Western notation became necessary conditions for the acceptance of young Arab musicians in the professional arena.

The prominent musicians Manṣūr 'Awād and Sāmī al-Shawā (1889–1965) founded the first school for the teaching of Arab and European music in 1906. In 1914 a group of aristocrats and musicians, including the *qānūn* virtuoso Muṣṭafā Riḍā (1890–*c*1950), founded the Oriental Music Club (Nādī Al-Mūsīqā Al-Sharqī), providing training for young musicians and a forum for older musicians who wished to preserve the *qadīm* ('old' tradition). In 1929 the same group obtained the patronage of King Fu'ād in order to found the Arab Music Institute (AMI; Ma'had Al- Mūsīqā Al-'Arabiyya). Since then the AMI, the Higher Institute for Music Teachers (founded in 1935, presently the Faculty of Music Education of Helwan University) and the short-lived Higher Institute of Musical Theatre (1944–50) offered training in Arab and Western music, producing several generations of musicians conversant in both Arab and Western styles. Western music has also been taught at the Cairo National Conservatory (*see* §4(i) below).

(vii) 19th-century overview. Musical life in 19th-century urban Egypt was compartmentalized along social, ethnic and gender lines. Ottoman influence prevailed; Western music was introduced; a tradition of court music was created; and a local tradition of musical theatre developed, largely catalyzed by Syrian artists. As was the case in Ottoman Turkey, musicians belonged to guilds (*ṭawā'if*), each of which was led by a *shaykh* who licensed musicians to practise their profession and protected them from the competition of amateurs. The most important guilds were the *alatiyya* (male professional instrumentalists forming *takht* ensembles) and the *'awālīm* (female entertainers whose ensembles comprised a solo vocalist, a dancer, an *'ūd* player and percussion instrumentalists). The *alatiyya* entertained men, while the *'awālīm* performed for women or men from behind a screen in the homes of the wealthy at weddings and other social occasions. Other guilds included the *sahbagiyya* (*muwashshaḥ* singers), the *darāwīsh* (Sufi singers) and the *qaṣṣāṣīn* (epic poets).

Different ethnic groups used different musical instruments. The *ṭunbūr turkī kabīr* (large Turkish long-necked lute), for instance, was played by Turks, Jews, Greeks and sometimes Armenians, while the *sanṭūr* (hammered dulcimer) was played by Jews and Christians.

Ottoman musical influences came to Egypt through various sources, including the Turkish military bands known as *mehter*, the Mevlevi mystical order of Dervishes, which valued music and dance highly, and the visits of several prominent Turkish musicians to Egypt and Egyptian musicians to Turkey.

During the second half of the 19th century a court music tradition developed under the patronage of the Khedive Ismā'īl (ruled 1863–79), who hired the composer and singer 'Abd al-Ḥamūlī (*b* 1855) as his court musician and sent him to Istanbul to study Turkish music. During the last quarter of the 19th century al-Ḥamūlī and Muḥammad 'Uthmān created a musical style that synthesized Egyptian, Turkish and Syrian elements; they explored the full potential of the *dawr* and helped to popularize it. During the same period several Sufi *munshidīn* became *takht* singers, notably al-Shaykh Yūsuf

al-Manyalāwi (1847–1911), and this trend continued throughout the first quarter of the 20th century.

In the 1870s a number of Syrian artists, including Salim Khalīl al-Naqqāsh, Adīb Isḥāq, Yūsuf Al-Khayyāṭ and Aḥmad Abū Khalīl al-Qabbānī introduced Western-inspired theatre to Egypt. Music was used to adapt European plays to Egyptian taste; during the intervals famous Egyptian singers performed songs, the themes of which were often unrelated to the play's subject. Salāma Ḥijāzī (1852–1917), a *munshid* and *mua'dhdhin* from Alexandria, transferred the *ṭarab* tradition to the stage and paved the way for the development, during the first three decades of the 20th century, of an Egyptian musical theatre tradition to which several composers contributed, notably SAYYID DARWĪSH, Kāmil al-Khulā'ī (1880–1938), Da'rūd Ḥusnī (1871–1937) and Zakariyyā Aḥmad (1896–1961).

The repertory composed for the musical theatre from the 1870s until the 1930s introduced several innovations in musical style. Singers were accompanied by large instrumental ensembles, including Western instruments played by European musicians. Strophic form was ubiquitous; melodies were simple, expressing the text clearly, and were sometimes harmonized. With the development of the musical theatre, commercial musical entertainment was established.

(viii) 20th century overview. Two concerns catalyzed developments in Arab music throughout the 20th century, namely the preservation of heritage and the creation of a modern Egyptian Arab musical identity. These concerns are evident in the creative efforts of composers and performers, in cultural policies and action, in performance practice and in written and oral discourses about music. At the same time the commercial music media played a major role in the production and transmission of music, catalyzing change and providing new sources of patronage for musicians.

A record industry was established in Egypt in 1904 by European and Middle Eastern companies and thrived until the 1930s, disseminating aspects of Arab music performance practice and stimulating change. A full *waṣla* could not be recorded on 78 r.p.m. records; individual compositions were limited to three minutes, and improvisation was reduced to occasional ornamentation. Following World War I, a repertory adapted to the limitations of 78 r.p.m. discs developed; the *ṭaqṭūqa*, a simple strophic song in colloquial Arabic, was central to this repertory.

Song films starring celebrated singers were highly popular from the 1930s until the 1950s; these films were built around strophic or through-composed songs performed without improvisation and usually accompanied by large orchestras. During the 1930s and 1940s Umm Kulthum (1904–75) and Muḥammad 'Abd al-Wahhāb starred in six song films each.

Amateur radio was introduced in the 1920s. The official Egyptian State Broadcast Station was inaugurated in 1934 and was an important influence on Egyptian musical life until the 1980s, when it was superseded by audio cassettes. During the 1930s and 1940s the policy of the official radio station concerned both the preservation of *qadīm* and the encouragement of certain innovations; the radio station formed large instrumental ensembles that included Arab and Western instruments, commissioned modernized instrumental compositions for these ensembles and promoted Western music by regularly broadcasting performances given by the Radio Symphony Orchestra. The RSO served as the nucleus of the Cairo Symphony Orchestra, which was founded in 1959. From the 1950s until the 1980s radio was the most far-reaching music medium and the major producer of Egyptian popular music, shaping its development by specifying the appropriate length, music style and textual content for songs to be broadcast. Throughout this period, acceptance as a radio artist was a necessary condition for composers and performers aspiring to widespread recognition.

During the 1980s the hegemony of the state-controlled radio was challenged by the privately owned commercial cassette industry, which covered most rural and urban musical domains and fostered the development of new types of urban popular music characterized by a rapid turnover of stars, new styles and repertory.

(ix) Composers and performers. The composer Sayyid Darwīsh traced a new course for Arab music in Egypt. In his 26 operettas he created a new musical style rooted in Egyptian tradition and free from Turkish influence; many of the songs in his operettas addressed contemporary social and political issues. His music reached a broad urban audience and expressed the concerns of common Egyptians; one of his patriotic tunes, *Bilādī bilādī* ('My Country, My Country'), has been used as the Egyptian National Anthem since the 1970s. Following his example, the composer and singer MUḤAMMAD 'ABD AL-WAHHĀB was dedicated to the modernization of Arab music through the creation of a synthesis of Arab and Western elements. Other composers who made significant contributions to the development of Arab music in the 20th century included Muḥammad al-Qasabjī (1892–1955), who introduced innovations in melodic shape; Zakariyyā Aḥmad, who developed a distinct style rooted in Egyptian tradition; and Riyāḍ al-Sunbatī (1906–81), who modernized the traditional *qaṣīda* while preserving its essential characteristics.

The solo vocalist UMM KULTHUM was the most prominent performer of modern Arab music and the best known Arab musician throughout the Arab world and in the West. Throughout her 50-year career her performances epitomized the essential characteristics of traditional Arab music.

3. NEW MUSIC IN THE 20TH CENTURY. Egyptian 19th- and 20th-century music is often syncretic and defies simple categorization as 'classical' or 'folk', 'religious' or 'secular', 'art' or 'popular'. Historic genres that are highly valued as 'art', such as the sung *qaṣīda*, often have distinctly religious themes; genres such as the *mawwāl*, associated by the end of the 20th century with the performances of the rural and urban lower classes, have roots in the court music of previous centuries. Mediated 'popular' music such as the songs of UMM KULTHUM and MUḤAMMAD 'ABD AL-WAHHĀB, appeared in performances of *inshād dīnī* in the late 20th century.

The musical theatre productions that began in the 1880s were early examples of music of a syncretic nature. Devised from European models, these productions combined colloquial and literary Arabic texts with melodies based variously on the *maqām* (see §2(ii) above) or European diatonic scales, usually sung in Egyptian style and accompanied by a European-style orchestra that often included European musicians. In the early 20th century the singer and impresario Salāma Ḥijāzī became

a much-loved star of musical theatre; his productions were imitated by many others – until the late 1920s Cairo supported dozens of theatrical troupes, many of which staged musicals – and Ḥijāzī marketed his songs on the commercial recordings initially produced in Cairo in the first decade of the 20th century.

Thus, while shaped by the burgeoning mass media in the 20th century, new music in Egypt remained rooted in local traditions. Some characteristics emanated from the historical heritage (*turāth*) of Arab music. The art of singing poetry, often with accompaniment by a small ensemble (*takht*), was carried into new music in the performances of Ḥijāzī and, later, Laylā Murād, Umm Kulthūm, Muḥammad 'Abd al-Wahhāb, 'Abd al-Ḥalīm Ḥāfiẓ (1929–77) and others. The singer was expected to render a clever or elegant poem clearly, using melody to enhance the meaning and emotion of the text; the performance might be improvised or based partially or fully on a pre-composed song. Genres associated with this type of performance included the *qaṣīda*, the *dawr* and the *monologue* (see §2(iv) above), all of which were used in musical theatrical performances, commercial recordings, musical films and radio and television programmes. Most of these genres relied upon an Egyptian version of the historic corpus of melodic modes (*maqāmāt*); they drew upon the rhythmic cycles (*īqā'āt*) to a lesser degree during the 20th century, and many of the historic *īqā'āt* fell out of use.

The *takht* (accompanying ensemble) comprised two to five musicians who played the *qānūn*, the *'ūd*, the violin (formerly the *rabāb*), the *riqq* and sometimes the *nay*. The *takht* was superseded by the *firqa*, which included Western and Egyptian instruments. By the mid-1930s an accompanying ensemble typically comprised 12 to 15 instrumentalists including several violinists, a cellist and a string bass player; ensembles continued to expand until about the 1980s, incorporating new electronic instruments (see also §2(v) above).

The *waṣla* was performed in concert halls for a short period during the first quarter of the 20th century, and its components were recorded separately on six-minute commercial recordings. The singers Yūsuf al-Manyalāwī (1847–1911) and Salāma Ḥijāzī and instrumentalists such as the *qānūn* player Muḥammad al-'Aqqād (1851–1931) and the violinist Sāmī al-Shawā (1889–1965) were among the first major recording artists. Women including the neo-classical singer Wapda al-Manyalāwiyya and the theatre star Munīra al-Mahdiyya (*d* 1965) also made commercial recordings. Audiences expanded, and many of the new listeners were women. Singers who could adjust their extemporized performances to the six-minute commercial recording and whose recordings sold well enough to be attractive to the recording companies became stars.

As mediated performances gained popularity, informal musical performances at coffee houses in working-class neighbourhoods and in rural villages became less frequent. The song genres of informal music-making typically featured clever colloquial lyrics on which melodies could be improvised; common among these genres was the *mawwāl*. Memorable stories such as the *Sīrat Banī Hilāl*, a historic tale of the tribe that conquered North Africa and its hero Abū Zayd, were recounted in people's homes and in coffee houses for many decades. Epic singers who accompanied themselves on the *rabāb* or the frame drum were well known in many parts of Egypt until shortly after the beginning of the 20th century; they were gradually replaced by record players, radios and, later, televisions.

Instrumental improvisations on the *nay* formed part of daily life; those on double-reed instruments such as the *mizmār* (usually accompanied by a double-headed drum, the *ṭabla*) marked celebratory occasions. The *mizmār* and *ṭabla* were also used to accompany men's stick-dancing and the dances of the famous *ghawāzī* (women dancers from Cairo exiled to Upper Egypt by the ruler Muḥammad 'Alī). Recordings of this music are available, but performances are rarely featured on television or radio.

One of the prominent successors to Salāma Ḥijāzī in the domain of musical theatre at the beginning of the 20th century was SAYYID DARWĪSH, who set standards for 'modern' Egyptian music. Working with historic forms such as the *muwashshaḥ* and the *dawr* and with the new European-derived genre of musical play, Darwīsh drew colloquial Egyptian lyrics, characters and music into the domain of public and mediated performance and became widely viewed as 'the father of modern Egyptian music'. His songs typically portrayed the lives of working-class Egyptians, often using local dialects, or replicated the genres of saints' days and holidays; the popularity of his lyrics and melodies spread rapidly, and his songs remain an important feature of Arab musical life at the beginning of the 21st century as models of locally inspired composition.

Many composers claimed Darwīsh's heritage as their own, notably Muḥammad 'Abd al-Wahhāb, who was known for his highly Europeanized approach to composition. Abū-Bakr Khayrāt used Darwīsh's melodies in orchestral compositions. Darwīsh's stylistic heirs included Zakariyyā Aḥmad (1896–1961) and Sayyid Makkāwī (*d* 1997), who continued to use the musical and textual materials of working-class life in new compositions. The result was not stylized folk music but new compositions rooted in the familiar language and musical practices of rural Egypt and 'traditional' life. From the 1970s, colloquial singers such as Aḥmad 'Adawiyya contributed to this strong current of musical activity; 'Adawiyya in particular carried the lively music historically associated with the wedding musicians of Muḥammad 'Alī Street in Cairo into recordings and clubs. Although the authorities considered his music too 'unsophisticated' to be broadcast on national radio, 'Adawiyya became enormously popular through the distribution of cassettes and video recordings, club performances and tours throughout the Arab world; his success illustrated the potential of cheap production media to circumvent official systems of musical patronage such as government institutions.

The mass media and the performers who worked with them kept certain historic forms of Arab music in the foreground of daily life and introduced new ones to Egyptian culture. Umm Kulthum and Muḥammad 'Abd al-Wahhāb pioneered musical performance on the radio with their performances of new compositions in *qaṣīda*, *dawr*, *ṭaqṭūqa* and *ughniyya* forms (see §2(iv) above) and established a model of performance style that influenced many musicians throughout the remaining decades of the 20th century. Umm Kulthum's large ensembles, long love songs, formal clothing and concert venues influenced many other female singers, including Su'ād Muḥammad, Warda and Fayza Aḥmad, who performed successfully in

the shadow of Umm Kulthum for most of their careers, as well as younger singers such as Nādia Muṣṭafā. Warda sang long colloquial love songs in French and Arabic and was known for her gracious and forthcoming persona on stage, while Fayza's lighter and higher voice offered a counterpoint to Umm Kulthum's often ponderous style. Like Umm Kulthum, both women worked with some of the most important composers and lyricists of their day.

Two Druze immigrants to Cairo enjoyed spectacular film careers, namely the *'ūd* virtuoso FARĪD AL-AṬRASH (1905–74) and his sister ASMAHĀN, who was noted for the beauty of her singing in both European and Arab styles.

An innovator in film song composition, Muḥammad 'Abd al-Wahhāb composed and performed dozens of short songs for musical films; his songs were also broadcast on the radio. Although he gave fewer performances after the 1950s, he remained a prolific composer of songs for films and recordings for other performers and was instrumental in the development of the careers of stars such as 'Abd al-Ḥalīm Ḥāfiẓ and Laylā Murād. Ḥāfiẓ set standards for 'crooning' in the 1950s and became well loved. His popularity continued after his death in 1977; the youth of the late 20th century listened to his famous performances of songs such as *Safīnī marra* ('It once was clear to me'), and many young men imitated his respectable but casual European image and his heartfelt crooning of love songs. Muḥammad Tharwat, Hānī Shākir and 'Amr Diyāb were among those who developed new versions of his style.

Throughout the 20th century a few forms of folk music were performed in mediated and international venues. Mitqāl al-Qinnāwī, a singer and *rabāb* player from Upper Egypt, recorded and toured internationally after being 'discovered' by Alain Weber. Khadra Muḥammad Khidr, a Cairene singer of *mawwāl* and other folk music associated with weddings and saints' days, made numerous cassette recordings and appeared on television. Following these models, a number of performers of *al-mūsīqā al-sha'biyya* (folk music) appeared on television and in stadium concerts during the 1990s. Several folk-singers appeared in the state folk ensembles established by President Jamāl 'Abd al-Nāṣir in the 1950s and 1960s, for which practising musicians were recruited from various parts of the country.

A broad genre loosely termed *al-mūsīqā al-shabābiyya* ('young people's music') developed during the 1980s and has remained popular; it features casually dressed singers and small ensembles often consisting of electronic keyboards and guitars and local hand drums, and the songs performed express contemporary themes using colloquial lyrics. Singers including 'Amr Diyāb, Aida al-'Ayyūbī and Hanān perform new colloquial songs in flexible, sometimes improvisatory settings with what is effectively an electronic *takht*; these singers often appear in stadium concerts, and their recordings and live performances are marketed internationally to a growing Arab diaspora.

Elements of regional musics have been used in popular music, creating, for instance, 'Aswani pop' (new popular music local to the city of Aswan) and 'Nubian pop', which uses elements of the music of the Nubian desert. Muḥammad Munīr drew Nubian pentatonicism and rhythmic patterns into the popular music of Cairo during the 1980s. Musicians such as 'Alī Ḥamīda adopted the rhythmic patterns associated with the Bedouin of the Western Desert. At the beginning of the 21st century, local styles continue to colour new music produced in Cairo as Cairene listeners increasingly show interest in music produced in the Gulf States and Libya as well as the different regions of Egypt; listeners recognize musics of the Suez Canal region, Upper Egypt, parts of the Egyptian delta, Alexandria and the Western Desert on the basis of dialects, song texts, melodic formulations, instruments and performance styles.

Throughout the 20th century religious music was 'popular'. Noted performers included the composer and singer of religious *qaṣā'id* Shaykh Abū al-'Ilā Muḥammad (1878–1927) and the *munshidīn* (religious singers) Shaykh Ṭāhā al-Fashnī (1900–71) and Shaykh Sayyid al-Naqshabandī (1921–76), whose supplications broadcast on the radio remain staples of the holy month of Ramadan. During the 1990s this aspect of religious life was dominated by Shaykh Yasīn al-Ṭuhāmī, who gained international fame.

New music at the beginning of the 21st century is eclectic. During the 1990s ensembles of young musicians played newly composed colloquial songs which drew extensively on the verbal and musical conventions of local repertories. Performers of *al-mūsīqā al-shabābiyya* drew elements from international pop, rock, jazz and rap, *takht* performances, local styles and the performances of older artists such as Muḥammad 'Abd al-Wahhāb. Analysis of the new styles is a complicated matter; one must learn to hear the variety of components included in what may superficially sound like generic international pop. The styles bring together characteristics from Egyptian historical traditions and the musics of the world beyond. The mass media have played a transformative role, introducing new venues for performances and casting light on performers such as women and working-class musicians whose audiences were previously circumscribed. Egyptian musicians and listeners have adapted the mass media to local purposes.

4. WESTERN MUSIC.

(i) Historical background. Western music was first introduced to Egypt through military bands. During the 1820s and 30s the Albanian ruler Muḥammad 'Alī (ruled 1805–48) founded five schools of Western military music as part of his vast programme for the modernization of Egypt. These schools were staffed by Italian instructors and attended by young, working-class Egyptians who learnt to play band instruments and studied the rudiments of Western notation and music theory. Graduates formed military bands that were attached to Muḥammad 'Alī's army and performed Western military music and Arab music adapted for this kind of ensemble.

Military music schools and bands continued their activities throughout the 20th century and had a considerable impact on the performance of Western music in Cairo and Alexandria, supplying orchestras with wind players and music institutes with qualified teachers of wind instruments.

The inauguration of the Cairo Opera House by the Khedive Ismā'īl in 1869 was part of the celebrations for the opening of the Suez Canal and contributed to the dissemination of Western art music in Cairo. From the time of its inauguration until its destruction by fire in 1971, the Cairo Opera House presented annual seasons of Italian opera, classical ballet and symphonic music performed by local and visiting orchestras. From the

1860s until the 1950s demand for Western art music came from the Greek, Italian and British communities in Egypt and from the Western-educated élite for whom Western art music symbolized modernity. Many middle- and upper-class Egyptian families acquired pianos and provided their children with regular instruction.

The performance and teaching of Western music was essentially carried out by foreigners, including visiting European musicians and members of the European expatriate community. Private conservatories named after their European founders were established, and many European musicians also taught privately. Chamber ensembles of European musicians performed regularly in hotel lounges, theatres and European-style tea houses.

The 1952 revolution initiated a new phase in the development of Western art music in Egypt. During the 1950s and 1960s generous government support was provided for existing institutions, and new ones were founded. The Cairo SO became independent of the Cairo radio station in 1959 and regularly gave concerts. The government also sponsored annual opera and ballet seasons. The Cairo Higher Institute of Music (Cairo Conservatory) was founded in 1959 and provided Western-style training for several generations of Egyptian composers and performers.

The destruction of the Cairo Opera House in 1971 represented a setback for the dissemination of Western music in Egypt. After the inauguration in 1988 of the Cultural and Educational Centre and Opera House donated by the Japanese government, Western art music again became a prominent feature of the musical life of Cairo. The Cultural and Educational Centre also staged regular performances of Arab music by government-sponsored ensembles.

(ii) Western-inspired idioms. Three generations of Egyptian composers created repertories of Western-inspired musical idioms. The first generation of composers included YŪSUF GREISS, ḤASAN RASHĪD and ABŪ-BAKR KHAYRĀT. All three composers completed their formal education in fields outside music (law, agronomy and architecture respectively) and received private musical training locally in the performance and composition of both Arab and Western music. Greiss was trained exclusively by European teachers in Cairo, while Rashīd and Khayrāt started their musical training in Cairo and completed it in European institutions (Rashīd at the RCM and Khayrāt at the Paris Conservatoire). All three composers attempted to develop an individual style inspired by Egyptian traditional music, and their work was permeated with locally inspired melodies; they used formal structures and a simple harmonic language largely derived from 18th- and 19th-century Western models.

The second generation included 'AZĪZ AL-SHAWĀN (fig.10), GAMĀL 'ABDAL-RAḤĪM and Rif'at Garrāna (*b* 1924), all three of whom completed their education and part of their musical training with private teachers in Cairo. Al-Shawān and 'Abdal-Raḥīm completed their formal education in economics and history respectively, but Garrāna studied music from the outset, training at the Higher Institute of Musical Theatre in Cairo. Al-Shawān worked with Aram Khachaturian at the Moscow Conservatory, while 'Abdal-Raḥīm studied with Harald

Genzmer at the Staatliche Hochschule für Musik in Freiburg. These composers were inspired by the traditional music and ancient history of Egypt and wove local melodies or modal features into their compositions; Al-Shawān used a predominantly tonal harmonic language, 'Abdal-Raḥīm used a dissonant harmonic vocabulary and contrapuntal textures within a modal framework, and Garrāna's music featured Egyptian melodies set in Western tonal language.

A third generation of composers studied with 'Abdal-Raḥīm in the composition department of the Cairo Conservatory and continued their studies abroad. Composers such as RAGEH DAOUD and MAUNA GHONEIM, both of whom studied at the Hochschule für Musik in Vienna, and Gamāl Salāma (*b* 1945) attempted to develop a new modal language inspired by local *maqāmāt* woven into contrapuntal textures.

ROBERT ANDERSON (I), SALWA EL-SHAWAN CASTELO-BRANCO (II, 1, 2, 4), VIRGINIA DANIELSON (II, 3)

Ehe. German family of brass instrument makers. All members of the family discussed here were born in Nuremberg and died there. The first generation comprised two brothers: Isaak (bap. 23 Jan 1586; bur. 25 Aug 1632) and Georg (bap. 25 Dec 1595; bur. 17 April 1668); they were known not only for their fine workmanship, but also for their quarrelsomeness. Georg's son, Johann Leonhard (i) (bap. 7 Dec 1638; bur. 22 July 1707), was the sole member of the second generation, but he had two sons, Johann Leonhard (ii) (bap. 18 June 1664; bur. 10 July 1724) and Friedrich (bap. 4 Feb 1669; bur. 21 Feb 1743). The fourth generation consisted of three members, Johann Leonhard (iii) (bap. 13 March 1700; bur. 19 April 1771) and (Martin) Friedrich (bap. 23 July 1714; bur. 28 May 1779), both sons of Friedrich, and Wolf Magnus (i) (bap. 22 Nov 1690; bur. 16 March 1722), son of Johann Leonhard (ii). The last important member was Wolf Magnus (ii) (bap. 1 Dec 1726; bur. 19 Jan 1794), son of Johann Leonhard (iii). The Ehes' financial status reflected political and social developments of both their trade and their city: Georg and the following two generations prospered, whereas some of the members of the last two were buried as paupers. The craftsmanship of the Ehe family was not inferior to that of the Haas family, although the latter family was more famous.

Isaak Ehe established a very high standard of craftsmanship from the beginning, as can be seen from the lavishly ornamented bass trombone made by him in 1612 and now in the Germanisches Nationalmuseum, Nuremberg; this instrument has been copied by several modern makers. Trumpets, trombones and horns made by Johann Leonhard (i), (ii) and (iii) can often be distinguished from one another only by details of their engraving, as mandrels and tools were handed down from one generation to the next. Friedrich Ehe made many different kinds of instrument: his last two dated trumpets (1741) are early examples of doubly-folded ones. Three of the finest surviving Baroque trumpets are nos.217–19 in the Germanisches Nationalmuseum, a matched set made in 1746 by Johann Leonhard (iii) and pitched in (modern) D♭ (no.217, of which a modern line drawing is available, has probably been copied more often than any other trumpet).

For illustration of an instrument by Johann Leonhard Ehe (iii), *see* TRUMPET, §4(iii), fig.12*a*.

EDWARD H. TARR

Ehlers, Alice (Pauly) (*b* Vienna, 16 April 1887; *d* Redondo Beach, CA, 1 March 1981). American harpsichordist of Austrian birth. She began piano lessons as a child, later studying the instrument under Robert and Leschetizky, and music theory with Schoenberg. In 1909 she matriculated at the Berlin Hochschule für Musik as a piano student. Immediately upon Landowska's appointment as professor of harpsichord there in 1913, Ehlers became her pupil and remained with her until 1918. After a successful concert début in Berlin, she toured as a harpsichordist in Europe, the USSR and the Middle East. She also taught at the Berlin Hochschule until 1933, after which she left Germany, taking up temporary residence in England and Austria. She first toured the USA in 1936 and moved there permanently two years later, settling in California and becoming an American citizen in 1943. In addition to making film and radio appearances Ehlers toured extensively, especially on the Pacific coast. She remained active as a teacher, first privately, and later as professor of harpsichord at the University of Southern California at Los Angeles, a chair which she held from 1942 until her retirement in 1962. Her playing was in the colourful tradition of the Landowska school, drawing freely on the resources of the modern harpsichord. She wrote *Vom Cembalo* (Wolfenbüttel, 1932).

HOWARD SCHOTT

Ehmann, Wilhelm (*b* Freistatt, Hanover, 5 Dec 1904; *d* Freiburg im Breisgau, 16 April 1989). German musicologist. From 1928 he studied musicology under Gurlitt,

Kroyer and Zenck at the universities of Freiburg and Leipzig, with history, sociology, literary history and philosophy as subsidiary subjects. He took the doctorate at Freiburg in 1934 with a dissertation on Adam von Fulda, becoming an assistant lecturer in the musicology department. In recognition of his experience working with Nazi organizations, the university created the position of 'assistant for practical musical tasks' to allow him to conduct music at university political ceremonies. After completing the *Habilitation* in 1937 with a study of the Thibaut-Behagel circle, he was appointed lecturer in musicology in 1938. He was also concurrently choirmaster of the Christuskirche, Freiburg (1928–37), and a teacher at the town's music college (1934–8). In 1940 he went to Innsbruck as a visiting professor and ran its musicology institute until 1945. In 1947 he entered the service of the Protestant Church of Westphalia, and in 1948 he founded a school of church music to serve the area (from 1971 the Hochschule für Kirchenmusik), which he directed until his retirement in 1972. He also founded and directed the Westphalian choir school at Herford. From 1949 to 1954 he held a teaching post at Münster University. In 1958 he founded Cantate, an enterprise to produce gramophone records of church music. With Schütz and Schrader he published the *Evangelisches Kantoreibuch* (Gütersloh, 1954, 11/1985).

Ehmann is a product of the 'Bläser- und Singbewegung' (Johannes Kuhlo, Fritz Jöde); his involvement was both practical and academic, beginning in the 1920s and 30s with his active participation in the youth movement, his involvement in Nazi organizations and publication of a practical guide for their uses (*Musikalische Feiergestaltung*, 1938), and his service as editor of *Deutsche Musikkultur*, a journal dedicated to merging scholarship with practice. Besides his studies on Protestant church music (especially Schütz and Bach), numerous editions of early music, and other music for wind (*Alte Spielmusik für Bläser*, Kassel, 1964–71, *Neue Spielmusik für Bläser*, Kassel, 1966–74), writings on performing practice and his highly accurate reconstructions of trumpets and sackbuts, he initiated and directed many conferences and courses on church, choral and wind music. He made many concert tours of America, Africa and Asia with a variety of groups. In the 1970s he attracted much attention in the United States for his choral techniques. He was awarded the Federal Cross of Merit First Class in 1969.

HANS HEINRICH EGGEBRECHT/PAMELA M. POTTER

Ehrenberg, Carl Emil Theodor (*b* Dresden, 6 April 1878; *d* Munich, 26 Feb 1962). German composer, conductor and teacher. On completion of his musical training at the Dresden Conservatory, he received appointments as Kapellmeister at Dortmund (1898) and Würzburg (1899–1900). From 1900 to 1904 he was assistant Kapellmeister at the Munich Hofoper, and the Kapellmeister at Posen (1905–6), Augsburg (1906–7) and Metz (1908–9). From 1909 to 1914 he directed the Lausanne SO. He returned to Augsburg as first Kapellmeister at the Opera (1916–18) and conducted the symphony concerts in Bad Homburg (1918–20). Moving to Berlin in 1922, he was active at the Staatsoper and taught conducting at the Stern Conservatory. In 1925 he moved to Cologne, where he was made professor at the Hochschule für Musik. In 1935 Ehrenberg returned to Munich to teach at the Akademie der Tonkunst. He lived in retirement in Munich from 1945 until his death.

Ehrenberg's music is thoroughly tonal. His chamber works approach neo-classicism in their balanced phrasing, symmetrical design and intimate tone. However, his strong ties with the Romantic tradition are revealed in his intense devotion to the lied; half of his published works fall within this genre. The greater part of Ehrenberg's music is unpublished.

WORKS
(*selective list*)

Orch: Nachtlied, after F. Nietzsche, op.14, vn, orch; 2 Stücke, op.15, str; Jugend, tone poem, op.19; Symphonische Suite, op.22; Festliches Vorspiel, op.34; Romantische Suite, op.35; Sinfonietta, g, op.45; Sinfonische Skizzen, 1896; Maria Stuart Ov., 1897; 2

syms., 1897–8; Wald, tone poem, 1898; Aus deutschen Märchen, 1902; Vn Conc., 1951

CHARLOTTE ERWIN

Ehrenberg [Erenberg], **Vladimir Georgiyevich** (*b* Dec 1874/Jan 1875; *d* Kharkiv, 14 Sept 1923). Russian composer and conductor. A self-taught composer (he also worked in the courts) who in 1908 founded with Nikolay Yevreynov the St Petersburg cabaret theatre *Krivoye Zerkalo* ('The Fun-House Mirror'). As music director of this company, which specialized in satirical stage miniatures, he was responsible for the music for the sensationally successful *Vampuka, ili nevesta afrikanskaya: opera, obraztsovaya vo vsekh otnosheniyakh* ('Vampuka, the African Bride: an Opera Exemplary in Every Respect'). First performed in 1909, by 1927 it had been presented 1000 times. Written to a libretto by Prince M. Vol'konsky, it parodied the musical, textual and dramatic banalities of standard 19th-century opera; the term 'vampuka' has since entered the Russian language as a synonym for operatic or theatrical clichés. Until 1916 Ehrenberg composed numerous such parodies and conducted them at the *Krivoye Zerkalo*. He then composed a one-act opera *Svad'ba* ('The Wedding') after Chekhov's vaudeville and dedicated the work to Chaliapin. Ehrenberg was interested, like Stravinsky, in the verses of 'Koz'ma Prutkov' (pseudonym for three 19th-century Russian poets) and wrote a cycle based on them entitled *Mnimïye inostrantsï* ('Mock Foreigners'). He also worked at the Mikhaylovsky Dramatic Theatre (1917–19).

Ehrlich, Abel (*b* Cranz, 3 Sept 1915). Israeli composer of German birth. After initial studies in Germany, he went to Zagreb to study with Václav Huml at the academy of music (1934–8). In 1939 he settled in Israel, studying composition at the Jerusalem Academy of Music with Shelomo Rosovsky until 1944. Ehrlich taught in various Israeli institutions from 1940; in 1964 he was appointed to the staff of the Israel Academy of Music, which was incorporated into Tel-Aviv University in 1966, and from 1972 to 1983 he was professor of theory there. His works from before 1953 are in a late Romantic style, influenced by the melody and rhythm of Middle Eastern folk music in a manner typical of the Israeli 'Mediterranean' style. Later Ehrlich went beyond this by employing oriental elements such as micro-intervals, rhythmic structures, contrasting timbres and heterophony. In the late 1950s he began to use serial procedures, a development that was stimulated when he attended courses given by Stockhausen and Pousseur at Darmstadt in 1959. Subsequently serialism gave way to further experiment, including some works, both instrumental and vocal, which attempt a musical realization of linguistic structures. He was awarded the Lieberson Prize on three occasions (1969, 1971, 1980), was winner of the Israel Composers and Authors Association Prize in 1974, 1980 and 1994, and also won the Israeli Prime Minister's Award in 1990.

WORKS
(*selective list*)

Stage: The Split Personality of Music Master Botten (short op, Ehrlich), op.104, 1958, Jerusalem, 1959; Immanuele Romano (Heaven and Hell) (short op, I. Romano), op.207, 1970, Jerusalem, 1971; Gnithon and Gnithemos (I am a Horse) (music theatre, Ehrlich, after H. Arp), op.450, 1977, Tel-Aviv, 1977; Dead Souls (short op, Ehrlich, after N. Gogol), op.458, 1978, Tel-Aviv, 1978; The Jubilee (comic chbr op, after A. Chekhov), 1995; Tonya (chbr op), 1995; more than 20 other ops (mostly comic), ballet, incid music, film scores

URY EPPSTEIN

Ehrlich, Cyril (*b* London, 13 Sept 1925). English writer on music and social historian. A self-taught pianist, he served

in the RAF and Army from 1943 to 1947 and while carrying out duties in India lectured on musical appreciation across the country. He studied economic history at the London School of Economics (BSc Econ 1950), continued as research assistant (1950–52) and gained the PhD in 1958. From 1952 to 1961 he taught at Makerere College, Uganda. He joined the staff of the Queen's University of Belfast in 1961, becoming reader in economic and social history in 1969, professor in 1974 and emeritus professor in 1986. He was visiting professor of music at Royal Holloway, University of London, 1995–7.

Ehrlich's main area of study is the economic and social history of music in Britain since the 18th century and he is the first scholar to have written extensively on this subject. His work, much of which considers the piano as a social and economic indicator, is based on painstaking archival and statistical research and is characterized by its clarity and wit. His monographs on the PRS and the Royal Philharmonic Society are official yet critical histories. In tracing the links between music, technology, business and society, he is outspoken about the negative effects of commercialism and cultural paternalism on professional music-making.

ROSEMARY WILLIAMSON

Ehrlich, (Karl) Heinrich (Alfred) (*b* Vienna, 5 Oct 1822; *d* Berlin, 30 Dec 1899). Austrian pianist, teacher, writer and critic of Hungarian descent. He studied the piano under Henselt, Bocklet and Thalberg, and composition under Sechter. Unwilling to establish himself in one place or occupation, by the time he was 40 he had lived and worked in Bucharest, Hanover (1852–5 as court pianist to King George V), Wiesbaden, London and Frankfurt. In 1862 he settled in Berlin, working as a journalist and piano teacher. From 1864 to 1872 and again at the end of his life (1886–98) he taught the piano at the Stern Conservatory. He wrote political correspondence for the *Vossische Zeitung* and *L'indépendence* (1867–9) and later for the *Allgemeine Zeitung* (1872), and was music critic for the *Neue Berliner Musikzeitung* (1865–6), *Die Gegenwart* (1872–92), *Die Tribüne* (1878) and the *Berliner Tageblatt* (1878–98). In 1885 he was granted the title of professor at the Vienna Conservatory. Ehrlich wrote several piano works (including an unpublished *Konzertstück in ungarischen Weisen* which provided Liszt with the theme of his Hungarian Rhapsody no.2), and many critical and historical books and pamphlets; but he is best remembered for his pedagogical work, especially his edition of Tausig's *Tägliche Studien* (Berlin, 1872 or 1873).

H.C. COLLES/R

Ehrling, (Evert) Sixten (*b* Malmö, 3 April 1918). Swedish conductor. Initial studies in the violin, the piano, composition and conducting led to a four-year course at the Swedish Royal Academy of Music. He made his opera début at Stockholm in 1940, studied with Böhm in Dresden in 1941 and made his concert début in Göteborg the following year. Ehrling's early success led to his appointment as director of the Stockholm Concert Society in 1943. After serving an apprenticeship as assistant and sometime guest conductor, Ehrling was made music director of the Swedish Royal Opera in 1953. He remained in the post until 1960. In the same era he began to tour internationally and taught at several institutes and in 1963 began a ten-year appointment at the Detroit SO. Following this he assumed directorship of the conducting programmes at the Juilliard School and in 1973 began to make regular appearances at the Metropolitan Opera, including a complete *Ring* cycle. In 1978 he was music adviser and from 1979 to 1985 principal guest conductor of the Denver SO. Ehrling has also served as music adviser in San Antonio (1985–8) and San Diego (1985). His recordings include works by a number of Swedish composers. He is deeply respected by fellow conductors as an artist of uncommon integrity, constancy and craftsmanship, and he has served as mentor to many young conductors and composers.

CHARLES BARBER/JOSÉ BOWEN

Eibenschütz, Ilona (*b* Budapest, 8 May 1873; *d* London, 21 May 1967). Hungarian pianist. She made her début as a child of six in Vienna, and travelled widely until she was ten, studying during part of that time, and until 1885, at the Vienna Music Academy with Hans Schmitt. She studied with Clara Schumann for four years (1886–90) and, after playing to Rubinstein and Liszt, her career as a mature artist began in 1890, when she played at a Gürzenich concert at Cologne. Performances at the Leipzig Gewandhaus and in Vienna followed, and on 12 January 1891 she made her first appearance in England, where she was to make her home, at a Monday Popular Concert,

playing Schumann's *Etudes symphoniques* and (with Piatti) Beethoven's A major Cello Sonata. Her success was emphatic. She was an early champion of Brahms in England, giving the first performances of op.118 and op.119 in 1894, but she virtually retired from the concert platform after her marriage in 1902. She made her only commercial recordings, of Brahms and Scarlatti, in 1903; some private recordings, made towards the end of her life, have been issued on CD.

J.A. FULLER MAITLAND/FRANK DAWES/DONALD ELLMAN

Eichberg, Julius (*b* Düsseldorf, 13 June 1824; *d* Boston, MA, 19 Jan 1893). German violinist, teacher and composer. He entered the Brussels Conservatory in 1843, studying with L.J. Meerts and Bériot, and graduated in 1845 with first prizes for violin and composition. He was then appointed professor at the conservatory in Geneva, where he remained for 11 years. In 1857 he went to New York and two years later to Boston. He was director of the Boston Museum Concerts (1859–66), and in 1867 took part in the establishment of the Boston Conservatory of Music, being mainly responsible for the good reputation of its violin department.

Eichberg's many compositions include works for solo voices, chorus, violin, string quartet and piano. He prepared textbooks and pedagogical works including collections of vocal exercises, studies for senior schoolchildren and a thorough violin method (1873). Eichberg enjoyed great success with his four operettas, *The Doctor of Alcantara* (1862), *A Night in Rome* (1864), *The Rose of Tyrol* (1865) and *The Two Cadis* (1868).

F.H. JENKS/JOHN MORAN

Eichenauer, Richard (*b* Iserlohn, 24 Feb 1893; *d* ?). German writer on music. He studied German, modern languages and music in Munich and Leipzig and was certified to teach languages and singing at the high school level; he then became director of the agricultural college in Goslar. Despite his lack of musicological training, his writings on music and race were widely cited as authoritative by musicologists, including Friedrich Blume, during the Nazi regime. His most widely quoted work, *Musik und Rasse* (1932, enlarged 2/1937), is an adaptation of attempts in art history and literature to identify the 'racial soul' and identify the racial aspects of musical style.

WRITINGS

Musik und Rasse (Munich, 1932, enlarged 2/1937)
Die Rasse als Lebensgesetz in Geschichte und Gesittung (Leipzig, 1934, 2/1935, 3/1939; Dutch trans. 1943)
Polyphonie, die ewige Sprache deutscher Seele (Wolfenbüttel, 1938)
Von den Formen der Musik (Wolfenbüttel, 1943)

PAMELA M. POTTER

Eichendorff, Joseph (Karl Benedikt), Freiherr von (*b* Lubowitz Castle, Upper Silesia, 10 March 1788; *d* St Rochus, nr Neisse, 26 Nov 1857). German poet. The scion of old aristocratic families, he spent his childhood at the country seat and in 1805 went to Halle University to study law; in 1807 he went to Heidelberg and there, and from 1809 in Berlin and Vienna, he was on friendly terms with some of the leading spirits of the Romantic movement. In 1813 he enlisted with Lützow's Freikorps in the war of liberation before eventually settling in Danzig, where he worked as a civil servant until, in 1831, he accepted a post at the Ministry of Culture in Berlin. He retired in 1844, at least in part owing to problems caused by his devout Roman Catholicism, and spent the remaining years of his life in the country.

Although his first published work was a novel, Eichendorff may be considered the German Romantic lyricist *par excellence*. Music plays an important part in many of his works, especially his best-known prose tale, *Aus dem Leben eines Taugenichts* (1826). Despite the rather limited vocabulary of his poetry and the seemingly untroubled note of calm confidence emanating from most of his best-known works, Eichendorff is anything but the simple, predictable, pious optimist he is sometimes held to be. Among the many composers who have set his lyrics are Brahms (6 lieder, choral works), Franz (13 lieder), Mendelssohn (5 lieder, 10 partsongs, a duet), Schumann (16 lieder, 6 partsongs) and Wolf (26 lieder and 6 choruses). Even in the 20th century the calm and occasionally melancholy beauty of his verses has drawn composers as disparate as Burkhard (a choral piece), Medtner (5 lieder), Paumgartner (an opera, *Aus dem Leben eines Taugenichts*), Reger (2 lieder, a chorus, a duet), Schoeck (more than 40 songs, choral works and an opera, *Das Schloss Dürande*), Ethel Smyth (4 lieder) and Richard Strauss (a lied and a choral piece). Pfitzner's cantata *Von deutscher Seele* and his 19 song settings deserve particular mention.

PETER BRANSCOMBE

Eichheim, Henry (*b* Chicago, 3 Jan 1870; *d* Santa Barbara, CA, 22 Aug 1942). American composer, violinist and conductor. A graduate of the Chicago Musical College, he went on to play with the Theodore Thomas Orchestra (1889) and the Boston SO (1890–1912). Thereafter, he devoted himself to composition, chamber music and conducting, making his reputation as an early champion of works by Debussy, Ravel and Fauré. Trips to Japan, Korea and China prompted intensive study of Asian music with Hisao Tanabe (Japan), Yang Yinliu (China) and Jaap Kunst (Java). During the first of four such trips (1915), Eichheim transcribed the sounds around him in notebooks that have, unfortunately, been lost. Photographs of musical performances throughout Asia do survive, however. Leopold Stokowski, a close friend, who

performed the premières of many of his works, travelled with him to Bali (1928) and India (mid-1930s). After 1922 Eichheim settled in Santa Barbara.

Eichheim's greatest contribution rests upon his pioneering efforts to combine the timbres of Asian instruments with those of the Western orchestra. Convinced that the introduction of Asian instruments would greatly enrich the range of sonorities available to Western composers, Eichheim was an avid collector. He lectured widely on the rhythmic and melodic elements of Asian music and often incorporated indigenous melodies into his compositions. The early piano piece *Gleanings from Buddha Fields* (1906), inspired by the writings of Lafcadio Hearn, reflects Eichheim's growing interest in East Asia. *Oriental Impressions* (1919–22), a suite of seven sketches, is based on transcriptions of a Korean street labourer's song, a blind shakuhachi player's melody and the sound of tuned bells hanging under the roof of the Imperial Temple, Bangkok. Large orchestral works, such as *Java* (1929) and *Bali* (1933), achieve new orchestral effects through the use of gamelan instruments. Throughout his career, Eichheim also composed songs; Yeats was his favourite poet, but in later years he also set Shakespeare, Tennyson and translations of Chinese poetry.

WORKS

Orch: Oriental Impressions, 4 street bells, Burmese cymbals, Burmese castanets, Chin. drum, fish-head drum, Jap. wood-bell, orch, 1919–22 [rev. of pf piece]; Malay Mosaic, 1924; The Rivals (ballet), 1924 [rev. as Chinese Legend, 1925]; A Burmese pwé, 1926; The Moon, My Shadow and I (Li Bai [Li Tai-po], trans. F. Ayscough, rev. A. Lowell), S, orch, 1926; Java, bonang, gender, mar, saron, gongs, orch, 1929; Bali, bonang, gender, saron, cymbals, gongs, orch, 1933

Chbr and solo inst: [6] Etudes, vn, 1890s; Moto perpetuo, vn, 1893; Sonata no.1, vn, pf, 1892–5; Str Qt, 1895; Gleanings from Buddha Fields (Poem for Pf), 1906; Oriental Impressions, pf, 1918–22 [rev. for chbr ens, 1919–21, orchd 1919–22]; Sonata no.2, vn, pf, 1934

DOLORES M. HSU

Eichhorn, Kurt (Peter) (*b* Munich, 4 Aug 1908; *d* Murnau, 29 June 1994). German conductor. He studied at the conservatory in Würzburg and made his début as chorus master and conductor in Bielefeld in 1932. After Hitler had annexed the Sudetenland, Eichhorn took over engagements in Teplitz-Schönau (now Teplice; 1939) and Karlovy Vary (1941–3). In 1944 he was appointed conductor of the Dresden PO, and after World War II he became a staff conductor at the Staatsoper in Munich. From 1956 to 1967 Eichhorn was chief conductor of the Gärtnerplatztheater in Munich, and in 1967 he became chief conductor of the Bavarian RO. In this capacity, he made several opera recordings, among them *Iphigénie en Aulide*, *Hänsel und Gretel* and works by Orff (*Die Bernauerin*, *Die Kluge*, *Der Mond*, *Orpheus*). He also taught at the Musikhochschule in Munich.

MARTIN ELSTE

Eichmann, Peter (*b* Brandenburg an der Havel, 1561; *d* Stargard, Pomerania, 12 June 1623). German music theorist, teacher and composer. He is a direct ancestor of the conductor Wilhelm Furtwängler. He taught at the town school at Stargard from 1588, and by 1596 he was Kantor there. Both in their subject matter and in the treatment of it, his two treatises on music are superior to the usual German song manuals for schools. In *Oratio de divina origine atque utilitate multiplici … artis musicae* (Stettin, 1600) he set out to demonstrate the divine origins and miraculous properties of music, drawing on biblical evidence and the writings of Boethius.

Eichmann was also concerned with improving the effectiveness of new music. Music, he maintained, could fulfil its purpose, stirring the emotions, bringing order into people's lives and heightening their awareness of God, only when it was well performed. Singers must therefore master the foundations of music theory and performing practice. *Praecepta musicae practicae sive Elementa artis canendi* (Stettin, 1604) deals with the elementary rules of song and with keys and modes. His key system contained 14 chromatic steps (with A♭, E♭, B♭, F♯, C♯, G♯, D♯), and thus began the division of the black keys D♯/E♭ and G♯/A♭. As an aid to memorizing the keys Eichmann referred to hymns and to well-known motets by Lassus. Among music examples he provided are four bicinia by Lassus and five pieces by Joachim Belitz, his predecessor in the school at Stargard, as well as four bicinia and a piece in cantional style of his own composition. In the preface he demanded that in school not only the hymn for Sunday should be practised but that also during the first days of the week the pupils should sing Italian madrigals and French chansons.

MARTIN RUHNKE

Eichner, Adelheid Maria (*b* ?Mannheim, before 1 Sept 1762; *d* Potsdam, 5 ?April 1787). German singer and composer. She was the daughter and only surviving child of the bassoonist and composer Ernst Eichner and his wife Maria Magdalena Ritter. She grew up in Zweibrücken, where her father was employed in the Hofkapelle of Duke Christian IV of Zweibrücken-Birkenfeld from autumn 1762 to November 1772. According to her friend C.F. Zelter, she was taught singing in Mannheim by an elderly Italian castrato of a good school; her father may have taught her the piano. At the end of 1773 she and her mother joined her father in Potsdam. He had travelled to Paris and London to give concerts and had begun his employment in the Hofkapelle of the Prince of Prussia (later King Friedrich Wilhelm II) in August 1773. She was apparently likewise employed in the Hofkapelle, as the only German woman singer, appearing in public concerts in Berlin as the prince's 'Cammer Sängerin' from 1777 and from 1781, at the Berlin Royal Opera; she was a permanent member of the opera from 1782 and sang

leading roles in *opera seria* performances. Her contemporaries unanimously praised her voice, which was even throughout its range of three octaves, and her extraordinary vocal technique; only her acting was considered stiff and awkward. Of her piano playing, the Freiburg *Musikalisches Taschenbuch* of 1784 remarked that she played 'with the same ease and skill [with which she sings] and particularly with regard to matters of taste in performance, her sensitive father's spirit seems to rest on her'. Her early death was attributed by Zelter to 'a severe emotional disturbance'.

Eichner first came to prominence as a composer in 1780, when her *12 Lieder mit Melodien fürs Clavier* was published in Potsdam; this collection, her only surviving work, includes one of the earliest Goethe songs, a setting of *Jägers Nachtlied*. Although highly expressive, the songs are conceived in instrumental terms, with little regard for the natural melody of their texts. Further individual songs were printed in musical almanachs until 1792. Eichner set poems by G.A. Bürger and J.D. Overbeck, as well as those of the Dutch General von Stamford, who from about 1775 until 1786 was tutor at the Prince of Prussia's court and according to Zelter, was engaged to her.

MARIANNE REISSINGER

Eichner, Ernst (Dieterich Adolph) (*b* Arolsen, bap. 15 Feb 1740; *d* Potsdam, early 1777). German bassoonist and composer, father of ADELHEID MARIA EICHNER. As a son of the Waldeck court musician and bassoonist Johann Andreas Eichner (1694–1768), he must have learnt the violin and bassoon, and been introduced to the rules of counterpoint and composition (the basis of his lauded prowess later in 'strict writing'), from musicians at the court. On 5 August 1753 he was confirmed. His marriage to Maria Magdelena Ritter (probably of the Mannheim family of musicians) undoubtedly took place before 1760, and their first daughter Adelheid was probably born between 1760 and 1762; a second daughter, Maria Catherina Elisabeth, was born on 14 August 1764 but died four days later.

On 1 September 1762 Eichner entered the court orchestra of Duke Christian IV of Zweibrücken (the brother of Waldeck's Princess Christiane), where he served primarily as a violinist and later (1769) was appointed Konzertmeister. He toured as a virtuoso bassoonist from 1767, establishing a considerable fame. In 1770 he travelled in the prince's entourage to Paris, where his earliest symphonies – among other works – appeared in print and where he was placed second to Cannabich in the Foire Germain symphony contest in 1772. He left the Zweibrücken court on 18 November 1772 and travelled via Paris to London. There he appeared as a bassoonist in 12 of J.C. Bach's subscription concerts (March–May 1773). In August of that year he was a bassoonist in the service of the Prussian crown prince, later Friedrich Wilhelm II, in Potsdam. He interrupted his service there only once, to visit Arolsen and Leipzig (1775). His early death passed unnoticed by the musical public.

Although active as a composer only from 1763 to 1776, Eichner left a noteworthy corpus of symphonies, solo concertos, chamber music and vocal works. His early style is typified in the solo concertos which were written before 1769 for the court at Zweibrücken; the chamber and symphonic works, on the other hand, date from his years as Konzertmeister or from his tenure in Potsdam. The last solo concertos seem untouched by his symphonic style; they strongly follow the so-called 'sonata-concerto' in their rounded, cantabile melodies and noticeably more adventurous harmonies. The sequence of themes is reduced to a first and second group (not always contrasting), and certain details depart from contemporary convention in this regard. The 12 two-movement keyboard trios and 24 three-movement symphonies (nos.1–24), which were two parallel series from the Zweibrücken years, resemble one another in the treatment of forms and themes, and reveal the application of Eichner's symphonic style to his chamber works – a novelty not universally accepted by his contemporaries. As was the custom at the time, the keyboard part is predominant in the trios, with violin accompanying and a cello part merely doubling the keyboard bass line. The remaining chamber works are all more or less isolated or occasional pieces, if not arrangements from contemporary operas. The Potsdam cello quartets (op.12), which are quite substantial, are novel only in having three movements; the two quintets for flute and strings were cited by Alois Volk as being important examples of chamber works with obbligato double bass parts.

The core of Eichner's output is his symphonies. Within the relatively brief span of seven years he composed 31 orchestral works (24 of them between 1769 and 1772) whose progress outlines a remarkable maturing of style. Despite their temporal proximity these works fall into three distinct stylistic periods: a phase of experimentation in form and content (nos.1–12), another of formal stability and enhanced expressivity (nos.14–24) and a 'late' style (nos.25–31) synthesizing both of these. Unlike most pre-Classical symphonists, particularly those at Mannheim, Eichner generally used a fully-fledged sonata form, with exposition, for the opening and final movements, and in the last symphonies shows himself quite capable of thematic development. The works of the Zweibrücken years are pompous, brilliantly coloured pieces intended to match the acoustics of Rococo concert halls, and aim above all at a sensual effect. The Potsdam works, however, unite this brilliance with depth of content, a new utterance that stands apart from artifice.

Eichner's compositions are the work of a solid craftsman and – half a generation before Mozart – an ingenious eclectic. The symphonies in particular amalgamate Italian three-part form with the frequently modulating harmonies of middle-Germany, the dynamics and expressivity of Mannheim, a French periodicity and cantabile, and a song-like melodic style from the north German, or Berlin, school. Eichner, no doubt consciously, sought a synthesis of the forms and idioms of his time; he fits into none of the important 18th-century 'schools', but was a solitary figure who, like so many of his contemporaries, aimed to give structure and substance to the new genre of the 'concert symphony'.

WORKS

printed works published in Paris, unless otherwise stated

ORCHESTRAL

Syms. (Eichner's numbering in square brackets; thematic catalogue in DTB, xiii, Jg.vii/2, 1906 and Reissinger, 1970): 6 as op.1 [2, 3, 1, 4, 5, 6] (1770); 3 à 8 parties, op.5 [11, 12, 10] (1772); 3 à 8 parties

obligées, op.6 [7, 19, 14] (1772); 6 à 8 parties obligées, op.7 [15, 20, 18, 8, 17, 9] (1772), no.5 ed. in DTB, xv, Jg.viii/2 (1907); 6 à 8 parties, op.10 [22, 21, 24, 16, 23, 25] (1775); 6 à grand orchestre, op.11 [29, 30, 26, 31, 28, 27] (1776); 1 in E♭ [13], lost

Concs.: 1 for hp/hpd, C (1771); 5 for ob, no.1, B♭, 1764, ed. D. Gerhardt (Leipzig, 1958), no.2 ('Jagdserenade'), D, 1770, no.3, C, 1772, no.4, B♭ and no.5, E♭, listed in Breitkopf catalogues (1779–81) [no.5 also pubd as cl conc.]; 1 for cl, E♭ (1777); 6 for bn, no.1, C, ?1771, no.2, C, 1773, no.3, C, no.4, E♭ and no.5, B♭, listed in Breitkopf catalogues (1778–84), no.6, D, in C.F. Cramer: Magazin der Musik (Hamburg, 1783/R); 1 for vn, 1763, 3 for fl, 1763, 1 for vc, 1775, all lost

CHAMBER

thematic catalogue in DTB, xxviii, Jg.xvi (1915)

4 or more insts: 6 qts, fl, vn, va, b, op.4 (1772), no.4 ed. in DTB, xxvii, Jg.xv (1914); 6 qts, vn, va, vc, b, op.12 (1776–7) [also as op.11]; Divertissement, 2 ob, 2 cl, 2 hn, 2 bn (?1776); Divertimento militare, 2 cl, 2 hn, 2 bn in C.F. MARIANNE REISSINGER

Eichorn, Johann (*b* Nuremberg, 1524; *d* Frankfurt an der Oder, 21 Aug 1583). German printer and book dealer. He probably learnt the printing trade in his native city, and he entered the University of Frankfurt an der Oder in 1547. Two years later he took over Nicolaus Wolrab's printing press and within a few years it became one of the main publishing houses in eastern Germany. He soon became official printer for the university and was made a member of the city council in 1570. On 31 October 1577 he requested and was granted the protection of Maximilian II's imperial patent. A subsidiary firm, founded by Eichorn in Stettin in 1568–9, was given to his son-in-law, Andreas Kellner (*d* 1591) in 1572. The main business was taken over in 1581 by Eichorn's son Andreas (*b* Frankfurt an der Oder, 17 Sept 1553; *d* Frankfurt, 21 Nov 1615), who had served his apprenticeship under Sigmund Feyerabend in Frankfurt am Main, and in 1615 by Andreas's son, Johann (*b* Frankfurt an der Oder, *c*1585; *d* Frankfurt, 1642), who had begun signing publications as early as 1606. Andreas compiled a publisher's list in 1606 containing 119 different items including music.

As university printer Johann Eichorn received the active support of the influential humanist Jodocus Willich, and was largely responsible for the growing importance of Frankfurt an der Oder in the international book market. By the late 16th century the city, with its three annual book fairs which attracted printers and book dealers from all over Germany, had become the main trading centre for eastern Europe. Although he printed books on a wide variety of subjects including local history, classical literature and theology, many of them decorated with woodcuts by the prominent artist Frantz Friderich, Eichorn's main contribution was in the publication of music. By 1617 the firm had brought out more than 90 works in this field, including such divergent collections as the widely used Protestant hymnbook of 1552, *Geistliche Lieder D. Martini Lutheri*, with its many subsequent editions, and lute tablatures of Waissel, Kargel and Drusina. Since he concentrated mainly on the works of local composers, Eichorn also published a great many compositions written for local special occasions (weddings, funerals, university ceremonies, etc.) as well as a variety of school plays, some of which included music. Both his son and grandson continued the business along much the same lines, relinquishing the lead, particularly in music, to the newly founded firm of Hartmann in about 1600.

MUSIC PUBLICATIONS

(*selective list*)

all published in Frankfurt an der Oder

J. EICHORN (i)

MARIE LOUISE GÖLLNER

Eidenbenz, Johann Christian Gottlob (*b* Owen, nr Kirchheim, 22 Oct 1761; *d* Stuttgart, 20 Aug 1799). German composer. He received his musical training at the Hohe Karlsschule at Stuttgart (1776–84), where his fellow students included Schiller and J.R. Zumsteeg. In 1784 he was appointed viola player in the orchestra of the Württemberg court at Stuttgart, a post he held for the rest of his life. He composed highly praised ballets (now lost) for the court theatre and many lieder with keyboard accompaniment, as well as keyboard pieces, flute duets and sacred works. His lieder, like those of his contemporaries Zumsteeg, Schubart and Rheineck, are representative of the Swabian lied school and were particularly successful. The majority are simple strophic settings with folklike melodies but occasionally have more complex structural patterns, such as strophic variation or rondo form; the keyboard functions primarily as an accompanying instrument, although with frequent preludes, interludes and postludes. Most of his keyboard compositions are short dance pieces intended for beginners, and his sacred cantatas are simple and unpretentious. In general, his works reveal attractive melodies, but awkward harmonic treatment.

WORKS

all printed works published in Stuttgart unless otherwise stated

VOCAL

Lieder: 12 Lieder mit Begleitung des Klaviers (Leipzig, 1798); 7 in Sammlung neuer Klavierstükke mit Gesang, i–ii (Dessau and Leipzig, 1783–4); 20 in Musikalische Monatschrift, ed. J. Zumsteeg (1784); 5 in Musicalische Rhapsodien, ed. C. Schubart (1786); 12 in Musikalischer Potpourri für Liebhaberinnen (1790–91); 7 in Taschenbuch für Freunde des Gesanges, i (1796)

Sacred (all in *D-Tl*): Herr, grosser Gott, dich loben wir (Te Deum), vv, chorus, orch, org; 3 cantatas with orch, org: Auf zu dir, Erhabener, B solo, 4vv, König aller Nationen, 4vv, Lobsinget Gott, 4vv; others

INSTRUMENTAL

Kbd: 24 leichte Klavier-Belustigungen (1793); Leichte Clavierstücke (Leipzig, n.d.); 3 works in Musikalische Monatschrift (1784); 15 works in Musikalischer Potpourri (1790–91); organ pieces

Other inst: Der Schäferlauf (ballet), Stuttgart, 1799, lost; 3 fl duos, op.6 (Heilbronn and Offenbach, 1795)

DAVID OSSENKOP

Eigeldinger, Jean-Jacques (*b* Neuchâtel, 9 March 1940). Swiss musicologist. He studied at the University of Neuchâtel (1958–62), the Sorbonne with Jacques Chailley (1962–5) and the Geneva Conservatory with Louis Hiltbrand (1970–71). He taught concurrently at the Institut Jaques-Dalcroze in Geneva (1976–81) and at the Geneva Conservatoire (1978–83). Additionally, in 1981 he was appointed lecturer at Geneva University, where he later became professor of the music department (from 1988) and director of the history of art and musicology department (1989–92). He has also been a visiting professor at the Paris Ecole Normale Supérieure (1985–7; 1995). He was the founder-president of the French-speaking section of the Swiss Musicological Society in 1980 and editor-in-chief of the *Revue musicale de Suisse romande* (1976–88).

Eigeldinger's main areas of study are J.-J. Rousseau and the aesthetics and musical writings of the Enlightenment, the history of musical interpretation from the 18th century to the 20th and the piano during the 19th century. In his study of the piano during this period he has examined its role in musical life in France and Germany, and also its repertory, particularly the works of Schumann, Liszt, Stephen Heller and Chopin. His work includes a scholarly edition of Heller's *Préludes à Mlle Lili*, a collection of 32 pieces for piano, op.119 (Mâcon, 1984), and an edition (Paris, 1982) of Jane Stirling's printed copies of Chopin's works, annotated by the composer for her use. Eigeldinger has made a special study of Chopin, examining the aesthetics of his musical style, his teaching and his music. His book *Chopin vu par ses élèves* is widely regarded as a work of seminal

importance, and he is one of three co-editors of a new critical edition of the complete works of Chopin. He has also translated a number of texts into French, including Forkel's work on the life, art and work of J.S. Bach (Paris, 1981). He received the honour of Order of Merit of the Polish Ministry of Culture in 1984.

Eiges [Eyges], **Konstantin Romanovich** (*b* Bogodukhov, Khar'kiv region, 24 May/5 June 1875; *d* Moscow, 2 Dec 1950). Russian composer and pianist. He attended the Moscow Conservatory (1900–05) where he studied with Ippolitov-Ivanov, Sergey Taneyev and Yaroshevsky. He was subsequently active as a pianist and teacher, Stanchinsky being among his pupils. Eiges was one of a circle of musicians, mostly composer-pianists, who congregated in Pavel Lamm's flat in Moscow during the 1910s and 20s. His writings on music include an article on Wagner ('R. Vagner i yego khudozhestvennoye reformatorstvo' ['Wagner and his Artistic Reformation'], *Russkaya Mïsl'*, vi (1913), 56–68), as well as reminiscences of Rachmaninoff and Taneyev. His works mostly involve the piano; his writing for the instrument is fluid, sensitive and strongly linked to early 20th-century Russian traditions. His style ranges from the naively Schumannesque (in the *Ėtyudï-fantazii*) to one which employs a wealth of cross rhythms (five against seven against six in the *Skazka* op.12 no.1) and intricate polyphonic layering alongside luxuriant harmonic and melodic progressions reminiscent of Rachmaninoff's later middle period. The two *sonata-poemï* are perhaps his best works and can be counted among the most successful of the many single-movement sonatas written in Russia in the 1910s and 20s. His son Oleg Konstantinovich Eiges (*b* Moscow, 30 April/13 May 1905) was also a pianist and composer whose output includes 14 piano sonatas; he studied composition with Anatoly Aleksandrov and Zhilyayev, and took piano lessons with Egon Petri in Berlin.

WORKS
(*selective list*)

Pf: Nocturne, op.1; 2 p'yesï: Eksprompt-ėtyud, fuga, op.3; Barcarolle, op.4; 2 prelyudii, op.5; 10 préludes, op.8, ?1910 [in memory of Yaroshevsky]; 2 skazki, op.12; 4 morceaux, op.14; Sonata-poėma no.1, op.15; Suite pastorale, pf 4 hands, op.18; 2 poėmï, op.19; Ėtyudï-fantazii, 2 vols, op.22/3; Sonata-poėma no.2, op.28

JONATHAN POWELL

Eight foot. A term used in reference to organ stops, and by extension to other instruments, to indicate that they are pitched at unison or 'normal' pitch (now based on $c' = 256$ Hz), as distinct from FOUR FOOT (octave higher), TWO FOOT (two octaves higher) or SIXTEEN FOOT (octave lower). Eight foot is only an approximation, since the length of open organ pipe required to sound *c* will depend on (a) the kind or standard of foot, (b) the standard of pitch, and (c) the scale or width, wind pressure and flue size of the pipe concerned.

As J. van Heuren observed (*De orgelmaker*, 1804–5) exact length can be established only when the pipe is voiced. Thus when Praetorius wrote in *Syntagma musicum*, ii (2/1619), p.17 that 'if the customary present-day Cammerton is given to an organ, the lowest C in the Principal is 8′ long' it must be remembered that (a) he had in mind the slightly shorter Brunswick foot, and (b) he was merely conforming to an organ-builders' convention and did not intend an exact description.

Before the 16′, 8′, 4′ terminology had become conventional (e.g. Chartres Cathedral, 1542), documents often attempted to be exact, though of course without specifying foot standard. Thus at Valenciennes in 1515 the Principal

was '5 piez', probably from *G* high pitch, perhaps equal to the the 'jeu de six piés en ton de chapelle' at St Eloi, Bordeaux, in 1529. Schlick's 6½ Rhine foot *F* of 1511 was probably much the same as the 'seven voet en effaut' at Zwolle in 1447. The 'werk van 16 voetten' at Delft in 1458 seems to indicate both a sub-octave chorus and low pitch, since the compass began at *F*.

PETER WILLIAMS

Eighth-note. American term for QUAVER. *See also* NOTE VALUES.

808 State. English club dance music group. Named after the Roland TR-808 drum machine, which was central to the development of club dance music in the UK in particular, they came to prominence as part of the Manchester dance music boom of the late 1980s and early 90s and were influential in bringing techno music to a wide audience in the UK. Formed in 1988 by Graham Massey (*b* 1960), Martin Price (*b* 1955) and 'A Guy Called Gerald' (Gerald Simpson), they released the acid house album *Newbuild* (Creed) in the same year, shortly after which Gerald left the group. DJs Andy Barker (*b* 1969) and Darren Partington (*b* 1969) joined for *Quadrastate* (Creed, 1988), which was less hard-edged and more influenced by Detroit techno. The following year saw their first hit with *Pacific State* (ZTT), a house track distinguished by an insidiously catchy soprano saxophone line which had been played at Manchester's influential Haçienda club for months before its release, and the album *808:90* (ZTT, 1989). A year after the popular *Ex:El* (ZTT, 1991), Price left the group. They continued to release records throughout the decade, although never repeated their success of the early 1990s.

WILL FULFORD-JONES

Eilend (Ger.: 'hurrying'; present participle of *eilen*, 'to hurry'). An indication found, like *mit Eile* ('with haste'), particularly in German scores around 1900. H.C. Koch (*Musikalisches Lexikon*, 1802) gave *eilend* as a direct translation for ACCELERANDO.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Eilhardt, (Friedrich Christian) Carl (*b* Erfurt, 15 April 1843; *d* Glauchau, 24 Jan 1911). German conductor, violinist and composer. He studied with the city music director Fuckel in Naumburg and composition with M. Hauptmann and the violin with F.R. Dreyschock in Leipzig. He gained wide experience as leader and conductor in many major cities in Germany, Poland and Switzerland, and on 21 February 1879 was elected city music director in Glauchau, succeeding Wilhelm Schmidt. He was responsible for the foundation of the important Konzertverein in 1885.

As an accomplished player, experienced conductor (occasionally of choirs) and hard-working organizer Eilhardt lent an extraordinary brilliance to Glauchau's musical life; prominent artists from all over the world appeared at his concerts. His numerous compositions, popular in spirit and melody, convincing in form and accomplished in instrumentation, are wholly suited to the demands of practical musicianship.

WALTER HÜTTEL

Eimert, Herbert (*b* Bad Kreuznach, 8 April 1897; *d* Cologne, 15 Dec 1972). German theorist and composer. He studied in Cologne, initially at the Conservatory (1919–24) and then at the University (1924–30), where he took his doctorate in musicology in 1931. He worked from 1927 at WDR, and from 1930 as music specialist on the *Kölnische Standtanzeiger*. Immediately before and during the war (1935–45) he worked as an editor on the *Kölnische Zeitung*. He then returned to WDR where, in 1951, he became director of the Studio für Elektronische Musik, the first of its kind devoted to composition using electronically generated sound. His own *Vier Stücke* (1952–3), along with Stockhausen's two studies (also realized at Cologne), are among the earliest examples of electronic music. Many of the most significant tape pieces of the later 1950s, including Stockhausen's *Gesang der Jünglinge* and *Kontakte*, and Ligeti's *Artikulation*, were also produced there. The studio, together with related activities initiated by Eimert, such as the late-night music programmes (1948–65) and the journal *Die Reihe* (which he co-edited with Stockhausen), made Cologne into an important centre for the postwar European avant garde. From 1965 to 1971 Eimert was professor at the Cologne Musikhochschule, where he was in charge of the electronic music studio.

While his work in electronic music brought him greater public prominence, Eimert's significance lies equally in his theoretical writings. His *Atonale Musiklehre* of 1923, which claimed to be 'the first systematic description of atonal technique', sets out to codify aspects of Hauer's theory and the compositional techniques of Golishev, whose notational system Eimert adopts. While it stops short of positing fixed pitch class orderings in the manner of Schoenberg's note-row, the earliest articles on which it predates, it strikingly anticipates the concerns of later 12-note theorists, Babbitt especially, in its exploration of various combinatorial possibilities, such as the systematic partitioning of the aggregate. The later *Lehrbuch der Zwölftontechnik* (1950) became one of the most widely disseminated primers of Schoenbergian 12-note technique, translated into Italian, Spanish and Hungarian, though it too is as much a document of Eimert's personal theoretical interests, for instance in symmetrical all-interval rows and the technique of 'Quartverwandlung' (or 'Quintverwandlung'), which transforms a 12-note row, treated as a reordering of the chromatic scale, onto an equivalent reordering of the circle-of-fourths (or fifths). *Grundlagen der musikalischen Reihentechnik* (1963) moves further beyond 12-note orthodoxy towards the generalized serial thinking that characterized the work of the Cologne circle.

Many of Eimert's journal articles were influential in the postwar debates on electronic music and on the music of Webern, which he considered to anticipate, if not actually exemplify, the generalized serial practices of the avant-garde generation. He also lectured at Darmstadt, where, in 1953, he coined the influential term *punktuelle Musik* ('point music') to characterize the post-Webernian emphasis on 'the single note'.

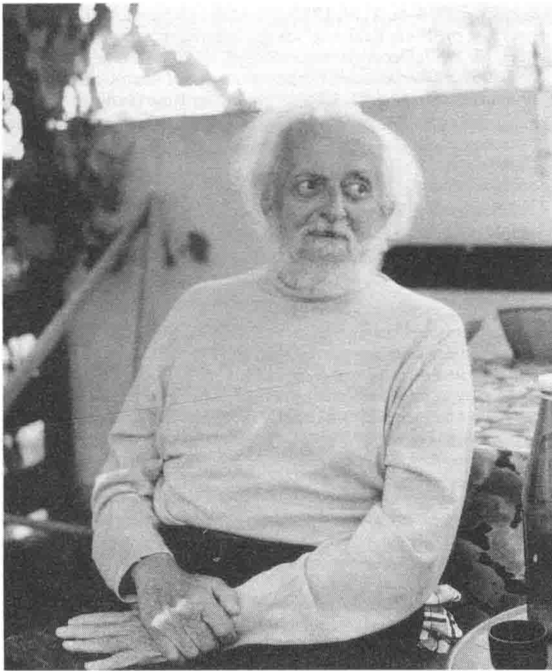
CHARLES WILSON



Einem, Gottfried von (*b* Berne, 24 Jan 1918; *d* Oberdürnbach, Lower Austria, 12 July 1996). Austrian composer and teacher. The adopted son of a diplomat (his natural father was a Hungarian aristocrat, Count László von Hunyadi) who was stationed as military attaché of the Austrian embassy in Switzerland, von Einem enjoyed a relatively prosperous childhood. The family moved to Schleswig-Holstein in 1921, and von Einem developed an interest in music through piano lessons and early attempts at composition. From 1928 to 1937 he went to secondary school in Plön and Ratzeburg, travelling extensively on vacations to England and to Bayreuth. Discharged from military service in Vienna after only 14 days, he went to Berlin with the intention of studying composition with Hindemith. Hindemith, however, had already resigned from the Berlin Hochschule für Musik in response to the Nazi propaganda campaign against his work. Nonetheless, von Einem remained in Berlin, working as coach and assistant to Tietjen at the Berlin Staatsoper, a post he held from 1938 to 1943. Declining the opportunity to become a conductor in Kassel, he also served as Tietjen's assistant at the Bayreuth Festival from 1938. His professional activities were somewhat curtailed in 1938 when he was arrested by the Gestapo and subjected to brutal interrogation about his political activities. This experience occurred several times, occasionally resulting in imprisonment for some days, but no charges were proffered, and he was eventually allowed to resume his work as a musician.

In 1941 von Einem began two years of composition study with Boris Blacher, whose influence was paramount to his career; the older composer soon became a close friend as well as the librettist of several of von Einem's major operas. Between 1942 and 1943 von Einem completed his first mature compositions, the Capriccio for orchestra, performed by the Berlin PO in 1943, and the ballet *Prinzessin Turandot* which received a triumphant first performance at the Dresden Staatsoper in 1944, where von Einem worked as a musical adviser from 1943. During the last years of the war Karajan commissioned the Concerto for Orchestra for the Berlin Staatskapelle. Performed for the first time in April 1944, it was roundly condemned by the Nazi authorities who objected to the composer's use of jazz-like syncopations in the last movement.

Von Einem left Dresden in 1944, settling in Styria, a region largely unaffected by the wartime activity. In 1945 he was briefly appointed a regional police chief in Ramsau and deputed to round up local members of the SS; but he soon resumed his musical activities, undertaking a period of study with Johann Nepomuk David in Salzburg. During this period von Einem was engaged in writing his first opera *Dantons Tod*, based on Georg Büchner's play about revolutionary France. First performed at the Salzburg Festival in 1947, the opera was widely acclaimed and it almost single-handedly established von Einem as one of the leading contemporary composers of the period. From 1946 onwards he played a prominent part in rebuilding Austrian musical life after the war. He served on the board of directors at the Salzburg Festival and the Wiener Konzertgesellschaft. However, he fell out of favour with the authorities in Salzburg in 1951, being falsely accused of communist sympathies for supporting Brecht's application for an Austrian passport. Although von Einem was removed from the directorate of the Salzburg Festival, he continued to enjoy prestigious commissions, in particular the ballet *Rondo von goldenen Kalb* (Hamburg, 1952), and his second opera *Der Prozess* (Salzburg, 1953) furthered his reputation.

In 1953 he moved to Vienna, where he became a member of the board of the Wiener Festwochen (1960–64), professor of composition at the Vienna Music Academy (1963–72), and dramaturg at the Vienna State Opera (1964–71). Von Einem remained a controversial figure throughout his life, yet he was highly regarded in his native Austria and received numerous awards including the Prize of the City of Vienna in 1958, the Austrian State Prize for Music in 1965, honorary membership of the city of Vienna, the Gesellschaft der Musikfreunde and the Wiener Konzerthausgesellschaft in 1988, and the Cultural Prize of Lower Austria in 1989.

Despite his declaration that the Lied was his most favoured genre, von Einem is best remembered as a composer for the stage. His early ballets *Prinzessin Turandot, Rondo von goldenen Kalb* and *Medusa* enjoyed great favour in German opera houses, praised both for their rhythmic dynamism and brilliant instrumentation. Nonetheless, it was opera that brought him an international reputation. Indeed *Dantons Tod* (1947), his first essay in the genre, is regarded as one of his most durable compositions. Its success can be explained on several levels, not least on account of its passionate sense of

Gottfried von Einem

historical commitment, which immediately resonated in a world beginning to come to terms with horrors perpetrated by the Nazis, and its compellingly theatrical libretto by Blacher. While von Einem's musical language is hardly innovatory, and individual phrases momentarily suggest such disparate influences as Strauss, Stravinsky, Weill and Blacher, these elements seem to be fully absorbed into an individual style that has sufficient rhythmic and harmonic flexibility to encompass the vast range of emotions demanded by the text.

In *Der Prozess* (1952), based on Kafka's novel about the unsuspecting bank signatory who is placed on trial for an unspecified crime, von Einem was able to bring to bear his own experience of imprisonment by the Nazis. Although the opera was received favourably, it is more questionable whether von Einem's neo-Stravinskian mode of expression fully meets the challenge posed by the libretto. Of his subsequent operas, *Der Zerissene* (1964) and *Kabale und Liebe* (1976) failed to make much impression, despite enjoying prestigious premières at major European opera houses. By contrast, *Der Besuch der alten Dame* (1970), which sets Friedrich Dürrenmatt's play, was an immediate success, becoming one of the most frequently performed operas of the 1970s. A powerful satire on the corruption engendered by lust for money, the work is distinguished by its great depth of characterization and tight control of thematic ideas, and its modern yet accessible musical language can be compared to that of Britten.

The influence of Britten's church parables may be perceived in von Einem's mystery opera *Jesu Hochzeit* (1980), to a text by his second wife Lotte Ingrisch. Condemned by the Catholic Church as blasphemous for incorporating on stage such episodes as an erotic encounter between Jesus, representing Life and Love, and a female Death and for casting Mary Magdalene as a pop singer, it provoked a national scandal after its first performance in Vienna and was quickly removed from the repertory. This débâcle undoubtedly affected von Einem's subsequent career as an operatic composer, for neither *Der Tulifant* (1990), with its passionate support for environmental issues, nor the posthumously performed *Luzifers Lächeln* have attracted much interest outside Vienna.

Von Einem also excelled as an orchestral composer. The early Capriccio and Concerto for Orchestra already manifest a virtuoso approach to scoring modelled on Stravinskian neo-classicism. Not surprisingly, his brilliant accessible style found particular favour in the United States, and he received prestigious commissions from orchestras in Louisville, Boston, Cleveland, Los Angeles and Minneapolis. The Stravinskian influence, as well as an obvious indebtedness to the Viennese tradition of Haydn, Mozart and Schubert, is perceptible in many of these works (e.g. *Symphonische Szenen*, *Tanz-Rondo* and *Wiener Symphonie*), though it is often tempered by a romanticism that recalls Bruckner, Mahler and early Schoenberg. Allusions to his Viennese forebears are also apparent in von Einem's chamber work, much of which dates from the last twenty years of his life. Here von Einem composes in a more austere contrapuntal manner, exercising a tight formal control over his thematic material and moving freely from passages of strongly defined tonality to those with a high level of dissonance.

While von Einem is revered in his native Austria, much of his large output continues to be neglected elsewhere. This is particularly surprising in the case of his numerous lyrical song-cycles, many of which have been championed by leading Austrian and German singers. His music has been attacked frequently for both his musical conservatism and its stylistic eclecticism, but it may well be reappraised in years to come. Without doubt, his steadfast refusal to adopt more radical modes of expression, particularly during the 1960s and 70s, is now perceived as being far less reactionary, and his consistent commitment to free tonality certainly provided inspiration to significant younger Austrian composers such as Kurt Schwertsik and H.K. Gruber who had themselves become rather disillusioned with avant-garde modes of musical expression.

WORKS

OPERAS

Dantons Tod (2 pts, B. Blacher and von Einem, after G. Büchner), op.6, 1944–6; Salzburg Festspielhaus, 6 Aug 1947

Der Prozess (9 scenes, Blacher and H. von Cramer, after F. Kafka), op.14, 1950–52; Salzburg, Festspielhaus, 17 Aug 1953

Der Zerissene (2, Blacher, after J. Nestroy), op.31, 1961–4; Hamburg, Staatsoper, 17 Sep 1964

Der Besuch der alten Dame (3, F. Dürrenmatt), op.35, 1968–9; Vienna, Staatsoper, 23 May 1971

Kabale und Liebe (2 pts, Blacher and L. Ingrisch, after F. von Schiller), op.44, 1974–5; Vienna, Staatsoper, 17 Dec 1976

Jesu Hochzeit (mystery op, 2, Ingrisch), op.52, 1978–9; Vienna, Theater an der Wien, 18 May 1980

Prinz Chocolat (Musikmärchen, 5 episodes, Ingrisch), op.66, 1982; Berne, 1 Mar 1983

Der Tulifant (3, Ingrisch), op.75, 1984; Vienna, 30 Oct 1990

Luzifers Lächeln (chbr op, 1, Ingrisch), op.110, 1996; Vienna, Ronacher, 4 Feb 1998

BALLETS

Prinzessin Turandot (2 scenes, L. Malipiero), op.1, 1942; Dresden, Staatsoper, 5 Feb 1944

Rondo vom goldenen Kalb (3 Nachtstücke, T. Gsovsky), op.13, 1950; Hamburg, Staatsoper, 1 Feb 1952

Pas de coeur (Tod und Auferstehung einer Ballerina) (2 scenes, von Cramer), op.16, 1952; Munich, 22 July 1952

Glück, Tod und Traum (dance serenade, Y. Georgi), op.17, 1953; Alpbach, 23 Aug 1954
Medusa (3 scenes, M.G. Hoffmann), op.24, 1957; Vienna, Staatsoper, 16 Jan 1957
Incid music

ORCHESTRAL

Capriccio, op.2, 1942–3; Conc. for Orch, op.4, 1943; Dantons Tod, suite, op.6a, 1949; Orchestermusik, op.9, 1947; Serenade, op.10, double str orch, 1949; Turandot, 4 episodes, op.1a, perf. 1954; Meditationen, op.18, 2 movts, 1954; Pf Conc., op.20, 1955; Wandlungen, op.21, 1956; Symphonische Szenen, op.22, 1956; Ballade, op.23, 1957; Medusa, op.24a, 3 movts, 1957; Tanz-Rondo, op.27, 1959; Philadelphia Sym., op.28, 1960–61; Nachtstücke, op.29, 1960; Vn Conc., op.33, 1967; Hexameron, op.37, 1969; Bruckner Dialog, op.39, 1971; Wiener Symphonie, op.49, 1976; Arietten (Pf Conc. no.2), op.50, 1977; Rindlberger Marsch, op.54, 1979; Ludi Leopoldini, op.55, 1980; Hunyadi László, op.59, 1980–81; Org Conc., op.62, 1981; Münchner Symphonie, op.70, 1983; Sym. no.4, op.80, 1986; Concertino Carintico, op.86, 1988; Fraktale, Concerto Philharmonico, op.94, 1991–2; Slowakische Suite, op.107, str, 1995

OTHER INSTRUMENTAL

Chbr: Sonata, op.11, vn, pf, 1949; Reifliches Divertimento, op.35a, vn, va, hn, pf, 1972; Str Qt no.1, op.45, 1975 [variations on a theme from the 3rd scene of Der Besuch der alten Dame]; Wind Qnt, op.46, 1975; Str Qt no.2, op.51, 1977; Str Qt no.3, op.56, 1980; Laudes Eisgarnenses, op.58, 4 hn, 1980; Steinbeis Serenade, op.61, ob, cl, bn, hn, tpt, pf, vn, vc, 1981 [variations on a theme from Mozart's Don Giovanni]; Str Qt no.4, op.63, 1981; Str Trio, op.74, 1984; Sonata, op.76, vc, pf, 1985; Von der Ratte, vom Biber und vom Bären, serenade, op.84, cl, bn, hn, 1988; Qt, op.85, fl, vn, va, vc, 1988; Str Qt no.5 'Festina lente', op.87, 1989–91; Miniatures, op.91, cl, bn, 1990; Verdehr-Trio, op.97, cl, vn, pf, 1992; Jeux d'amour, 3 caprices, op.99, hn, pf, 1993; Karl-Hartwig Kaltners Malerei, divertimento, op.103, tpt, 2 hn, trbn, 1993; Str Trio, 1996, frag.
Solo inst: 4 Klavierstücke, op.3, pf, 1943; 2 Sonatinas, op.7, pf, 1947; 3 Studien, op.34, gui, 1967; 2 Capricen, op.36, hpd, 1969; Sonata, op.47, vn, 1975–6; Sonata, op.60, va, 1980; Sonata, op.64, org, 1981; Vermutungen über Lotti, op.72, 10 Capricen, pf, 1983; Sonata enigmatica, op.81, db, 1986–7; Der einsame Ziegenbrock, op.89, cl, 1989; Titbits, 7 studies, op.98, cl, 1992; Ollapotrida, 7 studies, op.101, vn, 1993; Aspekte, 4 portraits, op.102, ob, 1993; Musik für Solo-Cello, op.108, 1995; 7 Portraits, op.109, pf, 1995; Seltsame Tänze, op.111, cl, 1996
Arrs. of works by Schubert and Musorgsky

VOCAL

Choral: Hymnus (Lernet-Holenia), op.12, A, SATB, orch, 1949; Das Stundenlied (B. Brecht), op.26, SATB, orch, 1958; Die träumenden Knaben (O. Kokoschka), op.41, SATB, cl, bn, 1972; An die Nachgeborenen (cant., Brecht, F. Hölderlin, Sophocles), op.42, Mez, Bar, SATB, orch, 1972–3; Gute Ratschläge (cant., various authors), op.67, Mez, SATB, gui, 1982; Unterwegs (song cycle, C. Busta, H. Schuhmacher, Ingrisch), op.82, SATB, 1982, rev. 1988; Missa Claravallensis, op.83, SATB, ww, perc, 1987, rev. 1988; Votivlieder (Busta), op.93, SA, 1990; Tier-Requiem (Ingrisch), op.104, S, spkr, SATB, orch, 1993
Other vocal (texts by Ingrisch unless otherwise stated): 8 Hafislieder, op.5, S/T, pf, 1944; 5 Lieder (H. Bethge, after Chin. poets), op.8, Mez/Bar, pf, 1946–8; Japanische Blätter (Bethge, after Jap. poets), 16 songs, op.15, v, pf, 1951; 7 Lieder (H. Carossa, J. Weinheber, W. Borchert, F. Hubalek, W. Bollmann), op.19, 1v, pf, 1954–6; 5 Lieder (Bollmann, K. Boysen), op.25, S/T, pf, 1958; Von der Liebe (J.R. Jiménez, Brecht, G. Mistral), op.30, S, orch, 1961; Kammergesänge (Bethge, Carossa, after Chin. and Jap. poets), 8 songs, op.32, Mez, chbr orch, 1964: Geistliche Sonate (scripture), op.38, S, tpt, org, 1962, rev. 1971–3; Rosa Mystica (H.C. Artmann), 8 Lieder, op.40, Mez, chbr orch, 1972; Leb wohl, Frau Welt (H. Hesse), song cycle, op.43, Mez/Bar, pf, 1974; Liebes- und Abendlieder (Weinheber, S. Walter, M. Bollinger), song cycle, op.48, T, pf, 1976; Leib- und Seelensongs, op.53, v, gui, 1979; Lieder vom Anfang und Ende, op.57, Mez/Bar, pf, 1980; Carmina Gerusena (Busta, F. Mayröcker), 8 songs, op.65, v, pf, 1981
Liderliche Lieder zur Gitarre, op.68, T, gui, 1982; Lebenstanz, song cycle, op.69, Mez, pf, 1982, rev. 1983; 8 Waldviertel Lieder, op.71, Mez, pf, 1983; 12 Tag- und Nachtlieder (various authors), op.73, Mez, pf, 1983; Inmitteln aller Vergänglichkeit (Busta), 12 songs, op.77, Mez, T, pf, 1985; Meridiane (Schumacher), 5 songs, op.78, v, pf, 1986; Bald sing' ich das Schweigen, song cycle, op.79, Mez, pf, 1987; Der Alchemistenspiegel, op.90, Mez/Bar, chbr orch, 1990; Überlasst den Elementen euch und ihren Geistern (Paracelsusspiel), op.92, 1990; Schatten der Rose (various authors), 12 songs, op.95, Mez/Bar, pf, 1991; 4 Tierlieder, op.96, Mez/Bar, pf, 1992; Duette in allem Farbeu (Prinzessin Travrigkeit) (L. Ingrisch), op.100, Mez, Bar, pf, 1992; Intime Töne (G. Benn), op.105, Mez, cl, 1993; Himmelreichlieder, op.106, medium v, pf, 1995

ERIK LEVI

Einfall (Ger.). A type of appoggiatura or passing note. *See* ORNAMENTS, §8.

Einfelde, Maija (*b* Valmiera, 2 Jan 1939). Latvian composer. She graduated from Jānis Ivanovs' composition class at the Latvian State Conservatory in 1966. From 1968 she taught music theory and composition at various music schools, and from 1980 to 1994 at the Jāzeps Mediņš Music College in Rīga. Her music is characterized

by a psychological approach, in which lyricism and Expressionism predominate.

ARNOLDS KLOTIŅŠ

Eingang (Ger.: 'entrance'). A short improvisatory passage that leads into a statement of thematic material. While *Eingänge* have been used by composers from J.S. Bach to Shostakovich, they are most frequently found in the works of Classical composers. Theorists such as Quantz (1752), J.A. Hiller (1780), H.C. Koch (1782–93), Türk (1789), Czerny (1829) and Baillot (1834) described and provided examples of the *Eingang*, but used different labels to identify it. Some 20th-century scholars use the terms 'lead-in', 'introduction' and 'entry', among others. *Eingänge* are found in virtually all genres, instrumental and vocal, of the 18th and 19th centuries.

Mozart used the term 'Eingang' in two letters to his father (22 January 1783, 15 February 1783) and in some of his manuscripts. In the manuscript of the Piano Concerto in B♭ K595 he labelled one passage 'Eingang im Rondo' and another 'Cadenza per il Rondo', thus drawing a distinction between an *Eingang*, which initiates and provides an improvisatory introduction to a phrase, and a cadenza, which embellishes a phrase's final harmonic progression. Mozart's written-out *Eingänge* (e.g. bar 173 of the finale of his Piano Sonata in D K311) may serve as a guide to his improvisatory style.

Eingänge are usually shorter than cadenzas, may consist of only a few notes, and typically begin on the dominant triad or seventh chord, in contrast to the tonic 6-4 chord from which a cadenza is usually launched. While cadenzas often include preceding thematic material, *Eingänge* tend to be non-thematic (exceptions include the *Eingang* at bar 80 of the third movement of Haydn's Oboe Concerto in C H VIIg:C1, and the one Mozart wrote for the third movement of his Piano Concerto in B♭ K450, both of which are thematically related to their respective movements). Some begin at the final chord or note of the previous phrase, thus forming an elision with the new phrase, as in the third movement of Mozart's Piano Sonata in B♭ K333, where an *Eingang* begins as an extension of the dominant at the end of bar 198; the improvisatory passage prepares and leads into the returning rondo theme at bar 199. Other *Eingänge* begin independently of the previous phrase, as at bar 287 of the third movement of Haydn's Sinfonia Concertante in B♭ H I:105; in either case, the *Eingang* momentarily delays and emphasizes the melodic content of the new phrase.

An *Eingang* may be either written into the score by the composer or left to the invention of the performer. In addition to the compositions cited above, examples of written-out *Eingänge* include those at bar 131 of the first movement of Haydn's Piano Sonata in E♭ H XVI:49; at bar 75 of the third movement of Beethoven's Quintet in E♭ for piano and wind op.16; and in the third movement of Johann Baptist Vanhal's Piano Concerto in D op.14, bars 153–9.

Eingänge that the composer has left to the invention of the performer are usually signalled in the score by a fermata. They are found in the rondo movements of most Classical concertos in which, following a contrasting episode, the performer is cued to add an improvisatory passage that leads into and highlights the returning rondo theme. Examples are found in bar 124 of the third movement of Haydn's Trumpet Concerto in E♭ H VIIe:l; at bar 164 of the finale of Mozart's Flute Concerto in G; and at bar 32 of the finale of Carl Friedrich Zelter's Viola Concerto in E♭. An example of a signaled *Eingang* in the vocal repertory occurs in Despina's aria 'In uomini, in soldati' in Mozart's *Così fan tutte*, where Mozart placed an oversized fermata over each part at bar 20. During the Classical era, composers occasionally placed an oversized or wide fermata in the score clearly to indicate the addition of improvised ornamentation. In the passage just cited, Despina supplies an *Eingang* that prolongs the dominant harmony of bar 20 while providing an ornamental introduction to the following phrase.

The practice of improvising an *Eingang* before the statement of thematic material probably developed during the early 17th century and, as with other performing practices, then became a compositional technique. Early occurrences of written-out *Eingänge* are seen, for example, before the ritornello theme in the third movement of Bach's Violin Concerto in E BWV1042, at bars 94 and 143. In Handel's Organ Concerto in D minor HWV 309 the composer marked six places for improvisatory passages to be added by the soloist prior to the statement of thematic material. For example, following the cadence at bar 29 of the second movement, Handel wrote the words 'ad libitum' in the score, directing the soloist to provide an improvised passage prior to the entrance of the fixed thematic material. Later in the same movement, at bar 62, the circumstances are repeated: following the cadence, the soloist is cued to add a passage of his or her own design that leads into the returning theme. Having flourished in the streamlined phrases and clear rhetoric of the Classical style, the *Eingang* became absorbed by the overlapping phrase structures of 19th-century music. Nevertheless, composers continued to use it as a means of emphasizing thematic material; later examples include the written-out *Eingänge* at bars 132–43 of the third movement of Brahms's Piano Concerto no.1 in D minor; at bars 143–8 of the first movement of Richard Strauss's Oboe Concerto; and at the beginning of the fourth movement of Shostakovich's Violin Concerto no.1, op.99.

Einleitung (Ger.). *See* INTRODUCTION (i).

Einschnitt (Ger.). A term used by J.G. Sulzer, H.C. Koch and others to denote a small, usually two-bar, unit of structure. *See* ANALYSIS, §II, 2.

Einstein, Alfred (*b* Munich, 30 Dec 1880; *d* El Cerrito, CA, 13 Feb 1952). American musicologist of German origin. He was a cousin of the scientist Albert Einstein. He began by studying law, but abandoned it after only a year and became a pupil of Adolf Sandberger in musicology and of Anton Beer-Wallbrunn in composition. In 1903 he obtained the doctorate at Munich University with a dissertation on German works for the viola da gamba in the 16th and 17th centuries. During the next decade he brought his name to a wider public with a series of articles in scholarly journals. His appointment in 1918 as the first editor of the *Zeitschrift für Musikwissenschaft* gave him a position of great influence, which he held until 1933. He was also music critic on the *Münchner Post* until 1927 and on the *Berliner Tageblatt* from 1927 to 1933. In the latter year he left Germany because of the Nazi regime. He stayed in London for some time and then lived mainly in Mezzomonte, near Florence. Towards the end of his stay in Europe he was offered a post at Cambridge but refused it. In 1939 he left Italy for the USA, where he became professor of music history at Smith College, twice occupying the Neilson Chair there. He also taught at Columbia University, New York, at Princeton and the University of Michigan at Ann Arbor and, from 1940, at the Hartt School of Music, Hartford. He became an American citizen in 1945. In 1949–50 he was visiting professor at Princeton and Yale; the former had conferred an honorary doctorate on him in 1947.

Einstein's life was one of increasing, immensely varied industry devoted to musicology. His finest achievement was undoubtedly *The Italian Madrigal* (1949), which was the first comprehensive study of the subject in any language; it is still not superseded as a whole, though detailed work by others on certain aspects of the subject has caused Einstein's findings to be modified. His book is the product of immense learning, and the breadth of his approach, as impressive in discussion of madrigal texts as in that of the music, is one of its outstanding features. It must be added, however, that his work is to some extent diminished by its rather Germanic aesthetic basis. Einstein's lifelong research into printed madrigal sources contributed substantially to his notable revision of Vogel's *Bibliothek* (1945–8).

The fruits of Einstein's devotion to Mozart are seen at their best in his 1937 revision of Köchel (on which he began work in 1925), in the 1947 reprint with supplement and in his fine edition of the last ten string quartets (1945). For details of the first and early editions of Mozart, he relied principally on the work of Deutsch, Hirsch and Oldman but himself examined all available autographs as the basis for a new chronology, also taking account of the 'nouveau classement' of Wyzewa and Saint-Foix. Allowance should be made for the fact that he did the last four years or so of his work in adverse circumstances, but it was unfortunate that he relied mainly on judgment of style when dating Mozart's undated compositions instead of undertaking the systematic palaeographical study essential to establishing as exact a chronology as possible, particularly of the early music. Certain tendencies visible in the 1937 Köchel became even more marked in *Mozart: his Character, his Work* (1945), where a wealth of critical insight and illuminating comment is marred by some faulty judgments and a good deal of groundless speculation presented as fact.

Einstein was a highly skilled editor, as can be seen in his thorough revisions of Riemann's *Musik Lexikon* (9th–11th editions, 1910–29), his expanded translation of Eaglefield-Hull's *Dictionary* (1926), his work for the *Zeitschrift für Musikwissenschaft* and his editions of a great variety of music. His numerous articles, which span nearly half a century, contain much that is still of value and show the catholicity of his scholarly interests. Some of his books – *Schubert* (1951), *Music in the Romantic Era* (1947) and *Greatness in Music* (1941) – now seem diffuse and subjective. But his *Short History of Music* (1917) is an admirable book of its kind: it keeps to essentials and maintains succinctness without a trace of obscurity. In sum Einstein's achievement was extensive and distinguished, though uneven. For over 40 years, as one of the greatest musicologists of his time, he exerted considerable influence on musical thought in Europe and the USA.

ALEC HYATT KING

Einstein, Arik (*b* Tel-Aviv, 3 Jan 1939). Israeli singer and lyricist. He was a member of the Nakhal Army Entertainment Ensemble from 1957 until 1960. His early recordings (1960–66) as a solo artist and as a member of the Yarkon Bridge Trio gained widespread popularity. He became dissatisfied with the Israeli popular music of the 1960s and turned to rock music, and between 1967 and 1972 he worked with rock-oriented musicians to record several albums which are generally considered to constitute the birth of Israeli rock. These include *The High Windows*

Trio (1967, with Shmulik Kraus), *Shablool* (1970, with Shalom Hanoch) and *At Avigdor's Grass* (1972, with Miki Gavrielov). In the late 1970s and the 1980s he made a series of albums with the composers Shem-Tov Levy and Yoni Rechter which included rock interpretations of Israeli traditional songs and some new songs in a similar style. During the 1980s and 90s he worked many times with his previous associates and continued to develop his brand of soft rock to critical acclaim. In creating a style rooted in Israeli musical traditions, he became an important and well-loved figure in the development of Israeli popular music from 1960 onwards.

RECORDINGS

MOTTI REGEV

Éire. *See* IRELAND.

Eiríksdóttir, Karólína (*b* Reykjavík, 10 Jan 1951). Icelandic composer and teacher. She graduated as a piano teacher in 1974 from the Reykjavík College of Music, where she also studied composition with Thorkell Sigurbjörnsson (1971–3). She completed her education at the University of Michigan both in music history and musicology (MM 1976) and in composition, studying with William Albright (MM 1978). She has taught at the Reykjavík College of Music (1979–89 and from 1995) and at the Kópavogur Music School (1979–84). Vice-chair of the board of the Icelandic Society of Composers (1988–91, and from 1995), she was chair of the board of the Iceland Music Information Centre (1983–8).

As a composer she seeks to adapt her technical and expressive means to the needs of each individual work, and from this arises the great stylistic variety of her music. Every possible sound is considered as a creative inspiration. In this way she manifests her opposition to conventional compositional thinking and reveals her search for new aesthetic and technical means which are representative of her time. The first period of her output, from 1982, is characterized by an avoidance of traditional constructional features (particularly development), by transparent textures and by a purity and concentration in expression. From *Sinfonietta* (1985) onwards – a piece she describes as 'more logical and organized' – her musical language has evolved to include more traditional stylistic patterns; the emphasis falls more on expression, and her music evinces a greater lyricism, reflection and emotion.

MAREK PODHAJSKI

Eis (Ger.). E♯. *See* PITCH NOMENCLATURE.

Eisen, Cliff (*b* Toronto, ON, 21 Jan 1952). Canadian musicologist. He received the MA in 1978 at the University of Toronto; at Cornell University he worked with Neal Zaslow and James Webster and took the doctorate in 1986. He was an assistant professor at the University of Western Ontario (1987–8) and at New York University (1988–95) and in 1997 was appointed reader in historical musicology at King's College, University of London; he is also associate editor of the new Köchel catalogue. He received the Alfred Einstein Award of the American Musicological Society in 1992.

Eisen's research has focused on the Classical period, particularly Mozart, performing practice and 18th- and 19th-century chamber music. His publications have dealt with many aspects of Mozart's biography and works, focusing on contemporary documentation of Mozart's life, as well as his chamber music, symphonies, and life in Salzburg. Eisen's dissertation on the symphonies of Leopold Mozart, which includes a thematic catalogue, deals with the complex question of authenticity surrounding Leopold and Wolfgang Amadeus Mozart's music. In addition to his academic activities, Eisen has been an adviser to Robert Levin and Christopher Hogwood for recordings of the complete Mozart piano concertos.

PAULA MORGAN

Eisenach. German city in Thuringia. In about 1206 the Wartburg Castle was the scene of a Minnesang contest, the 'Sängerkrieg auf der Wartburg' ('Wartburgkrieg'), that included Walther von der Vogelweide, Heinrich von Ofterdingen, Reinmar von Zweter and Klingsor. The event, recorded in the manuscripts of Manessische and Jena, is commemorated in 19th-century accounts – notably Wagner's *Tannhäuser* – and by the annual Eisenacher Sommergewinn festival. Mystery plays were given in Eisenach from the 12th century onwards, among them the *Spiel von den zehn klugen und törichten Jungfrauen* (1321). Martin Luther's early education was in the Dominican Lateinschule where he belonged to the Kurrende (choir), 1498–1501; 21 years after he left the school, it and the town churches had become Protestant. One of the town's treasures, the Kantorenbuch (*D-EIa*), was copied (1535–45) by Wolfgang Zeuner, a Kantor at the school; it contains motets by Josquin, Obrecht, Senfl and composers with local connections: Conrad Rein, Adam Rener, Anthonius Musa, Johann Walther and Martin Zeuner.

From 1672 to 1741 Eisenach was the seat of the duchy of Saxe-Weimar-Eisenach. The Hofkapelle united outstanding musicians with the firmly established Stadtpfeiferei, among whom was Johann Ambrosius Bach, Johann Sebastian's father. J.S. Bach was born in Eisenach and was a pupil at the Lateinschule. G.P. Telemann was court Kapellmeister for eight years from about 1708. Johann Christoph Bach was organist at St Georg from 1665 to 1703, succeeded by Johann Bernhard Bach and, in the 1740s, Johann Bernard's son Johann Ernst.

After the court returned to Weimar in 1741, musical life in Eisenach became more provincial. A Musikalische Gesellschaft was founded in 1759 and a Singchor in 1766. In 1817 students from 13 German universities met at the Wartburg and sang patriotic songs to demonstrate their wish for German unity. The Musikverein, founded in 1836, continued until war broke out in 1939. A small theatre accommodated occasional visiting companies; it was replaced by the Landestheater in 1951. Liszt conducted the spectacular première of his *Legende von der heiligen Elisabeth* at the Wartburg in 1867.

From 1919 to 1941 the Städtisches Orchester (later the Philharmonisches Orchester der Stadt Eisenach) performed under Walter Armbrust. Reger's *An die Hoffnung* had its première in Eisenach in 1912. St Georg became a diocesan centre of music; Rudolf Mauersberger (Kantor 1925–30) and his brother Erhard (Kantor 1930–61) maintained a high standard. The Musikschule Johann Sebastian Bach was founded in 1953. The Bach museum, established in 1907 by the Neue Bachgesellschaft, in a house close to where Bach was born, is an international centre of Bach studies and holds a valuable library and instrument collection. The town also has a Wagner museum, at the foot of the Wartburg. The later 20th century saw the founding of festivals celebrating Telemann (1982) and Bach (1991: the Thüringer Bach-Wochen, shared with other cities), as well as a jazz festival. The Kammermusik der Wartburgstadt association (established 1990) gives concerts in the Wartburg.

G. KRAFT/PERCY M. YOUNG

Eisenberg, Maurice (*b* Königsberg [now Kaliningrad], 24 Feb 1902; *d* New York, 13 Dec 1972). American cellist of German birth. He studied in Baltimore, Berlin, Leipzig and Paris, where he took harmony and counterpoint with Nadia Boulanger; he also worked with Casals in Spain. Having played in the Philadelphia Orchestra and the New York SO, he gave recitals in Paris, London, Berlin and other cities from 1926, and appeared as soloist with leading European and American orchestras. From 1929 to 1939 he was professor of the Casals class at the Ecole Normale, Paris. A member of the Menuhin Trio (with Yehudi and Hephzibah Menuhin), he founded and was artistic director of the London International Violoncello Centre and held annual master classes in Estoril, Portugal. Eisenberg's repertory included much 20th-century music, and he gave the first performance of Julien Krein's Cello Concerto, which is dedicated to him, in Paris in 1929 and of Glazunov's Concerto-Ballata there in 1933 under the composer. The author (with M.B. Stanfield) of *Cello Playing of Today* (London, 1957), he contributed many articles to music journals, magazines and newspapers. At the time of his death he was a professor of the cello at the Juilliard School, New York.

ELIZABETH FORBES

Eisenbrandt, H(einrich) C(hristian) [Christian Henry] (*b* Göttingen, 13 April 1790; *d* Baltimore, 10 March 1861). German maker of woodwind and brass instruments, active in the USA. He may be the 'Henry Eisenbrand' listed in the New York City Directory for 1815; someone of that name had dealings with J.J. Astor around that time. By 1819, however, Eisenbrandt had settled in Baltimore. Flutes and clarinets by him were awarded a silver medal at the Great Exhibition in London in 1851. He also entered instruments in at least three of the Metropolitan Mechanics Institute exhibitions held in Washington, DC. In 1853 the judging committee stated that his 'splendid flutes and clarinets have no competition and deserve the highest praise'; and in 1857 a saxhorn received special notice 'for the great improvements made in the valves'. Two American patents were obtained by Eisenbrandt for improvements in brass instruments. After his death in 1861 the business was continued until at least 1918 by his son H.W.R. Eisenbrandt.

Known instruments by Eisenbrandt include bassoons, oboes, a basset-horn, clarinets with five to 16 keys, flutes, flageolets, a few brass instruments and a drum. A jewelled clarinet is now in the Smithsonian Institution, and a cornet with a change of key mechanism patented by Eisenbrandt is also known. The Shrine to Music Museum at the University of South Dakota has several clarinets and a drum.

ROBERT E. ELIASON

Eisenhut [Eisenhuet], **Thomas** [Tobias] (*b* Augsburg, 23 May 1644; *d* Kempten, nr Mainz, 4 Nov 1702). German composer, teacher and theorist. He probably received his early education at the Jesuit Gymnasium, Augsburg. In 1664 he became a novice at the monastery of St Georg, Augsburg, taking the name Thomas in place of his baptismal name, Tobias. After ordination he became director of the choir as well as music instructor to the boys in his charge. With a change of abbot he was deprived of these duties. In 1677, however, he was called to the princely abbey of Kempten, where he became Kapellmeister as well as teacher and composer; he retained these positions until his death. He was made *canonicus regularis* at St Georg in 1674 but never returned to participate actively in affairs there. His treatise, *Musicalisches Fundament*, is an elementary text reflecting his work as a teacher of boys. It is in two parts. In the first he discussed such basic matters as notation, the church modes and simple vocal exercises, and he stressed the need to practise solmization; the second part indeed consists entirely of exercises in solmization. He stated that he had assembled all this material 'from the most famous and valuable authors' and that he had adapted it 'to avoid all annoying prolixity and injurious hindrance to the pupils' progress'.

WORKS

published in Kempten unless otherwise stated

Harmonia sacra per 30 concentus musicos, 2–7vv (1674)
Antiphonarium Marianum continens 4 antiphonas BVM, 1–4vv [2 vn, 3 va ad lib] (1676–7)
Hymni ariosi ... per totum annum, pars I, 1–4vv, insts, op.3 (1680)
Sacri concentus ... cum 4 antiphonis BVM, 1v, insts ... necnon lytaniis brevibus BVM, 4vv, 2 vn, op.4 (1683)
Offertoria de festis, tempore et communi, novis textibus, ariis, fugis et stylo recitativo 5vv concert., 2 vn, 2 cl, org [ripieno chorus 4vv, 3 va, 3 trbn ad lib] (Augsburg, 1694)

THEORETICAL WORKS

Musicalisches Fundament [Fundamentum musicale], so auss denen berühmbt-und bewerthisten Authoribus eines Thails zusamen getragen, andern Thails aber mit Vermeidung aller verdrüsslichen Weitläuffigkeit und schädlichen Auffenthaltung der Disciplen ... auch in conformität dess jetzmahlig-musicalischen Styli an Tag Geben (Kempten, 1682, 2/1702, 3/1732)

GEORGE J. BUELOW

Eisenhuth, Đuro (*b* Zagreb, 25 Dec 1841; *d* Zagreb, 2 April 1891). Croatian composer, conductor and violinist. He studied the violin in Zagreb and composition and counterpoint in Vienna. From 1861 to 1875 he led his own orchestra, which performed mostly dance and popular music. In 1867 Eisenhuth started teaching the violin at the music school of the Hrvatski Glazbeni Zavud, and in 1881 he became the leader of the theatre orchestra, which he also conducted for operettas and operas; in 1873 he was appointed conductor of the Hrvatsko Pjevačko Društvo Kolo. He held all these posts until his death. During the 1870s he also conducted several other Zagreb choral societies (Sloga, Merkur, Hrvatska lira, Crkveno Glazbeno Društvo). Eisenhuth was organist of the church of St Mary in Zagreb, and also performed as a solo violinist and in a string quartet and piano trio.

According to his own work-list (in *HR-Zaa*), Eisenhuth wrote over 220 sacred and secular compositions. Although the quality of his compositions is unexceptional for his time, his music was frequently published and performed in Croatia, and in the 1870s and 80s he was the most influential musician in Zagreb after Ivan Zajc. He wrote several *šaljivke*, burlesques for soloists, choir and orchestra, which are the first such humorous compositions in Croatia. His brother Josip (1844–96) was also a composer, choral conductor and cellist.

WORKS

(*selective list*)

most compositions in HR-Zh

Stage: Sejslav ljuti [Angry Sejslav] (op, F. Žigrović Pretočki), Zagreb, 10 March 1878; Otelo (operetta), op.181, 1886; Moć ljubavi [The Power of Love] (op), unperf.; Petar Bačić (op, L. Botić), inc.
Vocal: 6 masses (opp.9, 15, 17, 23, 36, 137); 4 Ave Maria (opp.26, 33, 135, 143); Requiem, op.60; arrs. of liturgical hymns in Croatian and Ger.; 99 compositions for male and mixed choir (San, Na Savi, Gorski kraj, Hrvati, Seljačke pjesme, Hrvatski sklad, Bura, Ustaj rode, Čeznuće za dragom, Njoj, Njezin kip, Pozdrav dragoj); qts, 2T, 2B; solo songs; burlesques for soloists, chorus and orch

ZDRAVKO BLAŽEKOVIĆ

Eisenmann, Oliver (*b* Zürich, 7 June 1940). Swiss organist and pianist. He studied the piano with Sava Savoff at the Lucerne Conservatory and the organ with Eduard Kaufman, organist of St Leodegar und Mauritius, Lucerne. He took the doctorate at Zürich University in 1971. A musician of wide-ranging talents and interests, Eisenmann has toured Europe and North America as both a pianist (from 1957) and an organist (from 1972); he has appeared in international organ festivals and played concertos in numerous venues. He has given first performances of many works by his father, the composer Will Eisenmann, in addition to making the first recording of Otto Barblan's *Variations on BACH* and a recording at the composer's suggestion of Frank Martin's *Passacaille* on the Berne Cathedral organ. Other recordings include major works by Mendelssohn, Reger and Boëllmann. He has written numerous articles on organ music, and composed works for organ and piano, chamber music and vocal music.

PAUL HALE

Eisenstadt International Haydn Festival. Austrian festival, which is held each September in Eisenstadt, capital of the Burgenland, where Haydn spent much of his working life in the employment of the Esterházy family. Founded officially in 1987, the festival has developed around the Austro-Hungarian Haydn Orchestra under the direction of Adam Fischer. Each festival includes symphony concerts, lieder and chamber recitals, often featuring rare Haydn repertory such as the baryton trios, and the production of a Haydn opera. In addition to the concerts and opera performances, held in the Esterházy palace,

one or more Haydn masses are given each year in their liturgical setting in the Bergkirche.

RICHARD WIGMORE

Eisenvioline (Ger.). *See* NAIL VIOLIN.

Eisis (Ger.). E𝄪. *See* PITCH NOMENCLATURE.

Eisler, Edmund. *See* EYSLER, EDMUND.

Eisler, Hanns (*b* Leipzig, 6 July 1898; *d* Berlin, 6 Sept 1962). German composer. He was the second son of the liberal middle-class Viennese philosopher Rudolf Eisler. The family moved to Vienna in 1901 and, although there was insufficient money for a piano (one was rented when possible) or for lessons, Eisler studied music from books and scores. His first attempts at composition date from his years at the Staatsgymnasium (1908–15) during which time he and his brother Gerhart, subsequently a celebrated political journalist, became involved in a progressive middle-class youth group. From 1916 to 1918 he served in a Hungarian regiment, continuing to compose (one work that has not survived was an oratorio *Gegen den Krieg*), and after the war he enrolled as a student of Weigl at the New Vienna Conservatory, earning money for the fees as a proofreader for Universal Edition.

Finding the teaching not strict enough, Eisler was accepted as a pupil by Schoenberg and he was taught privately by him (and sometimes by Webern) without fee between 1919 and 1923. Schoenberg recommended the Piano Sonata op.1 to Universal in 1923 and the work was given its première by Steuermann in October 1924. The several chamber works of this time are clearly influenced by Schoenberg and his two senior pupils. The Sonata, for which Eisler received the Vienna Arts Prize, the Songs op.2, the Piano Pieces op.3 and the Divertimento op.4 for wind quintet are extremely chromatic, harmonically rich and dense in incident, yet they possess wit, vivacity, elegance and good humour. *Palmström*, described as 'studies on 12-note series' and written at Schoenberg's request to go into a programme with *Pierrot lunaire*, has a similar lightness of touch and an unmistakable element of parody. The final song, *Couplet von der Tapetenblume*, is essential Eisler, with a typical throw-away surprise cadence. In 1925 he moved to Berlin and took a teaching post at the Klindworth-Scharwenka Conservatory. His Second Piano Sonata op.6 is significantly sparer in texture than the earlier works. Although the harmonic flavour remains – augmented triads, 7th chords with major and minor 3rds – the effect is fresher, as if Eisler was using serialism as a discipline, as a way of controlling extreme chromaticism. This work also introduced the distinctive 'Eisler bass' and jazz-influenced rhythms.

Eisler developed his strongly Marxist political convictions in those years and his commitment led to involvement in Vienna in the activities of, first, the Karl Liebknecht Gesangverein and later the Stahlklang Chorvereinigung. In September 1925 he moved to Berlin and in 1926 he applied to join the German Communist party. His mounting distaste for the direction new music was taking led, in March, to an unpleasant quarrel with Schoenberg, who found Eisler's views insupportable and his attacks on modern music disloyal. Eisler's dissatisfaction with new music included his own work, and his fully formed political ideology found expression in numerous articles and reviews in the Communist party's periodical *Die Rote Fahne* and led him to seek more politically aware ways of serving (and changing) society. His association with the Agitproptruppe 'Das rote Sprachrohr' began late in 1927 and a series of choral works dates from the years 1926–33, as well as the first of the marching-songs, which were of so strong and distinctive a character that they quickly became popular with left-wing groups throughout Europe. *Roter Wedding*, *Der heimliche Aufmarsch*, *Stempellied*, *Kominternlied*, *Solidaritätslied* and the *Einheitsfrontlied* are classics of the socialist movement. The tunes are constructed with superb economy and are usually in the minor mode, remarkable for music with so positive and exhortatory a message, Eisler feeling that the minor produced a more threatening quality. Many of these songs were first sung by the actor Ernst Busch, whom Eisler had met in 1929 and who played an important part in Eisler's career, not only in the 1930s but subsequently in the DDR.

In 1930 began the lifelong friendship and collaboration with Brecht and the creation at once of two masterpieces, the controversial Lehrstück *Die Massnahme* and *Die Mutter*, to Brecht's adaptation of Gorky's novel. Both scores are in Eisler's *Massenlieder* idiom, diatonic and texturally clear, with a profoundly subtle dialectical relationship between words and music. Instead of expressing the text in an obvious 'emotional' way, the music provides a gloss on the words and adds to their meaning; this is a characteristic of all Eisler's word-setting. Other important events during these years were the two visits to the USSR and the production of the film *Kuhle Wampe*, which included the *Solidaritätslied*.

When Hitler came to power in 1933, the activities of everyone involved in the German workers' movement came to a halt; Eisler's music was banned and there began 15 years of exile and the composition of a series of works dedicated to the overthrow of fascism. The next years were extremely eventful ones. As well as visiting the USA, he worked on film scores in Vienna, France, the Netherlands, Belgium and London (where his *Kleine Sinfonie* was first performed in April 1935) and collaborated with Brecht in Denmark on the 'atrocity story' *Die Rundköpfe und die Spitzköpfe*, the music for which contains some of his finest songs. Also from this time are the nine chamber cantatas and Eisler's largest-scale work, the *Deutsche Sinfonie*, a fiercely anti-fascist sequence of cantatas and instrumental movements, composed in Eisler's distinctively tonal type of serialism. The work received its first performance at the Berlin Staatsoper in 1959. After visits to the Spanish front, Paris and Denmark in 1937, Eisler travelled for a third time to the USA and took a post at the New School for Social Research in New York, where he had been guest-lecturer and composition teacher from October 1935 to January 1936. For five months from May 1939 he was visiting professor at the Mexico Conservatory and in 1940 he was given a three-year grant to undertake research into the function of film music. From this resulted scores for four films and the book, written jointly with Adorno, *Composing for the Films*.

In May 1942 Eisler moved to Hollywood and a teaching post at the University of Southern California. He met up with Brecht again and their collaborations continued with *Furcht und Elend des dritten Reiches* and *Galileo*. In addition to several film scores and various chamber works, Eisler set numerous new Brecht poems on the subject of exile in an individual and personal idiom which is an intriguing amalgam of the style of the 1925–6

Hanns Eisler, Malibu, CA, c1946

Zeitungsausschnitte and the *Massenlieder* – an original continuation of the German lied tradition. In 1947 Eisler, Brecht and numerous well-known Hollywood producers and scriptwriters were brought before the notorious Committee on Un-American Activities. Eisler was questioned in a fatuous way about *Die Massnahme* and the *Lob des Kommunismus* song from *Die Mutter*, and about being the brother of the 'communist spy' Gerhart Eisler. A worldwide protest on his behalf was organized and supported by Chaplin, Thomas Mann, Einstein, Picasso, Matisse, Copland and Cocteau. Eisler was released and expelled in March 1948. He returned to Vienna by way of Prague and after two visits to Berlin – in 1949 he set Becher's poem *Auferstanden aus Ruinen*, which was chosen as the national anthem of the DDR – he settled there for the second time. He was elected to membership of the German Academy of Arts, at which he held masterclasses in composition, and he was also professor at the Berlin Hochschule für Musik.

Thus for his last 12 years Eisler worked within the social system for which he had striven all his life. He had expressed his views in numerous essays on the crisis in bourgeois music, on stupidity in music, on progress in music and on the way out of the crisis and the building of a new music culture. Having overwhelmingly succeeded in the writing of protest music for the fight against capitalism and fascism, he was now faced with the need for music that could serve a new republic to be created out of the debris and disillusion of the war. Significantly there is no chamber music from these years. He was convinced that at this time of transition away from 19th-century habits of performance and listening, progressive music would be mainly 'angewandte Musik' – that is 'applied music', used for the theatre, cinema, cabaret, television, public events etc. Inevitably, with Brecht and his ensemble also in Berlin, music for the theatre played an important part, and from 1948 to 1961 scores for 17 plays were written. Not all of this music was new. Eisler's Handelian talent for the judicious re-use of existing material had already been evident in the 1920s and 1930s. Brecht's *Schweyk im zweiten Weltkrieg* was first produced in Warsaw in 1957 but further music was composed for the Frankfurt production of 1959. Eisler's achievement here ranks with his finest. The ironic juxtaposition of heroic, operatic music for Hitler, Himmler and Goering with tuneful cabaret songs accompanied by two pub pianos and interludes for beer garden orchestra matches the humour and flavour of Brecht's play perfectly; the transformation of the opening phrase of Smetana's *Vltava* theme into a powerful and menacing song about social change is a stroke of genius.

From these years also came music for 17 films, a further 36 settings in cabaret chanson idiom of Tucholsky poems (many specially written for Busch) and the *Neue deutsche Volkslieder*. Together with many other 'festival songs' and children's songs, these represent Eisler's attempt to compose in an idiom which could be immediately understood and quickly learnt. It could be argued that this desire for simplicity is sometimes carried too far, but many of these songs are extremely beautiful. *Anmut sparet nicht noch Mühe*, for instance, has a superbly moulded melodic line, accompanied simply but with great subtlety and ideally complementing the text. A parallel example in a concert work of about the same time is the 'Symbolum', the third movement of *Das Vorbild* to words by Goethe, written in 1952 for his pupils. Other important concert works are the *Rhapsodie* for orchestra with soprano solo and the cantata *Die Teppichweber von Kujan-Bulak* in which Eisler most successfully put into practice his belief, expressed as early as 1937, that 'in our new music', one would search in vain for 'bombast, sentimentality and mysticism' but find instead 'freshness, intelligence, strength and elegance'. Even in his last work, the cycle *Ernste Gesänge* for baritone and strings, where the texts might seem sometimes to justify the above undesirable qualities, Eisler asks the singer to refer the listener to the meaning of the words rather than to express them. All his life Eisler felt the need to protect his music from interpreters bred in the opera house and concert hall, and his scores abound with such cautionary directives as 'without sentimentality', 'simply', 'friendly' and even 'politely'.

Some writers and musicians in capitalist countries have poured scorn on politically committed composers such as

Eisler, as if it were reprehensible for an artist to be concerned about his function in society and to wish, through his art, to have some influence on how that society develops. There has also been the assumption that putting one's talents at the service of society inevitably results in propagandist banalities, or that music cannot be at once of use to society and expressive of the artist's self. Obviously, Eisler's enormous output, much of it written at great speed for particular occasions, varies considerably in quality, but the overall standard is extremely high. Even in those works which do not totally succeed, the invention, vitality and superb professionalism give great satisfaction. In his best works, *Die Massnahme*, *Die Mutter*, the *Zeitungsausschnitte* and many of the songs, he achieved undoubted greatness. His ability to write in such a diversity of genres in so individual a way is due to the technical training he received from Schoenberg, his single-minded purpose and his clear-sighted political aims, all controlled by an intellect of the highest calibre. Eisler was a great conversationalist and a master of the art of self-contradiction, using non sequitur and playing devil's advocate in a brilliantly ironic way in an attempt to look at a problem from every angle, to expose it fully to the gaze of his interlocutor. The range of his knowledge was enormous and, like Brecht, he was always intellectually alert.

In the 25 years after his death in 1962, international recognition of Eisler's significance was limited to pockets of enthusiasts restricted by the lack of available scores and recordings. Academic research into his music was assiduously pursued in the DDR but this contrasted with the relatively rare performances there of his larger-scale works. The demolition of the Berlin Wall in 1989 and the reunification of Germany threw his work and thought into a dramatically new perspective, and has required a rethinking of Eisler's and Adorno's aesthetic positions, previously considered to conflict. The foundation in 1994 of the International Hanns Eisler Society and the resumption of work on the Collected Edition are cause for optimism that a proper international assessment of his significance can be made.

WORKS

Edition: H. Eisler: Gesammelte Werke, ed. S. Eisler and M. Grabs (Leipzig, 1968–)

CHORAL WITH ORCHESTRA

op.	
16	Tempo der Zeit (cant., D. Weber [R. Gilbert]), A, B, spkr, chorus, small orch, 1929
20	Die Massnahme, 9 numbers (Lehrstück, B. Brecht), T, 3 spkrs, male chorus, chorus, small orch, 1930
25	Die Mutter, 13 numbers (Brecht), 1931; arr. as cant. with 2 pf, n.d.; some nos. arr., 1935
47	Kalifornische Ballade, 6 numbers (cant., E. Ottwalt), A, Bar, chorus, orch, 1934 [from radio score]
—	Lenin (Requiem), solo vv, chorus, orch, 1935–7
50	Deutsche Sinfonie, 11 numbers (Brecht), solo vv, chorus, orch, 1935–9
—	Mitte des Jahrhunderts (cant., J.R. Becher), S, chorus, orch, 1950
—	Bilder aus der 'Kriegsfibel' (Brecht), solo vv, male chorus, orch, 1957

VOCAL WITH ORCHESTRA

—	3 Lieder (Li-Tai-Pe, Geisha song trans. Klabund), 1919
—	Glückliche Fahrt (J.W. von Goethe), S, orch, 1946
—	Rhapsodie (Goethe: *Faust*, part 2), S, orch, 1949
—	Die Teppichweber von Kujan-Bulak (cant., Brecht), S, orch, 1957
—	Ernste Gesänge, 7 songs (J.C.F. Hölderlin, B. Viertel, G. Leopardi, after H. Richter, S. Hermlin), Bar, str, 1936–62

VOCAL WITH SMALL ORCHESTRA

(The majority of these songs exist in versions with pf, and some in other arrs. Some songs have a choral refrain, often ad lib)

—	Gesang des Abgeschiedenen (Jap., Chin.), A, chbr orch, 1918
—	Sehr leises Gehn im lauen Wind, A, chbr orch, 1919
—	Drum sag der SPD ade (R. Winter [Gilbert]), 1928
—	Lied der roten Matrosen (E. Weinert), 1928
18	6 Balladen (Weber, Brecht, W. Mehring), 1929–30
28	6 Lieder (Weinert, Weber, Jahnke and Vallentin), 1929–31
—	Lied der Werktätigen (Hermlin), 1929–31; with new text, Kominternlied, 1949
22	4 Balladen (B. Traven, K. Tucholsky, Wiesner-Gmeyner, J. Arendt), male v/chorus, small orch, 1930
—	Lied der roten Flieger (Kirsanow), 1931
—	4 songs (L. Frank, Weinert), 1931 [from film Niemandsland]
27	3 songs from film Kuhle Wampe (Brecht), 1931
—	Der neue Stern (Weinert)
—	Ballade von den Seeräubern (Brecht)
37	3 songs (Mehring), 1931 [from film Das Lied vom Leben]
—	Lied der Mariken (Brecht) [from stage work Kamerad Kasper]
41	4 Balladen (Brecht), 1931–2
48	2 Lieder (Clément and Mehring, Weber), 1931–2
39	Ballade vom Soldaten (Ballade vom Weib und dem Soldaten) (Brecht), 1932
—	Magnito-Komsomolzenlied (Lied vom Ural) (Tretjakow), 1932 [from film Die Jugend hat das Wort]
—	Das Lied vom vierten Mann, 1931

DAVID BLAKE

Eisodikon (from Gk. *eisodos*: 'coming in'). A chant of the Byzantine rite sung at the Little Entrance (*hē mikra eisodos*) of the DIVINE LITURGY when the clergy enter in procession with the Gospel lectionary. The Ordinary text of the *eisodikon* is adapted from Psalm xciv.6*a*, 'Come, let us worship', but alternative psalm verses are chosen for the high feasts of the Church year. The psalm verse is followed by a tripartite refrain, of which the first part ('Save us, Son of God') and the third ('allēlouïa') do not vary, but the second changes according to the feast. Although the text of the *eisodikon* varies, the musical sources usually provide a single melody. A few 14th-century AKOLOUTHIAI manuscripts (e.g. *GR-An* 2458) contain a relatively simple melody with the extraordinary rubric stating that it can be sung in any of the eight modes. A more florid melody in 'asmatikon' style is found in one Greek manuscript of the 14th century (*I-GR* Γ.γ.vii); like the *eisodika* of the later akolouthiai manuscripts, this melody is set in the 2nd authentic mode.

Eisteddfod. A competitive festival of Welsh origin, devoted mainly to music and literature. The word 'eisteddfod' (literally 'a session') did not come into common use until the 18th century, but the festival to which it refers originated in the medieval gatherings held from time to time to determine the professional requirements and duties of the bards. The earliest of these for which we have reliable documentary evidence was that summoned by Lord Rhys ap Gruffydd at Cardigan in 1176, but it is likely that similar convocations were held even before this date. Lord Rhys's festival is of particular interest because of certain features it had in common with the modern eisteddfod, namely the inclusion of competitions, the awarding of chairs to the victors, and the fact that it was proclaimed one year in advance throughout the British Isles. Similar meetings are recorded in other parts of Wales during the 14th and 15th centuries, the most important being that held by Lord Gruffydd ap Nicolas at Carmarthen in about 1450. Eisteddfods were also held at Caerwys, in Flintshire, in 1523 and 1567 (or 1568), the second under commission from Elizabeth I to rid the principality of numerous 'vagraunt and idle persons naming theim selfes mynstrelles Rithmers and Barthes'.

As the text of this commission suggests, the social standing of the bards in Wales declined during the Tudor period, and there are no records at all of eisteddfods during the 17th century. (Numerous accounts mention an elaborate festival supposedly held in 1681 by Sir Richard Bassett at Bewpyr Castle, in Glamorganshire, but this, it seems, took place only in the fertile imagination of Edward Williams – Iolo Morganwg – whose literary fabrications bedevil nearly every history of the eisteddfod written during the last 150 years or so.) However, the ancient festivals were often recalled by those responsible for organizing the 'tavern' eisteddfods of the 18th century, in what is sometimes referred to as the 'Almanac' period. Our knowledge of the eisteddfods that took place during this period is based mainly upon announcements such as the following, in John Prys's almanac for 1760:

> Be it known that an Eisteddfod of the Poets and Musicians of Wales will be held at the Bull in Bala Town, on Whit-Monday and Whit-Tuesday in 1760. It will be held under the same rules and in like manner as the ancient Eisteddfod of Caerwys in the days of Queen Elizabeth.

The fame and example of Caerwys were invoked again in 1797, when the Gwyneddigion Society announced its

intention of promoting a festival the following year 'in the hall that the Eisteddfod, by order of Queen Elizabeth, was held in the year 1567'. The Gwyneddigion Society, founded in 1771 by a group of Welsh men of letters in London, became associated with the eisteddfod at a famous meeting in Corwen, Merionethshire, in 1789, which inaugurated a whole series of similar gatherings in various parts of the principality, foreshadowing the National Eisteddfod as we know it today.

At the Carmarthen eisteddfod organized by the Dyfed Society in 1819 the first link was forged between the eisteddfod and the Gorsedd of Bards, perhaps the strangest and most influential of all the daydreams to which Iolo Morganwg contrived to give substance. The Gorsedd was present again at a number of other early 19th-century eisteddfods, including at least one of an important series organized at Abergavenny by the Cymreigyddion y Fenni between 1834 and 1853, but it was not permanently linked to the movement until the National Eisteddfod came into being in 1880. The antiquity which Iolo Morganwg claimed for his Gorsedd has long been discredited, but its pseudo-antique ritual continues to lend colour and a certain dignity to the proceedings of the present-day National Eisteddfod, especially at the ceremonies which accompany the chairing and crowning of the winners in the two main literary competitions.

The first attempts, dating from 1860, to stage an annual national eisteddfod ran into financial difficulties, and a National Eisteddfod Association, strongly supported by the London Society of Cymmrodorion, was set up in 1880. Since then a full-scale National Eisteddfod has taken place every year, the venue alternating between north and south Wales, with occasional excursions across the border to London, Liverpool and Birkenhead. In 1937 the Association was replaced by the National Eisteddfod Council, which was in turn reconstituted as the National Eisteddfod Court in 1952. The title 'Royal' was conferred by Queen Elizabeth II in November 1966.

During the 19th century, choral singing gradually assumed a dominant position in both local and national eisteddfods, and the most coveted musical awards at the National Eisteddfod today are those offered for the Chief Choral and Chief Male Voice competitions. Prizes are also offered for solo singing, penillion, instrumental playing and folk dancing. The professional concerts given each evening in the huge central pavilion amount to what is in effect an important non-competitive festival in its own right. Though the aim of the Gwyneddigion and Cymmrodorion Societies had been to foster, through the eisteddfod, Welsh traditions and culture, the Welsh language itself became increasingly neglected during the 19th century. The English aristocracy was often represented by patrons or guests at the more important eisteddfods; adjudications were given in English by some of the leading English composers and conductors; and the English language was frequently stipulated as an alternative to Welsh in the literary competitions. The Mold eisteddfod of 1823 even ended with the singing, in English, of *God Save the King*. This trend continued well into the 20th century, but renewed concern for the preservation of the Welsh language and Welsh customs has resulted in the introduction of an all-Welsh rule for the entire proceedings.

The National Eisteddfod has served as a model for countless local eisteddfods held each year in towns and villages throughout Wales, and in other countries where Welsh communities exist. Since 1929 the Urdd (Welsh League of Youth) has sponsored an annual eisteddfod, run on similar lines to the National, in which schools and youth organizations participate, first at local and then at national levels. Another offshoot, though with rather different aims, is the International Eisteddfod, held annually since 1947 at Llangollen; this is devoted mainly to the folksongs and folkdances of the nations whose representatives come to compete there from all parts of the globe.

MALCOLM BOYD

Eitner, Robert (*b* Breslau [now Wrocław], 22 Oct 1832; *d* Templin, 2 Feb 1905). German editor and bibliographer. Self-taught in music, Eitner established himself at Berlin in 1853 as a music teacher and also became known as a composer. In 1863 he founded a practical music school, but soon became interested in historical research and in 1867 received a prize from the Amsterdam Maatschappij tot Bevorderung der Toonkunst for compiling in manuscript the *Lexikon der holländischen Tondichter*. Turning to a wider field of musical scholarship, Eitner founded the Gesellschaft für Musikforschung in 1868 (among the first of its kind anywhere) and became its president and secretary. In 1869 he established and edited the *Monatshefte für Musikgeschichte* as the society's journal and followed this in 1873 with the Publikation Älterer Praktischer und Theoretischer Musikwerke, consisting largely of unpublished early music, which ran to 29 volumes during the next 32 years.

Eitner realized the importance of systematic collection of information about the sources of musical history and made them available in published catalogues. In his own words, 'Die Musik-Bibliographie ist die Grundlage alles historischen Wissens'. In 1877, in collaboration with Pohl, Lagerberg and Haberl, he issued the *Bibliographie der Musik-Sammelwerke des XVI. und XVII. Jahrhunderts*. Arranged in chronological order, with locations of copies, and with an index of all the pieces in the collections, this has proved to be a work of enduring value and has served as a model for later bibliographies (for instance,

Howard Mayer Brown's *Instrumental Music printed before 1600*, Cambridge, Massachusetts, 1965, 2/1967).

Shortly after this, Eitner seems to have begun his most important work, the great *Quellen-Lexikon* which appeared in ten volumes (1900–04) and took the birth-year of 1780 as the terminal date for inclusion. Undertaken largely by correspondence in an age when quick, cheap photocopying was unknown and few reliable individual catalogues had been published, it recorded printed and manuscript music held by well over 200 libraries throughout Europe. In method and scope, this was a remarkable achievement which served as the chief source for musical research for over half a century. Only since 1962 has it gradually been superseded by RISM, which has acknowledged its debt to Eitner. Like his great contemporary, Chrysander, Eitner never held any official position, but in 1902 he received the title of Professor in recognition of his dedicated services to musical scholarship.

Above all, Eitner was a pioneer; he was prolific both as a writer of musicological articles and as an editor of early music. Most of his work appeared in the two journals mentioned above and he also contributed to *Allgemeine deutsche Biographie*.

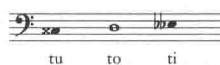
ALEC HYATT KING

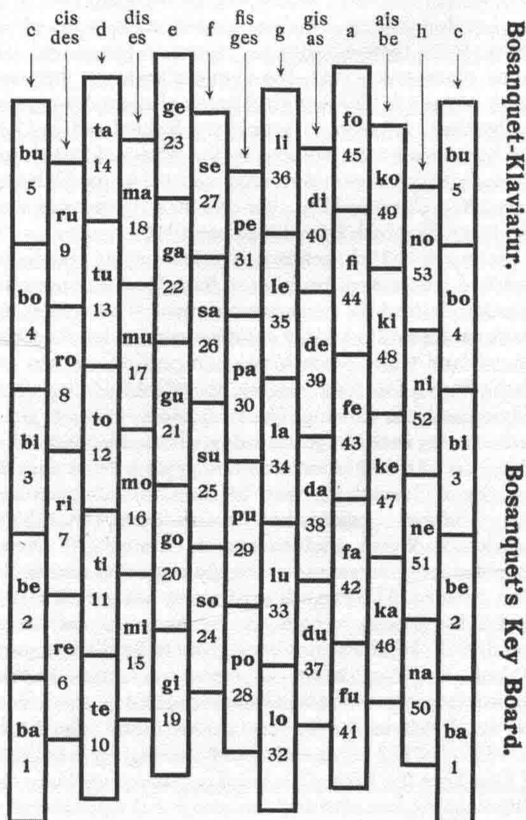


Eitz method. An extremely elaborate solmization system, originally named the 'Tonwort' method. It was devised in 1892 by Carl Andreas Eitz (*b* Wehrstedt, nr Halberstadt, 25 June 1848; *d* Eisleben, 18 April 1924), a German mathematician and teacher of music at Eisleben. Designed to accommodate the chromatic idiom of the late 19th century, the method provided a separate syllabic note name for each diatonic, chromatic and enharmonic degree of the untempered scale. Using these names, the pupil was taught to identify and sing the notes concerned according to just intonation.

The basis of the system was a series of seven note names: *bi*, *to*, *gu*, *su*, *la*, *fe* and *ni*, permanently associated with the rising scale of C major. To these syllabic names

Ex.1

Ex.2



Ex.3

were added two separate series of related names for the intervening semitones and enharmonic degrees. Diatonic semitones were allotted names which retained the vowel of the parent note (ex.1), while the names of enharmonic notes retained the parent consonant (ex.2). The 31 resultant note names are shown in ex.3.

In a further search for complete purity of intonation Eitz extended this series to embrace the more thorough mathematical division of the octave as previously employed by R.H.M. Bosanquet in his 'generalized keyboard harmonium'. This instrument, designed to perform in just

Complete range of Eitz's note names laid out in the form of the Bosanquet keyboard: from C.A. Eitz's 'Das Tonwort' (1928)

intonation in all usual keys, was demonstrated by Bosanquet to the Musical Association in London on 1 May 1875. Its tiered keyboard provided four additional keys for each white note and three for each black note, making a total of 53 keys to the octave. Eitz then evolved a complete range of note names, laid out in the form of the Bosanquet keyboard (see illustration). A superlative example of the sacrifice of aesthetic to scientific considerations, so complicated a system could hardly expect to receive general acceptance; though used at an elementary level in Bavarian schools for a time, the Eitz method was formally banned in Prussia between 1914 and 1925.

BERNARR RAINBOW

Ek, (Fritz) Gunnar (Rudolf) (*b* Asarum, 21 June 1900; *d* Lund, 21 June 1981). Swedish composer. After private studies in Lund he studied the cello, composition with Ellberg and the organ with Hägg and Olsson at the Swedish Royal Academy of Music (1920–26). He was for a decade first cellist in the orchestra of the Swedish film industry; then he was appointed organist of Östra Eneby, Norrköping (1938–42), and Allhelgonakyrkan, Lund (until the end of the 1950s). For eight years he played the cello in the Scania Quartet. In his orchestral works Ek developed a characteristic contrapuntal texture, harmonically based on church modes but with some thematic material also from Swedish folksongs. His church music is often founded on chorales.

HANS ÅSTRAND

Ekerlin, Fanny [Frantiszka]. *See* ECKERLIN, FANNY.

Ekkehard of St Gallen. From the 10th century to the 13th there were five monks with the name Ekkehard at the Swiss monastery of St Gallen who were of some importance to the history of medieval chant and poetry.

(1) **Ekkehard I 'Decanus'** (*b* Thurgau, *c*910; *d* St Gallen, 14 Jan 973). Teacher of the liberal arts at the monastery. His students included his nephew, (2) Ekkehard II 'Palatinus', (3) Ekkehard III, Notker III 'Labeo' (or 'Teutonicus') and Burkhard II (abbot from 1001 to 1022). He went to Rome in about 957 and was offered the abbacy by Pope John XII (955–64), but declined it because of his poor health. He was an overseer of ten brethren (*decanus*) from 958 to 964. His surviving works comprise eight *versus ad sequentias*: *A solis occasu*, *Adoremus gloriosissimum* (of doubtful authenticity), *Ambulans Jesus*, *Concurrite huc*, *O martyr eterni*, *Prompta mente*, *Qui benedici cupitis* and *Summum preconem*. His authorship of the famous epic *Carmen Waltharii manu fortis* (ed. and trans. D. Kratz, New York, 1984), ascribed to him by (4) Ekkehard IV, is considered doubtful by some scholars.

(2) **Ekkehard II 'Palatinus'** (*b c*940; *d* Mainz, 23 April 990). Teacher at St Gallen, at the court of Duchess Hadwig of Swabia (*d* 994) in Hohentwiel Castle, and at the imperial court of Otto I (936–73), where he taught the young Otto II (973–83). His administrative ability won him the favour of Queen Adelheid (*d* 999) and ultimately a post as cathedral provost at Mainz. His works include a book of poems, *Epigrammata*, mentioned by (4) Ekkehard IV but now lost, and a few surviving *versus ad sequentias*: *Gaudendum nobis suadent*, *Plebs parentis*, *Summi conatibus* and perhaps *Laudes Deo perenni* (sometimes incorrectly ascribed to (1) Ekkehard I).

(3) **Ekkehard III** (*b c*950; *d* 21 March, after 1000). A *decanus* like (1) Ekkehard I, although the title did not become associated with his name. He was a teacher at St Gallen and at Hohentwiel, where he taught the castle chaplains. His name is mentioned in the cloister's annals as a writer (976), but no works ascribed to him survive.

(4) **Ekkehard IV** (*b* Alsace, *c*980; *d* St Gallen, 21 Oct 1060). Student of Notker III 'Teutonicus'. He went to Mainz (1022–31) at the request of Bishop Aribo (1020–31), where he led the cathedral *schola*. As choirmaster he took part in the famous celebration of Easter Mass at Ingelheim on 29 March 1030 in the presence of Emperor Conrad II (1024–39). After Aribo's death he returned to St Gallen. Ekkehard IV was a prolific writer. His best-known work is the *Casus monasterii sancti Galli* (ed. and trans. H.F. Haefele, Darmstadt, 1980), written between 1046 and 1053 as a continuation of an earlier chronicle by Ratpert (*d* 890). Other works include *Benedictiones ad mensas*, *Liber benedictionum* (1020–35), *Poemata*, *Versus ad picturas claustri sancti Galli*, *Versus ad picturas ecclesie Moguntium*, epitaphs for Notker I 'Balbulus', Aribo of Mainz and Walter von Speyer, reworkings of poems by (1) Ekkehard I, Notker I and Ratpert, and several *versus ad sequentias*.

Although not always historically accurate, Ekkehard's *Casus* is invaluable not only for its wealth of biographical detail and anecdotes about such important figures as Ekkehard I–IV, Hartmann I–II, Iso, Notker I–III, Ratpert, Tuotilo and Waltram, but also for detailed descriptions of ceremonies, including those connected with visitations of the cloister (Charles III, 883; Conrad I, 911; Otto I, 972), which give a good picture of the liturgical and musical practice at the monastery and at Mainz during the 10th and 11th centuries. It is also the source for the legend of the visit by the Roman cantors Petrus and Romanus, according to which the teaching of Romanus at the monastery was the origin of the 'Romanian' letters found in the St Gallen chant manuscripts and other east

Frankish manuscripts. Ekkehard's handwriting has been identified in a number of St Gallen manuscripts.

(5) **Ekkehard V** (*fl* 1210–20). Author of *Instituta patrum de modo psallendi sive cantandi* (*GebertS*, i, 5–8; also ed. in Bernhard), and of the *Vita Notkeri Balbuli* essentially taken from the *Casus* of (4) Ekkehard IV.

The principal manuscript sources for the *versus ad sequentias* of the monks named Ekkehard are *CH-SGs* 381 (10th century), 376, 378, 380 and 382 (all 11th century), *CH-SGs* 546 (1507), *PL-Kj* Cod.Theol.IV° 11 (Minden, 1024) and *CH-E* 121 (10th century). The earliest source for the *Casus* is *CH-SGs* 615 (12th or 13th century).

ALEJANDRO ENRIQUE PLANCHART

Eklund, Hans (*b* Sandviken, 1 July 1927). Swedish composer and teacher. After attending the Stockholm College of Music (1947–52) he studied composition with Larsson and with Pepping in Berlin (1953–4); and in 1957 he studied opera in Rome. In 1964 he was appointed to teach counterpoint and harmony at the Stockholm College of Music. Most of his early compositions were instrumental and were marked by a solid technique developed principally from Hindemith and Reger; the concertante *Musica da camera* pieces were modelled on Hindemith's *Kammermusik* series. *Musik för orkester*, which marked a turning-point in his career, was followed by twelve symphonies, which oscillate between aggressive power and a plaintive introversion, sometimes also with a dash of black humour or with grotesque eruptions.

ROLF HAGLUND

Ekmalian, Makar Grigori (*b* Vagharshapat, 2 Feb 1856; *d* Tbilisi, 19 March 1905). Armenian composer, teacher and choirmaster. He studied at the Gevork'ian Academy in Vagharshapat with Nikoghayos T'ashchian, who had published three volumes of his transcriptions of Armenian liturgical music. In 1879 Ekmalian entered the St Petersburg Conservatory to study with Rimsky-Korsakov, Ioganser and Solov'yov; he graduated in 1888 with the cantata *Der Rose Pilgerfahrt* (after M. Horn) of which only extracts survive. From 1890 until his death he lived in Tbilisi, teaching at the Nersessian College (1891–1902) and also directing the music college of the Russian Music

Society (1893–4). In addition to teaching both conventional notation and the Armenian system devised by Hambartsum Lymonja (1768–1839) he organized an excellent chapel choir. He taught many singers who subsequently became well known; his composition pupils included Komitas and Tigranian. He spent much time collecting and arranging folksongs; his collection of liturgical music, which was completed in 1892 and sanctioned by the church authorities, was published in Leipzig in 1896 as *Patarag* (the canticles of the Armenian liturgy). This volume included arrangements for three- and four-part male chorus and for four-part mixed chorus; the style is diatonic and homophonic and the smooth vocal writing ensured success for parts of the collection on the concert platform. His other works – which include an overture, piano pieces, choruses and songs – are notable for their inventive textures, synthesis of classical and modal harmony and their consistency of style.

SVETLANA SARKISYAN

Ekphōnēsis. A recitative-like cantillation used in Byzantine services by the ANAGNŌSTĒS for reading the lessons and by the priest for reading the Gospel. *See* EKPHONETIC NOTATION.

Ekphonetic [lectionary] **notation.** Notation designed to facilitate the solemn cantillation of lessons, especially of biblical texts. The term 'ekphonetic' (from Gk. *ekphōnēsis*: 'pronunciation', 'reading aloud') was coined by I. Tzetzes in 1885 ('Hē epinoēsis tēs parasēmantikēs tōn Buzantinōn', *Parnassos*, ix, 1885, p.441). Various such systems may be found in medieval manuscripts; in no case is the musical significance of the signs known, and hypothetical transcriptions are possible only by comparison with cantillation in the modern practice of the various traditions. The signs may comprise letters, dots or 'cheironomic' figures which presumably represent the motions of a conductor's hand; these signs are termed 'accents' in the Semitic systems and 'neumes' in the Latin and Greek, although their significance is not that of the neumes in Western and Byzantine neumatic notations (*see* NOTATION, §III, 1 and BYZANTINE CHANT, §2) and the types should not be confused. Ekphonetic notation occurs mainly in association with biblical texts, whether for church or synagogue, but may be found also in other prose texts and even in hymns.

1. Syriac, Pehlevi and Soghdian. 2. Hebrew. 3. Byzantine. 4. Slavic, Georgian and Armenian. 5. Latin.

1. SYRIAC, PEHLEVI AND SOGHDIAN. Dots are often found in Syriac manuscripts of the Bible, written in black ink above, below or on the line. In other texts they appear less frequently and in red, perhaps to indicate that their use in this way is unusual. They served to facilitate a correct understanding of the sacred text, and to indicate the inflections of the voice; according to Gregory bar-Hebraeus (13th century; ed. and trans. in Moberg, ii, 108–9): 'In every language a listener can distinguish aurally various meanings in one and the same phrase ... merely through changes in inflection; Syrian writers ... devised a system and constructed signs consisting of dots for the accents, so that the various inflections, each of which indicated a particular meaning, could be understood visually by the reader in the same way as they are recognized aurally by the listener'. Earlier treatises associate the accents with the translation of the Bible from Greek. These treatises contain lists of accents, with examples from the Bible and comments on their use and significance (e.g. to express astonishment or fear).

According to tradition, Joseph Hūzāyā (*fl* *c*530) of the school of Nisibis invented the nine main accents, but two of them (*pasoqa*, main pause, and *'eṣyana*, subsidiary pause) occur frequently in a manuscript dating from 411. During the 5th century the system increased in complexity; it had developed fully before the 11th century. More than 30 accent names are known, but all except 12 to 15 denote special functions of the main signs. Originally the system seems to have consisted entirely of single dots; later these were combined with the main pausal accent, the *pasoqa*, as signs containing two dots, which superseded the single dots as indicators of the main divisions within verses. The signs containing two dots were in their turn again combined with the *pasoqa*, as signs containing three dots (Table 1).

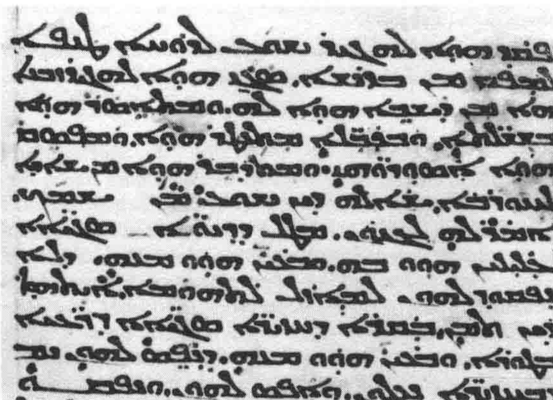
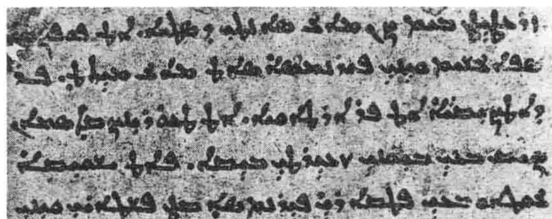
in each case — represents one phrase of text, to be read from right to left



After the schism of the 6th century (*see* SYRIAN CHURCH MUSIC, §1), the Syriac tradition bifurcated into a Western (Syrian Orthodox, Jacobite) tradition whose centre was at Edessa, and an Eastern (Assyrian, Nestorian) tradition whose centre was at Nisibis. New accents were added to the Western tradition, and James of Edessa (*d c*700) invented nine new variants of existing signs. In practice, however, the notation was reduced to a mechanical application of four pausal accents and other interrogative accents.

The Eastern Syriac notation was supplemented with many additional signs; it became highly sophisticated, and remained more flexible than the Western system. In it, the accents were usually larger than other dots used in the text, in order that the reading should be facilitated (fig.1). Red ink was used to indicate variant readings. The high degree of sophistication of this notation may be seen in the Mar Babai manuscript, dating from 899 and containing elaborate interlinear corrections and variants.



A 6th- or 7th-century Pehlevi psalter (ed. in Andreas and Barr) contains ekphonetic notation identical with that of early Syriac manuscripts. New Testament manuscript fragments from Turfan, in the Soghdian language and written in Nestorian Syriac characters (fig.2), contain Eastern Syriac accents (Table 1*b*); the corresponding passage is similarly subdivided in Greek manuscripts with ekphonetic notation.

2. HEBREW. The Tiberian system of notation is the best studied, although some scholars still maintain that it was purely syntactical rather than musical. According to tradition it was invented in the 9th century CE by the family of Ben-Asher at Tiberias, and superseded the Babylonian and Palestinian systems of notation, which are thought to have developed around the early 7th century CE. It is still in use: one system is used for the poetical books of the Old Testament (*Psalms*, *Proverbs* and parts of *Job*), one for the rest of the Bible (see below), a third for rabbinical texts.

The verse is the basic unit of passages of the Bible and is marked off by an accent, *silluq*, and a punctuation sign, *sof-pasuq*. Each word of the verse has an accent, serving to join it to or divide it from the next. The signs, placed over or under the line, are dots or strokes, perhaps cheironomic in origin: some Egyptian and Tunisian communities still accompany the cantillation of the Bible

1. *Eastern Syriac notation in a gospel according to the Peshitta,* CE *615 (GB-Lbl Add.14471, f.64r); dots for accents are large, dots for vowel pointing are small (read right to left)*

2. *Fragments of a New Testament lectionary from Turfan (c9th century) in the Soghdian language (Syrian script) with Eastern Syriac accents (read right to left), and (below) transliteration, with English translation, showing positions of Syriac accents*

with hand movements (*see* CHEIRONOMY, §4). Final clauses of lessons are not notated, perhaps because the text was divided differently at different times into one-year and three-year cycles; the final words are recited differently from the rest of the lesson only in some communities.

There are 13 dividing accents; Table 2*a* shows the most important (*silluq* at the end of a verse, *atnaḥ* at the end of a half-verse, *zaqef* and *segolta* as subsidiary stops within either half of the verse). The sequence of signs is not arbitrary: *silluq* or *atnaḥ* is preceded by *tifḥa* or *tebir*; *zaqef* is preceded by *pashta*; *segolta* is preceded by *zarqa* (Table 2*b*). The chief dividing accents correspond in equivalent texts to a certain extent with Greek notational signs, but the correspondences may be due to the fact that the Greek translations are parallel in syntax to the Hebrew, rather than to musical similarities between the traditions (see Table 3).

In the modern tradition, the accents may be interpreted differently in different parts of the Bible (e.g. Pentateuch and Prophets) or on different occasions (e.g. for cantillation at synagogue or in the *ḥeder*, the religious school). Although accent lists (*lu'ah zarqa*) exist, comparable to those of the Greek tradition, where each accent is given its musical value, these do not remain constant in different contexts nor *a fortiori* within different Jewish communities; and no original interpretation, common to different traditions, can be reconstructed. (*See also* JEWISH MUSIC, §III, 2(ii)).

3. BYZANTINE. Byzantine ekphonetic notation occurs in manuscripts between the 9th and 14th centuries, and occasionally in later additions to early manuscripts such as the 5th-century Codex Ephraimi (*F-Pn* gr.9). After the 15th century the function of the signs had been forgotten, and their significance was sometimes misinterpreted as that of punctuation. They occur almost exclusively in biblical texts: the prophetologion (Old Testament lectionary), evangeliarion (Gospel lectionary) and apostolos (Epistle lectionary). They do not occur in the psalter or prose liturgical texts apart from those of the lectionaries,

silluq or atnah	tifḥa	tebir
zaqef	pashta	
segolta	zarta	

In each case —— represents one word of text; the positions of the signs may vary

although synod texts in *GB-Ob* Holkham 6 are provided with ekphonetic notation for liturgical use. Study of Byzantine notation began in the mid-19th century, but the first systematic analysis was that of Høeg (1935). The recitation of lessons in the modern Greek Orthodox Church has not been systematically compared with the medieval notation.

Medieval manuscripts contain continuous lists of neume names, with notation added to the lists as it would be to a biblical lesson. The 10th- or 11th-century manuscript *ET-MSsc* Monastery of St Catherine 8 has such a list, added in what may be a late 12th-century hand, with ekphonetic notation in red as well as an archaic Palaeo-Byzantine notation (*see* BYZANTINE CHANT, §3) in black, which shows the musical significance of each combination of ekphonetic signs (fig.3). Unfortunately this archaic notation is impossible to transcribe precisely in isolation. Some of the neume names derive from the names of the ancient Greek prosodic accents (*oxeia* = 'acute', *bareia* = 'grave'); the *apostrophos* may represent the *hypodiastolē*, a prosodic sign of the grammarians of antiquity. The remaining neume names may be cheironomic in origin.

The classical notational system was fully developed between the 11th and 14th centuries with a series of stereotyped neume pairs (Table 4). These signs are written in red above, below or between the phrases of the text as in fig.3, and are combined in pairs so that each pair frames a *kolon* (unit of three or four words), which is to be recited to a particular musical phrase. The signs at the beginning and end of the *kolon* are normally identical, except in the *apesō-exō* pair and those including a *teleia*. According to the neume list in fig.3, the first and last accented syllables of a *kolon* are subject to melismatic treatment, and the rest are recited to a simple *tonus currens*. In the fully developed system, a *kolon* with the combination *syrmatikē* and *teleia* was also marked by a melisma near the end, indicated by a *media*.

In the classical system, three or four *kola* are usually linked as a period, the cadence of which is one of the *teleia* combinations; within the period, intermediate cadences are indicated with the *apostrophos* (no.10 in Table 4). The whole biblical lesson normally comprises about 15 periods, and concludes with a stereotyped final cadence, consisting of the neume pairs nos.5, 9 and 10, sometimes preceded by pair no.6; nos.6 and 5 occur only in this final cadence.

The archaic ekphonetic notation differs in a number of respects from this classical system: other neume combinations are possible, one neume of a pair may be omitted, the pairs nos.6 and 5 may occur outside final cadences, and in some manuscripts the ekphonetic signs are written in the same brown ink as the text. The melodic formulae must originally have been transmitted orally and applied to the text, from memory, according to the punctuation: the latter, in early manuscripts, comprises dots for short stops and spaces for longer ('full') stops. It would seem that when the notation was invented, perhaps in the 8th century, it could at first be used freely, but was then codified by some authority, perhaps at Constantinople.

4. SLAVIC, GEORGIAN AND ARMENIAN. The Byzantine ekphonetic notation, like the Byzantine neumatic notation, was adopted by the Slavs. A few New Testament manuscripts contain a system of ekphonetic notation; in one source (the *Kuprianovskie listki*) the notation agrees with that of Greek manuscripts. A Glagolitic missal from Kiev contains eight signs interpreted by some as Latin ekphonetic neumes and by others as prosodic accents. Georgian manuscripts from the 11th to 13th centuries contain lists of neumes transliterated from Greek; the Greek notation may have been used in Georgian lectionaries. Armenian manuscripts contain an indigenous ekphonetic notation, used for the recitation of the Gospel and the Old Testament Prophets. Some of the signs indicate pitch: *verjaket*, marking a main pause and raising of the voice; *midjaket*, marking a secondary pause and lowering of the voice; *storaket*, also marking a secondary pause; and *buth*, indicating the lowering of the pitch by degrees, without a pause. These are used together with rhythmic signs (*sugh*, for a shortening of the note, and *jerkar*, for a lengthening of the note) and signs indicating formulae (*shesht* and *harzanish*), as in Table 5. Special

TABLE 3

Hebrew with Tiberian notation (read right to left)	*Hebrew transliteration with Tiberian notation*	*Greek with ekphonetic notation*	*English translation*
הוי האמרים לרע טוב	hōj hā'omĕrīm lāra' tōb	ouai hoi legontes to ponēron kalōn	Woe unto them that call evil good

3. (a) List of ekphonetic signs (read right to left) from a 10th- or early 11th-century MS (ET-MSsc 8, f.303v); the ekphonetic signs are in red ink and are distinct from the supplementary Palaeo-Byzantine notation, here, unusually, in black ink; (b) transcription of the above passage showing ekphonetic signs only

formulae, not written down, are used at the beginning and end of lessons.

5. Latin. Between the 10th and 15th centuries, a heterogeneous jumble of ekphonetic notational systems was used in Latin lectionaries, sacramentaries, missals, homiliaries and other books, for biblical lessons and also for collects (prayers), other chanted prose sections of the services and homilies. The system used varies between manuscripts but each manuscript normally contains three or four (sometimes many more) signs comprising dots and neumes illustrating the inflection of the voice.

Many manuscripts use neumes in conjunction with the ancient punctuation signs, a dot above the line (*plena distinctio*, full stop), a dot on the line (*media distinctio*, middle stop) and a dot below the line (*subdistinctio*, weak stop). The full stop is combined with the *apostrophus* to signify a final cadence, and with a *quilisma* to signify a question; the middle stop, together with the *flexa*, signifies a middle cadence; the weak stop, together with the *flexa*, *pes* or *podatus* signifies a weaker division (Table 6*a*). These signs occur after each section of the text, like

TABLE 4: Greek neumes of the classical system

(b) Ekphonetic signs used in Rvat lat.4770

.⁄ ; ∾ .; .,. .⁄ ∴,

punctuation marks, and they may be no more than that in the simpler versions of the system that use only two signs. Some manuscripts use these punctuation marks doubled, trebled or quadrupled as in the Syriac systems of ekphonetic notation, but still combined with neumes. *I-Rvat* lat.4770 contains the signs shown in Table 6*b*, for example. Biblical texts are subdivided with these signs in a way similar to that of Byzantine ekphonetic notation.

Single words and passages within texts may sometimes carry neumes in the usual sense (i.e. full musical notation rather than ekphonetic notation) over each syllable. This may occur in the title of a lesson, or in its last few words (compare the Byzantine final cadence formulae). In the Passions the words of Christ on the cross may be fully notated with neumes; similar treatment is sometimes given to the genealogies from *Luke* and *Matthew* (*see* GOSPEL, §3, (ii)–(iv) and PASSION, §1). Some manuscripts similarly prescribe a performance of the biblical canticles more solemn than that of the surrounding text.

GUDRUN ENGBERG

Eksanishvili, Eleonora (Grigor'yevna) (*b* Tbilisi, 11 Feb 1919). Georgian composer, pianist and teacher. At the Tbilisi Conservatory she studied the piano with A. Tulashvili and composition with A. Ryazanov and Andria Balanchivadze, graduating in 1940 and 1945 respectively. In 1947 and 1950 she was a postgraduate student at the Moscow Conservatory, studying with Goldenweiser (piano) and Litinsky and Shebalin (composition). In 1944 she began her career as a pianist and teacher; she has taught in Tbilisi at the First Music College, the Paliashvili Central Music School and, from 1953, at the conservatory, where she was appointed professor in 1973. On Eksanishvili's initiative, the first Georgian experimental school-studio was set up in 1973; the teachers there have used the method she expounded in her textbook *Aisi* (published 1972) of developing creative abilities using Georgian folksong. Eksanishvili's piano music, comprising original compositions, transcriptions of works by Georgian composers and music for children, is the most significant part of her output. In 1967 the Supreme Soviet of Georgia conferred on her the rank of Honoured Artist.

WORKS
(*selective list*)

Stage: Progulka (Druz'ya lesa) [A Walk (Friends of the Forest)] (children's op, 1, I. Sikharulidze), 1960; Lesnaya komediya [Forest Comedy] (children's op, 2, V.-Pshavela), 1972; other stage works for children
Orch: 2 pf concs., 1944, 1955; Vesna [Spring], children's suite, chbr orch, 1972
Chbr: Str Qt, 1944; Pf Qnt, 1945, rev. 1970; Str Qt, 1949; Vn Sonata, 1970
Pf: Detyam [For Children], 8 pieces, 1958; Sonata, 1973; 12 Georgian folksong arrs., 4 hands, 1974; Memorial: prelyudii, ėtyudï i ėlegiya, 1980; other preludes and transcrs.
Vocal: Noch' [Night] (A. Abasheli), 1v, pf, 1940; Sumerki [Twilight] (H. Heine), 1v, pf, 1948; Tomborskiye nochi [Tomborsk Nights] (song cycle, I. Mosashvili), 1975; 2 romances (J.W. von Goethe), 1984; children's songs

OL'GA MANUL'KINA

Ektār [ektārā, ekanāda]. A South Asian term principally denoting drone chordophones. *Ektār* ('monochord') most commonly denotes a drone lute, generally a spike lute. In general these instruments have a single string, but sometimes two, and they are often over 100 cm long. A round gourd with a hole cut out of the top and a skin glued or nailed over it is pierced by a long wood or bamboo neck. A steel string, attached to the lower, projecting end of the neck, passes up over a narrow bridge of arched wood or bone (the deep bridge of the *tambūrā* is not common here), and is secured at the top to a wooden peg, usually inserted from below. The *ektār* is held either vertically or over the player's shoulder, to accompany his own singing, providing both a drone and a rhythmic accompaniment, the string being plucked by the index finger. The players are usually mendicant religious singers, either Hindu *sādhus* or Muslim *fakīrs*. *Tār* ('metal string') derives from Persian and the instrument and the use of drones may derive from urban music

(*see* TAMBŪRĀ). The *yaktāro* of Sind, some *ṭuila* of Orissa and the *rāmsāgar* of Gujarat are similar instruments.

The *ektārā* of southern Bihar has a bamboo stick fingerboard about 86 cm long and 2·5 cm thick. The stick passes through one side of a bowl-shaped bottle gourd, roughly 15 cm by 21 cm, and projects a few inches out of the opposite side. A piece of goat- or lizardskin (scaly side out) is attached with metal tacks or with wooden pegs and string over a mouth about 11 cm in diameter cut in the face of the gourd. One or two brass playing strings pass over a wooden bridge and are secured at the gourd's lower end to a peg or to the bamboo stick's projection. At the upper end, the strings are fastened to pegs about 55 cm from the bridge. The upper end of the bamboo fingerboard may be wrapped with coloured paper, string or ribbons and topped with coloured streamers or peacock feathers. The *ektārā*player holds his instrument upright, gripping the neck just above the resonator and plucking the playing string or strings with the index finger of the same hand. If he is dancing, he supports the gourd resonator with his other hand, in which he carries clusters of small bells which sound as he beats his hand against the gourd. The *ektārā* is generally played by men as a drone accompaniment of definite or indefinite pitch. In southern Bihar it is an instrument of mendicant singers, but it is also used by traditional musicians in group dances such as the *mardana jhumar* ('men's *jhumar*'), and by some Ādivāsī musicians for vocal accompaniment and in communal dances.

In Nepal the *ektār* is a single-string lute with a long neck and a body made from a calabash or a coconut. It is used by wandering *jogi*sto accompany religious songs of the *bhajan* type.

For the Bengali and Orissan *ektārā* (*gopīyantra*) *see* VARIABLE TENSION CHORDOPHONE.

Ėkvodin [Ecvodion]. A monophonic electronic instrument. It was invented during the early 1930s by Andrey Aleksandrovich Volodin (1914–81), with Konstantin Ioilevich Koval'sky, at the State Institute for Music Research (GIMN) in Moscow. It was originally operated from a fingerboard but this was later replaced by (and sometimes combined with) a conventional keyboard later models were manufactured until the late 1970s. *See* ELECTRONIC INSTRUMENTS, §III, 1(iv).

El-Dabh, Halim (Abdul Messieh) (*b* Cairo, 4 March 1921). American composer of Egyptian birth. While a student at the Sculz Conservatory, Cairo (1941–4), he won first prize in the Egyptian Opera House Composers Competition (1942). He went on to study composition at the University of New Mexico (1950–51), the Berkshire Music Center (1951–2), where he worked with Copland and Fine, the New England Conservatory (MM 1953) and Brandeis University (MFA 1954). His awards include fellowships from the Fulbright (1950, 1967), Guggenheim (1959–60, 1961–2) and Rockefeller (1961) foundations. He has taught at Haile Selassie University, Addis Ababa, Ethiopia (1962–4), Howard University, Washington, DC (1966–9), and Kent State University (1969–91), where he served as professor of Ethnomusicology and Pan-African Studies and co-director of the Center for the Study of World Musics (from 1979).

El-Dabh's compositional style is influenced by Egyptian folk and traditional music. Frequently monodic, his works feature complex rhythms and much use of percussion. His career was launched in 1949 with a highly acclaimed performance of *It is Dark and Damp on the Front* (1948) at All Saints Cathedral, Cairo. In 1950 he made his début as a solo drummer, under the direction of Stokowski, in the first performance of *Tahmeela*. Other works include *Clytemnestra* (1958), *One More Gaudy Night* (1961), *A Look at Lightning* (1962) and *Lucifer* (1975), commissioned by Martha Graham; *Sound and Light of the Pyramids of Giza* (1960), written for the Cultural Ministry of the Egyptian Government and performed daily at the pyramids; and *New Pharaoh's Suite*, written for the Cleveland Museum of Art to accompany a visiting Ethiopian exhibit from the Louvre (1996). *Spectrum no.1 'Symphonies in Sonic Vibration'* (1955) and *Leiyla and the Poet* (1959) have been recorded.

WORKS
(*selective list*)

DRAMATIC

Dance scores: Clytemnestra, 1958, rev. 1983; One More Gaudy Night, 1961; A Look at Lightning, 1962; Lucifer, 1975

Ops: Ptah-Mose and the Magic Spell (op trilogy), 1972: Aton, the Ankh and the World; The Osiris Ritual; The Twelve Hours Trip; Black Genesis, 1975

Other: Yulei, the Ghost, S, ob, cl, hn, tpt, str, 1962; The Eye of Horus, B, perc, 1967; Prometheus Bound, 1969; Opera Flies, 1971, rev. 1995; The Birds, actors, dancers, solo vv, choruses, fl, perc, pf, synth, 1988; Lucy, Come Back, dancers, vv, perc, multimedia, 1993; Antony and Cleopatra, 1997

INSTRUMENTAL

Orch: Sym. no.1, 1950; National Anthem for Egypt for President Naguib, 1952; Sym. no.2, 1952; Sym. no.3 'Of 37 Years', 1953; Cleopatra, 1961, rev. 1983; Nomadic Waves, wind, 1965, rev. 1981 [arr. wind, perc]; Conc., cl, derabucca, str, 1981; Tahmeela: Concerto grosso, timp, orch, 1986; Ramesses the Great (Sym. no.9), 1987; 5 études, concert band, 1989; Harmonies of the Spheres: Ten Nations Rejoice, wind, 1991; New Pharaoh's Suite, chbr orch, 1996

Chbr: Monotone, Bitone and Polytone, wind sextet, perc, 1952, rev. 1985; Tabla Dance, perc ens, pf, 1952; Frieze in Body Movt, vn, hp, pf, timp, 1954 [orig. title Impressions from Gaugin, Leger and Dali]; Spectrum no.1 'Syms. in Sonic Vibration', pf strings, drum, 1955 [arr. 4 vn, 4 hp]; Juxtaposition no.1, perc ens, 1959; Juxtaposition no.2, perc, hp, 1959; Egueypto-Yaat, 2 tpt, perc, 1963; Hindi-Yaat no.1, perc ens, 1965; Tonography, cl, bn, mar, perc, 1980 [rev. as Tonography III, 1984]; Ceremonial Fattening for Death and Resurrection, bn ens, 1991; Theme Song: the New Renaissance, fl, vc, pf, 1991; Multicolored Sonata, 2 tpt, 1996

Solo inst: Drum-Takseem, 1951; Sonics, perc, 1955; Kalabsha on River Nile, hp, 1991; Secrets of the Sky and Earth, mar, 1996

VOCAL

Choral: Gloria aton, SATB, perc, str, 1960; Sound and Light of the Pyramids of Giza (Lamentation de Pharaon) (Music of the Pyramids), S, Bar, SA, orch, 1960, rev. 1983; Prayer to the Sphinx, solo vv, SATB, orch, 1960; Pyramide, TB, perc, hp, str, 1960; Theodora in Byzantium, S, TB, orch, 1965; Abongila's Love, male chorus, perc, 1974

Solo: Juxtaposition no.3, Mez, 2 hp, perc, 1959; Isis and the Seven Scorpions, S, fl, hpd, derabucca, 1975; Hajer, S, 1979; The Jade Flute, S, tpt, 1989

PIANO

It is Dark and Damp on the Front, 1948; Evolution and Decadence, 1949; Osmo-Symbiosis (Duo-Tahmeel no.1), 2 pf, 1952; Felucca (The Celestial Journey), 1953; Arabiyaats, 1954; Ifrikiyaats, 1954; Misriyaats, 1954; Mekta' in the Art of Kita', 1955; Eulogy to Cairo's Earthquake Victims and their Families, 1992; 6 other pieces

ELECTRO-ACOUSTIC

Elements, Beings and Primevals, tape, 1959; Leiyla and the Poet, tape, 1959; Meditation on White Noise, tape, 1959; The Word, tape, 1959; Elec Fanfare, 1963, collab. O. Luening

Principal publisher: Peters

DENISE A. SEACHRIST

Elder, Mark (Philip) (*b* Hexham, Northumberland, 2 June 1947). English conductor. He was a boy chorister at Canterbury Cathedral and principal bassoon with the National Youth Orchestra before reading music at Cambridge, where he gained his first conducting experience. From 1969 he worked on the music staff of the Wexford Festival, Glyndebourne and Covent Garden. After two years as a staff conductor for Australian Opera, 1972–4, he returned to London and joined the ENO in 1974, becoming music director in 1979. At the same time he worked frequently with other London orchestras; from 1980 to 1983 he was principal guest conductor of the London Mozart Players, and from 1982 to 1985 principal guest conductor of the BBC SO. Between 1992 and 1995 he was principal guest conductor of the CBSO, and in 1999 he was appointed music director of the Hallé Orchestra.

His tenure at the ENO brought major development in musical standards, vocal and orchestral, and an adventurous and sometimes controversial presentation of a wide repertory (see R. Milnes: 'Mark Elder', *Opera*, xl, 1989, 1049–54; incl. interview material). Elder conducted over 30 new productions for the ENO, including the première of David Blake's *Toussaint* (1977) and the first British production of Busoni's *Doktor Faust* (1986). He made his Bayreuth début with *Die Meistersinger* in 1981, and in 1988 made his Metropolitan début with *Le nozze di Figaro*. He resigned from the ENO in 1993 to work as a freelance conductor, and has subsequently conducted at Covent Garden and elsewhere, receiving particular acclaim for his performances of Verdi. He made his Glyndebourne début, with *Simon Boccanegra*, in 1998 and returned to the ENO in 1999 for a much admired *Parsifal*. In concert he has given the premières of George Benjamin's *Ringed by the Flat Horizon* (1980), which he has also recorded, Maw's *Odyssey* (1987) and works by Jonathan Harvey, Colin Matthews and David Matthews.

Elder's performances combine skilled ensemble, vitality of spirit and dramatic perception. His operatic recordings include *Otello*, *Rigoletto* and *Orpheus in the Underworld*, with *Rusalka*, *Gloriana* and *Rigoletto* on video. He has also recorded Busoni's Piano Concerto (with Peter Donohoe) and orchestral works by Shostakovich, Szymanowski and Panufnik. He was made a CBE in 1989.

NOËL GOODWIN/ALAN BLYTH

Elders, Willem [Wilhelmus] **(Ignatius Maria)** (*b* Enkhuizen, 29 Dec 1934). Dutch musicologist. After his musical education at the Dutch Institute of Catholic Church Music in Utrecht (1953–6) he continued his studies with Albert de Klerk (organ) and Wolfgang Wijdeveld (piano) and studied musicology at the University of Utrecht with Smijers, Reeser, Lenaerts and Nolthenius. In 1964 he was appointed research assistant at the university's musicological institute and four years later he took the doctorate under Lenaerts with a dissertation on symbolism in early Flemish music. He became reader at Utrecht in 1968 and professor in 1971, retiring in 1992. He was also editor of the *Tijdschrift van de Vereniging voor Nederlandse muziekgeschiedenis* (1968–88) and a member of the board of the Vereniging voor Nederlandse Muziekgeschiedenis (1971–81), of which he was president, 1978–81. He was awarded the Dent medal in 1969 and the medal of the Vereniging voor Nederlandse Muziekgeschiedenis in 1989.

Elders's work on symbolism, which culminated in his book *Symbolic Scores* (1994), shows a critical attitude to a subject much prone to speculation and treats the symbolic relationship between the content of the text on the one hand and the notation and various aspects of composition on the other. Apart from his writings on symbolism, Elders has also continued the work begun by Smijers on Josquin; together with Antonowycz, he completed the Smijers edition, and has become chairman of the editorial board for the new collected edition of Josquin's works which began publication in 1987.

ELLINOR BIJVOET/JOOST VAN GEMERT

Eldridge, (David) Roy ['Little Jazz'] (*b* Pittsburgh, 30 Jan 1911). American jazz trumpeter, brother of the alto saxophonist Joe Eldridge. After serving apprenticeships with several territory bands in the Ohio Valley area and the Midwest, he went to New York in 1930 and gained prominence among black jazz musicians while playing with Teddy Hill's group (1935). He then joined Fletcher Henderson's band for two years and led his own groups before becoming known nationally as a trumpeter (and singer) with Gene Krupa's band (1941–3). With Krupa, and with Artie Shaw in 1944–5, Eldridge was considered the foremost jazz trumpeter of the period and a successor to Louis Armstrong. Influenced by Armstrong and Rex Stewart, he developed a highly personal style marked by rhythmic drive, a brilliant, powerful tone, superior virtuosity and endurance, as well as an unusual control of the altissimo register. In the 1950s and 60s he was frequently associated with the tenor saxophonist Coleman Hawkins, and in their quintet performances was less inclined to the sensationalism which sometimes marred his big band playing. He influenced the young Dizzy Gillespie, whose work shows Eldridge's impact on modern jazz. Among his outstanding recordings are *Wabash Stomp* (1937, Voc.) and *Rockin' Chair* (1941), with Gene Krupa.

GUNTHER SCHULLER

Electric & Musical Industries. *See* EMI.

Electric bass guitar [bass guitar]. An ELECTRIC GUITAR, usually with four heavy strings tuned *E'–A'–D–G*. The electric bass guitar was invented by Leo Fender and was first marketed as the Fender Precision Bass in 1951 (*see* FENDER). The instrument was introduced to meet the needs of musicians playing the bass part in small dance bands in the USA: they wanted not only a more easily portable instrument than the double bass, but one that could match the volume of the increasingly popular solid-bodied electric guitar, and could be played with greater precision than their large, fretless, acoustic instruments. Fender's electric bass guitar answered all these requirements. It was based on his already successful Broadcaster (later named Telecaster) six-string electric guitar, with a similar solid body of ash and neck of maple. The four strings were tuned to the same notes as the double bass (an octave below the bottom four of the six-string electric guitar), and a single pickup fed controls for volume and tone; the fretted fingerboard offered players the precision they wanted.

As with the electric guitar, Fender's earliest customers for the Precision Bass were country-and-western players, but the electric bass, which was quickly adopted by many makers of electric guitars, began to infiltrate other popular music forms and has been widely used in pop, rock, jazz, rhythm and blues, reggae and rock and roll. Players usually use the first two fingers of the right hand to pluck the strings, though some musicians, especially those who have a background in playing six-string electric guitars, use a plectrum. Chords are possible, but are rarely played, the emphasis being on a single supportive bass line with runs. A method of playing that has developed among some jazz and 'funk' bass players involves striking the lower strings with the edge of the thumb, while flicking higher strings with the fingers, producing a very percussive and almost anti-melodic style; known as 'slapping', it was apparently first used by Larry Graham, the bass player with Sly and the Family Stone in the late 1960s.

The name 'Fender' became almost generic for electric bass guitars at one time, and a number of new models were introduced, including the Jazz Bass (1960), and a six-string electric bass (1962), originated by Danelectro in 1956, tuned an octave below the normal electric guitar. Fender models are still very popular. Other American and East Asian manufacturers have taken a large part of the market, but electric basses are also made in Europe and elsewhere.

The original Fender design remains practically unchallenged, though features such as the number of pickups and the winding of the strings vary. Since the late 1970s some electric bass guitars have made use of 'active electronics' to enhance their sound. This system uses a pre-amplifier, built into the instrument, to boost the volume and widen the frequency range available from the instrument's tone controls; it was popularized by the Alembic company of California who began in the 1970s to produce superlative electric basses, as used by the virtuoso Stanley Clarke.

The fretless bass guitar is a normal electric bass except that it lacks frets. The singing tone it produces is quite unlike that of its fretted counterpart, and was made popular by Jaco Pastorius of the jazz-rock group Weather Report in the late 1970s and early 80s. One attempt to change the design of the electric bass came in the 1980s from the American maker Ned Steinberger. The SteinbergerBass was constructed entirely from injection-moulded plastics, lacked the conventional peghead at the upper end of the neck, and had a tiny body, barely wide enough to carry the pickups, control knobs and machine heads. Five-string and six-string 'extended' bass guitars

began to appear during the 1980s, the latter pioneered by session bassist Anthony Jackson. Hybrid 'electro-acoustic' bass guitars with acoustic guitar-like bodies and built-in pickups have also gained a certain currency since the late 1980s.

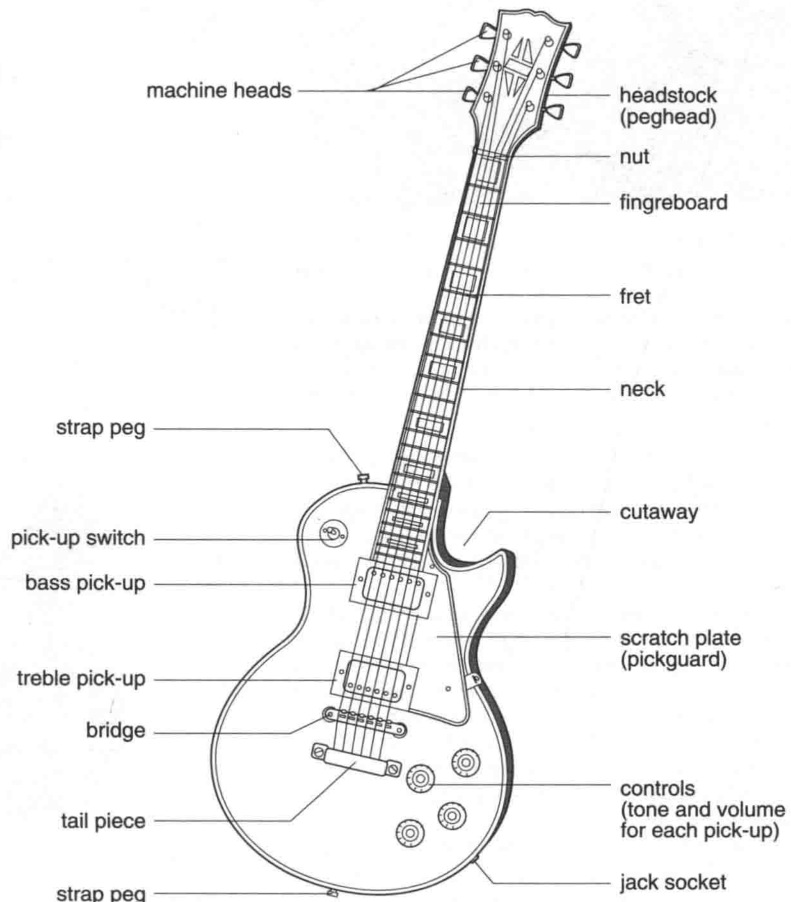
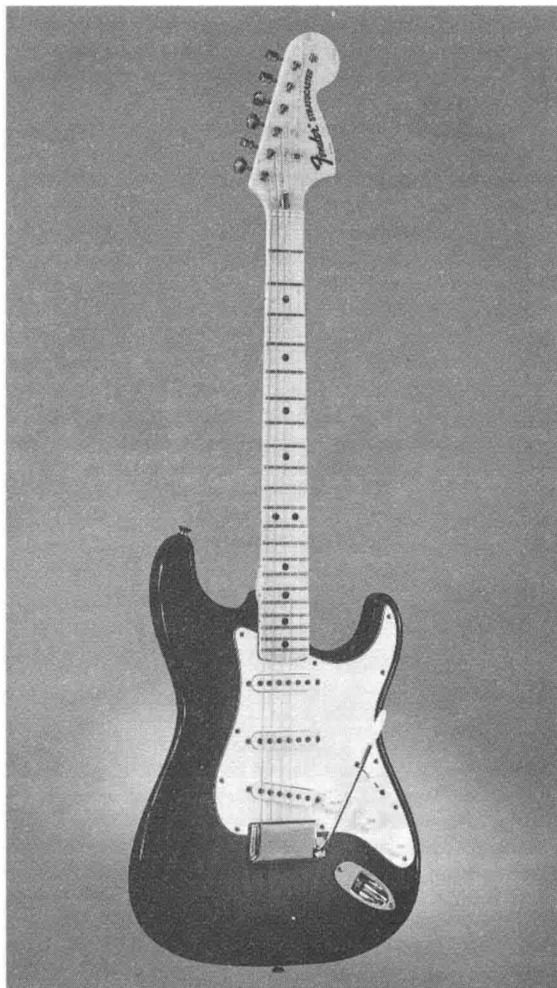
TONY BACON



Electric guitar. An electronically amplified guitar.

1. Introduction. 2. Technical aspects. 3. History.



1. INTRODUCTION. There are two main kinds of electric guitar: the hollow-bodied or semi-acoustic; and the solid-bodied, in which the body provides little resonance but simply serves as a mounting-block to accommodate the bridge and the electronic apparatus, and to bear the strings under tension. Standard electric guitars have six strings (normally tuned *E–A–d–g–b–e′*) and the ELECTRIC BASS GUITAR usually has four (*E′–A′–D–G*); there are 12-string instruments (in which the top two strings are doubled in unison, the rest being doubled at the upper octave) and other variants with different numbers of strings, as well as hybrid instruments with two necks (for example, one with six and the other with 12 strings, or one standard and one bass neck). Electric steel guitars for the lap and free-standing electric steel guitars, both designed for Hawaiian-style playing, have also been made (see §3 below; *see also* HAWAIIAN GUITAR and PEDAL STEEL GUITAR).

The electric guitar has found a place in virtually all forms of popular music. The early instrument was introduced or popularized by players such as T-Bone Walker (blues), Charlie Christian (jazz), Chuck Berry (rhythm and blues), Merle Travis (country and western) and Buddy Holly (rock and roll). Today it enjoys widespread use in these forms and in modern Western popular hybrids, including pop, rock, jazz-rock and reggae. Since the 1950s the art of electric guitar playing has been taken forward by a number of talented and musically gifted performers, including Chet Atkins, who defined the sounds of Nashville country picking through work with Elvis Presley and the Everly Brothers, as well as on his own abundant recordings; Wes Montgomery, whose affecting 1960s Riverside recordings amount to some of the finest jazz playing; Jimi Hendrix, who in his brief career combined rock, blues and soul into the most astonishing and influential electric guitar playing; John McLaughlin, probably the most influential jazz guitarist since Montgomery; and Eddie Van Halen, whose playing in the 1980s contained a range of fresh styles and a lucid flamboyance.

Outside popular music the electric guitar has been little used, with certain notable exceptions, such as Tippett's *The Knot Garden* (1966–9), Stockhausen's *Gruppen*

1. Gibson Les Paul (Custom model) solid body guitar, showing controls

2. Fender electric guitar (Stratocaster model) with three pickups and a 'tremolo arm'

(1955–7), Previn's Guitar Concerto (1971, which uses electric guitars in the orchestra), Berio's *Allelujah II* (1956–7) and Boulez's *Domaines* (1968); it has a solo role in David Bedford's *Star's End* (1974) and *Proença* (1977) by John Buller.

2. TECHNICAL ASPECTS. The electric guitar is an essentially simple device: the energy of the vibrating strings, struck by the player with plectrum or fingers, is transferred into electrical energy by the pickup or pickups; this energy is in turn amplified by an external amplifier and loudspeaker.

A guitar pickup usually has six magnetic polepieces surrounded by a coil of wire, or two such coils wired for hum rejection. The pickup is a transducer, converting one form of energy (the vibrations of strings) into another form of energy (an electrical signal). The guitar's metal strings vibrating in the pickup's magnetic field induce a current in the coil of wire in that field, the voltage of the current varying according to the frequency at which the strings vibrate.

The degree and type of amplification of the electric guitar depends largely on musical idiom. Amplification equipment ranges from small combination or 'combo' units, which house amplifier and loudspeakers in one cabinet, to large 'stacks' of separate loudspeaker cabinets and amplifier units. Amplifiers are based either on valves or transistors, and can produce output power ranging from a few watts to many hundreds of watts rms. In rock music electric guitarists often 'overdrive' valve amplifiers to distort the signal; such distortion, together with the uneven frequency response of valve amplifiers, gives the instrument a characteristic sound quality. The first transistorized amplifiers had a 'cleaner' sound, less well liked by most rock musicians. In response to their requirements, some manufacturers introduced transistorized circuitry that emulated the behaviour of valve amplifiers.

Some amplification units incorporate devices for special effects, but more often such devices – developed chiefly for use in rock and pop music – are contained in purpose-built boxes or 'pedals', plugged between the instrument and the amplifier, and sometimes interconnected within 'racks' or 'pedalboards'. They are designed to enhance, distort or change the electrical signal to produce the desired effects on the sound. A 'wah-wah' pedal modifies the tone of the sound by boosting a particular band of frequencies, which changes according to the degree to which the pedal is depressed. 'Fuzz' or distortion (and more recently the 'pre-amp' pedal) is the electronic simulation of the sound from an overdriven amplifier, achieved by feeding the signal from the guitar pickup through a unit that alters the waveform, usually to an

3. Rickenbacker 12-string hollow body electric guitar, 1964

approximation of a 'square wave'. Echo or 'delay' is produced by electronic means, or mechanically by slightly delayed playback of taped sounds. 'Phasing' is the electronic re-creation of the sweeping effect produced mechanically by running two tape recorders with the same programme slightly in and out of time with each other; 'flanging' is an enhanced version of phasing. The 'chorus' effect, which makes a single instrument sound like a group of instruments, is produced by time-delay electronics. 'Octave dividers' divide or multiply the frequency of a signal by a factor of two, to give parallel octaves below or above the note being played on the instrument; more sophisticated possibilities of this effect are given by the 'harmonizer'. In addition to special devices, units found in the recording studio have been adapted for use with the electric guitar: for example, the 'compressor', which smoothes out sound peaks, the 'noise gate', which reduces the noise content of the signal supplied to the amplifier, and 'parametric' and 'graphic' equalizers, which are sophisticated forms of tone controllers. The amplifier itself often includes a 'reverb' effect that simulates natural acoustic reverberation by mechanical or electronic means.

3. History. The first experiments with the electrical amplification of guitars took place in the USA in the 1920s and 1930s. Guitarists were looking for ways of making their instruments match the volume of the ensembles in which they played, especially big dance bands. The principal problem was to find a suitable pickup.

The engineer and musician Lloyd Loar, who worked for the Gibson company, began in the 1920s to try out crude magnetic pickups; he left Gibson in 1924 and, with Lewis Williams, started the Vivi Tone Co. (and a sister company, Acousti-Lectric) in 1934, which manufactured electric violin-family instruments as well as electric fretted instruments. Other Americans experimenting with magnetic instrument pickups at the time included Rowe and DeArmond, who formed an eponymous company early in the 1930s to manufacture them, and George Beauchamp and Paul Barth who joined forces with the Californian businessman Adolph Rickenbacker to form the Ro-Pat-In Company (*see* Rickenbacker). In 1932 their company produced some of the very first commercially made electric guitars, the Rickenbacker A22 and A25 models. These guitars, nicknamed 'Frying Pans' because of their circular bodies and long necks, were 'lap steel' (or Hawaiian) guitars – that is, instruments played resting on the guitarist's lap, the strings being stopped by a steel bar held in the left hand. Around this time the National company (*see* Resonator Guitar) produced one of the earliest electric Spanish-style (as opposed to lap steel) guitars, followed shortly by Rickenbacker with the Electro Spanish model. The Gibson company, by now a well-established name, entered the electric guitar market in 1935 with an Electric Hawaiian guitar, the EH–150, and an electric Spanish guitar, the ES–150. The latter had a spruce top with f-holes, a maple body and a mahogany neck; it featured a distinctive pickup designed by Walt Fuller, later called the Charlie Christian pickup after the pioneering electric jazz guitarist had used it.

It was in the late 1940s that one of the most significant developments for the future of the electric guitar was made, leading to the introduction of the solid-bodied electric guitar. The Californian engineer Paul Bigsby built a solid-bodied electric guitar for the country guitarist Merle Travis in 1948 (this instrument is now in the Country Music Hall of Fame in Nashville, Tennessee), but the first commercially manufactured solid electric guitar was the Fender Broadcaster, designed by Leo Fender and others and introduced in 1950. The Broadcaster's body was a solid plank of ash with rounded corners; a cutaway underneath the joint with the solid maple neck aided access to the high frets. At the top of the neck was a stylish peghead with machine heads ranged along one side only, while on the body there were two single-coil pickups, one close to the neck join, the other built into the simple bridge assembly and slanted to accentuate the treble frequencies of the higher strings. (An early prototype called the Esquire had only the bridge pickup.) A brass plate supported two control knobs – for volume and tone (originally volume and pickup 'blend') – and a three-way switch that allowed the player to select either of the two pickups individually or both together. The Broadcaster was renamed the Telecaster in 1951. It initially found favour with country-and-western players, but it has continued to be popular in various musical forms and is still made virtually unchanged.

The next important solid-bodied electric guitar was Gibson's Les Paul guitar, introduced in 1952 (fig.1). Paul, a well-known country, jazz and pop guitarist, had approached Gibson some years earlier, having experimented with solid electric guitar designs over a long period. The guitar that was eventually marketed under his name was developed by Gibson designers and endorsed by Paul. Various models including the 'Gold-top', Custom and Standard have been produced, and are still made.

In 1954 Fender introduced the Stratocaster, the first solid-bodied electric guitar to have three pickups, the first with Fender's 'tremolo arm' system for vibrato effects, and the first Fender guitar to have a contoured body (fig.2). It also had a double cutaway where the body joined the neck, to allow even easier access to the upper frets. It is still made.

These three 1950s designs – the Telecaster, the Les Paul and the Stratocaster – formed the basis for much that was to follow from other electric guitar makers in the USA, Europe and Japan. Countless copies and variants have been produced since the 1950s and, particularly, following the pop music boom in the early 1960s, which established the electric guitar as the basis of the pop sound.

The principal features of the electric guitar have remained unchanged, but several refinements and developments have been introduced since the early 1950s. In 1955 Gibson's Seth Lover patented the 'humbucking' pickup, which uses two coils to eliminate noise and interference; it also affects the sound by reducing response to high frequencies. Humbucking pickups have been used on most Gibson electric guitars since the mid-1950s and are largely responsible for the difference in sound between these and Fender guitars, which have largely continued to use single-coil pickups. Gibson introduced their first twin-necked electric guitar – one neck with six strings and the other with 12 – in 1958, and in the same year launched the Flying-V, which was at the time unsuccessful but has given rise to many outlandishly shaped models. Also that year, Gretsch were the first to offer stereo guitars, achieved by splitting the output of the strings and feeding them to two separate amplifiers. The first Rickenbacker 12-string electric guitar was made in 1963 and was used

effectively by Geroge Harrison of The Beatles and Roger McGuinn of The Byrds.

Experiments with materials other than wood have occurred sporadically. Rickenbacker made an electric guitar from Bakelite in the 1930s, while National produced a series of models with fibreglass bodies in the 1960s. In 1971 Ovation created an electric-acoustic hybrid by adding a bridge-mounted peizo pickup assembly to their plastic-backed acoustic guitar. Carbon graphite has been used occasionally for necks.

Attempts have been made to link guitars with synthesizers, primarily by the Japanese company Roland, since the late 1970s, but without widespread success. 'Locking' vibrato systems appeared in the 1980s, largely due to the efforts of Floyd Rose in the USA. They were designed primarily to improve on Fender's original tremolo system and to enable a more extreme use of the effect by the strings being locked into position at the nut and the bridge. These systems often appeared on a new breed of instrument nicknamed the 'superstrat', a slimmed-down, 24-fret, Stratocaster-inspired design with a distinctive 'pointed' headstock, popularized by US makers Jackson and Charvel. Ibanez emerged as the leading Japanese manufacturer at this time.

In the 1990s there was a return to simpler, backward-looking 'retro' designs, and the classic 1950s trio of Telecaster, Les Paul and Stratocaster remained as popular as ever.

TONY BACON

Electric organ. A term used of certain types of ELECTRONIC ORGAN that are not fully electronic. It is sometimes applied indiscriminately to all electronic and electric organs, or more accurately to those instruments that include either electroacoustic or electromechanical elements, in order to distinguish them from instruments in which the sound-generating system consists of electronic oscillators with no moving parts. Most precisely it describes only those electroacoustic organs, in which – like the electric guitar and electric piano – the acoustic sounds of the vibrating mechanism are reduced and made audible by means of special pickups or transducers; the sound sources have usually been free reeds, as in the reed organ. The most successful example was the Everett Orgatron (1934), on which the first Wurlitzer models were based; subsequent instruments include the Minshall-Estey (*c*1950) and several models marketed by Farfisa from the late 1950s. In the Orgatron and Wurlitzer electric organs the permanently vibrating brass reeds are enclosed in a case which prevents their being heard acoustically; the reeds form part of the instrument's electrostatic transducers. Above each reed is a tone screw which may be adjusted to emphasize selected natural harmonics.

Until about 1930 the term 'electric organ' usually meant a pipe organ in which electricity powered part of the action; such instruments are now referred to as 'organs with electric (or 'electro-pneumatic') action'.

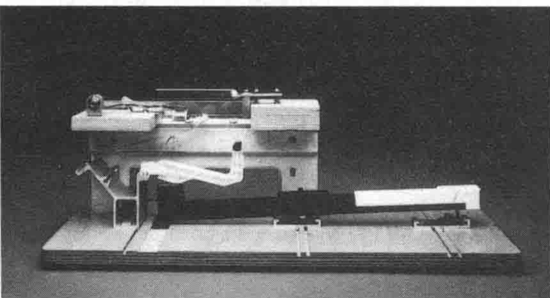
HUGH DAVIES

Electric piano. An electrically amplified keyboard instrument capable of producing piano-like sounds; its sound-generating system may, but need not, consist of strings (for classification, *see* ELECTRONIC INSTRUMENTS, §I, 2 (i)(a)). The range of such instruments includes modified pianos and instruments that bear a close resemblance to a normal upright or grand piano and its mechanism. Fully electronic keyboard instruments, in which the sounds are generated by electronic oscillators, produce similar sounds – usually with additional timbres such as harpsichord, vibraphone and clavinet (one of Hohner's early electric piano-like keyboards) – and are classified as electronic pianos; digital pianos were introduced in the early 1980s, originally based on digital synthesis, from around 1986 primarily featuring sampled piano sounds. Their increasingly realistic timbres and comparative cheapness of manufacture resulted in the production of electric pianos ceasing around 1985, although many 'classical' instruments are still played by rock musicians. Some companies have also added MIDI to acoustic pianos, equipping them with optical sensors that respond to key, hammer or string movements.

The first electric pianos appeared on both sides of the Atlantic around 1930. Three of the pioneers, BENJAMIN F. MIESSNER, of Millburn, New Jersey, and Walther Nernst and Oskar Vierling of Berlin, achieved considerable sophistication in their efforts. Miessner's patent for an electric piano (based on his Electronic Piano, 1930–31), without soundboard and using electrostatic transducers for the amplification system, formed the basis of several instruments manufactured in North America between 1935 and 1939. Nernst and Vierling were members of the team that developed the Neo-Bechstein-Flügel (1931; fig.1), and Vierling alone designed the Elektrochord (1932).



The adaptation of the acoustic instrument to the electric version involved considerable changes. Double or triple strings were often dispensed with and thinner wire was used. Since the vibrations of the strings directly affected electromagnetic pickups or electrostatic transducers, no energy-absorbing soundboard was necessary; thus the strings resonated with an organ-like timbre for up to a minute, unless, as in the Neo-Bechstein, additional

1. Neo-Bechstein-Flügel, Berlin, 1934 (Deutsches Museum, Munich), showing the electromagnetic pickups (each of which is responsible for the amplification of a group of five single or double strings) and a separate loudspeaker unit

dampers were brought into operation to obtain a conventional duration of sustain. In the Neo-Bechstein the strings were grouped in fives, each group converging towards a pickup (for the full range of 88 chromatic notes, 18 pickups were employed); the keyboard-hammer-damper action was similar to that of the conventional piano but redesigned to accommodate the much lighter touch necessary for this instrument. The basic construction of an electric piano was much lighter than that of the ordinary grand piano, but this was offset by the weight of the pickups and often of an amplifier and even a built-in loudspeaker.

As with other electric instruments, designers of electric pianos concentrated on the loudspeaker sound and deliberately reduced the loudness of the purely acoustic sounds produced by the mechanism. The impact of the hammers on the strings itself produced little tone without

2. Mechanism of the Rhodes electric piano, mid-1970s; when the key is depressed the hammer hits the thin wire, the vibrations of which are reinforced by the 'tone bar' and amplified by means of the electromagnetic pickup

a soundboard, but the volume could be controlled with the left pedal, or an additional swell pedal, which directly influenced the degree of amplification given to the signals from the pickups. Thus a sustaining or even swelling of notes could be achieved, the greatest possible deviation from the natural sound of the acoustic instrument. The right pedal retained its normal function of raising the dampers. The amplification system also made possible alterations in the timbre of the sound by means of pickups positioned at different points along the strings, or by filtering or amplifying the harmonics electronically.

A few electric pianos were constructed in the 1930s that did not use a piano-like mechanism. In the Variachord (1937) the strings were activated by electromagnets; the Clavier (1934) of Lloyd Loar and Selmer's Pianotron (1938) used plucked reeds as the sound source. Most modern electric pianos also abandoned conventional piano action and with it the form of the upright or grand piano, appearing as portable keyboards on legs, similar to many small electronic organs. The tone-producing elements were often steel rods (electric piano by HAROLD RHODES, 1965) or reeds (WURLITZER electric piano, 1954) which, when struck with felt-covered wooden hammers (or plucked, as in the Hohner Pianet, 1962), vibrate in a polarized electrical field (fig.2). Some are designed to simulate as closely as possible the sound of a conventional piano, while others have tone-modifying devices that also imitate the harpsichord, clavichord or honky-tonk piano. Most postwar electric pianos incorporate electromagnetic or piezoelectric crystal pickups; electrostatic methods were rarely used.

Finally, one should note the practice of electrically amplifying an acoustic grand piano. Usually this is done merely to create a louder sound, for example, to balance other amplified instruments. In some compositions, however, microphones are used to pick up sounds from a piano for transformation by means of other devices, as in Cage's *Electronic Music for Piano* (1964) and Stockhausen's *Mantra* (1970).

RICHARD ORTON/HUGH DAVIES

Electro-acoustic music. Music in which electronic technology, now primarily computer-based, is used to access, generate, explore and configure sound materials, and in which loudspeakers are the prime medium of transmission (*see also* COMPUTERS AND MUSIC, §II). There are two main genres. Acousmatic music is intended for loudspeaker listening and exists only in recorded form (tape, compact disc, computer storage). In live electronic music the technology is used to generate, transform or trigger sounds (or a combination of these) in the act of

performance; this may include generating sound with voices and traditional instruments, electro-acoustic instruments, or other devices and controls linked to computer-based systems. Both genres depend on loudspeaker transmission, and an electro-acoustic work can combine acousmatic and live elements.

1. Nature of the medium. 2. Terminology. 3. Acousmatic music. 4. Live electronic and real-time applications. 5. Performance interfaces. 6. Listening and loudspeakers. 7. The studio. 8. Electro-acoustic sounds and other genres.

1. Nature of the medium. Electro-acoustic music is generally regarded as a body of art-music genres that evolved from compositional techniques and aesthetic approaches developed in Europe, Japan and the Americas in the 1950s. During this decade the growing availability of magnetic tape offered composers a high-quality recording medium which allowed greater experimentation in the manipulation of recorded sounds. This music sought to expand compositional resources beyond the sounds available from instruments and voices, to explore new sound shapes and timbres both by transforming recorded sources and by synthesizing new sounds, and to break the confines of fixed pitch and metrically based approaches to rhythm.

The invention of sound recording has made all sounds available for potential use as musical material: sounds that were previously ephemeral can be captured, and environmental phenomena can be imported into music. Moreover, close exploration of sounding bodies (including instruments) with microphones magnifies and reveals the internal detail of sounds, sometimes with surprising results. Sound recording is itself a transformation process, and recorded sounds may appear in a work without further alteration. Alternatively, recorded sounds can be subjected to transformations ranging from lightly enhanced colorations to alterations so extensive that the transformed sound is but a distant relative of the original. For example, a sound can be analysed into its constituent components, which can then be reconfigured, so that timbre and shape are transformed.

Creating a sound through synthesis requires the composer to design the constituents of a sound and their evolution according to a particular method – for example, building sounds based on waveforms, constructing sounds out of the briefest sound-grains, or specifying the parameters of models based on the behaviour of the voice, instruments and other sounding bodies. Given a viable method, the composer can both emulate existing sounds and design original sounds. However, no device or computer program is capable of realizing every composer's designs with ease. Furthermore, technology is not neutral: all technological processes result in characteristic acoustic behaviours that influence the musical outcome.

2. Terminology. 'Electro-acoustic' merely describes the technology used to provide the production tools; it does not describe the sound world or the distinctive idioms made possible by this technology. Although 'electro-acoustic' is adopted in this article as the most appropriate generic adjective, other terms have been used either as surrogates or to represent a particular approach to the medium.

In the 1950s *elektronische Musik* was the term given by a group of German composers, initially working in Cologne, to music on magnetic tape consisting of sounds generated electronically (by means of oscillators, for example) – that is, music whose materials are created synthetically. The composers aimed to use electronic resources to construct timbres, thereby extending control to the structure of sound itself, and they envisaged that a musical structure would be planned before realizing it electronically. These aims only became truly viable with the arrival of the computer.

Musique concrète was created in Paris in 1948 by Pierre Schaeffer (soon joined by Pierre Henry). It grew out of Schaeffer's experience in radio, but was also inspired by film soundtracks. The word 'concrète' originally conveyed the idea that the composer was working directly (concretely) with the sound material, in contrast to the composer of instrumental or vocal music who works indirectly (abstractly) using a symbolic system of notation which represents the sounds to be made concrete by instruments and/or voices. In *musique concrète* sound materials could be taken from pre-existing recordings (including instrumental and vocal music) and recordings made specially, whether of the environment or with instruments and objects in front of a studio microphone. These source sounds might then be subjected to treatments before being combined in a structure; the compositional process proceeded by experiment. Schaeffer intended that sounds should be perceived and appreciated for their abstract properties rather than being attached to meanings or narratives associated with their sources and causes. The relationship between what sounds signify and their abstract sonic attributes lies at the heart of the subsequent development of the acousmatic music aesthetic. *Musique concrète* quickly became identified with 'natural', real-world sounds, even though *concrète* theory did not exclude the use of recorded electronic sounds.

In Paris towards the end of the 1950s 'electro-acoustic music' was promoted as a better term for representing the cohabitation of the *concrète* and electronic approaches to sounds. At this stage, however, 'electro-acoustic' referred only to music on tape. To confuse matters, as studios spread 'electronic music' lost its specialized German connotations and in many countries came to be synonymous with 'electro-acoustic music' as a collective term for all approaches to the medium. 'Electro-acoustic' gradually became the dominant term, although 'electronic' is still in use.

'Tape music' means simply that the music in its final form is recorded on magnetic tape. The term is closely associated with works composed in the USA in the early 1950s and has been widely used internationally ever since, although decreasingly now that tape (analogue or digital) is no longer the only final storage medium.

'Computer music' entered the vocabulary when the computer became a significant compositional tool; the first attempts at synthesis took place in 1957 at the Bell Telephone Laboratories in Murray Hill, New Jersey. The earliest computer music studios were distinct from (analogue) electronic music studios. Today all electro-acoustic music may be regarded as computer music, and although 'computer' may not fully represent the technological means employed, the term continues to be widely used.

Since the late 1980s 'sonic art' has been adopted to situate electro-acoustic music within a wider framework. Although electro-acoustic resources are not obligatory for

creating sonic art, the term has the advantage of indicating an openness to all types of sound.

3. ACOUSMATIC MUSIC. In traditional music the listener has visual access to the gestures of sound-making, an experience that is an essential aspect of the listener's affinity with the human articulation of music. In acousmatic music, which exists in recorded form and is designed for loudspeaker listening, the listener perceives the music without seeing the sources or causes of the sounds. Acousmatic music thus ruptures traditional notions of music reception. In terms of content the genre, playing on its invisibility and liberty, is ideal for exploring the ambiguous and allusive play of causalities, metamorphoses, acoustic imagery and the behaviour of sounds in virtual spaces. The recorded format of acousmatic music allows the composer to combine sounds created at different times and on different systems, and offers the utmost flexibility for juxtaposing and superimposing sounds with attention to the finer details of sound quality. Two aesthetic tendencies have emerged. The more 'abstract' approach is concerned with developing discourses of sound types and timbres; the other favours recognizable 'real-world' sounds (including other music), a more radiophonic approach, which can border on the documentary, and is sometimes referred to as 'anecdotal' music. However, the two tendencies can merge and should not necessarily be regarded as polarized. The argument as to whether anecdotal music is inferior to more abstract music is a continuation of the debates concerning the merits of programme music.

The word 'acousmatic' refers to the *akusmatikoi*, pupils of Pythagoras who, so that they might better concentrate on his teachings, were required to sit in absolute silence while they listened to their master speak, hidden from view behind a screen. In a radio talk in 1955 the French writer Jérôme Peignot used the expression 'bruit acousmatique' to describe the separation of a sound from its origins as encountered in *musique concrète*. Schaeffer in his *Traité des objets musicaux* (1966) compared the role of the tape recorder to the screen of Pythagoras, emphasizing the concentrated listening facilitated when working in the studio with sound recorded on tape: repeated listening encouraged a better appreciation of the detailed abstract attributes of sounds. In 1974 the composer François Bayle, head of the Groupe de Recherches Musicales, suggested adopting the term as more suitable than 'electro-acoustic music' for representing the special conditions of listening to music on tape. Acousmatic music has focussed attention on how we listen to sounds and to music, and what we seek through listening. Consequently, music analysis and music psychology have expanded their fields of inquiry to encompass the wider sound world of electro-acoustic music.

4. LIVE ELECTRONIC AND REAL-TIME APPLICATIONS. The earliest electric instruments, such as the theremin and ondes martenot, influenced subsequent synthesis and interface designs, but did not assist in establishing new musical genres. John Cage pioneered the use of electronic devices on the concert platform: his *Imaginary Landscape* series (1939–52) includes the earliest use in live performance of electric sound devices and recordings, sometimes combined with amplified 'small sounds' (which would otherwise remain barely audible).

Two approaches to combining electronic resources with live performers emerged in the 15 years after the effective foundation of electro-acoustic music in 1948. 'Mixed music' involved combining live instrumental/vocal performer(s) and pre-recorded tape, as in Schaeffer and Henry's *Orphée 53* (1953) for soprano and tape, and Maderna's *Musica su due dimensioni* I (1952) for flute, cymbal and tape. Mixed music embraced divergent aesthetics, ranging from works focussing on relationships between 'extended' or non-standard instrumental sounds and the sound world opened up by the acousmatic approach, to works that explored the pitch and rhythmic complexities of serialism, with taped electronic sounds acting as an accompaniment to the performer. Stockhausen's *Kontakte* (1959–60) embodies elements of both approaches. Composers also surrounded the performer(s) with environmental sounds, sometimes to articulate social and political arguments, as in Nono's *La fabbrica illuminata* (1964) for female voice and tape, or as part of more extensive sound environments and installations.

In 'live electronic music', sound produced by the performer was modified electronically at the time of production in a manner controlled by the instrumentalist or another performer (often at the mixing console). By the end of the 1960s performance groups typically used devices that changed the spectral characteristics (filtering, ring modulation, flanging and phasing), spatial positioning (panning) and sound envelope shapes, as well as echo and delay systems (based at that time on tape), which made possible the superposition and repetition of material. Many of these devices became more widely available after the introduction of voltage control in the mid-1960s.

Both mixed and live electronic music posed questions of microphone type and placement, amplification and balance. Indeed, amplification could in many circumstances be considered a form of transformation, projecting otherwise barely perceptible sounds and altering the spectral balance of the original. In some cases electric and electronic sources replaced the live acoustic instrument and were fed directly to the processing devices.

The analogue processes available to performers and composers in the 1950s and 60s were replaced by digital equivalents as fast microprocessors became available in the 70s and 80s. This same revolution led to the widespread introduction of the personal computer from the early 80s. Until this time computers had been used for synthesis and processing, but working in what was called 'deferred time', often waiting a considerable period for the process to be completed. The ever-increasing speed of digital devices finally allowed composers to hear the sound as soon as the instruction to create or process it was given. This was known as working in 'real-time', a term which has tended to replace 'live' (as in 'live electronic music') in an often confusing manner.

Digital technology has been applied to music in two ways: event processing and signal processing. In event processing (standardized by the adoption of the MIDI protocol after 1983), the music is represented digitally as streams or channels of 'note events' specified primarily by their pitch, duration (note on/note off) and dynamic level (velocity of attack). This enables composers to create and store note files to be triggered during performance, activating and controlling sound-production devices such as synthesizers and samplers.

The computer emerged as a 'performer' on stage in the mid-1980s, when it became relatively simple to describe note relationships in computer terms and to manipulate notes in real time. In effect the computer could assume the role of an improviser. This led directly to 'interactive composition', in which performer and computer were, for example, free to choose among possible responses or even to develop event material (most commonly pitches and rhythms) produced at the time of performance according to rules defined in advance by the composer. By the mid-1990s systems had been created that were capable of 'learning' and devising such rules of response during the performance itself.

Some computer systems can 'track' the live performer and adapt the electro-acoustic part accordingly. In the first generation of such systems the computer compared the real performance with a stored score, adjusting the accompanying material to fit (with respect to timing and, to a certain extent, accommodating performer errors). By the mid-1990s more flexible options had become available in which the performer could influence, in real time, the dynamic, timing and even timbral constitution of an electro-acoustic part.

Slower to develop, because more demanding still of computational speed, was digital signal processing in real time. This technology is concerned with transformations of spectral and temporal aspects of sound quality – the major constituents of what we loosely call timbre. Until the mid-1990s this field was dominated by stand-alone devices which could be controlled in real time by the performer (or by a separate computer). But the increasing speed of personal computers has allowed the implementation of many such processes in real time, making possible the integration of event and signal processing within a single control environment – a development that will influence both studio composition and performance practice.

Of course an 'event' cannot exist without a 'signal', and vice versa. Nonetheless there remains a clear distinction between traditions of electro-acoustic music-making that retain a pitched and rhythmic (event-dominated) approach and those that are more textural and timbral (signal-dominated) in their discourse. But a central ground has emerged where complex timbral events (more or less pitched) in rhythmic sequences interact with the live musical material.

In works that demand the strict synchronization of the live performers with a fixed electro-acoustic tape part, a click track may be required to enforce adherence to tempo and accurate entry cues. Many musicians object to this timing strait-jacket. However, the development of sound-recording systems based on computer hard disk storage allows 'sound files' (which previously would have been in a fixed disposition on tape) to be triggered and even mixed during performance, thus giving performers greater control over timing.

There is no agreement as to what constitutes 'live' electro-acoustic music. The presence of a live performer cannot always be detected from a recording; even at a concert there is often no apparent relationship between a visible human gesture and an acoustic result. The human performer may be influencing streams of computer data calculated in real time which, when heard, give no clear indication of human activity. Research in the psychology of sound and music perception may begin to explain what we perceive as 'human presence' through our ears alone. There remains a divide between the idealist view that computers may learn to become 'independent' performers (and composers) and the argument that computers should be used to extend essentially human performance creativity which may continue to be recognized as such through its sound alone.

5. Performance interfaces. The need for human-/computer interfaces more appropriate to a truly musical relationship has led to two kinds of devices: those that follow and measure human physical action ('controllers'), and those that analyse the acoustic result of a performance.

Most early applications of electricity to the creation of music were directed towards electronic versions of acoustic instruments. From 1945, and especially after the introduction of voltage control in the 1960s, 'control' devices (the performer interface) were increasingly separated from 'production' devices (those related to the synthesis and processing of sound). From this divide emerged instrument controllers which seek to follow human performance actions and translate this information into a form suitable to control quite separate sound-production equipment. The first generation of such interfaces, developed from the mid-1960s, was used to control analogue synthesizers and processors via voltage control.

Given an additional impetus by the introduction of MIDI, a new digital generation of controllers was developed in the 1980s. The most important were based on well-known instrumental types, for example guitar, wind, string and percussion controllers. These devices tracked and measured the physical action that causes sound production (finger position and pressure, breath pressure, strike velocity etc.), and usually had no acoustic sound output of their own. The designers often added the measurement of physical actions that were not significant in the original acoustic instrument – for example, finger pressure ('aftertouch') on the wind controller.

Another group comprised more general devices which analysed the sound result of instruments (using pitch-tracking, envelope-following and timbre-analysis techniques), translating the measurements into control information. These could be adapted for use with a variety of instrumental sources, often standard acoustic instruments with minor modifications and attachments. The more sophisticated and detailed such analysis was, the greater became the apparent limits of the MIDI protocol in terms of speed and timing. Most devices produce information output at rates far faster than MIDI can accurately transmit, and the compression of this information to work within the limits of MIDI leads to a loss of expressive performance detail. As a result there has been considerable pressure for a faster replacement to the MIDI standard.

Performance action controllers have come to dominate the marketplace, usually being more reliable, more universal (as MIDI devices) and cheaper, but they are considerably less sensitive to performance nuance (especially timbral variation). However, controllers based on signal analysis are set to emerge more strongly as faster, more reliable real-time analysis methods become available. A combination of both approaches (performance action and signal analysis) has been used in some devices.

More radical interface designs have been proposed. Some retain the physical feedback familiar to instrumental

performers. Surfaces, webs (strings under tension), springs (for example in games-machine paddles and joysticks) and solid objects made of familiar or newly developed elastic substances may be deformed and 'played'. The gestural energy of touch and pressure is transduced and transmitted (in the same way as with more standard controllers) to the sound-production apparatus. Other interfaces detect physical movement without elastic resistance. Devices have been built into gloves, pads (used under the floor or sometimes on the performer's body) or installed in furniture or sculpture. There is sometimes not even direct physical contact with the device, as with ultrasonic proximity and movement sensors used extensively, for example, with dance and installations. Some interfaces combining these approaches have been developed for use by composers and performers with special needs.

Since the mid-1960s biophysical interfaces have been developed to control sound-production and modification devices. Originally taken over from medical systems, transducers for the detection of biological variables such as skin resistance and brain activity waves have been used to control sound sources (the biofeedback sound systems of David Rosenboom and works by Alvin Lucier are examples). Although such interfaces remain on the fringes of experimental music, they are rich in possibilities.

6. LISTENING AND LOUDSPEAKERS. Electro-acoustic music is dependent on loudspeakers as the medium of transmission. Therefore the types and qualities of loudspeakers, their ability to project sound and their placement relative to the listener are important factors in the reception of electro-acoustic music: the perception of spatial images and textural detail changes in different listening conditions. This is particularly true of acousmatic music and acousmatic elements of performances, most notably where the composer has paid great attention to detail when working in a high-quality studio environment, which is quite different from that of a concert hall, public space or home. The diffusion of sound in public remains a fragile, variable and imperfect art which has developed for the most part empirically.

The first concerts of electro-acoustic music were French radio broadcasts of *musique concrète*, and the first public concert was of Schaeffer and Henry's *Symphonie pour un homme seul* (played from disc turntables on stage) at the Ecole Normale de Musique in Paris in 1950. Schaeffer recognized the potential blandness of simple loudspeaker projection in a large space, and in 1951 he experimented with using four channels to create a play of perspectives and trajectories at the Théâtre de l'Empire in Paris. Other special systems designed for concert diffusion include the 425 loudspeakers of the Philips Pavilion at the Brussels Exposition in 1958 (Varèse's *Poème électronique* and Xenakis's *Concret PH* were conceived for this space), and the spherical auditorium with 50 loudspeakers at the Osaka World's Fair in 1970, used for performances of Stockhausen's works. The first permanent loudspeaker installation for the diffusion of acousmatic music in concert was the 'Gmebaphone' of the Groupe de Musique Expérimentale de Bourges (first concert in 1973), followed by the 'Acousmonium' of the Groupe de Recherches Musicales in Paris (1974).

The last two systems served as models for many sound-diffusion installations devoted to concert presentations of electro-acoustic works. Typically, loudspeakers (usually not of the same type and frequency coloration) are placed at various distances from listeners in differing perspectives and orientations in order to project the music in a kind of topographical relief. A main solo pair of speakers usually projects a detailed frontal image, more widely spaced pairs permit a broadening of the image and less directional speakers create peripheral atmosphere by reflecting the sound off walls. Speakers can project the sound upwards in order to create 'height'; small higher-frequency units can carry the sound above listeners, and the lower register can be extended with special bass speakers. The person diffusing the sound adjusts the level of each speaker (or stereo loudspeaker pair or grouping) during performance, combining speakers to expand, dramatize and 'sonorize' the environment, and to vary the acoustic image so that the listener is 'in' the music rather than 'viewing' it from a distance. Sound diffusion ultimately aims to encourage attentive listening and assist the engaging of listeners' imaginations while enhancing the inherent spatial dimensions of the music.

The first electro-acoustic works were monophonic (one-track); some early works on tape were composed on more than one track, permitting concert presentation of the tracks on separate loudspeakers. (For example, a tape recorder with six spools allowed the simultaneous playback of three mono tapes for the first performance of Messiaen's *Timbres durées* in 1952.) Stereo stabilized as the norm for acousmatic works in 1959–60, but many early 'stereo' works would better be described as two-track rather than possessing the stereo 'image' we recognize today. The quadraphonic (four-track) format emerged in the late 1950s and is still used. It requires loudspeakers to be placed in four locations around the listener both to create surround-sound environments and to realize trajectories such as rotating sounds, as in Stockhausen's *Kontakte* for tape, piano and percussion. The multi-speaker installation described above is suitable for diffusing works composed in a stereo format, but works may exist in more than two channels, providing an opportunity for more textural separation, greater complexity of concurrent events and a more polyphonic approach to spatial play. In the late 1990s the eight-channel format gained popularity, encouraged by the availability of eight-channel digital tape.

Computer-assisted automated systems, some more suitable for spatializing live electronic music than for diffusing works in fixed recorded format, appeared in the 1980s. Notable were the 4X system developed at IRCAM, used for Boulez's *Répons* (a project begun in 1980) to process and spatialize the sound of the six instrumental soloists; and the computer-assisted gestural control system developed by the GRAME studio in Lyons in 1986. Automation permits the pre-programming of spatial settings, trajectories and patterns, and the memorizing of the fader movements created by the person diffusing the sound; means of gestural control other than mixer faders are attractive for live electronic performance.

Computer programs and processors for spatialization have also been designed to be used in the composition process so that the result is encoded in the music itself. An early example was John Chowning's program to create virtual spaces outside the four speakers of the quadraphonic square and detailed sound-paths around the auditorium, as in his *Turenas* (1972). In stereo as well

one can create the illusion of sound travelling in three-dimensional space outside the normal limits defined by the physical speaker enclosures, and even above and below the listener. Because such spatial effects depend on the quality of loudspeaker, a controlled acoustic and listening position, they rarely survive concert diffusion in a public space, but they are likely to become incorporated in home sound systems used in conjunction with television, thereby opening up new possibilities for the electro-acoustic composer.

The public presentation of acousmatic music has been condemned both for the temporal fixity of musical structures and for the lack of visual interest. The art of diffusion has arisen partly in response to these complaints. Diffusion can radically affect (for better or worse) the impact and atmosphere of acousmatic works. But the use of conventional concert spaces for acousmatic music, with listeners facing forwards in fixed seating, raises traditional visual expectations which by definition cannot be satisfied. Hence there have been many experiments with less traditional settings, sometimes in collaboration with other media. The first open-air diffusion was of part of Schaeffer and Henry's *Symphonie pour un homme seul*, with improvised choreography by Merce Cunningham, in Waltham, Massachusetts, in 1952. Max Neuhaus took electro-acoustic music underwater in 1971. A notable early installation was Henry's *Spatiodynamisme*, which consisted of 12 tapes triggered automatically in an aleatory manner, contributing to the environment associated with Nicolas Schöffer's 'tour cybernétique' at Saint-Cloud in 1955. Among earlier audiovisual events the light-and-sound installation for Xenakis's first *Polytope* at the Montreal Exposition in 1967 was particularly innovatory.

With the arrival of the compact disc, and the consequent elimination of the background noise of the long-playing record, the listener could buy a copy of an acousmatic work which was identical in quality to the original. Thus by the late 1990s acousmatic music in particular was often conceived with private listening in mind. There has been a significant expansion in commercially available repertory, and composers are able to produce their own compact discs immediately on completion of a new work.

7. THE STUDIO. Schaeffer founded the first electro-acoustic studio in 1948 under the auspices of Radiodiffusion-Télévision Française, a model that was followed throughout Europe. Initially studios relied on (78 r.p.m.) disc technology. In addition to mixing, the most commonly used processes were speed change, repetition ('closed groove' – later, with tape, called 'looping') and cutting into the evolution of a sound (most often removing its attack). The introduction of tape machines in 1951 marked the establishment of what became known as the 'classical tape' studio. The design of these studios was broadly the same whether sources were recorded and manipulated, as in the French *musique concrète* tradition, or synthesized in an often laborious process of mixing from simple sources, as in the early years of the Studio für Elektronische Musik of Westdeutscher Rundfunk in Cologne.

Most European national radio networks had channels dedicated to cultural programming, and the establishment of studios under their auspices was an extension of this practice, as well as building on existing radiophonic, sound drama and *Hörspiel* traditions. These studios had a solid infrastructure of well-maintained recording equipment in a high-quality monitoring environment, to which were added such electronic devices as oscillators, filters and amplifiers. From the start the production of works for concert or broadcast was the studios' primary mission.

In the USA, where such national or regional institutions did not exist, the earliest studios were assembled by composers for personal and sometimes commercial ventures, or for specific projects. Cage's *Williams Mix* (1952) was realized in a temporary studio with assistance from Louis and Bebe Barron's private studio in New York (operational since 1948); the San Francisco Tape Music Center was originally established by a composers' collective (1959). The first institutional studios in the USA were set up in university music departments, and some developed strong links with engineering and, later, computer science and artificial intelligence departments. In several cases strong entrepreneurial relationships with industry were established; the studios' emphasis was sometimes as much on research and technical innovation as on musical ends. These studios laid the foundation for America's enormous contribution to computer music software.

The following are among the most important early classical tape studios (original names have been used, and the dates are those of the first recognized production of music).

Club d'Essai, Radiodiffusion-Télévision Français, Paris (1948) [now Groupe de Recherches Musicales, part of the Institut National de l'Audiovisuel]
Tape Music Studio, Columbia University, New York (1951) [now Columbia-Princeton Electronic Music Center]
Studio für Elektronische Musik, Westdeutscher Rundfunk, Cologne (1951)
Electronic Music Studio, NHK (Japanese Radio), Tokyo (1953)
Studio di Fonologia, Radio Audizioni Italiane, Milan (1953) [closed 1977]
Studio Eksperymentalne, Polskie Radio, Warsaw (1957)
Elektronmusikstudion (EMS), Sveriges Radio, Stockholm (1957) [now Elektroakustisk Musik i Sverige (EMS), a subsidiary of the Swedish Concert Institute]
Studio de Musique Electronique de Bruxelles (APELAC), Brussels (1958) [closed 1967]
Estudio de Fonología Musical, University of Buenos Aires (1958) [closed 1973]
Electronic Music Studio, University of Toronto (1959)
San Francisco Tape Music Center (1959) [now the Tape Music Center, Mills College, Oakland, California]
Studio voor Elektronische Muziek, University of Utrecht (1961) [now amalgamated with the Instituut voor Sonologie, Royal Conservatory, The Hague]

The classical tape studio relied heavily on manual control of the sound source and sound-processing devices. The advent from the mid-1960s of devices such as oscillators, filters and amplifiers, which allowed electrical voltages to replace much of the painstaking manual operation, made an immediate impact on studios that concentrated on systematic sound synthesis and processing. At the same time the transistor revolution was leading to increasing miniaturization and the development of the synthesizer as we know it today. The synthesizer could be used both as a versatile studio generation device and, more significantly, as a live performance instrument, one that was rapidly developed in popular music and jazz performance.

This second wave of studios extended the diversity of the classical studio. Those orientated towards the French tradition treated the new versatility of sound generation

as a potential source of rich and complex timbres over which it became possible to exert more control in terms of timbral evolution. Those with a greater interest in retaining rhythmic, harmonic and melodic approaches developed devices that stored a 'sequence' of voltages that could be triggered at a controllable rate or stepped through by the user, and looped if required; hence the term 'sequencer' which was later to become an important component of computer control.

The demand for more sophisticated analogue sequencers led to several relatively short-lived developments in computer applications in the 1970s. These 'hybrid' systems, in which a simple low-speed 'digital-to-analogue' converter allowed the computer to operate voltage-controlled synthesis and processing systems, were effectively overtaken by the introduction of MIDI systems from 1983. (For the evolution of digital synthesis and sound processing *see* COMPUTERS AND MUSIC, §II.)

The early evolution of the computer music studio was largely separate from the developments outlined above. A small group of research centres in the 1960s grew, by the 70s, into 'computer music centres' with necessarily strong relationships to computer science interests. The personal computer revolution of the late 80s and 90s eventually brought the fruits of these developments to all studios. The integration of these originally distinct studio types parallels the increasing speed of computer systems. Production studios had always worked with immediate sound feedback, and many were willing to integrate the new, more powerful computer tools only as processing times fell, firstly to real time for control software (sequencers) and then to real time for processing, recording and editing.

Each stage of this evolution has seen a steady shift away from tape and towards the hard disks of computer memory as the main storage and manipulation medium, although digital audio tape (DAT) and compact disc (CD) remain common media for storage of the final work. There has been a corresponding trend away from direct physical contact – manipulation of a bank of tape machines, the cutting of tape with razor blade, the manual setting of values on front panels of devices – towards a purely visual (on-screen) replication of these same functions, often using icons representing the original physical processes. The physical mixing console has diminished in importance and is increasingly replaced by its virtual representation. The monitoring environment is, however, as important as ever, with even greater demands to exclude unwanted noise and to use loudspeakers that are increasingly accurate over a wide frequency range. This parallels the greater demand for high-quality sound systems for entertainment venues, video games, film sound and television.

The growing use of electro-acoustic resources in education has led not only to the application of computer methods to traditional aspects of Western musical notation, composition and ear training, but also to the introduction of electro-acoustic music in all its varieties to composers, performers and listeners at a much earlier age. An education studio (often completely mobile) consisting of a computer controlling synthesis, sampling and processing devices, possibly with hard disk recording or a small stand-alone multi-track recording facility, is increasingly common in pre-university education.

The popular dance music phenomenon of the late 1980s and early 90s was facilitated by the expansion of home studios using the first generation of computer sequencers, samplers and synthesizers affordable on a personal budget. With respect to technical production standards the difference between 'amateur' and 'professional' studios has progressively eroded, especially as it became feasible to record and edit on hard disk. This has transformed institutional studios (whether in universities or research centres) from hardware service providers into centres of contact and exchange within larger networks. A new relationship is forming between such studios and composers' personal facilities.

Finally, dissemination of music over the internet will have considerable consequences for the production and consumption of electro-acoustic (and indeed any kind of) music. The studio of the future may be linked directly to other studios, performance spaces, sound and music libraries, and home sound systems. Although the internet environment is likely to become increasingly 'noisy' and difficult to navigate, it may lead to the creation of the 'virtual studio' in which a composer can configure an ideal sound-processing and synthesis environment; this need not be located at any one place but may be accessed from anywhere the composer chooses.

8. ELECTRO-ACOUSTIC SOUNDS AND OTHER GENRES. The aesthetic approaches associated with electro-acoustic art music have often arisen quite independently in other genres of sonic art: sound effects and soundtracks for film and 'sound design' for the theatre, sound environments for site-specific art installations and museum exhibitions, sound sculpture and kinetic art, radio art and imaginative radio drama, sound poetry (text-sound composition) and vernacular music genres such as dance music. Electro-acoustic music may be considered variously as a distinct, autonomous genre; as a component – whether equal in status, dominant, supporting or decorative – in instrumental/vocal music and in multimedia or intermedia arts; and as a sonic practice absorbed, consciously or not, into another genre. Furthermore, it has become increasingly difficult to maintain clear distinction between electro-acoustic 'art' music and vernacular musics that embrace electro-acoustic attitudes. This blurring of differentiation among genres, and sharing of practice across genres, is inevitable as common electro-acoustic means become cheaper and more readily available to individuals.

SIMON EMMERSON, DENIS SMALLEY

Electronic instruments. Instruments that incorporate electronic circuitry as an integral part of the sound-generating system. This article also discusses instruments that are properly classed as 'electric' or 'electroacoustic'. There are three reasons for this. First, historically and technically the development of electronic instruments resulted from experiments, often only partly successful, in the application of electrical technology to the production or amplification of acoustic sound; in many areas electronic instruments have superseded their electric predecessors, and they have also opened up their own, entirely new possibilities for composition and performance. Second, all electric instruments require electronic amplification, so that there is some justification for considering them alongside instruments that are fully electronic. Third, common usage dictates 'electronic instruments' rather than 'electric (or electroacoustic) instruments' as the generic term for all instruments in which vibrations are amplified and heard as sound through a loudspeaker, whether the sound-generating system is electroacoustic or electronic.

The total quantity of electronic instruments built in the 70 years since the first models were manufactured already numbers many millions, and the day is not far off when they will outnumber all other instruments made throughout human history (especially if all the digital watches, pocket calculators, home computers, mobile telephones and electronic games machines that can play melodies or produce other sounds are taken into account). Well over 500 patents for electronic instruments (in some instances several for a single instrument) were granted in Britain, France, Germany and the USA up to 1950 alone; statistics since that date would show a considerable acceleration. Electronic instruments are now used in all forms of contemporary Western music by performers and composers of all tastes and styles. Following the spread of electronic organs in the late 1940s and the 1950s to many parts of the world where electricity supplies were newly installed and often barely adequate, the electric guitar became similarly widespread in the 1960s and 70s. By the beginning of the 1980s the synthesizer was starting to be used in areas such as India and West Africa and to be heard in concerts given by rock musicians visiting China.

I. Terminology and techniques. II. Early applications of electricity (to 1895). III. 1895–1945. IV. After 1945.

I. Terminology and techniques

1. Terms and names. 2. Electroacoustic instruments: (i) String instruments (ii) Reed instruments (iii) Other vibratory mechanisms (iv) Air microphones and contact pickups. 3. Electromechanical instruments: (i) Tone-wheels (ii) Photoelectric film instruments (iii) Other types. 4. Electronic instruments: (i) Monophonic instruments (ii) Partially polyphonic instruments (iii) Fully polyphonic instruments (iv) Classification. 5. Peripheral equipment: (i) Signal-processing devices and amplifiers (ii) Loudspeakers.

1. Terms and names. To the layman the terms 'electric' and 'electronic' are often not clearly distinguishable; since both electric and electronic devices clearly function by means of electricity, one is apt to use the words interchangeably or with only an imprecise notion of where the distinction between them lies. Technically, electronic devices form a subset of all electric devices, being those, broadly speaking, that incorporate thermionic valves or semiconductors. In common usage, however, 'electric' is normally applied not to the whole range of electrically powered devices, but simply to those that are not electronic.

In discussing musical instruments it is useful to make a similar distinction between 'electric' and 'electronic' instruments: this article does so on the basis of the method of sound generation. The term 'electric' is used of two types of instruments: electroacoustic instruments, which produce sounds, albeit often virtually inaudible, by acoustic methods, and incorporate built-in microphones, pickups or transducers by means of which these vibrations are amplified; and electromechanical instruments, in which the mechanism itself produces no sound but creates a regular fluctuation in an electrical circuit which can be converted into an audio signal. The term 'electronic' is used of instruments in which the sound is generated by means of electronic oscillators or digital circuitry.

It is not always easy to maintain this useful distinction between electric and electronic instruments. As explained in the introduction, convenience and common usage dictate that this article be headed 'Electronic instruments' though it might more properly be called 'Electric and electronic instruments', or even (using the term in its comprehensive sense) 'Electric instruments'. In this dictionary, for example, the terms 'electric piano' and 'electric organ' are used for all electric keyboard instruments that produce piano- or organ-like sounds, while 'electronic piano' and 'electronic organ' describe their fully electronic equivalents.

This terminological confusion has its roots in the naming and describing of instruments during the period between the two world wars when electronic technology was first developing. The clear-cut differentiations that can now be made retrospectively were not at all clear at the time. Up to about 1930 'electric organ' meant a pipe organ with electric action, and 'electric piano' an electrically powered player piano (the terms are still occasionally used in this sense). Around 1930 several music journals carried regular articles on 'mechanical' music, which dealt not with clockwork music machines but with all the recently introduced electrically-powered means of producing, storing and diffusing sound and music: radio, gramophone, the sound film and electric and electronic instruments. In the 1930s some of the more frequently found descriptive terms for such instruments were 'electrotonic', 'electromagnetic', 'electrogenic', 'radio-electric' and 'ether-wave'. Common to both the interwar and post-war periods are the terms 'electronic', 'electric(al)', 'electroacoustic', 'electrophonic', 'synthetic', 'electron music' and 'electromusic'. Today 'electroacoustic' and 'electronic' are the most widely used terms for the large

area of music generated or modified by electric and electronic instruments and associated equipment. They have taken some 50 years to crystallize out of all the previous usages and are still not universally accepted. (*See also* ELECTROPHONE.)

The naming of electric and electronic instruments presents its own peculiar difficulties. The use of the name of an existing musical instrument may be regarded as thoroughly inappropriate by those who see little resemblance to it in the newly invented, electrified version: protracted disputes took place over the name 'electronic organ', for example. Shortly after the introduction of the Hammond organ in 1935, the company had to defend itself against the Federal Trade Commission in the USA for the right to use the name 'organ'; the case ran for two years, between 1936 and 1938. A similar struggle took place in West Germany from 1959 to 1969 between Ahlborn Orgel and the Bund Deutscher Orgelbaumeister, during which the Gesellschaft der Orgelfreunde published a collection of essays (1964) proposing the new word 'Elektrium' for all electronic organs instead of Ahlborn's 'Elektronenorgel'.

When choosing a new name, it is often hard to decide whether to emphasize or avoid drawing attention to such a partial relationship. The electric or electronic versions of the guitar, piano and organ are all played in much the same way as their traditional counterparts, and in many cases the resulting sound is similar to or even intended to mimic that of the earlier instrument. The naming of new instruments that do not show such a straightforward connection with an acoustic predecessor has, by and large, proceeded according to one of the following principles: the incorporation of all or part of the name of the inventor(s) or manufacturer; the use of a musical suffix such as '-phon(e)', '-ton(e)' or '-chord'; the inclusion of an electrical or 'scientific' term or affix, such as 'radio-', 'syn-', 'electro-', 'wave', '-tron' or '-ium'; or the adoption of the name of a traditional instrument to which the new invention bears little or no resemblance in sound or appearance (Audion piano, *clavecin électrique* and Electronic sackbut).

2. ELECTROACOUSTIC INSTRUMENTS. Today amplified instruments are commonplace in all kinds of music: apart from the symphony orchestra, there are few instrumental ensembles playing music composed or arranged in the last few years that do not feature at least one such instrument. They may be ordinary acoustic instruments played in front of air microphones or with contact pickups attached to them (these are not regarded as true electroacoustic instruments under the classification proposed here), or they may be specially designed electric instruments with built-in pickups (or occasionally microphones).

Electroacoustic instruments mostly involve keyboards or strings and normally resemble standard acoustic instruments to a greater or lesser extent. Their conventional vibratory mechanisms such as strings, free reeds, bells, plates or rods are, however, not only essential parts of the electrical circuits designed to make their vibrations audible over a loudspeaker, but in some cases – where the microphones or pickups are electrostatic – are actually integrated into the circuits and carry a voltage. Furthermore, timbre control is often obtained by the positioning of several pickups at different points along the vibratory mechanism (at its nodes, for example), and the performer can select various combinations of these. (Electronic modification is often applied to the signal before it is amplified and passed through a loudspeaker; see §5 below.) The sound sources normally have their acoustic radiation reduced: electric pianos lack soundboards (which, incidentally, considerably increases the length of time for which the strings vibrate), and reeds are enclosed.

There are three basic subdivisions of the electroacoustic category: electromagnetic, electrostatic and photoelectric. A further subdivision, piezoelectric, may be added, though piezoelectric crystal pickups were seldom incorporated into true electroacoustic instruments before the 1960s (their principal application is in amplified acoustic instruments; see §(iv) below). The photoelectric principle occurs even more rarely: in the mid-1930s Richard H. Ranger constructed an instrument in which air-blown free reeds affected beams of light that reached photoelectric cells, and a comparable system was adopted around 1986 for providing digital MIDI information about the movement of piano hammers and keys, as in Yamaha's Disklavier. The other two methods also involve the amplification of a vibratory mechanism by means of pickups that are not in direct contact with it. A pickup is a form of transducer, that is, a device that converts physical energy (the vibrations of the mechanism) into electrical energy which can be passed as a regularly varying current to an amplifier. Electromagnetic pickups are best known in the form in which they occur on most electric guitars (a row of six cylindrical pole-pieces). They consist essentially of a permanent magnet wound with a continuous length of fine wire. The magnetic field around the magnet is intersected by the coil and the pickup is so placed that the vibratory mechanism of the instrument (which must be of a material that responds to magnetism) is situated within it. When the vibratory mechanism is excited the magnetic field is altered in shape and small pulses of electrical energy are generated in the coil. An electrostatic pickup usually consists of a rectangular bar or plate which functions as one electrode or plate of a variable capacitor or condenser whose other plate consists of the vibratory mechanism. To a musician unfamiliar with electrical circuitry there may be no readily perceptible difference between these two types of pickup. The distance of a pickup from the vibratory mechanism is typically no more than about 1 cm. The earliest application of the electromagnetic pickup to a musical instrument appears to have been in the 'musical telegraph' of 1874 (see §II, 3, below), while electrostatic pickups (which require a power supply) do not seem to have been introduced until the 1920s.

(i) String instruments. Electric versions have been made of all three types of string instrument: struck (piano), plucked (guitar, harpsichord) and bowed (violin family).

(a) Struck strings. The principal type of electric instrument that utilizes struck strings is the ELECTRIC PIANO. Its strings, particularly those for the lower notes, are shorter, thinner and under less tension than in an acoustic piano, since acoustic diffusion is not required. The use of pickups to transmit the vibrations of the strings to the amplifier means that no soundboard is needed. In some cases the hammer mechanism is simpler and the hammers strike the strings with less force than in the acoustic instrument. Both grand (usually reduced in size) and upright electric pianos have been made.

Electromagnetic pianos that employ struck strings include the Neo-Bechstein-Flügel (1931), Hiller's *Radio-*

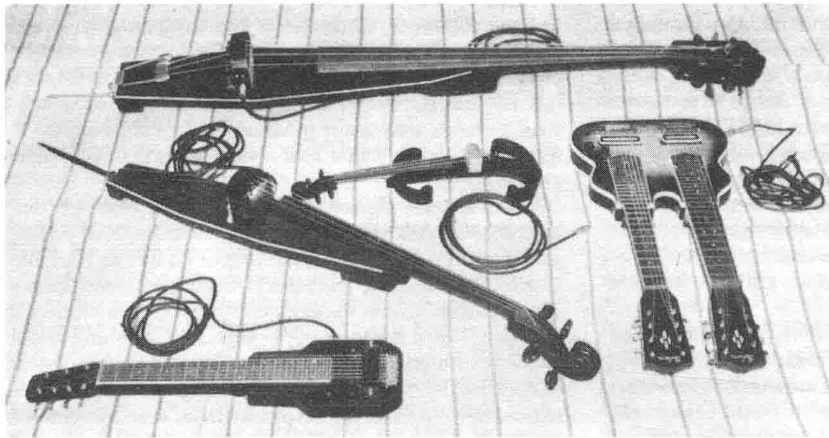
klavier (introduced in Hamburg in 1931), the *Lautsprecherklavier* of Beier and von Dräger (mid-1930s) and the Multipiano (built at NHK Tokyo in 1967).

Electromagnetic forms of the SOSTENENTE PIANO include the *elektrophonisches Klavier* (1885–1913), the Variachord (1937), and the Crea-Tone (1930), in which the normal hammer mechanism is replaced by electromagnetic excitation of the strings; other instruments that function in the same way include those invented from the 1880s onwards by Boyle, Singer and others (see §II, 3, below), as does the E-Bow electric guitar accessory (*c*1977).

Electrostatic pianos include Vierling's Elektrochord (1932), the Everett Pianotron (*c*1933), Miessner's Electronic Piano (1930–31) and several instruments based on his patent that were marketed after 1935, the Dynatone, Krakauer Electone, Minipiano, Storytone and a similar piano marketed in Canada by Bernhardt. Electrostatic clavichords include the Clavinet (*c*1960).

Struck strings amplified electrostatically were the basis of the 'chromatic electronic timpani' made by BENJAMIN F. MIESSNER in the mid-1930s, which was played with drumsticks. A similar instrument, also with a range of a chromatic octave, is the Timbalec (*timbales électroniques*) developed in the early 1960s by Guy Siwinski for André Monici's Orchestre Electronique Monici in Orleans; its pickups were probably electromagnetic.

Piezoelectric crystal pickups were used to amplify nearly all electric pianos marketed from the late 1970s to the mid-1980s, including the uprights manufactured by Aeolian, Gretsch and Helpinstill, and the baby grands by Crumar, Helpinstill, Kawai and YAMAHA.



(b) Plucked strings. The ELECTRIC GUITAR is the most familiar of electric plucked string instruments. The history of its technical development is chiefly that of the invention of an efficient magnetic pickup. Crude pickups were used by Lloyd Loar as early as 1923 and within a few years guitarists were experimenting with amplification by means of air microphones (Eddie Durham, 1929) and acoustic gramophone needles (Les Paul and Alvino Rey, *c*1930); special guitar microphones were devised by Loar (manufactured by Acousti-Lectric in the mid-1930s) and Miessner (made by Amperite in 1928), and the Horace Rowe-DeArmond guitar pickup was manufactured in 1931. The first electric guitars to be marketed (1931) used electromagnetic pickups of the simplest sort; at the end of the decade Epiphone replaced the single large rectangular magnet with separate small magnets (or pole-pieces), one for each string, mounted on a base and, as before, surrounded by a single coil. (In the early 1980s Yamaha produced an electric guitar that reverted to the single bar magnetic pickup.) A large number of electric guitars now use the 'humbucking' pickup, invented in 1955 by Seth Lover: this uses two coils instead of one, wired so that current flows through them consecutively. Not only does the twin-coil pickup eliminate interference, it also affects the sound of the instrument by decreasing the response to higher frequencies.

Electric guitars are principally of two types, the hollow-bodied ('semi-electric') in which the soundboard and resonating chamber are similar to those of the acoustic instrument, and the solid-bodied in which the body transmits no vibration from the strings. Almost all models of both types carry one or more knobs on the body, by means of which volume and timbre can be controlled, and many have a vibrato lever ('tremolo arm') attached at the bridge or tailpiece. Sound-processing devices, usually in the form of pedals, are often used (see §5 below). Electric Hawaiian guitars have also been constructed: they are usually mounted on legs and have up to four necks, knee-levers and several pedals ('pedal steel guitars').

Other electric plucked strings include a 'complete set' built by A.E. Allen and V.A. Pfeil in Orange, New Jersey, around 1934, mandolins (manufactured by the National Dobro Corporation, fender and Gibson), banjos, harps, such as those built in the early 1980s by Merlin Maddock in South Wales (about 1 metre high and weighing about 4–5 kg), and *sitārs* (in the USA). A harp-like instrument (Rahmenharfe), the strings of which may be bowed, rubbed and struck as well as plucked, has been constructed by Kagel, and Dieter Trüstedt has made a series of electromagnetically amplified long zithers. Electric harpsichords form a distinct group and include one designed in 1936 by Hanns Neupert and Friedrich Trautwein, the Thienhaus-Cembalo (probably electromagnetic), the Cembaphon of Harald Bode which used electrostatic pickups, electromagnetically amplified instruments made by Baldwin in the early 1960s and Neupert from 1966, and Ivor Darreg's Megapsalterion or Amplifying Clavichord.

(c) Bowed strings. Electric instruments based on the violin family are either solid-bodied or, more commonly, 'skeletal' instruments consisting of little more than a fingerboard (fig.1). Precedents for the latter are found in walking-stick violins and the Stroh violin. Solid-bodied electric instruments, especially cellos and double basses, are normally heavier than the acoustic versions. Amplification is almost invariably by means of one or more sets of electromagnetic pickups (with steel strings), or piezoelectric crystal contact pickups. Table 1 lists electroacoustic bowed string instruments constructed in the 1920s and 30s, information on a number of which is incomplete.

Since World War II exploration in this area has been less widespread, partly because the improved quality of amplification systems and special pickups has meant that acoustic instruments can now be very effectively electrified. Electric violins have been manufactured by Fender, Zeta Music Systems (with four or five strings, also violas), Yamaha and several other companies. Around 1972 Max Mathews developed an electric violin with a separate pickup for each string. Electric cellos have been manufactured by Yamaha (two models) and constructed by Donald Buchla (1979) and by the cellists Ernst Reijseger (from 1969, using electromagnetic and piezoelectric crystal pickups, and including a solid skeletal model) and David Darling (eight-string solid cello, *c*1980), for Jeffrey Krieger and for Philip Sheppard (with five strings; 1998). Solid-bodied electric double basses have been manufactured by companies such as Fender (1951) and Zeta and were built by Motoharu Yoshizawa and in France (early 1980s) for Joëlle Léandre and others. The Gizmotron (originally Gizmo) and Bass Gizmotron, devised around 1971 by electric guitarists Kevin Godley and Lol Creme and improved by John McConnell, are attachments respectively for the electric guitar and electric bass guitar with small hurdy-gurdy-like wheels to bow the strings. Electric bowed strings have found many applications in popular music: they were used by the Electric Light

1. Electroacoustic string instruments by Benjamin F. Miessner, 1939: seven-string guitar, cello, violin, double-necked guitar and double bass

Orchestra, for example, and the jazz-rock soloists Jean-Luc Ponty and Michal Urbaniak both originally played a violectra, tuned one octave lower than the violin, and subsequently a five-string electric violin (extending down to *c*). Lakshminarayana Shankar performs on a specially-built two-necked ten-string electric violin, and Eberhard Weber on a six-string electric double bass.

(ii) Reed instruments. In this group, which are almost all keyboard instruments, steel or steel-tipped tuned reeds (usually free reeds), enclosed in sound-proof chambers, are amplified electromagnetically or electrostatically. One or more pickups are positioned close to the reed, one of them typically at the free end; where there are several, different timbres can be produced. Other elements that contribute to timbral variety, in electric as in acoustic free-reed instruments, include the thickness, width, weight and profile of the reed, and the degree (if any) of twist at its tip. The reeds are usually set in motion by compression (blowing) or by suction, but unlike those in acoustic free-reed systems they are often maintained in vibration for as long as the instrument is switched on, to avoid any delay in 'speaking', particularly with the reeds for lower pitches;

TABLE 1

Instrument	*Date*	*Inventor/manufacturer*
violin (special internal pickup)	*c*1912	J.J. Comer, Automatic Enunciator Co., USA
violin (special ?internal pickup)	*c*1913	W.H. Derriman, Britain
violin (special internal pickup)	*c*1922	C. Hammond, USA
violin (special pickup on the bridge)	*c*1923	E. Hoffmann, Germany
violin (with cut-down body)	*c*1924	F.W. Dierdorf, USA
Giant-Tone Radio Violin (special pickup fitted in the f-hole	1927	R.F. Starzl, USA
Superviolon (special pickup with associated circuitry that enabled it to play in the ranges of all bowed strings)	*c*1931	Paul Bizos, France (several presented *c*1934 as a complete 'string ensemble')
violin	*c*1931	Harald Henning, Austria
Elektro Geige	*c*1931	Oskar Vierling, Berlin
Electrolin	*c*1933	A.E. Allen and V.A. Pfeil, Orange, NJ
Makhonine violin	*c*1933	Makhonine, France (presumably Ivan Makhonin, a Russian (*b* *c*1886), who emigrated to France in 1920)
violin	*c*1934	Lloyd Loar, Acousti-Lectric Co., Kalamazoo, MI
Electro Violin	*c*1935	Electro String Instrument Co., Los Angeles (under the Rickenbacker marque)
Violino elettrodinamico (audible over 8 km)	*c*1936	[?G. Giuletti], Padua
VioLectric ('amplifonic violin')	1936	John Dopyera, National Dobro Corp., Los Angeles
Vibra-Violin	*c*1937	made in the USA; inventor unknown
violin	?*c*1937	Benjamin F. Miessner, Millburn, NJ
Electrofonic Violin (with belly but no back)	1938	Marshall Moss and William Bartley, Washington, DC
viola	*c*1934	A.E. Allen and V.A. Pfeil, Orange, NJ
viola	*c*1935	Lloyd Loar, Acousti-Lectric Co., Kalamazoo, MI
'electrical cello'	1931	R. Raven-Hart, ?London
Elektro-Cello	*c*1931	Oskar Vierling, Berlin
cello	*c*1933	A.E. Allen and V.A. Pfeil, Orange, NJ
cello	*c*1937	Hugo Benioff, California
5-string cello	*c*1937	V. Karapetoff, Cornell University, Ithaca, NY
cello	?*c*1937	Benjamin F. Miessner, Millburn, NJ
double bass	*c*1933	A.E. Allen and V.A. Pfeil, Orange NJ
double bass	*c*1934	Lloyd Loar, Acousti-Lectric Co., Kalamazoo, MI
Radio Bull-Fiddle	*c*1935	Ivan Eremeeff, Philadelphia
double bass	1936	Electro String Instrument Co., Los Angeles (under the Rickenbacker marque)
double bass	?*c*1937	Benjamin F. Miessner, Millburn, NJ
Radiotone (keyboard 'hurdy-gurdy')	*c*1930	Gabriel Boreau, Paris

in some electric pianos the reeds are plucked, or struck by small hammers.

Electromagnetic pianos that employ free reeds include Lloyd Loar's Clavier (1934), the Pianophon (1954) and later models of the Pianet; organs of this type include some Farfisa models. Another instrument that functions in a similar way is the Guitaret (early 1960s). Instruments in which free reeds are activated by electromagnets include the Musical Telegraph (1874–7) and the Canto (*c*1927).

Electrostatic pianos include earlier models of the Pianet (1962), the Selmer Pianotron (1938) and the electric pianos manufactured by Wurlitzer from 1954 (designed by Miessner) and from 1968 (Harald Bode); organs of this type include the Orgatron (based on Miessner's electric harmonium) and its derivative the early Wurlitzer organ, an early model of the Minshall organ, the Radareed organ, an instrument made by the television pioneer John Logie Baird (1927) in which reeds were placed inside organ pipes, the Mutatone of Constant Martin and the hybrid Mannborg organ. Another instrument that functions in the same way is the Hohner Cembalet (1958).

(iii) Other vibratory mechanisms. A number of electroacoustic instruments use vibrating devices other than strings and reeds. Electrically driven tuning-fork oscillators generated sound in the RCA Electronic Music Synthesizer (1951–2) and the short-lived Rogertone (USA, ?1950s). Struck rods were amplified electrostatically in the Pre-Piano of HAROLD RHODES and electromagnetically in its successor, the Rhodes electric piano. Electromagnetic pickups are used to amplify a variety of vibrating materials in instruments built by Mario Bertoncini, Hugh Davies, members of the ensemble Sonde, Max Eastley, Dieter Trüstedt, Alvin Lucier, and Peter Appleton, and specified in works by John Cage. Keyed percussion has also been amplified: in 1931 the bass notes of a five-octave marimba, incorporating a two-octave vibraphone, were amplified, and in the 1930s electric glockenspiels and vibraphones were developed; in the 1960s a special pickup was produced by the Ludwig Drum Co. for use with the vibraphone, and the Deagan company marketed its Electra-Vibe. Many electric carillons constructed since the early 1930s are based on bells, tubular bells, reeds, plates, bars, rods or springs that are played mechanically or from a keyboard and are amplified electromagnetically or electrostatically (in the USA one company installed more than 5000 electric carillons up to the mid-1960s). Starting in 1930, Miessner experimented with electrifying various wind instruments, including the clarinet, saxophone and mouth organ, and in 1939 Buddy Wagner formed an amplified wind ensemble. The *orgue radiosynthétique*, designed by Abbé Pujet in France in 1934, was an electroacoustic pipe organ, the pipes of which were enclosed so that their sounds could be heard only by means of the microphones and loudspeakers that were part of the instrument.

(iv) Air microphones and contact pickups. Air microphones are transducers that pick up vibrations from the air and convert them into electrical current; contact microphones (pickups) are attached to some part of the vibratory mechanism and pick up vibrations directly from it. There is normally no fundamental electrical difference between the various types of microphone and pickup. The latter may be electromagnetic, electrostatic or piezoelectric. Attempts to develop the piezoelectric air microphone (which exploits the effect first observed in 1883 by Pierre and Jacques Curie) were first made around 1920, but it was not until 1931 that C.B. Sawyer devised the first successful version. Piezoelectric transducers exploit the property of certain crystals and ceramic materials that produce a voltage when a mechanical stress is applied to them; the physical vibration of the body of an instrument can apply such a stress, which is converted by the transducer into electrical oscillations. (The effect is also applied in high-stability crystal-controlled oscillators.)

Before the introduction of electric guitars, pianos and other instruments with integral pickups, several methods of amplifying acoustic instruments, and particularly the piano, were tried: Richard Eisenmann (from 1885) and F.C. Hammond (1924) developed special contact microphones for the piano, and several others were devised in the late 1920s and early 1930s, including the Radiano piano microphone of Fred W. Roehm and Frank W. Adsit (1926). Since World War II high-quality piezoelectric crystal contact pickups, including ranges that cater for virtually all instruments, have been marketed by many companies: among the best-known are the Barcus-Berry range made in Long Beach, California, from the early 1970s; the FRAP ('Flat Response Audio Pickup') made in the USA since 1969 by Arnie Lazarus; the C-Ducer designed by John Ribet, Francis Townsend and André Walton, and made by C-Tape Developments of Alton, Hampshire, since 1980; and those made for individual instruments, such as the Helpinstill piano contact microphone produced by Charlie Helpinstill in Houston, Texas, from the early 1970s.

Contact pickups and microphones and air microphones have been very widely used in the last 40 years to amplify acoustic instruments. Contact microphones continue to be essential, for example, with certain recent commercial instruments that are basically acoustic but also provide the possibility of being linked to electronic devices or computers. The only applications of air microphones in electric instruments seem to have been in the *orgue radiosynthétique*, and later similar systems for amplifying pipe organs (see §IV, 3(ii)), and in some electric carillons; the Thienhaus-Cembalo may also have used them. Piezoelectric crystal contact pickups have been used in some electric pianos and electric bowed string instruments (see §(i) *a* and *c* above) and in many of the ELECTRONIC PERCUSSION instruments based on drums or drum-pads developed since the late 1970s; they have also been incorporated into newly invented instruments by composers, performers and sound sculptors, including John Cage, Mario Bertoncini, Hugh Davies (in the Shozyg family), members of the group Sonde, Chris Brown, Tom Nunn, Luigi Ceccarelli, Richard Lerman, Leif Brush (amplifying minute sounds from nature), Johannes Bergmark and Takis (in the Electromagnetic musical series of sound sculptures) (see also §IV, 6(i)). Similar use has been made of strain-gauges and enclosed 'contact' magnetic pickups such as stethoscope microphones.

3. ELECTROMECHANICAL INSTRUMENTS. Like electroacoustic instruments, those based on electromechanical systems may be electromagnetic, electrostatic or photoelectric. In this group, however, the photoelectric principle is of far greater importance than in the electroacoustic group.

(i) Tone-wheels. The tone-wheel is almost invariably the basis of the electromechanical systems of sound generation that is found in electronic organs and other keyboard

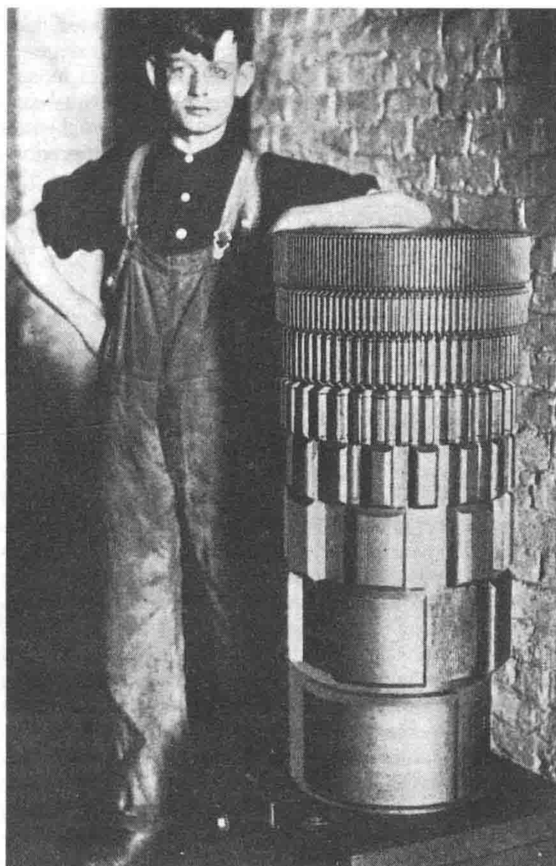
instruments from the 1890s to the 1960s; today, as with all other methods that involve moving parts, it has been superseded by fully digital instruments. Such systems are powered by a synchronous electric motor, an induction motor whose speed is controlled by the frequency of the electrical supply (50 Hz in Europe, 60 Hz in North America) and is therefore very stable. The motor drives one or more shafts on which a series of discs or cylinders, usually made of metal, glass or plastic, is mounted. Each disc or cylinder carries a 'pattern', representing a waveform, repeated regularly an integral number of times; in cylinders and discs of one type this pattern is outlined on the rim, in the form of teeth or a more complex profile; in the other type of disc the pattern is engraved as a ring of repeated shapes or a continuous wavy line on the face. Several different waveforms may be represented on a cylinder (where they appear as bands of teeth, spaced at different intervals in each band) or on the second type of disc (where they are arranged concentrically); multiple waveforms on a single disc or cylinder allow it to produce several timbres. When the discs or cylinders are rotated, the electromagnetic, electrostatic or photoelectric systems of which they form part cause regular fluctuations, corresponding to the waveform patterns, in an electrical circuit. (The system in its entirety is the equivalent of an electronic oscillator.) The electrical signals thus produced are amplified and heard as sound through a loudspeaker. The speed at which a disc or cylinder is rotated, multiplied by the number of repetitions of the waveform represented on its face or rim, produces a frequency of the same number of cycles per second; the shape of the waveform on the face or of the profile on the rim produces an analogue variation in the signal, which ultimately determines the timbre of the note that is heard. The mechanism functions continuously while the instrument is switched on.

Tone-wheels have varied in size from the massive cylinders some 46 cm in diameter of the Telharmonium, to the 5″ (12·7 cm) electrostatic discs in the Compton Electrone (later reduced to half of this) and the 1⅞″ (4·7 cm) electromagnetic discs of the Hammond organ (fig.2). Normally an instrument contains either a single wheel for each pitch or 12 composite discs or cylinders that each produce all the octave registers of one pitch class. In a few cases each disc carries the waveforms for all the 12 pitches of a single octave; however, the irrational ratios that exist between the frequencies of many of the pitches mean that not all of the waveforms can be inscribed on the disc an integral number of times, and where an incomplete waveform occurs an audible click may result. One of several solutions to this problem was devised for the Hardy-Goldthwaite organ, in which the incomplete waveforms were divided into small sections and distributed evenly round the disc between the complete cycles; other such instruments produce pitches that are not perfectly in tune but whose waveforms fit exactly on to the disc.

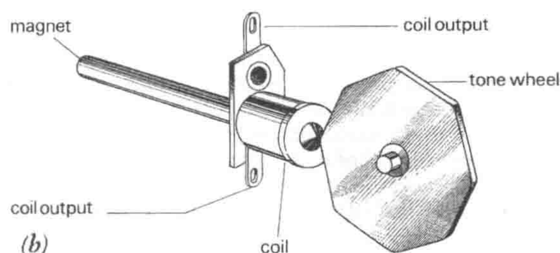
There are several methods of producing variations in timbre: by incorporating filter circuits into the signal-processing stage; by adding duplicate sets of discs or cylinders that carry different waveforms (replacement discs of this sort were available for the Welte Lichtton-Orgel and the Mattel Optigan); by adding different waveforms on the faces of the existing discs, or (as in the Mastersonic) placing differently profiled electromagnets around the circumference of each toothed tone-wheel; or by 'borrowing' harmonics, at appropriately reduced strength, from other pitches (a process known as 'additive synthesis'). A number of procedures have been devised for creating the waveforms that determine timbre: they range from trial and error and the reproduction of sinusoidal outlines, to the use of photographic impressions derived from the stops of famous pipe organs (this method is especially suited to photoelectric instruments, and may be seen as a forerunner of the 'sampling' techniques prevalent in recent digital instruments).

A different type of tone-wheel is found in some early photoelectric instruments in which the regular interruption of a beam of light is produced not by a waveform pattern but by a ring of holes or slits; the principle is similar to that of the siren or an old-fashioned lighthouse.

Electromagnetic tone-wheel instruments include the Choralcelo, Ivan Eremeeff's Gnome, the HAMMOND ORGAN, Magneton, Mastersonic, Béthenod's *piano électrique*, Rangertone organ, TELHARMONIUM, Robb's Wave organ, an untitled organ built by Karl Ochs around 1909, an organ constructed by Oskar Vierling in 1928 and G.V. Dowding's Valvonium (? late 1940s).

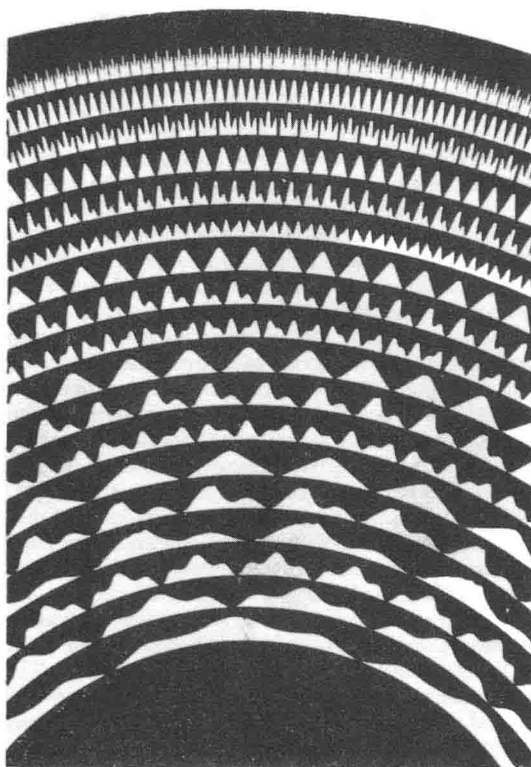


Electrostatic tone-wheel instruments include the Dereux organ, Electrone, Makin organ, Midgley-Walker organ, an instrument demonstrated by Harvey Fletcher in 1946, and the Harmoníphon manufactured in Spain in the mid-1960s.

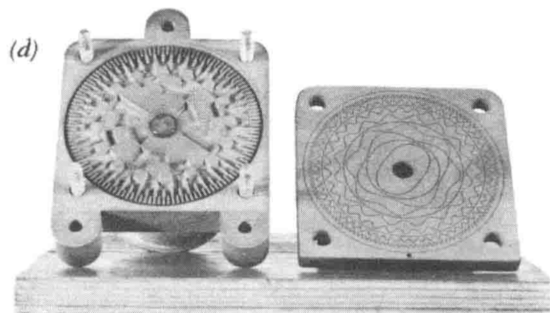


Photoelectric instruments that use tone-wheels or perforated discs include the ANS, Cellulophone, Hardy-Goldthwaite organ, the organ developed by Charles-Emile Hugoniot, the Lichtton-Orgel, Photona, Polytone, Radio Organ of a Trillion Tones, Rhythmicon, Superpiano (and its predecessor, the Thiring piano), the 'universal recorder' for the Syntronic organ, the Optigan and Vako Orchestron (described under DRAWN SOUND), Hendrik Johannes Van der Bijl's photoelectric organ (1916), an unfinished organ by G.T. Winch (1933), the Prismatone (mid-1940s), organs manufactured briefly in the 1950s by Baldwin and around 1960 by Kimball, the Organova (*c*1950), an organ manufactured around the mid-1950s by the Société Française Electro-Musicale, one designed by Melville Clark and demonstrated in 1959 and Jacques Dudon's recent Lumiphones.

(The term 'tone-wheel' is sometimes confusingly applied to the 'performance wheels' (for small adjustments in pitch and modulation) introduced on the Minimoog and now found on many keyboard synthesizers.)



(ii) Photoelectric film instruments. Photoelectric tone-wheel instruments form a special category of all DRAWN SOUND instruments. The basic technique of drawn sound is the graphic marking on film of shapes that represent sounds; the film is then passed between a light source and a photoelectric cell. This principle has been used in a number of instruments and composition machines, including the Clavivox, the fourth CROSS-GRAINGER FREE MUSIC MACHINE, Oramics, the Singing Keyboard, the Syntronic organ, the Variafon and a system patented in 1940 by James A. Koehl; related systems have been used by Norman McLaren, in the ANS, the 'Bildabtaster' unit used with the Siemens Synthesizer, and in the light-screen devised for performances by Michel Waisvisz.



A photoelectric system is also used in the Saraga-Generator, but here it is controlled not by film but by the

2. Tone-wheels: (a) rotor for the second Telharmonium (1906), carrying eight alternators machined with 2, 4, 8, 16, 32, 64, 96 and 128 teeth; (b) diagram of a tone-wheel from the Hammond organ, showing its relationship to the bar magnet; (c) a section of a glass disc from the Lichtton-Orgel, carrying 18 waveforms which give three timbres for all the octave registers of a single note; (d) a pair of stator (right) and rotor (left) discs for the Compton Electrone, carrying respectively engraved waveforms, which give the fundamental and all the octaves of a single note, and the electrodes that scan the waveforms

movements of the performer's hand between the light source and the photoelectric cell.

(iii) Other types. Attempts have been made since sound recording was first developed to produce electromechanical instruments based on previously recorded sounds. In 1920 K. Fiala experimented with magnetized steel discs, as did Charles-Emile Hugoniot at about the same time, magnetized steel wire formed the basis of several attempts up to 1950, including that of Graydon F. Illsey, and gramophone records were used from at least 1931. More effective results were achieved with instruments using optical film soundtrack (see §(ii) above) but few of these systems had more than a brief success. It was not until the advent after World War II of magnetic tape, with its greater fidelity, that such an approach became feasible; sounds pre-recorded on magnetic tape form the basis of the Chamberlin, MELLOTRON and Birotron. In the 21st century electromechanical systems of this sort have been overtaken by digital samplers that store and play back musical and other sounds recorded through a microphone.

An electromechanical system is also used in a group of composition machines in which oscillators are controlled by punched paper tape: the Electronic Music Box, RCA Electronic Music Synthesizer, Siemens Synthesizer, and a 'synthesizer' developed by Armand Givelet and Edouard Coupleux. Another composition machine, the Hanert

Electrical Orchestra, uses a drawn sound technique – the marking of cards with electrically conductive material which is then 'read' by brushes carried by a moving unit.

4. ELECTRONIC INSTRUMENTS. This category consists of those instruments whose sounds are generated by means of electronic components such as analogue oscillators and noise generators, or, more recently, from digital synthesis or the resynthesis of sampled sounds. An oscillator is a device that, like the mechanisms of electroacoustic and electromechanical instruments, produces regular fluctuations in an electrical circuit; in this case, however, the fluctuations are not produced by means of moving components, but by purely electronic means. In some instruments each of a set of oscillators is tuned to a fixed frequency, but in others the frequency of the oscillator or oscillators may be continuously varied over a wide range. An analogue oscillator typically generates a sine, sawtooth, square or pulse waveshape; each of these has a different harmonic content. Among the types of oscillator of importance in musical instruments are the beat-frequency oscillator (BFO), which produces sine waves of frequencies within the range audible by the human ear as the difference between the frequencies of two VHF oscillators, one of fixed and the other of variable frequency; and the voltage-controlled oscillator (VCO; *see* VOLTAGE CONTROL and SYNTHESIZER).

A noise generator (white noise) is a device that produces a signal that varies randomly and aperiodically, covering the complete audio spectrum; the output consequently has no clearly identifiable pitch and can be used to create percussive sounds; it is often filtered to create narrower bands of sound.

The following discussion concentrates on instruments that produce sounds of fixed pitch; many of the considerations that apply to these instruments apply equally to the generation and control of sounds that have no fixed pitch.

(i) Monophonic instruments. The instruments that belong to this category are, chiefly, space-controlled, dial- and fingerboard-operated instruments, keyboards and many analogue synthesizers. A monophonic electronic instrument is one in which only a single pitch can be generated at any one time. (On keyboard and fingerboard instruments, where it is possible to depress more than one key or position at a time, it is usually the highest that gives rise to a signal.) A monophonic instrument requires only one oscillator, though occasionally two or more are used, normally to reinforce one another at the same frequency and so produce a richer tone or a 'chorus' effect. The highest pitch on a monophonic instrument normally has the frequency generated by the oscillator; lower frequencies (and therefore pitches) may be produced by the introduction of greater resistance or capacitance into the circuit. A monophonic keyboard produces discrete steps within the range of the oscillator, each key introducing a fixed value of resistance or capacitance into the circuit so that it generates a fixed pitch. In space-controlled and dial-operated instruments the controlling mechanism introduces a continuously variable resistance or capacitance, so that only glissandos and sustained pitches are possible (though an on/off switch and usually a volume control allow the glissandos between pitches to be interrupted in such a way as to reduce the portamento quality and even to obtain staccatos). Fingerboard instruments have a wire, ribbon or band that allows both discrete pitches and glissandos to be executed (*see* FINGERBOARD, (ii)).

Two types of timbre control are employed in monophonic instruments. In those that are based on a beat-frequency oscillator a distinctive timbre may be achieved by means of additional circuitry that 'distorts' the original sine wave to create a different overtone content; the theremin and ondes martenot both create their unusual timbres in this way. In other types of instrument different timbres are obtained by 'subtractive synthesis' – the filtering of overtones.

(ii) Partially polyphonic instruments. Many analogue and digital synthesizers have keyboards that can produce more than one note at a time, but have an upper limit on the number (up to the early 1980s usually two, four, eight or 16, subsequently 32, then 64, and now 128) that will sound simultaneously. These and a few similar earlier instruments are classified as partially polyphonic, in the same way as, for example, a violin or a guitar.

A system of this sort was first introduced by Harald Bode in the Warbo Formant-Orgel (1937), which used four oscillators. All partially polyphonic electronic instruments make use of a system of 'assignment', derived ultimately from that already described for monophonic keyboards: in Bode's instrument the oscillators were 'assigned' to the four highest keys depressed at any one time ('high-note priority'); Bode's system also allowed each voice to have its own timbre. In the first partially polyphonic synthesizers, produced in the mid-1970s, an alternative method of assignment became available – that of first- or last-note priority; with digital circuitry further sophistication became possible, such as a system in which the 'earliest apart from lowest or highest' note is rejected.

A different approach to the creation of a partially polyphonic instrument was the use of multiple monophonic keyboards (as in the later instruments of JÖRG MAGER) or fingerboards (the Hellertion), or the equivalent – a 'split' keyboard. This last (which is used in some harmoniums as well as in electronic instruments) is a keyboard divided into two (not usually physically) at a certain point: each section constitutes an independent monophonic keyboard which controls its own oscillator and is capable of creating its own timbres. Bode was probably the first designer to use the split keyboard in an electronic instrument, the Melochord (1947); in a later, two-manual version (1953) the keys of one manual could be used to control the timbre of notes produced by the other, a feature later found in some synthesizers.

All the instruments described so far in this section are extensions of the monophonic principle, using oscillators of variable frequencies. By contrast there are some small organs that are based on the principle of the fully polyphonic instrument, but, for economic reasons, have restricted capabilities. In this type of system the pitches are produced by division of the fixed frequencies of a set of oscillators (see §(iii) below); but instead of the 12 oscillators (one for each note of the chromatic octave) used in a fully polyphonic instrument of this type, only six or four are used, so that pairs or groups of three semitones must 'share' each oscillator (as on 'fretted' clavichords). This places a limitation on the chord configurations that can be played, though for most purposes such instruments are more versatile than any other type of partially polyphonic keyboards. Digital keyboard instruments often permit more simultaneously

sounding notes than the player has fingers, sometimes even more than there are keys on the keyboard (e.g. 12, 16, 24, 32, 48, 64 or 128), but this is necessary for accuracy in certain contexts, such as rapid glissandos or clusters, where a large number of notes may continue to sound together after they have been played.

(iii) Fully polyphonic instruments. This group includes some electronic pianos and organs, string synthesizers, and digital and analogue synthesizers that can produce any number of notes within the range simultaneously. A few fully polyphonic instruments, mostly organs, use a separate oscillator for every key on the keyboard, but this is less common (because it is more expensive) than the use of a set of 12 oscillators with frequency dividers, or of one or more master oscillators with two stages of frequency division. In the former system the 12 oscillators generate the frequencies of the 12 pitch classes of the octave in a high octave (sometimes the highest octave of the instrument's range, sometimes the octave above that – see the discussion of timbre below). Sets of frequency dividers (one for each octave of the instrument's range) produce the pitches for the lower octaves: the frequency of the highest C, for example, is divided by a succession of frequency dividers, each producing a C one octave lower than the preceding one. Up to the 1950s there were considerable problems with the stability of electronic oscillators, which were greatly reduced by having only 12 oscillators for the whole instrument since all pitches derived from each oscillator would remain perfectly in tune. (A related but much less common system of generating many pitches from oscillators of fixed frequency is by means of frequency multiplication, using oscillators tuned to low frequencies.) During the 1970s technological developments permitted an efficient and stable variant of the single oscillator to be used to generate sounds in fully polyphonic instruments. The principle is very similar to that of many monophonic electronic keyboard instruments, but sophisticated circuitry allows any number of notes to be sounded at one time. The frequency of a VHF crystal-controlled oscillator (with a frequency of, for example, between 1 and 4 MHz) is divided to create the 12 pitches in the highest octave required; these frequencies are then divided successively to produce the pitches of all the lower octaves.

Timbres are most often created in electronic instruments by subtractive synthesis, that is, filtering. The process of frequency division normally results in a square wave, which is variously filtered to give different timbres. If the frequencies of the oscillators are themselves used to produce the highest octave of the instrument's range, the waveshapes generated by the oscillators must also be modified to give a homogeneous timbre throughout the range. In some instruments this is avoided by tuning the oscillators to the octave above the highest required by the instrument and producing all the pitches by means of frequency division. One drawback of using only 12 or fewer oscillators is that all the pitches derived by frequency division from a single oscillator are in phase with one another, so that changes in registration (produced by introducing a different filter) may sound too 'clean'; further, this system does nothing to counteract the regularity of the beats that occur between the notes of a chord, whereas on a pipe organ the different ranks of pipes have more complex phase relationships. For these reasons some instruments use more than one master oscillator; a different solution was contrived in early models of the Allen organ, which incorporated a 'random motion effect generator' to break up the perfect phasing resulting from frequency division.

(iv) Classification. Monophonic electronic instruments controlled other than by keyboards include the space-controlled *croix sonore*, Electronde, *elektronische Zaubergeige*, Ethonium, ONDES MARTENOT (earliest version), Saraga-Generator, Sfaerofon, THEREMIN, instruments of the theremin type built by G. Leithäuser (Berlin, 1932), Robert A. Moog, Ivor Darreg, Charles Mattox, Jorge Antunes, Herbert Jercher and many versions that were designed and marketed in the last three decades of the 20th century, and the Terpsitone of Lev Termen; the dial-operated Dynaphone, Ondium Péchadre and Sphärophon (original version); the fingerboard-operated Ėkvodin, Ėmiriton, *fil chantant*, Hellertion, ONDES MARTENOT, Oscillion, Sonar, Termen's fingerboard theremin, the TRAUTONIUM, probably the Violena, and a later version of the Shumofon, as well as some synthesizers and the Kaleidophon; the Vocoder speech synthesizer and the Sonovox voice-operated sound modification device; and an electronic percussion unit, the Side-man. Wind controllers for synthesizers include the Electronic Valve Instrument, Lyricon and Variophon, and are used in the Tromborad (1927) and the Electra Melodica (*see* MELODICA), and with instruments made by Crumar and Yamaha.

Monophonic electronic keyboard instruments include some models of Casio's early Casiotone, the Clavivox, Emicon, Mager's Kaleidophon, Termen's keyboard theremin, the Melochord, Melodium, Shumofon, Singing arc, Staccatone, Stylophone, Subharchord, Tubon, Voder and some Yamaha instruments, as well as later versions of the Dynaphone, Ėkvodin, Ėmiriton and ONDES MARTENOT, many synthesizers (see below) and some synthesizer controllers, and instruments of the piano attachment type – the Clavioline, Hohner Electronium, Multimonica, Ondioline, Solovox, Thyratone and Univox.

Partially polyphonic electronic instruments include the keyboard-controlled Casiotone (most models, usually eight voices), Heliophon (two manuals, up to six voices), a later version of the Melochord (two manuals), the Partiturophon (four and five manuals, including pedals), the later versions of the Sphärophon (three and four manuals including pedals), the Warbo Formant-Orgel (one manual, four-voice polyphonic) and some 'biphonic' instruments from the former USSR; the fingerboard-operated *elektronische Monochord* (two fingerboards), Hellertion (later versions of which had two to six fingerboards) and Mixtur-Trautonium (two fingerboards); the dial-operated Wobble organ (four monophonic control units); the RCA Electronic Music Synthesizer (one or two monophonic units); and some syntheizers.

Fully polyphonic electronic organs include the Ahlborn organ, Allen organ, AWB organ, Baldwin organ, Basilika, Bradford Computing organ, Compton-Edwards organ, Conn organ, Coupleux-Givelet organ, Yamaha Electone, Elka organ, Gulbransen organ, recent models of the Hammond organ, Ionica, Johannus organ, KdF-Grosston-Orgel, Kinsman organ, Kristadin, Livingston-Burge organ, Lowrey organ, Miller organ, Minshall organ, Norwich organ, Novachord, Organo, Philicorda, Pianomate, Polychord III, Riegg organ, Rodgers organ, Saville

organ, Schober organ, Seeburg organ, Thomas organ, Tournier organ, Tuttivox, Vermona, Vierling organ, Vox (Continental and Jaguar organs), Wyvern organ, Yunost′, and instruments made by Copeman Hart, Crumar (the Toccata organ), Estey, Farfisa (recent models), Kawai, Kimball, Korg, Lipp, Roland, Voce and Wurlitzer (recent models). *See* §IV, 3(iii); *see also* ELECTRONIC ORGAN.

Other fully polyphonic instruments include the Audion piano, Béthenod's 'piano-harp', Pianorad, Rhythmicon, Scalatron, electronic accordions such as Farfisa's Cordovox and Transicord, and the Excelsior Digisyzer, types of string synthesizer, electronic pianos and several microtonal keyboard instruments (*see* MICROTONAL INSTRUMENTS, §4(ii)).

Synthesizers range from monophonic (heterophonic) to fully polyphonic instruments. Since a monophonic synthesizer can often produce far more complex sounds than a fully polyphonic electronic keyboard instrument of any other type, the classification into monophonic and partially and fully polyphonic is of less importance. Individual synthesizers, related composition machines and electronic percussion instruments include the following models and manufacturers: Akai, Alesis, Alpha-Syntauri, ARP, Buchla, Casio, Cheetah, Chroma, Clavia Nord, Composertron, Con Brio, Crumar, Dartmouth Digital Synthesizer, Dimi, DMX-1000, Doepfer, ElectroComp, Electronic Music Box, Electronic Sackbut, Elka, EMS, E-mu, Emulator, Ensoniq, Fairlight CMI, 4X, GAME, General Development System, Gmebogosse, Hanert Electrical Orchestra, Kawai, the Kit, Korg, Kraakdoos, Kurzweil, LinnDrum, Minimoog, Moog, Oberheim, Odyssey, Omnichord, Oscar, PAIA, Peavey, PPG Wave Computer, Prophet, Putney (VCS-3), Qasar, Quasimidi, Roland, RSF Kobol, Sal-Mar Construction, Serge, Siel, Siemens Synthesizer, Simmons Electronic Drums, Soundchaser, Spacedrum, SSSP, Synare, Synclavier, Syndrum, Synergy, Synket, Synsonics drums, Waldorf, Wasp and Yamaha; *see also* ELECTRONIC PERCUSSION and SYNTHESIZER.

5. PERIPHERAL EQUIPMENT. The discussion of electric and electronic instruments in §§2–4 above has concentrated on the generation of electrical signals and the components of the instruments (keyboards, fingerboards, strings, tone-wheels etc.) used to trigger or control them. In almost all such instruments the electrical signal must be amplified (or increased) before it can be heard as sound over a loudspeaker.

(i) Signal-processing devices and amplifiers. Many performers, especially in rock and other popular musics, increase the range of possibilities for modifying the signal produced by their instruments by using external devices. Signal-processing devices impose on the signal various types of filtering, distortion, echo (by means of a tape loop or digital delay), phasing, chorus effects, tremolo, reverberation and so on. Most are available in the form of small modular units (often built into pedals) which may be connected in a series according to taste. (The use and effects of such devices with electric guitars are discussed in ELECTRIC GUITAR, §2.)

Amplification is necessary when the electrical signal has insufficient energy itself to drive the moving parts of a loudspeaker; the AMPLIFIER (based on valves, transistors, integrated circuits or microchips) takes electrical energy from an external source (mains or batteries) and uses the signal derived from the instrument to control the delivery of that power to the loudspeaker. The first electronic amplifiers were developed around 1925, but it was some time before they were widely used. During the 1930s a number of small electronic instruments were marketed that were designed to be connected to a domestic radio set and so did not need their own amplification system; detailed instructions for implementing this novel procedure were usually provided. Since World War II powerful, high-fidelity amplifiers (capable of reproducing the input with great precision and at great volume) have been developed; systems of this type, used by rock musicians for example, achieve an output of up to several thousand watts RMS. Amplifiers often incorporate some signal-processing elements, such as filter controls and reverberation; they may also be housed in a single unit (a 'combination unit') with loudspeakers.

(ii) Loudspeakers. A LOUDSPEAKER is a transducer that converts electrical energy into sound-waves and diffuses them (its function is thus the reverse of that of a MICROPHONE or PICKUP). The earliest use of a loudspeaker for a musical instrument was the metal wash-basin which acted as both diaphragm and sound projector for Elisha Gray's electromagnetic 'musical telegraph' of 1874. Telephone earpieces, developed in the late 1870s, constituted the first effective loudspeakers and were used by several inventors of musical instruments, including Ernst Lorenz for his patented *electrisches Musikinstrument* (1884). Similar 'personal' loudspeakers were employed in the 'stereophonic' transmissions from the Paris Opéra made over landlines installed in 1881 by Clément Ader (called the 'Théâtrophone'), and the land-line 'broadcasting' system initiated by Telefonhírmondó in Budapest in 1893; the (non-electric) listening tubes and horns that were introduced with commercial phonographs and graphophones in 1888 were of the same sort. In the early 1890s larger horns added to telephone receivers, as in Edison's 'loudspeaker telephone', permitted limited public listening. In 1906 the conductor Henry Wood amplified orchestral double basses using Charles Parsons' Auxetophone, powered by compressed air.

Thaddeus Cahill's TELHARMONIUM, used in landline transmissions from 1902, supplied a current of a far higher voltage than normal to telephone receivers, to which long cardboard horns were fixed (often concealed in floral decorations) to create greater volume; contemporaneous descriptions report that the sound was as loud and clear as that of an orchestra, but such statements must be accepted with caution in view of the many claims for the fidelity of early sound-generating and recording systems that would now be regarded as untenable. A chance discovery, in November 1906, that a carbon arc-lamp could also act as a loudspeaker (a principle introduced in Duddell's 'singing arc' of 1899) was incorporated as a demonstration into the daily concert; electromagnetically excited piano soundboards were also briefly used.

An exact contemporary of the Telharmonium, the Choralcelo, made use of several unusual loudspeaker units containing bars and plates of wood, metal and glass, and also buggy springs, which were activated electromagnetically to create different timbres. Even more unusual objects were utilized during the 1920s by Jörg Mager, who by 1930 had patented at least ten different designs for loudspeakers made from, among other materials and objects, wood, baking tins, tissue paper, gongs, a silver

plate, and (for the 32′ bass) a membrane covering the end of a length of iron stovepipe. A much later system that uses different materials to filter signals in a similar way is the 'instrumental loudspeaker' invented by David Tudor for *Bandoneon!* in 1966 and incorporated in his Rainforest series of concert works and sound environments; several members of the group Composers Inside Electronics, founded by Tudor, devised further types of 'instrumental loudspeaker', which include a rotating version by Martin Kalve.

Although the electronic amplifier and appropriate loudspeakers were developed in the mid-1920s, the loudspeaker did not achieve its present form until the late 1930s and individual instruments continued to employ unusual methods of diffusion. The earliest theremin (1920) was played over a telephone earpiece with a horn attached. The Pianorad (1926) had a separate loudspeaker diaphragm for each note, all of them mounted on a single large horn (see fig.5 below). Different timbres were produced in the Radiotone (1930), the Rangertone organ (1931) and the Magneton (1933) by a combination of tone controls and several loudspeaker systems (possibly giving different frequency responses), any of which could be selected by operating a switch. Three types of unusual loudspeaker are available with the ondes martenot: in 1930 an 'echo' loudspeaker was used; around 1933 the *diffuseur métallique* was introduced, a brass gong-like plate treated as a diaphragm, and in 1947 the *palme*, a wooden leaf-shaped unit containing a transducer and carrying on each face 12 sympathetic strings tuned to a chromatic octave (this replaced the echo loudspeaker; for illustration *see* ONDES MARTENOT); in 1972 a further unit containing stretched coil springs was developed.

The capabilities of loudspeakers for diffusing sound have been variously explored. Around 1949 Constant Martin devised an electronic carillon in which the loudspeakers were mounted inside bell-shaped horns that were swung like bells. Many systems have been devised for rotating some sort of diffuser in front of the transducer in a loudspeaker, as with the rotating paddles of fans in some larger reed organs (such as those made by Estey) dating from the mid-1860s: the LESLIE has a curved reflector that can rotate at two speeds, and in some models the loudspeaker itself rotates to produce the same effect (other rotating loudspeakers continue to be marketed). Systems of this sort were used with many electronic organs such as the Allen, Dereux, Electrone, Orgatron and Thomas organs; with others two or more loudspeakers are often provided to counteract the directionality caused by hearing the sound from a single source, which is in marked contrast to the aural impression created by a pipe organ.

Multiple loudspeaker systems have been devised for the diffusion of taped electronic music, of which one of the most substantial was installed in Le Corbusier's Philips pavilion in the 1958 Brussels World Fair (425 loudspeakers); since the early 1970s several systems have been assembled, such as François Bayle's Acousmonium, the Gmebaphone and BEAST, in which the sound spectrum is distributed according to register over a group of as many as 50 loudspeakers. For live performance Lowell Cross devised the four-channel Stirrer system of sound distribution (1963–5) and Hans Peter Haller and Stockhausen invented systems that give three-dimensional diffusion – respectively the Halaphon (1971) and the Modul 69A, which was installed in the German pavilion in Osaka during Expo '70. Multiple loudspeaker systems have also been used in live performances on the Sal-Mar Construction and GAME composition machines (respectively 24 and 100–200 loudspeakers).

Mention should here be made of the phenomenon of acoustic feedback, which can occur in any electronic amplification system. It is caused when a microphone or pickup is close enough to a loudspeaker to pick up vibrations from the latter's diaphragm, which it then feeds through the system again; at a certain level (controllable with a potentiometer) an obtrusive screech known as 'howl-round' results, which, when carefully controlled, yields a range of clear pitches. This effect, normally carefully avoided, has been exploited in rock music (where its use was pioneered by Jimi Hendrix and Pete Townshend on electric guitar, and by the viola player John Cale in the group Velvet Underground), improvised music (especially by Derek Bailey, to prolong the sound of an electric guitar), and sound poetry (by Henri Chopin); it has also been specified by a number of composers, including John Cage and Alvin Lucier, and has been incorporated in solo percussion performances and sound environments by Max Neuhaus (see §IV, 6(ii) below).

II. Early applications of electricity (to 1895)

The use of electricity in the production of sound has naturally been closely linked with advances in electrical technology, primarily during the last two centuries. In a number of instances a particular instrument has been 'ahead of its time', before what we would now consider to have been an almost essential element had actually been invented. The first electronic instrument was already in use before the electronic valve was invented, and several existed before electronic amplification. Similarly the first two electrical instruments not only predated the public electricity supply and the storage battery but also the discovery of electromagnetism, being based on electrostatic principles.

1. To 1800. 2. Experiments with electromagnetism. 3. The 'musical telegraph' and related instruments. 4. Electric action.

1. To 1800.

The principle of static electricity was first discovered around 600 BCEby Thales of Miletus, but systematic investigation of the phenomenon of electricity did not take place until the Renaissance. William Gilbert of Colchester initiated a scientific approach to the study of what he called 'electrics', which he described in *De magnete* (1600); the terms 'electricity' and 'magnetism' were both in use, though they were not linked, by the time Sir Thomas Browne wrote *Pseudodoxia epidemica* in 1646. Otto von Guericke in Magdeburg constructed the first friction machine for generating static electricity around 1663. The earliest form of capacitor, the Leyden jar, was developed in 1746 in Leyden by Pieter van Musschenbroek from the principle discovered in 1745 independently by his assistant A. Cunaeus and by Ewald J. von Kleist in Pomerania; this permitted the concentration of static electricity produced by von Guericke's machine and its gradual or instantaneous discharge. This invention made possible the two earliest electric musical instruments, Diviš's DENIS D'OR (*c*1730–62), in which electricity did not form an essential part, and the *clavecin électrique* invented by JEAN-BAPTISTE DE LA BORDE (1759), in which static electricity was used as part of the basic mechanism of the instrument. The latter was based on an

apparently unnamed method used in early electrical laboratories to audibly warn an experimenter of the presence of an electrical charge; it was probably invented by Andreas [Andrew] Gordon in Erfurt in 1741 and was described or demonstrated to Benjamin Franklin in Boston in 1746. An eight-bell instrument based on this principle was developed in about 1747 by Ebenezer Kinnersley, an associate of Franklin in Philadelphia, and the device subsequently received substantial publicity when it was mentioned in Franklin's publication of his experiments with atmospheric electricity. Nearly 80 years were to elapse before the next sounds were produced by electricity.

2. EXPERIMENTS WITH ELECTROMAGNETISM. Developments in the 19th century began with the invention by Alessandro Volta of the storage battery (voltaic pile, 1799); by the end of the century electrical telegraphy, disc and magnetic recording, the telephone, the first 'computer', electric lighting, the earliest AC power supplies and the principles of radio and film had all been developed. Each of these has affected the application of electricity to music. It was not unusual for inventors, particularly those concerned with sound communication, to divide their time between science and music; for example, Charles Wheatstone, a pioneer of electrical telegraphy, also invented the concertina and constructed a speaking machine, using free reeds in both.

Electromagnetism was the chief area of innovation in the 19th century, laying the foundations for electrical technology as we know it today. The discovery in 1820 by Hans Christian Oersted of the relationship between electricity (as it was then understood) and magnetism quickly led to electromagnetic research by Michael Faraday, Sir Humphrey Davy, André-Marie Ampère, François Arago and others. In 1825 William Sturgeon constructed the first electromagnet at Woolwich, and in 1830–31 Faraday in London and Joseph Henry in Albany, New York, produced the first electrical transformers and motors.

One of the next stages in the exploration of electromagnetism was the first electrical production of sound; in the late 1840s this initiated the monitoring of electrical communications, such as electrical telegraphy and Morse code, by means of sound, and the research that led to the development of the telephone. In 1837 Charles Grafton Page, working in Salem, Massachusetts, discovered the basic principle of the electric bell (not itself devised until 1850 by John Mirand) by linking a battery, coil and permanent magnet; audible clicks were produced when the battery was connected or disconnected. Page does not seem to have developed his 'galvanic music' much further. In 1838 Charles Delezenne of Lille constructed the first rotating tone-wheel, the toothed circumference of which produced a sustained oscillating electrical current. The following year Neef in Belgium caused a 'hammer' on the end of a flat spring to oscillate in an electromagnetic circuit, which also gave a sustained sound. Devices similar to the 'Neef hammer' include the better-known 'Wagner hammer' developed by Johann Philipp Wagner in Frankfurt in 1837, and one constructed in the same year by A. de la Rive in Geneva.

Further elaborations of these systems were devised by scientists in several countries. In 1856 Pétrina of Prague built an 'electric harmonica' for research purposes, based on four differently tuned Wagner hammers operated by keys. In the same year in Bonn Hermann von Helmholtz, experimenting with speech synthesis, introduced a tuning-fork into a circuit based on the Neef hammer; using eight such systems, tuned to the notes of the harmonic series, he could create vowel sounds. An improved model featured an oscillator circuit incorporating an additional tuning-fork to maintain sustained sounds.

3. THE 'MUSICAL TELEGRAPH' AND RELATED INSTRUMENTS. The technology of telegraphy and telephony was responsible for much of the next stage of progress. The first electrical 'telephone' was constructed by Philipp Reis in Friedrichsdorf, near Frankfurt, in 1860–61, but this was capable only of limited intelligibility since it did not transmit speech but only its outlines. The Reis telephone inspired a number of researchers during the 1860s, though it was not until 1875–6 that the first successful telephone was invented by Alexander Graham Bell. Keyboards were used in some telegraph systems in the 1860s and in 1871 a Musical Telegraph Company was founded in Rochester, New York. Bell's chief rival, Elisha Gray, was one of several American inventors who used electromagnetically controlled tuned steel reeds in multiplexed telegraphy; in 1874 he transmitted and received over a single line messages in Morse code, each using a differently tuned pair of reeds. Gray's first 'musical telegraph' used reeds for transmission to a single electromagnetic 'loudspeaker'; in an improved model (1876; fig.3) the vibrations of steel reeds were both created and picked up, for transmission over a telephone line, by electromagnets. The same principle was used in Thomas Alva Edison's quadruplex telegraph (two messages in each direction) and Bell's 'multiple harmonic telegraph' (the immediate precursor of the telephone). Bell also proposed (though never constructed) a similar system, called an 'electric harp', for use in speech transmission. In 1882 Emile Berliner took out a patent for a tone-wheel for use in telephony and telegraphy. A fact that has rarely been emphasized is that Bell's telephone (1876) and Edison's 'phonograph' (1877) brought an end to an era in which all communications were digital (though not necessarily binary) – as in semaphore, Amerindian smoke signals, the pinned barrels and perforated cards on which the music for all types of mechanical instrument was stored, the electric telegraph and Morse code – and ushered in the analogue century from which a recent

3. Elisha Gray's 'musical telegraph', 1876

transition into a second digital (or possibly a hybrid) era has taken place.

Experiments were also being pursued in Britain and Europe. In 1878 Lord Rayleigh incorporated a 'phonic wheel' (also developed independently by La Cour) in a device for measuring the frequency of a tuning-fork, and in 1888 Ernest Mercadier in France introduced a photoelectric tone-wheel system for multiplex telegraphy. Robert Kirk Boyle of Liverpool developed and patented (1884) a system in which strings mounted on a frame and soundboard were activated by electromagnets; this was the first patent for a specifically musical application of electricity to produce sustained sounds. At the same time Ernst Lorenz of Frankfurt developed a similar system, the *elektrisches Musikinstrument* (1884, patented 1885). Partly derived from Neef's work, it paralleled Gray's use of electromagnets for the production and transmission of vibrations, though the reeds were struck by hammers (similar to the mechanism of some electric pianos); the instrument was also the first to use a telephone earpiece, attached to the soundboard, as a loudspeaker. From around 1885 Richard Eisenmann of Berlin used electromagnets to activate piano strings in his *elektrophonisches Klavier* (a similar system was patented in 1887 by the American Georg F. Diekmann). Paris Eugene Singer, working in London in 1891, activated piano strings (also free reeds and other vibrating objects) by means of feedback; a series of rotating toothed wheels (one per note), mounted on a single shaft to ensure a constant relationship between them, excited the strings by creating current oscillations at the same frequencies as those to which the strings were tuned, thus using electrical rather than mechanical vibrations in the feedback circuit. Related electromagnetic principles were later applied in the *palsiphone électromagnétique* (*c*1890) of Emile Guerre and Henri Martin, the Choralcelo (1908), the 'electric harp' Symphonia built into a piano by the Lyrachord Co. in New York (1912), the Pianor of Henri Maître and Henri Martin (Rouen, 1912), the Canto of Marcel Tournier and Gabriel Gaveau (France, *c*1927) and Simon Cooper's Crea-Tone of 1930.

4. ELECTRIC ACTION. Another area of exploration during the 19th century concerned the use of electromagnets to simplify the action of pipe organs, pianos and other keyboard instruments. William Wilkinson, an organ builder in Kendal and a friend of Sturgeon's, briefly experimented with electromagnets in 1826, but the technology had not by then reached a sufficient stage of development for such a system to be practical. From 1852 British patents for electromagnetic actions were granted to Henry John Gauntlett (1852), John Wesley Goundry (1863), Juan Amann (Bilbao, Spain, 1866), Echlin Molyneux (Co. Wicklow, Ireland, 1871), John Charles Ward (1876), Constantin Polienoff (Tagil, near Perm, 1889), Magnetic Piano Co. (New York, 1901), Shonnard Manufacturing and Trading Corp. (New York, 1902), William Kennedy-Laurie Dickson (1903) and Joseph Weber (Brooklyn, 1905). The proposals of Gauntlett (arising from his unrealized project for controlling several organs from a single console at the 1851 Great Exhibition) and Goundry were chiefly for organs. During the early 1850s similar experimental work was carried out in France by Count Théodore du Moncel and Froment; it was put into practice by Stein et Fils of Paris in an unsuccessful organ shown at the Paris Exposition of 1855.

The first successful organs with electric action were the result of the collaboration of Albert Peschard and CHARLES SPACKMAN BARKER, who together obtained a significant patent in France in 1868, based primarily on Peschard's work in Caen from 1860. Barker built organs at Salon, Bouches-du-Rhône, in 1866 and at St Augustin in Paris in 1868. Also in 1868 he took out a British patent on his action, under licence from which Henry Bryceson built the first organ in Britain with electric action – at the Theatre Royal, Drury Lane. The first American patent for electric action in organs was taken out in 1869 by HILBORNE LEWIS ROOSEVELT, who around 1871 also briefly collaborated with Barker in Dublin; he built a demonstration model in 1869 and a commercial instrument in 1876. Also in 1876 Schmoele Bros. of Philadelphia presented an electric action orchestrion, the Electromagnetic Orchestra, at the American Centennial Exposition. Experiments by Eberhard Friedrich Walcker between 1858 and the early 1860s were followed by the construction of the first German organs with electric action by Karl Weigle in 1870 and 1873; but these proved unsuccessful, and no further work was carried out there until the mid-1880s, at the time when electric action began to be adopted by many European and North American organ builders.

Electricity was used to operate player pianos from about 1850, and the basis for many later systems was developed by Matthäus Hipp of Neuchâtel in his 'electromechanical piano' of 1867. Electric action was also employed in Dieppe's *cristallophone électrique* (1877), which consisted of keyboard-operated crystal bells, and in connection with special timbres on large church organs. Three octaves of eletropneumatically struck brass gongs were added to the 'celestial organ' of the Westminster Abbey organ in 1895 (Hill & Son), and similar four-octave sets of gongs were installed as part of the Echo organs at Norwich Cathedral (Norman & Beard, 1899) and Liverpool Cathedral (Willis). A five-octave set was added at St George's Hall Concert Room in Liverpool (Willis), while in 1908 a set was included in a Hope-Jones organ at St Paul's Cathedral, Buffalo, New York. Chimes, celesta, glockenspiel and other percussion effects became common, especially in American organs; in 1914 a set of carillon-like struck solid cylindrical chimes, playable either from the organ console or from a special keyboard, was installed at Westminster Abbey. Other examples of more unusual applications of electric action at this period include I.B. Schalkenbach's Elektrisches Orchester (1893) in which instruments and sound effects were remotely controlled by a single performer from a two-manual console, an electromagnetically operated string quartet (each instrument 'played' by two bows) devised by Antonio Pagani in Milan between 1884 and 1898, and (from *c*1850) 'magical' remote-controlled operation of percussion instruments by conjurors as well as a 'clapping machine' concealed behind the audience in Robert-Houdin's own theatre in Paris. For a performance of his cantata *L'impériale* during the Paris Universal Exhibition in 1855, Berlioz commissioned a special version of an electric 'metronome' invented by Verbruggen, which he had seen in Brussels a few years earlier, to indicate his beat to five sub-conductors; this method was subsequently adopted in some opera houses for offstage choruses.

The subsequent widespread use of electricity to replace mechanical action is beyond the scope of this article (*see*

ORGAN, §II, 9–10, §VI, 4; *see also* INSTRUMENT MODIFICATIONS AND EXTENDED PERFORMING TECHNIQUES, SOUND SCULPTURE, VIBRAPHONE). Similar applications are, of course, found in many electric and electronic instruments.

III. 1895–1945

Several principles of great importance to the development of electric and electronic instruments were introduced during the 19th century: the tone-wheel and the use of a single shaft for several such wheels to give accurate tuning, the diffusion through a single 'loudspeaker' of differently pitched sounds, Eisenmann's invention of a contact microphone, and the application of feedback. Experiments based on these and other aspects of electrical technology formed the basis for the development of the first electronic instrument that is still in use, the theremin.

1. To *c*1930: (i) Early developments (ii) The influence of radio (iii) The theremin (iv) Fingerboard- and dial-operated instruments (v) Keyboard instruments. 2. *c*1930–39: (i) Germany (ii) Other developments in Europe and the USSR (iii) USA (iv) Manufacturing (v) Dissemination and applications. 3. 1939–45.

1. To *c*1930.

(i) Early developments. The first instruments of importance constructed during this period were probably among the largest musical instruments ever built. Between about 1895 and 1900 Thaddeus Cahill made the first model of his Telharmonium in Washington, DC; its sounds were generated by enormous electromagnetic tone-wheels mounted on a set of shafts driven by a single motor. Cahill also constructed special loudspeaker-receivers to which he fed currents of very high voltage to give a substantial level of sound. A second, improved model, built in Holyoke, Massachusetts, was moved to New York in 1906, where daily concerts were given and for a while 'broadcast' over landlines. Interference with the telephone network and a lack of subscribers caused the enterprise to fail. A third model of the instrument (1908–11) survived in working order until at least 1916. Its exact contemporary, the Choralcelo, more modest than the Telharmonium but still extremely large and complex, achieved limited commercial production and was still in use in the 1950s; research by Edith Borroff has uncovered two surviving instruments, at least one of which could be restored to working order.

The tone-wheel generator, containing as it does a purely mechanical element, may be seen as a halfway stage between amplified acoustic vibrations and the fully electronic oscillator. The latter was first employed in a musical instrument (in a rather limited form) by the radio pioneer William Du Bois Duddell, as a result of his investigating the high-pitched whistle produced by the electric arc-lamps used at that time for street lighting; Duddell exploited the whistle for musical ends in his 'singing arc' (1899), controlling it with a simple audio oscillator. In 1902 Pierre Janet in France developed the principle, expanding the range to eight and a half octaves. Duddell later applied it in radiotelephony and the Dane Valdemar Poulsen exploited it in the Poulsen arc (1903), which was important in the development of long-distance radio transmissions. The concept of modulating light by means of sound also had an influence on the development of the optical film soundtrack in the 1920s.

During the period between the outbreak of World War I and the end of the 1920s electronic instrument research was closely linked to the development of radio (see §(ii) below). The principles of the tone-wheel and amplified vibrations were largely neglected until around 1930 except for a six-octave, electromagnetic tone-wheel organ constructed by K. Ochs in 1909, Van der Bijl's photoelectric organ (1916) and the work of Charles-Emile Hugoniot around 1920.

(ii) The influence of radio. The rapid development of radio was made possible by a rush of technical inventions in the first few years of the 20th century. In London in 1904 John Ambrose Fleming introduced his diode thermionic 'oscillation valve', which was followed by the triode valve independently developed by Lee de Forest in New York and Robert von Lieben in Vienna in 1906; by 1913 such valves were sufficiently improved to be commercially useful. The first wireless transmission of speech and music, using amplitude modulation, was made from Brant Rock, Massachusetts, in 1906 by the Canadian Reginald Fessenden. De Forest made the first valve amplifier in 1907 and W. Burstyn produced an electronic oscillator in 1911; oscillators and amplifiers using regenerative feedback were made between 1912 and 1915 by de Forest and Edwin H. Armstrong in New York, Irving Langmuir in Schenectady, New York, Frank Ebenezer Miller in the USA, C.S. Franklin and H.J. Round in England and Alexander Meissner of Telefunken in Germany. Broadcasting for military purposes began around 1917 and the following year Dr Frank Conrad set up a private transmission system in Pittsburgh which led to the establishment there of the first permanent radio station (KDKA) in 1920.

The first electronic instrument to exploit the recently improved valve (or vacuum tube) was, appropriately, de Forest's own Audion piano, a simple keyboard instrument that may not have been completed; de Forest's related patent of 1915 is of greater interest than the instrument itself, since it proposes the use of a beat-frequency oscillator and the phenomenon of hand capacitance. Radio experimenters had discovered that the frequency of the note produced by a badly adjusted radio receiver during the demodulation process could be altered by passing a hand close to the electromagnetic field inside the receiver (it was also possible to create such a note in a properly adjusted set); even slight changes in the body capacitance were found to be sufficient to create audible variations in the note. This effect was quickly applied to musical instruments, especially by inventors working in France: Armand Givelet, an engineer at the radio laboratory at the Eiffel Tower, the cellist and radio telegraphist Maurice Martenot, and the Russian émigré composer Nicolas Obouhow all experimented with it from around 1917, though it was several years before satisfactory results were achieved. One problem was that when playing a keyboard the performer could not prevent unwanted changes in pitch caused by the movement of his hands in relation to parts of the circuitry (even screening could not entirely eliminate this effect); another was the lack of a proper loudspeaker system until around 1925 when electronic amplification was introduced.

(iii) The theremin. These difficulties did not, however, deter the Russian radio engineer and cellist Lev Termen, who unveiled his Aetherphon (later renamed 'theremin') in 1920. This was based on his capacitative alarm and

measurement systems in which a changing whistle was an essential feature; far from attempting to minimize the effect of body capacitance, Termen made the most of it by extending an antenna outside the instrument's container for the performer to orientate hand and arm movements visually as well as by ear. The theremin proved enormously successful and Termen demonstrated it widely in the USSR and Europe. His European travels took him to Berlin in 1923 and to Germany, Britain and France in 1927.

It appears that in 1923 Terman met Martenot and Djunkowski (who later gave performances in Berlin on an instrument of the theremin type). It also seems probable that the Danish bandleader Jens Warny heard about Termen's visit to Berlin or was even there at the time, since in the same year he became the first to produce a version of the theremin, called the 'sfaerofon'. For Martenot, contact with Termen and his instrument would have suggested principles of design that he could exploit. The first model of the ondes martenot (1928) bore little resemblance outwardly to the later version (see §(iv) below): it consisted of two units on small tables, which were controlled by a standing performer who manipulated a string attached to a finger-ring. This method of performance, which is gesturally very close to that of the theremin, was retained as a spectacular alternative to the fingerboard version of the instrument until 1930.

By 1929 three other more or less direct copies of the theremin had been constructed – Obouhow's *croix sonore*, the *elektronische Zaubergeige* and the Electronde; in the early 1930s further versions followed, including the Ethonium and one designed for home use by G. Leithäuser. At least one theremin player, Konstantin I. Koval'sky, was active in the Soviet Union during Termen's ten years in the USA (1927–38), when Vladimir Aleksandrovich Sokolov composed four solo pieces for the instrument (1929). The theremin was included in a storm scene in Shostakovich's film score for *Odna* ('Alone', 1930–31) and in Gavriil Nikolayevich Popov's film music for *Komosol: the Patron of Electrification* (1932). The principle of the space-controlled theremin has continued to be used.

(iv) Fingerboard- and dial-operated instruments. In 1922 Termen tried out a fingerboard controller for his theremin (as was only natural for a cellist), though it was not until 1930 in the USA that he finally demonstrated his 'electric cello'. Other Russians were probably inspired both by this experiment and by Termen's avoidance of any form of keyboard. Virtually unknown in the West, following an early demonstration of the theremin in 1921, a major supporter of the development of electronic instruments in the Soviet Union was the acoustician Nikolay Aleksandrovich Garbuzov. He directed the State Institute for Music Research (GIMN) in Moscow from 1921 to 1931; in 1931 he worked briefly at the Institute for Scientific Research for Radio and Television (NIIRT), where he collaborated with Saul Grigor'yevich Korsunsky on 'adapter' pickups for bowed string instruments, and then from 1932 to his death in 1955 he was the first director of the Laboratory for Musical Acoustics, Institute for Scientific Musical Research at the Moscow Conservatory (NIMI). In 1936 the All-Union Radio Committee commissioned NIMI to undertake research in the field of 'electromusic', resulting in the setting up of the Radio Studio for Broadcasting Electromusical Instruments. Electronic instruments from GIMN included the Violena (1927) of V.A. Gurov and V.I. Volïnkin and Andrey Aleksandrovich Volodin's Ėkvodin (with Koval'sky; early 1930s).

In Leningrad similar researches into both electronic instruments and quartertone music, with a group formed in 1925 by Georgy Mikhaylovich Rimsky-Korsakov, were carried out from 1919 at the Institute for the History of the Arts, directed by the composer and musicologist Boris Vladimirovich Asaf'yev. It appears that Nikolay Stepanovich Anan'yev's Sonar (*c*1926) was invented elsewhere, while the Ėmiriton (Andrey Vladimirovich Rimsky-Korsakov and Aleksandr Antipovich Ivanov, with V.P. Dzerzhkovich and V.L. Kreytser; 1932–5, 1944) was developed at the Research Institute of the Musical Instrument Industry and the Research Institute for Theatre and Music. All of these, with the possible exception of the Violena, were fingerboard instruments, though in some cases the fingerboard was later replaced by a conventional keyboard.

In Paris a succession of electronic instruments (including the theremin) were demonstrated between 1927 and 1930, and for a time the city became the principal European centre for developments and innovations in this field. Many of the instruments devised and presented in the late 1920s had keyboards (see §(v) below), but it was the cheaper and simpler monophonic instruments without keyboards that attracted the most attention: the dial-operated Dynaphone (*c*1927) of René Bertrand, the similar but less significant Ondium Péchadre (1930), the improved version of the *croix sonore* (1934), and in particular the ondes martenot (1928), the mechanism of which was originally controlled by means of a pull-string, but was soon adapted to a fingerboard. The Dynaphone was demonstrated as far afield as Barcelona, Prague and Budapest, and works involving three and six of the instruments were composed for two early demonstrations in Paris. Thereafter it rapidly dropped out of the public eye, while Martenot's instrument went from strength to strength.

Another pioneer who used beat-frequency oscillators was JÖRG MAGER, who constructed several electronic instruments between 1921 and the early 1930s (all of them disappeared or were destroyed in World War II). Mager's interest in microtonal music had led him to study electronics and radio, and his first instrument, the monophonic Elektrophon (subsequently improved as the Sphärophon; fig.4), was based on the radio 'howl' or 'squeal'; it was operated by a handle in front of a calibrated dial, replaced in 1928 by a keyboard.

(v) Keyboard instruments. Concurrently with the development of instruments controlled by body capacitance and from fingerboards and dials, more conventional keyboard instruments were built using the new electronic technology.

In France Charles-Emile Hugoniot, who had carefully studied Cahill's French patents, took out a series of patents of his own between 1919 and 1922 for a wide range of sound-generating systems; these and his photoelectric organ of 1921 had some influence, for example on the electromagnetic tone-wheel system used by the radio engineer Joseph Bethénod in his *piano électrique* (1928), and Pierre Toulon's photoelectric Cellulophone (*c*1927). Gabriel Boreau's novel Radiotone (1930) was a hurdy-gurdy-like monophonic keyboard in which a mechanically

4. Jörg Mager playing the Kurbelsphärophon, c1923

bowed string was electroacoustically amplified. In three successive years Armand Givelet and Edouard Coupleux presented a monophonic 'radioelectric piano'; the first substantial electronic organ, the Coupleux-Givelet organ, which had one oscillator for each note and met with some success as an instrument for use in churches; and the first 'synthesizer', controlled by punched paper tape. A monophonic keyboard instrument built by Quinet at the same period attracted little attention.

In the USSR the only such instrument to be made appears to have been Sergey Nikolayevich Rzhevkin's 'electronic harmonium' (1924) which was designed at GIMN for acoustical research and could only sound up to four notes simultaneously.

The South African Hendrik Johannes Van der Bijl, working at Western Electric in New York, produced his pioneering photoelectric organ in 1916; it generated sounds by means of flashes of light reflected off white marks on black paper tape on to a photoelectric cell. In New York Hugo Gernsback employed audio-frequency oscillators in his Staccatone of 1923 and the Pianorad of 1926 (fig.5). An exhibition of simple electronic 'organs' was held at King's College, London, in 1923.

In Germany Mager's researches led him to replace the dial control of the Kurbelsphärophon by three monophonic keyboards (including a pedal-board) in the Klaviatursphärophon (1928); he then expanded this into his Partiturophon which had four (1930) and later (1931) five monophonic keyboards, including a pedal-board. In 1927 he also produced the less well-documented but more unusual monophonic Kaleidophon. At the short-lived peak of his career he was given the use of a small castle in Darmstadt, to which he moved in 1929 and where he founded the Studiengesellschaft für Elektro-akustische Musik.

2. *c*1930–39.

(i) Germany. Beginning shortly before 1930, it was in Germany, and particularly Berlin, that the type of intensive activity previously seen in France continued. Around 1928 two important centres were established, the Heinrich-Hertz-Institut für Schwingungsforschung at the Technische Hochschule and the Rundfunkversuchsstelle at the Staatliche Akademische Hochschule für Musik. The Heinrich-Hertz-Institut, under its director Karl W. Wagner, was wholly or partly responsible for about half of the electronic instruments built in Germany up to the mid-1930s (Wagner himself constructed a machine for synthesizing vowel sounds which influenced the development in the USA of the Vocoder and Voder soon afterwards). An important figure in German developments was Oskar Vierling, who began his studies at the institute in 1928. Having assisted Mager with the Klaviatursphärophon, Vierling later worked in all three areas of sound generation; he designed the electroacoustic Elektrochord and an electric violin and cello, contributed to the construction of the Neo-Bechstein-Flügel, collaborated with the American Winston E. Kock on an oscillator-based organ, and later produced such an organ of his own, the KdF-Grosston-Orgel. Besides Vierling's work, the original version of the Saraga-Generator and G. Leithäuser's theremin were also constructed at the institute. Harald Bode was another designer who studied there, though his first electronic instrument, the Warbo Formant-Orgel (1937) was built in Hamburg; this was followed in 1938 by the Melodium, constructed in Berlin with Vierling's assistance.

The Rundfunkversuchsstelle was less concerned with the development of new instruments: Hindemith and Toch, for example, each composed two works of *Grammophonmusik* (Toch's are lost, Hindemith's were recently rediscovered), a precursor of *musique concrète*, at the department in 1929–30. One important instrument, the trautonium (1930), was produced there; one of its features was that it had an audio oscillator 'at pitch' rather than a beat-frequency oscillator. Its inventor, Friedrich Trautwein, devised its monophonic fingerboard in ignorance

5. Pianorad by Hugo Gernsback, 1926

of that in the Hellertion, constructed the previous year by two non-Berliners, Bruno Helberger and Peter Lertes. Both instruments were improved and expanded throughout the 1930s. Oskar Sala, who as a student had been one of the first to perform on the trautonium, made two versions of it with two fingerboards, and in 1949–52 derived an instrument of his own, the Mixtur-Trautonium, from Trautwein's invention. The Hellertion was extended to give four monophonic voices, and Helberger continued to refine his original concept, calling the new version the Heliophon; this in turn occupied him for some time and he built a new model of it as late as 1947.

Other instruments invented in Germany during this fertile period include Hiller's electroacoustic *Radioklavier*, demonstrated in Hamburg in 1931, amplified harpsichords such as the Thienhaus-Cembalo, and the photoelectric Lichtton-Orgel, developed in Freiburg by Edwin Welte and constructed by the organ builders Th. Mannborg in Leipzig.

(ii) Other developments in Europe and the USSR. Although the focus of attention shifted to Berlin during the 1930s, more or less isolated experiments continued elsewhere. In Austria three tone-wheel instruments, the Thiring piano, its successor the Superpiano and the Magneton, were produced, as well as an electric piano, the Variachord. In France, less the centre of developments than before, there were the electroacoustic *orgue radio-synthétique*, the Mutatone of Constant Martin, Béthenod's oscillator-based 'piano-harp', and the polyphonic Tournier organ, which used beat-frequency oscillators. In Britain Leslie Bourn and A.H. Midgley worked on electrostatic tone-wheel systems for electronic organs, resulting in the manufacture of the Electrone and the Midgley-Walker organ (the photoelectric Winch organ was not completed); the Selmer company in London marketed the Pianotron, an electric piano based on plucked reeds.

The pioneering work of Termen in the Soviet Union in the early 1920s was matched in the next decade by significant developments in a different direction. The introduction of sound film in the USSR in 1929 led to experiments by Arseny Mikhaylovich Avraamov and Yevgeny Aleksandrovich Sholpo (at first together and later independently) in techniques of DRAWN SOUND. Sholpo went on to develop four models of a photoelectric composition machine, the Variafon, beginning in 1932. Research in these and other areas of electronic and microtonal music was fostered by the general desire for modernization and in particular by the programme of electrification for the whole country set in train by Lenin soon after the Revolution. At NIMI Igor′ Simonov devised the NIMI, a monophonic keyboard instrument (*c*1932), Gurov and Volïnkin the Neoviolena (*c*1936) and Simonov and A.Ya. Magnushevsky the Kompanola (1938, 1948). Simonov later constructed an electronic harmonium (late 1940s) and the sound-effects Shumofon (*c*1955).

(iii) USA. The 1930s were a period of great expansion and experiment in the area of electric and electronic instruments in the United States. Around 1930 the Russian émigré Ivan Eremeeff founded the Society of Electronic Music, and starting in 1932 demonstrated a series of electromagnetic and photoelectric tone-wheel and related instruments, including the Gnome, the Syntronic organ and the Photona. Other American tone-wheel instruments from the early and middle 1930s included the Hardy-Goldthwaite organ, Termen's Rhythmicon, the Rangertone organ, Radio Organ of a Trillion Tones, Polytone and the Hammond organ, and the similar electromechanical 'Singing Keyboard'; in Canada Morse Robb developed the Wave organ from 1926.

The second important area of American exploration in the early 1930s was that of electroacoustic instruments. Lloyd Loar, Eremeeff and others experimented with bowed strings (see Table 1 above), and the electric guitar, to whose development Loar had also contributed, began to come into its own. The piano was first electrified in the mid-1920s: in 1926, for example, a shop in Atlantic City displayed a Chickering Ampico player piano in the window, the sounds of which were amplified and transmitted to listeners in the street using an air microphone; various contact microphones were designed specially for use with the piano, including the Radiano (1926). From 1931 Benjamin F. Miessner exercised considerable influence on the further development of a viable electric piano through his Electronic Piano. Other electric keyboard instruments included Loar's Clavier and two products from the Everett Piano Co., the Pianotron and the Orgatron.

Instruments from this period based on oscillators included several applications by Termen (who lived in New York from 1927 until 1938) of his theremin principle; in 1934 he designed and constructed two theremins with extended frequency range for Varèse's *Ecuatorial*. Other inventors produced the monophonic Emicon (designed in Hungary but manufactured in the USA) and fingerboard Oscillion, and the Voice-Chord Organ.

(iv) Manufacturing. Up to the middle of the 1930s only a few electric and electronic instruments were made commercially. Starting around 1910 at least six examples of the Choralcelo were constructed. In 1929 manufacture of both the ondes martenot and the theremin began – until the 1950s the ondes martenot was built entirely by hand and therefore in small numbers, and up to 500 theremins were sold by its makers, RCA. A small number of similar instruments were produced by the Heinrich-Hertz-Institut, and (based on the Electronde) in Britain. Of the 100 trautoniums made, all but the dozen (or 50 according to one source) that were sold or given away are said to have been destroyed. The Emicon was also manufactured, but it is not known in what numbers. The various models of electric piano seem to have had no greater commercial success: 'limited quantities' (possibly 100) of the Neo-Bechstein-Flügel were produced and unknown numbers of the Elektrochord, the British and American Pianotrons, Miessner's Electronic Piano and its derivatives the Electone, Dynatone, Minipiano, Bernhardt Electronic Piano and Storytone. The first electric bowed or plucked string instrument to achieve high sales was the solid-bodied electric guitar, which was not marketed until the end of the 1940s. World War II adversely affected all such manufacturing enterprises.

Paradoxically it was the largest, most complex and most expensive instrument, the electronic organ, that was the first to succeed; this was partly because it was often cheaper for a church to install an electronic organ than to repair or replace a pipe organ, and also because small churches could afford an electric instrument to replace a reed organ or piano when a pipe organ was beyond their means. The first electric organ to be marketed on a large scale was the reed-based Orgatron (1934); it was followed

in 1935 and rapidly eclipsed by Laurens Hammond's mass-produced tone-wheel Hammond organ, sales of which had reached 50 a month by the end of that year and a total of 5000 after three years (of which some 1750 were bought by churches). In Canada Robb's Wave organ, by contrast, was unsuccessful, only about 20 being produced. The British Electrone was developed only cautiously: Compton began by adding solo Electrone sections to cinema and theatre organs, launching the first complete instrument in 1938, only to be interrupted a year later by the start of World War II; some 80 were in existence in early 1940.

In 1939–40 Hammond began to manufacture oscillator-based instruments, starting with the first piano attachment – the monophonic Solovox – and the organ-like Novachord (perhaps the first electronic instrument to apply the principle of 12 oscillators with frequency division). Manufacture of the Allen organ began, initially on a modest scale, in 1939.

(v) Dissemination and applications. The progress of electric and electronic instruments towards general acceptance in the 1930s can be traced in the records of concerts and demonstrations involving ensembles of such instruments; they were often used in arrangements of familiar popular and light classical works, though quite a number of compositions were written specially for them. The demonstrations of the Dynaphone in Paris in 1928 included Honegger's ballet music *Roses de métal* for three Dynaphones and piano. Later in the same year New York heard the first of three major presentations of the theremin: on that occasion four theremins were played with orchestra; in the Carnegie Hall in 1930, 14 theremins and a fingerboard theremin were accompanied by piano and harp; and in the same hall in 1932, 16 theremins (including both fingerboard and keyboard versions) were presented as the Theremin Electrical Symphony, as well as Termen's Rhythmicon, Terpsitone and 'keyboard electronic timpani'. In 1930 the conductor Stokowski added a fingerboard theremin (or 'electric cello') to the Philadelphia Orchestra to reinforce the double basses at the lower octave, later replacing it first with a specially built model and then with an ondes martenot. Stokowski's interest in all new applications of electricity to music, including early stereophonic recording, continued throughout his life. In the early 1930s he worked closely with Ivan Eremeeff at the Philadelphia radio station WCAU, but their project for an electronic orchestra of around 35 performers (all or most playing Eremeeff's Syntronic organ) seems to have fallen through because of Stokowski's disagreements with the orchestra's management. Another similar project of his was for a combined acoustical and electronic orchestra (150 acoustic and 24 electronic instruments) for San Francisco's 1939 Golden Gate exhibition. In 1957, by which time he was conductor of the Houston SO, he returned to the idea of reinforcing the double basses, using a 32′ 'electronic tone generator' specially built by the Allen Organ Co.

Also in the USA, in 1935–7, Percy Grainger wrote his *Free Music* no.1 for four theremins and no.2 for six (neither work seems to have been performed). Ives added an optional theremin part to his Fourth Symphony, probably around 1930, and Copland used the instrument in his opera *The Second Hurricane* (1936); Ives also helped to finance the construction of Termen's Rhythmicon. Over 75 concert works have featured the theremin; one-third of this total consists of American works written up to 1950 (composiitions written since 1984 for and by Lydia Kavina, Termen's great-niece, comprise another third). In 1938 Johanna Beyer wrote *Music of the Spheres* for three unspecified monophonic electronic instruments. In the following year at the New York World's Fair, Ferde Grofé conducted the Novachord Orchestra (four Novachords and one Hammond organ) in some 40 numbers arranged by him. Also in 1939 the Novachord was included in Tom Adrian Cracraft's All Electronic Orchestra, together with instruments constructed by Miessner (or based on his patents) – the Krakauer Electone, four electric violins, electric cello, electric double bass, electric guitar, electric bass guitar and 'chromatic electronic timpani'; the conductor was provided with a small mixing console for balancing the individual loudness levels, and a pedal for controlling the volume of the whole ensemble. A surprising early advocate of the electronic organ was Kurt Weill. He included the Hammond organ and (from 1939) the Novachord (sometimes as solo instruments) in several of his later works, beginning with the 1935 London première of *A Kingdom for a Cow* and his first American musical *Johnny Johnson* (1936). Both the Hammond organ and Novachord featured in *Railroads on Parade* (1938–9) composed for the New York World's Fair, and the Novachord was used in incidental music for two comedies in 1939 and 1940. An unidentified electric piano was also included in his music for Fritz Lang's film *You and Me* (1937–8). Other composers included the Novachord in film music, up to the late 1960s.

In Germany, the centre of activity and exploration during the early 1930s, Hindemith composed a seven-movement trio for trautonium, *Des kleinen Elektromusikers Lieblinge*, to be performed at the instrument's launch in 1930, a concerto for trautonium and strings the following year and a four-voice solo, *Langsames Stück und Rondo*, in 1935; the total repertory for the trautonium and the later Mixtur-Trautonium amounts to approximately 30 concert works (some of which are light music) and a handful of ballets and operas. In 1931 an electrical-music conference was held in Munich, in which Mager, Helberger, Trautwein, Vierling and others participated. At the eighth Funkausstellung in Berlin in 1932 an Elektrisches Orchester was presented, consisting of two theremin-like instruments (at least one by Leithäuser), a trautonium, Hellertion, Neo-Bechstein-Flügel, Elektrochord, Saraga-Generator and Vierling's Elektro-Geige and Elektro-Cello; a similar ensemble, photographed at the Funkausstellung a year or two later, omitted the second theremin and the Saraga-Generator, and included some new players. The Croatian composer Josip Slavenski wrote his *Musik für vier Trautonien und Pauken* in 1937, and included electronic instruments in his unfinished *Heliophonia*. With the rise of Nazism in 1933 official support was mostly restricted to instruments such as the KdF-Grosston-Orgel that could be used effectively at large-scale public events.

In France in 1933 Ravel gave permission for the first movement of his String Quartet to be played by four ondes martenots; four of the instruments were also included in Joseph Canteloube's opera *Vercingétorix* (1933) and Honegger's cantata *Les mille et une nuits* (1936–7), one of many works commissioned for the 1937 Paris Exposition, which also included Messiaen's *Fête des belles eaux* (for six ondes) and Daniel Lesur's *Interludes*

(for four ondes or horns). The ondes martenot is the electronic instrument for which by far the largest repertory has been composed, including music for the concert hall (nearly 1000 works), films, ballets, the theatre and the music hall; by 1950 Honegger, Milhaud, Jolivet, Koechlin and Messiaen had each incorporated it in several works (including solo pieces with and without piano, a concerto by Jolivet and Messiaen's *Turangalîla-symphonie*). Around 1934 a 'string orchestra', consisting only of electric violins but covering the full string range, was presented in Paris.

In 1938 Canon Francis Galpin, at the age of 80, gave a lecture to the Musical Association in London entitled 'The Music of Electricity', which featured demonstrations on the Neo-Bechstein-Flügel, Electronde, trautonium and Hammond organ. An Electronic Instrument Inventors Symposium was held in Moscow in 1940 which included the theremin, Violena and Ėmiriton and probably the Ėkvodin; and in 1944 several Ėmiritons were played at the Moscow Conservatory.

Another area in which electric and electronic instruments found an application was the provision of radio identification signals and signature tunes. As early as 1924 Dr Endre Magyari invented a mechanically controlled oscillator circuit to give the signal on Radio Budapest; a second model, from 1925, is now in the Postal Museum, Budapest. In New York in the late 1920s Hugo Gernsback devised an 'electromagnetic glockenspiel' for the same purpose, and a decade later the Elektrochord was used at the Reichssender in Berlin.

3. 1939–45. Activities in the 1930s were apparently not too greatly affected by the American Depression in the early part of the decade or the coming to power of the Nazi party in Germany towards the middle of it. But most European work came to a stop with the beginning of the war in 1939, and American developments continued unabated only until the United States entered the conflict in December 1941. However, even in European cities directly affected by the hostilities work continued on a few instruments: in occupied Paris Georges Jenny began to manufacture his Ondioline in 1941, and in 1943 Constant Martin completed a decade's development of an electronic organ; during the siege of Leningrad (1941–4) Sholpo made improvements to the second model of his Variafon.

The great hiatus that occurred in the work of most composers, musical instrument inventors and manufacturers meant that some instruments were abandoned, destroyed or lost without trace, and others were discontinued. On the other hand certain aspects of electrical technology, in particular magnetic tape recording equipment, advanced more rapidly than would have been the case in peacetime, and prepared the way for major inventions such as the computer, the transistor (1947–8) and the long-playing microgroove gramophone record (1948). The interruption caused by the war, and the accelerated technological growth that it fostered, produced two distinct chronological cycles of development in the application of electronics to music – the first concerned principally with instruments and the second with electronic music as it evolved in specialist studios. In many cases practitioners of electronic music after the war were largely cut off from the inventors of instruments who had been active before 1939, and were ignorant of work carried out only a decade or two earlier.

From the late 1940s electronic music on tape became the main focus of interest to composers; until the arrival of the synthesizer in the mid-1960s only a few electronic instruments were in use, in studios, radio stations and universities: the ondes martenot at RAI Milan and Radio-Genève, the *elektronische Monochord* and the Melochord at Nordwestdeutscher Rundfunk, Cologne, the theremin at the University of Illinois at Urbana, the Elektrochord at the Technical University in Berlin, and the Mixtur-Trautonium in Oskar Sala's private studio.

IV. After 1945

1. GENERAL TRENDS. The evolution of electronic instruments since 1945 is in some respects simpler and in others more complex than in the previous 20 years. On the one hand instruments are more easily classifiable, falling mainly into the following groups: electronic and electric organs and pianos, analogue and digital synthesizers, string synthesizers, piano attachments and electronic percussion. On the other, the electronic technology involved has progressed at an ever-increasing speed, bringing with it large-scale mass-production of electronic instruments for the first time, and a continuous stream of new products and new models of established products; this development in the area of musical instruments is, of course, only one manifestation of the electronic revolution that has affected the lifestyle of everyone in the West.

By and large the centres of activity in electronic instruments have changed in the post-war years. The USA recovered more rapidly than Europe from the effects of the war, and quickly established a lead that remained unchallenged until the early 1970s, when Japanese companies rose meteorically to prominence owing to their ability to develop existing ideas and technology to a stage where mass-production techniques could be applied. In western Europe designers have concentrated mainly on smaller and cheaper electronic instruments, such as those introduced by Hohner in West Germany during the 1950s and early 1960s, and by the large number of organ, string synthesizer and synthesizer companies founded in Italy since the 1960s (around 1980 some 200 were operating in the Ancona area). Little of the exploratory spirit shown by early Soviet researchers survived the Stalinist era, and Britain and France have produced comparatively few electronic instruments that have been exported on a substantial scale. Isolated developments of considerable significance have taken place in some countries, including Australia, the Netherlands and Sweden, that were not previously prominent.

The post-war period is characterized largely by two types of instrument, the electronic organ and the synthesizer, which are discussed below (see §§3 and 5). In the last few years each has taken over features from the other, and they have spawned a variety of hybrids such as the so-called string synthesizer, which often incorporated electronic organ, piano and brass sections.

2. COMMERCIAL CONSIDERATIONS. The manufacture of electronic instruments, in its infancy before the war, has expanded enormously since 1945. The development and production of such instruments has been carried out largely by companies founded specifically for the purpose; some have directed their products at existing markets, whether popular or highly specialized, while others have created a completely new demand which their instruments are intended to meet. Many types of operation have been established, from those occupying vast factory complexes where instruments are mass-produced in their thousands, to small businesses run by one or two skilled designers and builders who make single instruments to order. There have been successes and failures at all levels. Many promising small-scale ventures have collapsed or have needed to be reorganized because those who originally invented the instruments and then set up companies to manufacture them lacked business acumen or the desire to compete with mass-production techniques.

This phenomenon can be illustrated by the development and ultimate fate of several manufacturers of synthesizers from the early 1970s onwards. Paolo Ketoff, one of the pioneers of the synthesizer in the mid-1960s, produced several Synkets, but his one-man operation came to an end in the mid-1970s due to personal injury and an inability to compete with (comparatively) larger companies. ARP Instruments built up a two-fifths share of the American synthesizer market in 1980, but was bankrupt within a year through mismanagement. The Moog company ceased in 1985 and recent attempts to revive it appear have been unsuccessful, while EMS continues, but on a very different basis: after 1977 Robert A. Moog had no connection with the company that he set up, and none of the original directors or designers remains at EMS; Moog is the only figure from the original personnel of either company who is still active in the design and manufacture of similar instruments (though not under his own name). Finally Buchla, which has remained a small-scale company run by its founder and designer Donald Buchla, was associated with CBS for two years around 1970; thereafter the company could not for some time use Buchla's name for its newer designs.

Many inventors of successful electronic instruments, whose first product was a marketing success, have found it difficult to keep up with rapid developments in electronic technology and often with the competition that their own instrument has created. Not all these electronic wizards have been good businessmen or even good judges of those to whom they could entrust the running of their businesses. Some of the longest-surviving companies, such as Wurlitzer and Yamaha, were already successful in other areas of electronics or musical instruments. Only a few manufacturers have had the good fortune to find a single product that so successfully meets a particular need that they can concentrate exclusively on it, and effectively stifle all competition (the ondes martenot and the Mellotron are examples).

3. THE ELECTRONIC ORGAN.

(i) Church organs. In many ways the most contentious of all electric and electronic instruments has been the electronic organ. Unlike most other electronic instruments, which have established new areas of application and musical style, the electronic church organ directly rivals the pipe organ and to succeed must emulate the pipe organ's particular characteristics. Some of those built before 1940 probably would not sound much like organs to modern ears, though contemporary claims for their fidelity to pipe organ sound were high. (The propriety of using the term 'organ' for these instruments and the legal battles fought by companies who wished to do so are discussed in §I, 1, above.) The controversy began with the appearance in 1935 of the Hammond organ, the first real threat to the pipe organ. Although the Hammond company did not design their electric organ specifically for church use, many smaller churches bought one, perhaps influenced by the exaggerated claims in early publicity or by the recommendations of esteemed musicians such as Koussevitzky, Stokowski and Toscanini.

The technical considerations involved in creating an acceptable imitation of a pipe organ from an electric or electronic instrument are principally the directionality and the quality of the sound. The source of the sounds coming from a pipe organ differs from that in most other acoustic instruments in being often diffuse and far removed from the player; a medium-sized electronic organ in a church can sound sufficiently authentic with two or three carefully positioned loudspeaker installations (which can even be moved to create different effects). Directionality is more problematic the higher the pitch – the source of a sound being increasingly difficult to detect in the lower ranges. The designers of some organs have taken particular care to deal with this factor: in the Dereux organ, for example, revolving paddles placed in front of a loudspeaker create an effect of diffusion only for the higher notes.

The greatest challenge lies in the electronic mimicking of the special qualities of the pipes themselves, individually and in combination. First steps were made in this direction with the photoelectric tone-wheels of the Lichtton-Orgel and the electrostatic ones of the Compton Electrone, which were based on the waveforms produced by the pipes of existing organs. In recent years circuitry of increasing sophistication has permitted more precise emulation of the characteristics of pipes: micro-second delays can be introduced for lower notes (larger pipes take slightly longer to 'speak'), and the momentary wind noise that precedes notes when certain stops are used can also be imitated, as in the frequently synthesized 'chiff' attack heard in flute stops (resulting from the starting transient of a flue pipe). The principal musical drawback of the electronic organ is that frequencies generated electronically are often perfectly in phase with one another; this is particularly troublesome in instruments that use frequency division to produce many pitches from the frequency of one or a dozen oscillators, but it can also occur even where there is an oscillator for every note, since different timbres are often produced by means of filters. Perfect phasing makes for unauthentic organ sound since it does not occur in pipe organs. Several methods of dealing with it have been developed. Around 1937 Hammond introduced the 'chorus generator', a second tone-wheel generator which produces sounds slightly out of tune with those made by the principal generator; the two together create beats which enrich the sound quality. The same result can also be achieved electronically. An innovation similarly aimed at the faithful reproduction of pipe organ timbres was introduced by Conn in about 1980; it consists of an amplification system in which the output from the loudspeakers is channelled through sets of tuned pipes. Other effects that have been produced by

means of electronic circuitry include the simulation of the touch of a tracker-action organ, and increasingly authentic reverberation, created digitally.

The first fully electronic organ to be marketed was the Allen organ, produced from 1939. Shortly after the war several other American and European companies followed suit, and the 1950s and 60s saw increasing activity in this area. The introduction of the Digital Computer Organ by Allen in 1971, with its tone cards and card reader, was the first application of digital sampling for the faithful reproduction of pipe organ sound. Most companies that specialize in church organs offer a range of four to six models, the largest of which (three or even four manuals) is usually available in custom-built versions specially designed in collaboration with the organist who will play the finished instrument.

The advantages of an electronic organ for a church that needs to replace a pipe organ are chiefly financial; such an instrument is less expensive and requires less maintenance and tuning than a comparable pipe organ; indeed an electronic organ is impervious to changes in temperature, and is unlikely to need any tuning once it has been installed. It has very few moving parts apart from the keys. It can be transported fairly easily since the circuitry is normally accommodated entirely in the console (an umbilical cable connection to an additional unit in some earlier electronic organs can easily be unplugged), and it takes up much less space than a pipe organ. These advantages, especially the financial ones, have proved to be of great importance in recent years when labour costs are proportionately much higher than formerly and churches are less prosperous.

From a musical point of view, it has been found that the best electronic organs compare favourably with good pipe organs. Not all pipe organs sound well in the churches where they are installed, and little can be done to improve the result; with an electronic organ a degree of compensation can immediately be made by adjusting the reverberation electronically. Larger electronic organs are invaluable for concerts and recordings of works in buildings that have no pipe organ, and as temporary replacements for pipe organs in churches, cathedrals or concert halls during repairs or rebuilding. An electronic organ can, at little extra cost, offer a choice of registrations to suit music from different eras; several instruments are available with some combination of 'Baroque', 'Romantic', 'Traditional' and 'Classical' registrations.

(ii) Hybrid organs. It has sometimes been found advantageous to combine elements of the electronic organ with the pipe organ, often in the form of one electronic section added to an otherwise acoustic instrument. The first hybrids of this sort were small pipe organs to which an electronic bass extension was added; this could offer several 16′ and 32′ stops without the need for installing very large pipes. The first such separate electronic bass was probably the pedal unit, based on that of the Rangertone organ, that was introduced into the pipe organ at Vassar College, Poughkeepsie, New York, in 1933. In the late 1930s the John Compton Co. (in the process of completing the development of their Electrone) produced a similar 32′ electronic extension. In 1955 the Allen Organ Co. introduced a 32′ 'electronic tone generator' based on the pedals of their organ, and two years later a special version of this was built for reinforcing the double basses in Stokowski's Houston SO.

Also during the 1930s electronic solo voices were first introduced into pipe organs, usually those in use in theatres and cinemas; for example, Radiotone sections, employing an amplified bowed string, were installed in theatre organs in Britain by Hill & Sons and Norman & Beard. Rather later Compton produced a 'solo cello' voice, and a section that imitated woodwind and bells, the Melotone; and, as has already been noted, Compton first developed the Electrone organ in the form of individual sections for addition to pipe organs.

Electrical amplification of enclosed groups of pipes was first carried out in 1934 by Abbé Pujet in his *orgue radiosynthétique*; in the 1950s similar systems of amplification were installed in pipe organs by Frank C. Wichlac of Chicago, Alfred G. Kilgen of Los Angeles, and John Hays Hammond jr of Gloucester, Massachusetts. Since World War II more integral hybrids have been designed for church use. Around 1958 the Kilgen Organ Co. marketed a model in which the electronic sections provided not only the pedals (8′ and 16′) but also the lowest octave for the 8′ stops on the manuals. More recently Walter Leib has devised the *elektronische Auxiliaire*, a collaboration between Ahlborn Orgel and a builder of pipe organs has resulted in a model that is two-thirds electronic, hybrid organs have been manufactured by Lipp (one manual uses pipes, the other and the pedals are electronic) and the Rodgers Organ Co., and the Allen Organ Co. has made some electronic additions to existing pipe organs.

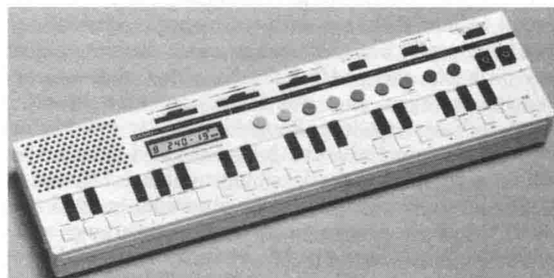
In any register, but especially in the bass, electronic circuitry saves space and cost when compared with pipes; it also obviates compromises such as the use of a closed 16′ pipe instead of a 32′ open one. However, the advantages of hybrid instruments are not all on the side of the electronic sections: the problem caused in fully electronic organs by perfect phasing (see §(i) above) is largely overcome by mixing electronic and acoustic sections in a single instrument.

Similar hybrids have been devised in a number of related electronic instruments. During the 1950s the Clavioline was added to street barrel organs manufactured by two Belgian companies, and electronic solo sections were included in accordions (such as the Hohnervox – a combination of the Electronium and an accordion – and Siegfried Mager's Multimonica), and in harmoniums, including Mager's Mannborg organ (*c*1950, with electronic solo section and 16′ bass) and the Orcheline (the Netherlands, late 1950s). Since the early 1970s several electronic organs (including models manufactured by Baldwin, Conn, Elka, Farfisa, Kawai, Kimball, Wurlitzer and Yamaha) have included 'synthesizer' or 'solo orchestra' voices, which are usually monophonic and are sometimes controlled from a separate short manual.

(iii) Concert, home and entertainment organs. The earliest electronic organs, such as the Hammond, were intended to cater for all the purposes for which an organ might be used. Since the war, however, the different functions of the electronic organ have become increasingly distinct and have led to the development of instruments that bear little resemblance to one another. Electronic organs designed for concert use fall into two categories – those for classical music (similar to and usually interchangeable with church models) and those for light music (which often resemble the earlier cinema and theatre pipe organs). Models of the latter type, many of which include

unusual stops and special effects, have been manufactured by Allen, Baldwin, Conn, Farfisa, Gulbransen, Kimball, Lowrey, Rodgers, Wurlitzer and the Haygren Organ Co. of Chicago (the Harp-Organ, 1949). The other important type of electronic organ is the small home or entertainment organ, which usually includes performance aids and special effects to enable inexpert players to create a good impression. The Hammond company was the first to detect the market potential of such instruments and for a long time was the leading manufacturer of home organs; this area continues to be a major concern.

The electronic home organ normally has one or two manuals; where there is a pedal-board it is usually monophonic, with a compass of a single octave and pedals that are parallel instead of radiating outwards, as in a church organ. The typical 'spinet' arrangement of most two-manual instruments was introduced by Hammond in 1949: the manuals are shorter than normal (between three and four octaves each) and are offset, normally by one octave, the lower-pitched manual being in front and the higher-pitched behind; occasionally the two manuals are unequal in compass.



It was also Hammond who, in the early 1950s, introduced the 'chord organ' (though the idea was anticipated in Eremeeff's Photona of 1935). The chord organ has a single monophonic or polyphonic keyboard with buttons or occasionally additional keys (usually on the left side of the console) each of which, as on an accordion, selects a chord; it enables the player to produce an accompaniment to a melody played on the manual without having to finger complete chords. The principle is similar to that of the piano attachment, the first example of which – the Hammond Solovox – was marketed in 1940; this device is a monophonic keyboard designed for solo playing with the right hand to an accompaniment played on the piano by the left. In fact the first Hammond chord organ (also their first fully electronic organ, apart from the unusual Novachord) used circuits that were partly based on those of the Solovox, and effectively combined the melody and accompaniment elements in a single instrument. It had a three-octave keyboard (like a piano attachment) and 96 chord buttons, offering a choice of eight chords in each key; a chord bar, operated by the palm of the left hand, provided articulation, and two pedals supplied respectively the root and the 5th of the chord selected, two octaves below the note played on the keyboard.

In the 1950s other electronic home and entertainment organs, besides Hammond's, were produced, including the Combichord, Tuttivox and Polychord III (all designed by Harald Bode), the Gulbransen, Jennings, Lowrey, Minshall, Schober, Thomas and Toccata organs, some models of the Ahlborn, Allen, Baldwin, Conn and Estey organs, the Yamaha Electone, and instruments built by Farfisa, Hohner, Selmer of London and Wurlitzer; in the USSR the Kristadin and Yunost′ were marketed. By the mid-1960s Hammond's domination was being challenged, particularly by the Lowrey and Thomas organs, and in the next two decades many more companies, some newly established, entered the market in the hope of taking a share of the rapidly expanding sales of home organs; they included Bontempi, Casio, Cavendish, Crumar, Elgam, Elka, Eminent, Gem, Godwin, Jen, JVC, Kawai, Kimball, Kinsman, Korg, Marlborough, Philips, Riha, Roland, Seeburg, Siel, Solina, Technics, Viscount, Vox, Welson, Weltmeister and Wersi. Some models, of the Schober and Wersi organs for instance, were marketed in kit form. In the early 1980s Japanese companies such as Casio and Yamaha began to produce miniature electronic instruments (fig.6), which quickly came to account for more than half the total sales of electronic instruments annually. Some two years after these instruments first appeared in Europe, Western manufacturers, such as Baldwin, Bontempi, Lowrey and Wurlitzer, rather belatedly followed suit.

The home organs produced since the 1960s have been aimed increasingly at the beginner and less skilled performer. The beginner is catered for by peripheral guides such as note names printed above the keys, indicator lights above the keys, specially simplified notation for use with a particular company's instruments, and musical games. Once some degree of facility has been attained, the player can exploit the various devices and features that make possible a polished performance without the need for highly developed keyboard skills: chord buttons, electronic rhythm sections (introduced in the early 1960s), 'walking bass' units and alternative types of chordal accompaniment (early 1970s), small memories for automatic replay, microprocessor-controlled arpeggiators (late 1970s), and digital programming and storage of registrations (early 1980s). (Many of these features are also standard in synthesizers and related instruments.) Some organs marketed in the early 1970s incorporated cassette tape recorders so that the player could pre-record an accompaniment; slightly later, solo 'synthesizer' sections were included in some instruments.

As electronic circuitry has become more sophisticated it has, paradoxically, required less and less space, until an electronic organ of some versatility can now be quite small and can be easily carried around. The concept of portability has changed considerably over the years: the original Hammond organ, weighing around 80 kg, was considered portable; in the 1950s small dance band or 'combo' organs weighed about 35 kg and could be fitted into the boot of a car; today a small organ can weigh as little as 2·5 kg, while a miniature monophonic instrument weighs about 0·5 kg and can be carried in a coat pocket. From the mid-1980s electronic organs were primarily based on digital synthesis, then on different combinations of synthesized and sampled sounds, and more recently entirely on sampled sounds.

Solo performances on electronic organs, especially the Hammond, have been common in jazz, swing and related musics, and are well documented on gramophone record. In rock music, in the mid-1960s, when few performers could afford to buy a Hammond, two of the most popular small electronic organs were those produced by Farfisa

6. Casiotone VL-5, 1982

and Vox. Memorable recordings include the Animals' hit *House of the Rising Sun*, in which a Vox Continental was played by Alan Price, Rick Wright's performance on a Farfisa in Pink Floyd's *Set the Controls for the Heart of the Sun*, and some of Ray Charles's slower songs, such as *Here we go again*, where the mood is set by an unidentified instrument, probably a Hammond. Early in the 1970s successful rock players, such as Rick Wakeman, Vangelis and Patrick Moraz, started to collect keyboards, first placing smaller instruments on top of an acoustic piano or electronic organ and later stacking them on top of one another; each instrument in such a bank of keyboards is treated as if it were a special stop on a vast electronic organ. Some rock musicians have continued to prefer the sound of the 'classical' Hammond tone-wheel organs with drawbars. When these were replaced by fully electronic organs, the characteristic (and unavoidable) key-clicks associated with the tone-wheel models were eliminated; recent advances in electronic technology have allowed Hammond (and other companies) to respond to pressure from performers by producing drawbar models in which the key-click is mimicked electronically.

Since the 1970s the electronic organ (again often a Hammond) has been included in a number of works for orchestra or ensemble; Dubravko Detoni (21 compositions) and Berio (more than 16 compositions) have favoured it especially, and Friedrich Cerha, Jacob Druckman, Henze, Kagel, Bernard Rands, Enrique Raxach, Murray Schafer, Armin Schibler and Stockhausen have all specified electronic organ in several works. The Yamaha Electone has been featured in many Japanese compositions since 1960. Solo works for electronic organ have been composed by Roland Kayn (*Diffusions*, for one to four instruments, 1965), George Cacioppo (*Holy Ghost Vacuum, or America Faints*, 1966) and Bernard Van der Boogaard (*Melancholic Moods*, 1980). Several concertos or similar concertante works for electronic organ have been written. Small electronic organs have been used in works by the American minimalist composer-performers Philip Glass, Terry Riley and Steve Reich, who specifies four portable electronic organs, such as the Farfisa Mini-Compact, in his *Four Organs* and *Phase Patterns* (both 1970); Riley has also played an Electone tuned in just intonation.

4. Other instruments.

(i) Keyboards. The success of all types of electronic organ is partly due to the existence of a substantial repertory – on the one hand the entire body of music composed for the pipe organ, on the other music specially composed or arranged for rock and other light-music ensembles and published for use with entertainment and home organs. The same factor probably accounts for the popularity of electric and electronic pianos since the 1960s, compared with the electric pianos manufactured during the 1930s, the limited success of which was partly the result of the lack of a suitable repertory. Today rock musicians make considerable use of 'vintage' electric pianos, as they do of all types of electric and electronic keyboards, often favouring those developed in the early 1960s, such as the Rhodes, the Hohner Pianet and Clavinet, and the Wurlitzer. Of these only the Clavinet produces sounds by means of struck strings: the Rhodes and the Wurlitzer employ tuned rods, and the remaining instruments all use plucked or struck reeds. Several more recent electric pianos, in which the method of sound production is the same as in an acoustic piano, include upright and grand models produced by Aeolian, Crumar, Gretsch, Helpinstill, Kawai and Yamaha; these all use piezoelectric pickups, and some can be partly folded or dismantled for ease of transport, which has endeared them to touring rock musicians. Electroacoustic methods have also been used as the basis for reed organs (such as the Radareed organ) and electric harpsichords in the postwar period.

Although attempts have been made since the 1950s to develop fully electronic pianos, using the same principles as have been exploited in the electronic organ, the first really successful instruments were not marketed until the early 1970s; the RMI Electra-Piano was followed by models manufactured by Armon, ARP (taken over by Rhodes), Crumar, Elka, Korg, the Kustom division of Baldwin, Multivox, Roland, Vox and Yamaha. In addition to a choice of piano timbres (including acoustic and electric), many of these have stops such as Harpsichord, Clavichord and Vibraphone. Some companies include an electronic piano section in their string synthesizers.

The reliability of the electronic oscillator has led to its use in other types of keyboard instrument as well. A few electric accordions were produced in the 1950s, such as the Elektro-Cantulia (*c*1953), but these were overshadowed by electronic versions pioneered by Hohner, who produced several models in the 1950s, as well as hybrids such as the Multimonica and the Hohnervox. In the 1960s and 70s Italian companies such as Farfisa (with the Cordovox, Duovox, Syntaccordion, Transicord and Transivox) and Elka (Elkavox and Concorde) followed suit, and a few individual instruments were made by other manufacturers (the Iorio Accorgan and the computerized Digisyzer from Excelsior). Electronic harpsichords have been produced by the Allen Organ Co., Rodgers and Roland.

A number of specialized monophonic bass keyboard instruments have been manufactured. An early example was Hohner's Bassophon, which the company followed with the 29-note Bass 2; the Weltmeister Basset is similar. Around 1965 Joh. Mustad in Göteborg began to manufacture the Tubon, a 30-note cylindrical keyboard instrument which is slung round the performer's neck on a strap; it was used for a while by Swedish pop groups.

Oscillator-based keyboard instruments have been used in microtonal tunings and for just intonation, and limited quantities of two specially designed instruments of this sort, the Arcifoon and the Scalatron, have been manufactured. Keyboards have also been used to control electronic sound-effects instruments, such as the Mellotron, Chamberlin and Birotron, which all employ magnetic tape, and the Shumofon, which is based on a noise generator. Some other miscellaneous electric and electronic keyboard instruments, utilized in the United States during the 1960s but now forgotten, include the Band Box, Baritone Electric Vibraharp, Ace Canary, Electric Celeste, ElectriKazoo, Nova-Harp and RMI Rocksichord.

(ii) Bells, chimes and carillons. Electric bells, chimes and carillons were first devised around 1930 (for the mechanisms used, see §I, 2(iii) above). Early examples were electromagnetically activated and were probably unamplified; they included the 'electromagnetic glockenspiel' of Hugo Gernsback (late 1920s) and the set of electromagnetic Javanese gongs used by Jörg Mager in 1931 for the 'elektroakustische Gralsglocken' in performances of

Wagner's *Parsifal* at Bayreuth and Cologne. (The *Parsifal* bells have also been supplied by the trautonium (1950–57; Bayreuth, 1955–7) and the Fairlight CMI (Berlin and Salzburg, 1980), following several acoustic devices such as Bayreuth's home-made set of long thick piano strings mounted on a resonator and J.C. Deagan's 'Parsifal bells' (? *c*1900).) In the mid-1930s a set of electric bells called the Electrophone was built for the Dutch composer Daniel Ruyneman. In 1937 an 'electrophonic carillon' was manufactured (probably in the USA), Constant Martin built an electronic carillon, and Vierling devised a set of electric bar chimes (*c*1939); a similar system to the last was constructed at the Oberascher bell-foundry in Munich (1939). Other electric bell sounds produced in the 1930s often employed amplified tubular bells. In 1940 the trautonium was used to imitate bells and gongs in Richard Strauss's *Japanische Festmusik*. Trautwein constructed a set of electric bells in 1947.

During the late 1940s electromagnetic keyboard chimes using steel rods and bars were manufactured in the USA by Deagan (a 25-note electric carillon), Schulmerich (which by the mid-1950s was making a five-octave set) and other companies, such as the Meneely Bell Co., Earle J. Beach & Son and Stromberg-Carlson; their example was followed by several organ companies, including Compton in Great Britain, who added chimes to the Electrone. Deagan and the Maas-Rowe Organ Co. both produced four-octave Organ-Harps, which consisted of amplified struck metal tubes or bars, and tuned rod chimes were used in Allen and Rodgers electronic organs in the 1960s. Since the late 1960s electronic organ chimes have mostly been produced by electronic oscillators or digital synthesis.

In France around 1950 the *carillon électromagnétique* was made by Chancenotte, and Constant Martin devised an improved version of his carillon (see §I, 5(ii)). In Russia Vasily Trifonovich Mal′tsev, working in Moscow, produced sets of electric bells for use by orchestras and in theatres, while Magnushevsky created an electronic replacement for the carillon of ten bells in the Kremlin's Spasskaya [Saviour] clock tower (1945), playing two melodies, of which the Internationale was broadcast for many years daily over Radio Moscow. As with other electric instruments, electric carillons are much cheaper than their acoustic counterparts and have accordingly been widely introduced. In the mid-1960s there were only around 80 acoustic carillons in the USA but more than 5000 electric carillons had been installed by a single manufacturer. More recent versions of this group of instruments include the chimes often broadcast over the tannoy system in airports and railway stations to attract the public's attention; in these the sounds are usually produced by electromagnetically amplified struck rods, which are sometimes bent at a node to produce a particular timbre.

(iii) Repertory. The repertory for electronic instruments composed since World War II differs greatly from that of the 1930s. The ondes martenot continues to be used extensively, especially in France; Jacques Charpentier composed two concertos for it (1959–60) and Boulez a quartet for four ondes (now withdrawn). Two ondes have been featured in works by Aurel Stroe, whose *Arcades* (1962) includes, besides an ondes, an Ondioline and an electronic organ. The instrument has also been included in a number of Japanese compositions since the late 1950s. Two ondes martenot ensembles exist, the Sextuor Jeanne Loriod in Paris (six instruments) and the Ensemble d'Ondes de Montréal (four). After enjoying considerable popularity in Hollywood films between 1945 and the early 1950s, the theremin has seldom been called for: parts for it were included in Bohuslav Martinů's *Fantasia* (1945), Alfred Schnittke's oratorio *Nagasaki* (1958), Lejaren Hiller's *Computer Cantata* (1963) and works by Jorge Antunes (late 1960s), Irwin Bazelon (1960) and David Del Tredici (three works between 1969 and 1976). Larry Sitsky's *The Legions of Asmodeus* (1975) is scored for four theremins. In the late 1960s the Moog theremin was featured in the Beach Boys' hit record *Good Vibrations* and was a significant element in the pop group Lothar and the Hand People. The trautonium and Mixtur-Trautonium have been used by Richard Strauss (*Japanische Festmusik*, 1940), Orff (*Entrata*, 1940) and Henze (the ballet *Tancredi e Cantilena*, 1952) and in works by Harald Genzmer, Werner Egk, Paul Dessau and Oskar Sala. The Subharchord, similar to the Mixtur-Trautonium, was also featured in several East German solo works with orchestra. In the 1950s in West Germany and Austria the trautonium and the Heliophon were substituted for the ondes martenot in performances of Honegger's *Jeanne d'Arc au bûcher* (the part is not typical of the rather sweet sound of the ondes – it includes imitations of dogs howling, an ass braying, and the sounds of fire and bells). Two Russian works from this period were the Concerto for Ėkvodin by Sergey Vasilenko and Vasily Zolotaryov's Symphony no.6 'Moya rodina' [My homeland] (1944), which featured an Ėmiriton.

The Solovox was used in arrangements of five of his earlier works by Percy Grainger around 1950–52; the Ondioline occurs in several pieces by Jean-Etienne Marie, and the Clavioline in compositions dating from the 1950s by Toshirō Mayuzumi, Shin′ichi Matsushita and Rodion Shchedrin (the ballet *Konyok-gorbunok* [The little hunchbacked horse] (1955–6); the Second Suite specifies an Ėkvodin as an alternative). An ensemble consisting of six Claviolines (the Bode version) and one Bode organ was formed in 1954, and in the late 1950s the jazz pianist Sun Ra used both the Clavioline and the Electric Celeste. Around 1950 Hohner established a Studio für elektronische Musik in Trossingen, which encouraged the use of the Electronium in serious and light music by German composers, and in 1954 Wolfgang Jacobi composed a work for four Electroniums and Helmut Degen an Electronium concerto. The instrument also features in works written in the late 1960s and early 70s for his own ensemble by Stockhausen. In the former Soviet Union the Electronic Instruments Ensemble was founded in Moscow by M. Kadomtsev (possibly the Soviet Army's electric musical instrument ensemble, from 1956), and the Vyacheslav Meshcherin Band was formed in 1957 to play dance music and arrangements of light classical and folk music on Radio Moscow; it included a Clavioline, Pianophon, Hammond organ, Neo-Bechstein-Flügel and (later) a Yunost′. The generation that emerged in the 1950s showed a brief interest in electronic instruments, especially Alfred Schnittke in the oratorio *Nagasaki* (1958), the unfinished 'Concerto for electric instruments' (1960) and the unperformed cosmonaut tribute *Poėma o kosmose* [Poem about space] (1961), which featured not only the theremin but also two other Russian instruments, the Ėkvodin and Kompanola. No details are available

concerning the electronic instruments used in Andrey Mikhaylovich Volkonsky's 2 *Japanese Songs* (1958). In the same period Sofiya Asgatovna Gubaydulina included an Ėkvodin, a Kristadin and an electric piano in *Four Pieces* for electronic ensemble (?1961). Shchedrin's music for the ballet *Anna Karenina* (1971) incorporates a Shumofon. In the mid-1960s the Orchestre Electronique Monici in Orleans included the Timbalec (electric timpani).

Electronic instruments have found a role in film scores and soundtracks since the 1930s. In 1930–31 Shostakovich used a theremin in his score for *Odna* [Alone] and in the next few years the ondes martenot was included in scores by Franz Waxman (*Liliom*, 1933), Honegger (*L'idée*, 1934, and *Pygmalion*, 1938) and Ibert (*Golgotha*, 1935). Mager used the Partiturophon in his music for *Stärker als Paragraphen* (1936), and during the 1930s the Neo-Bechstein-Flügel was used in several film scores; in the late 1940s and 1950s the Heliophon was similarly in demand for Austrian films. Mayuzumi included the Clavioline in *Street of Shame* (1955), and the Mixtur-Trautonium has been the basis not only for many film scores composed since 1953 by Oskar Sala and others, but also for the sound effects created by Remi Gassmann and Sala for Hitchcock's *The Birds* (1962).

Hollywood's initial reluctance to use such novel sounds was only gradually overcome, and to begin with they were exploited mostly in films with sinister or controversial themes. A Novachord and an electric violin feature in Waxman's score for Hitchcock's *Rebecca* (1940). The theremin, first used by Max Steiner in *King Kong* (1933) and by Waxman in *The Bride of Frankenstein* (1935), was incorporated by Robert Emmett Dolan in his score for *Lady in the Dark* (1944), by Miklós Rózsa in *Spellbound*, *The Lost Weekend* (both 1945 – to portray respectively amnesia and drunkenness) and *The Red House* (1947), and by Roy Webb in *The Spiral Staircase* (1945). Hanns Eisler introduced the Novachord (together with an electric piano) in *White Flood* (1943) and Webb used it in *Murder, my Sweet* (1945), while an electric violin featured in Waxman's *Mr Skeffington* (1944). With the growth of science fiction films after 1945, otherworldly, electronic sounds became almost *de rigueur*: for example, Bernard Herrmann used four theremins and an electronic oscillator in *The Day the Earth Stood Still* (1951) and Louis and Bebe Barron created a full-length electronic soundtrack for the classic *Forbidden Planet* (1956). During the 1950s the theremin was especially popular in science fiction and horror films.

Taped electronic music (often only short passages) was employed in some 20 films of all kinds from 1950 until the mid-1950s (by, among others, Boulez and Varèse), after which the tally becomes too large to be documented. From the late 1950s Paul Beaver's electronic music studio in Los Angeles produced electronic music (usually using electronic instruments) in collaboration with many leading Hollywood film composers for films that included some notable box-office successes. The most important development since the 1960s has been the increasing use of the synthesizer in film soundtracks and scores (see §5(v) below).

5. The synthesizer.

(i) Forerunners of the synthesizer. The first electronic instruments that were called synthesizer would not be so described today because they were not intended for, and were nearly all incapable of, live performance; 'composition machine' is perhaps a more appropriate term. The two models of the RCA Electronic Music Synthesizer as well as the slightly later Siemens Synthesizer, all developed during the 1950s, are, like a predecessor constructed around 1929 by Edouard Coupleux and Armand Givelet, programmable electronic composition machines; similar systems were used in the Cross-Grainger 'free music' machines (1945–61), the Electronic Music Box (1951) and several devices based on the technique of drawn sound, including Yevgeny Murzin's ANS (the only pre-computer system still in use), Composertron, Raymond Scott's Electronium, the fourth of Grainger's 'free music' machines, the Hanert Electrical Orchestra, Oramics and the Variafon. In these machines the music (or individual layers of it) is programmed by punching holes in a paper tape, or drawing outlines on film, as in the optical film soundtrack. (Grainger's third machine used a related but highly individual mechanism based on 'hill and dale' channels in a paper roll.) There is always a delay in such systems (though it may be very short) between the composer's completing the 'notation' of the programming and hearing the sound, so that no real-time performance is possible (except where keyboards have been added as an alternative or special control element, as in the ANS and Hanert's apparatus). Early computer-based systems included the system at the Elektronmusikstudion (EMS) in Stockholm, the SSSP in Toronto and the series of machines at IRCAM that culminated in the 4X; outside IRCAM the principal such system today is Iannis Xenakis's UPIC (up to 1977) which, by 1987, with more powerful computer processing, was able to function in real time. Many commercial synthesizers have, of course, been used compositionally; the early modular synthesizers were primarily intended for electronic music studios, and with the advent of programmable synthesizers in the late 1970s it became possible for musicians to prepare timbres and to record sequences at their leisure, even though such a possibility has been largely ignored in the field of rock music.

(ii) Analogue synthesizers. The earliest instrument that resembles a Synthesizer in the form in which it is familiar today is the monophonic 'electronic sackbut' built by Hugh Le Caine in Ottawa in the late 1940s (fig.7). Several of its features have become common on

7. Hugh Le Caine with the original version of his 'electronic sackbut', 1945

commercial synthesizers, including a touch-sensitive keyboard (a feature introduced in electronic instruments as long ago as the first model of the Telharmonium in 1900), a portamento glide strip (resembling the fingerboards introduced in the 1920s), modulation control for vibrato and timbre, and a limited application of VOLTAGE CONTROL, the most significant aspect of the synthesizer. In addition a glide between consecutive notes (a feature pioneered in the ondes martenot and later used in the Ondioline) could be produced by a sideways key movement; pitch 'bending' is used widely by rock and jazz keyboard performers, and has only rarely been available on electronic keyboard instruments other than the synthesizer.

The next steps were carried out by Harald Bode. The two-manual version of his Melochord (1953) could be linked to separate devices in an electronic music studio such as a reverberation unit, a white-noise generator and a ring modulator (some of which were incorporated in a custom-built version in 1954). After emigrating to the USA, Bode developed a modular sound processor (1959–60) which incorporated voltage-control elements, and this had some influence on Robert A. Moog, who in 1964 invented and began to manufacture the first commercial modular synthesizer. Starting in 1962, Donald Buchla devised a series of voltage-controlled electronic music modules for the San Francisco Tape Music Center; a complete system was installed there in 1963 and the first sales were in 1964. Also in the early 1960s, Paolo Ketoff, working in Rome, constructed the integrated studio Fonosynth (1962), on which the more compact non-modular Synket (1964) was based; this also incorporated elements of voltage control. In all of these instruments interconnections between the modules were achieved by patchcords, as in a telephone switchboard, the 'spaghetti' of crossing cords often obscuring the controls on the front panel. Although they were designed for electronic music studios, and mainly contained modules that were familiar to the users of such studios (except for the voltage-control features that become possible when all the modules are specially designed and are electrically standardized), these synthesizers had one or more optional monophonic keyboards and were soon being played in concert performances. In 1968 Korg marketed the first Japanese synthesizer, and in 1969 the Putney (VCS-3) and the first version of Michel Waisvisz's Kraakdoos appeared; the first ARP synthesizer, which had matrix switches instead of patchcords, was marketed in 1970. In the same year Le Caine developed the Polyphone, the first polyphonic synthesizer.

Voltage-controlled studio synthesizers are still manufactured, with updated modules; Buchla instruments continue to be made, and models were previously marketed under the marques Aries, ElectroComp, E-mu, EMS, Korg, PAIA, Polyfusion, Roland, Serge and Synton; a newcomer is Doepfer. Of these systems, all but the ElectroComp and those from EMS and Korg were fully modular, permitting any combination of modules selected from a substantial range to be configured in any desired permutation; the remaining systems allow no choice or rearrangement, but this restriction makes possible compact methods of patching, such as the 16 by 16 pin matrix-board adopted by EMS for the Putney, which brings together all the available interconnection points in one part of the console. (This also has disadvantages: in larger instruments such as the EMS Synthi 100, with its two 60 by 60 matrix-boards, errors can easily be made; and users have found that plotting functions on a board gives less of a sense of making a connection than does the linking of two points by a patchcord.)

The success of Walter (later known as Wendy) Carlos's recording *Switched-on Bach*, which was produced on a Moog in 1968, brought the synthesizer to the attention of many people for the first time, though it was not until its use became widespread in rock music in the late 1970s that the 'man in the street' began to have some idea of what the name implied. Many other multi-tracked synthesizer recordings rapidly followed, offering interpretations and arrangements of all styles of music; over 40 recordings using the Moog had been released by the summer of 1970, of which only four contained 'serious' original compositions. The instrument was included in at least two jazz groups, and the First Moog Quartet (four synthesizers) was formed in 1969 by Gershon Kingsley. This popular exposure stimulated the formation of new companies and thus competition, which after a modest start became increasingly intense in the late 1970s.

The first new approach in synthesizers was once again inaugurated by Moog, to satisfy requests for an instrument specifically designed for concert performance. The Minimoog (1970) was followed in 1971 by the model 2600 and the Odyssey, both from ARP, which quickly became Moog's closest rival. Still monophonic (the Odyssey is strictly speaking duophonic), these more portable synthesizers eliminated patchcords and matrix-boards altogether, replacing them by hard-wired, predetermined interconnections and limited changes, obtainable from switches mounted on the front panel. The more restricted options available to the performer in these instruments marked the first step in the move away from the extremely versatile studio instrument towards a keyboard instrument resembling an electronic organ. In the early 1970s other new companies came into existence – at least six in Italy (including Crumar and Davoli) most of which were short-lived, Roland, E-mu, Serge and Oberheim, and several companies that have specialized in small synthesizers designed at least in part for schools, such as the ElectroComp and the PAIA, and the non-commercial Gmebogosse. Serge, Buchla and, to a lesser extent, EMS have remained small companies, primarily concerned with systems that have less appeal for rock musicians; they have therefore avoided most of the compromises and commercial rivalry in which other companies, at the more competitive end of the market, have had to become involved. Synthesizer manufacture in eastern European countries began around 1980, including the Vermona (East Germany, late 1970s) and the Polivoks (USSR, *c*1982).

With the more commercial approach prevalent from the mid-1970s, most companies were forced to explore new possibilities in order to maintain their position; this meant not only exploiting the latest developments in electronic technology, but also catering for a wide range of musical tastes and requirements with a selection of different instruments. Besides studio and performance synthesizers in several sizes, some manufacturers added electronic or electric pianos, electronic organs and string synthesizers to their range. The string synthesizer (also known as a 'string ensemble') is more like an electronic organ than a synthesizer; it has a limited choice of 'stops'

that may provide brass, piano and organ timbres as well as string sounds. At this time the sequencer (pioneered by Buchla in the mid-1960s) began to be widely used to extend the capabilities of the synthesizer, and some instruments even incorporated one; the sequencer was an early form of programmable 'memory' that permitted the automatic repeat of sequences of pitches. The potential of the sequencer was soon exploited in the self-contained electronic percussion unit or electronic drum machine. More specialized, computer-based sequencer instruments include the series of polyphonic digital MicroComposers manufactured by Roland since 1977. (String synthesizers and drum machines are the latest in a line of electronic instruments, including the RCA Electronic Music Synthesizer, the Mellotron and synthesizers in general, to cause difficulties with musicians' unions, particularly in the USA and Britain.)

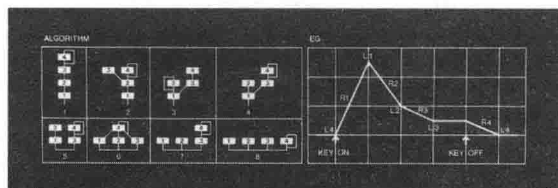
(iii) Digital synthesis. Digital electronics, first introduced around 1970 but not widespread until the late 1970s, brought about something of a revolution in electronic instruments. Electronic instruments now incorporate microprocessors (miniature computers contained on a single 'chip') which make possible the storage and playback of sounds and various types of sound processing. The digital synthesizer offered the composer a new and more intuitive method of computer synthesis than had been available to him previously. Computers were first used for synthesis in the mid-1950s, but because computer synthesis requires a knowledge of programming in the user and some understanding of the technicalities of the computing process, few composers found it congenial; moreover the time lag between the programming of a sound and hearing it was regarded by many as a serious drawback. The digital synthesizer, which supplies the computing power necessary for real-time synthesis without requiring an ability to programme, is closer to the concept of an 'instrument' held by most composers and has therefore provided a more acceptable and usable resource.

The first digital synthesizers were devised in the early 1970s; they included the Qasar (encouraged and supported by the composer Don Banks, who had played a similar role in the evolution of the Putney), the Dimi and the Dartmouth Digital Synthesizer. The first to be marketed was the Synclavier (1976) and by 1981 a number of others were available, including the PPG Wave Computer, DMX-1000, Fairlight CMI, General Development System, RMI Keyboard Computer KC-II, AlphaSyntauri and Soundchaser. Since each of these systems employed a microcomputer, either separately or integrally, and most had two linked computers to deal with different aspects of the workload, they were the most expensive of all synthesizers, but they were highly versatile and offered the composer the widest range of resources in real-time synthesis; the playback and modification of preprogrammed sounds could be carried out simultaneously with or independently of live performance. The outward appearance of early digital synthesizers differed little from that of a computer since they usually included the standard computer peripherals such as a visual display unit, disc drives and an alphanumeric keyboard. Today virtually all synthesizers are digital, and using computer elements has become second nature to many musicians. Studio systems combine sophisticated hardware and software, as in Symbolic Sound's Kyma (software) with the Capybara Sound Computation Engine, or, like Opcode's Max software, rely on external commercial synthesis systems.

Since digital electronic technology is very different from that employed in analogue systems, some of the companies that manufactured the first digital synthesizers were new to the synthesizer market. Casio's first musical product, the VL-Tone (1981), was basically a pocket calculator with the addition of a simple keyboard. In the same period the existing synthesizer manufacturers began to integrate digital electronics, which make some processes (such as arpeggiation and sequencing) very straightforward, into their new models. One of the first manifestations of the new approach was the trend towards the polyphonic synthesizer, using several oscillators or the frequency division methods familiar from electronic organs (see §I, 4). An early stage (1974–6) was Oberheim's multiplication of a basic 'Synthesizer Expander Module' to form the nucleus of instruments with two, four, six or eight voices (that is, the number of notes that can sound simultaneously); these had a keyboard and an optional sequencer and memory. In 1975 Buchla's Electric Music Box Series 300 featured digital oscillators. In 1976 Moog produced the first fully polyphonic commercial synthesizer, the Polymoog, using two oscillators with frequency division. The next digital step was that of programmability, introduced in the 12-voice RMI Keyboard Computer KC-I in 1974 and Yamaha's GX-1 in 1975 (an eight-voice polyphonic synthesizer with three manuals and pedalboard which resembled an electronic organ, and was categorized by Yamaha in its Electone range), the monophonic Oberheim OB-1 and Yamaha's eight-voice CS80 (1976), and thereafter included in the RMI Keyboard Computer KC-II and the fully polyphonic Korg PS-3200 (1977), the five-voice Prophet 5 and the ARP Quadra (1978), the Oberheim OB-X and EMS Polysynthi (1979), from around 1980 in the Buchla Touché, E-mu's Audity, Roland's Jupiter-8, the Korg Polysix, the first Casiotones (hybrids combining elements of the synthesizer and electronic organ; see fig.6), the Prophet 10 (fig.8) and the monophonic Proteus from PAIA, and around 1982–3 in the Synergy, Chroma, Memorymoog, Buchla 400, Aries, Prism, and Yamaha DX series.

The number of polyphonic voices on a synthesizer is partly determined by cost and the area of the market at which it is aimed by the manufacturer, and partly by the sound-generation system; thus the fully polyphonic Polymoog and, to a lesser extent, the Korg PS-3200 inevitably have certain resemblances to an electronic organ, while the ARP Quadra incorporates a string synthesizer. Prior to the introduction of the Musical Instrumental Digital Interface (MIDI) in 1983 there was comparatively little demand for synthesizers to be fully polyphonic, but with

8. Prophet 10 by Sequential Circuits, 1980



the availabitiy not only of increasingly substantial internal memory storage but also of the greater control by external devices that MIDI made possible, a maximum polyphony of a number of equivalent to all or most of a player's complement of fingers soon becomes insufficient, especially if multiple layers are to sound simultaneously. In a solo performance, for example, even 12- or 16-note polyphony can soon be exceeded if the notes in a rapid passage continue to sound for up to one second in duration. Even on currently available synthesizers and samplers – as well as on digital organs and pianos – the available polyphony is often less than the number of keys on the keyboard (normally 61, apart from the 88 keys on most electronic pianos); typically 16, 32 or 65, only reaching 128 in a handful of models at the very end of the 20th century, as the cost of computer memory continues to fall.

The programs used by these instruments mainly affect timbres ('sound files'); in some cases only those timbres supplied by the manufacturer can be used, in others the user is free to program a personal selection of sounds. As with a computer, while the synthesizer is switched on, sounds can be stored in and retrieved from its volatile memory (RAM – random access memory), but a permanent storage medium (ROM – read only memory) is required from which sounds can be loaded into RAM. A variety of storage systems have been adopted in different instruments. From 1976 Oberheim synthesizers included a facility for using a standard cassette tape recorder for storage (the same method was used in some Roland models, two Buchla ones, the RSF Polykobol and the Voyetra series), while a digital cassette unit (featured in the first PPG Wave) could be added to one version of the Roland MicroComposer and the Prophet 10. Punched cards like those used with some computers were introduced in the digital Allen organ in 1971, and similar cards were employed in the synthesizer-related ElectroComp Synkey, the RMI Keyboard Computer, two Buchla models, the Variophon wind-controlled synthesizer and the Deputy piano attachment, while a magnetized strip provided the storage medium in three Yamaha synthesizers and one miniature electronic 'organ' from the early 1980s. Many digital synthesizers use discs for storage: the $5\frac{1}{4}$″ (13·3 cm) diameter floppy disc was originally the most common, but hard (Winchester) discs, of the same size but far greater capacity, were used in the McLeyvier and Synclavier; the Fairlight had 8″ (20·3 cm) floppy discs, while the Buchla 400 began the trend for the more recent $3\frac{1}{2}$″ (8·9 cm) microfloppy discs – these are still frequently used in a high density version. Other storage systems have included plug-in cartridges and cards (anticipated in 1971 in the Prestopatch on the Putney), which were originally used in the Synergy, the DX range of Yamaha synthesizers (for both ROM and RAM) and the Elkasong feature in some Elka organs, and cards are still favoured by many companies; recent occasional use of CD-ROMs; and, in the early 1980s, the bar-code reader used briefly in models in the Casiotone range; the plug-in chips that provided the ROM (programmed by the manufacturer) in some synthesizers; and the magnetic bubble memory in Kinetic Sound's Prism synthesizer. Requirements for ever-greater storage capacity are often met by external devices that are connected via MIDI or the computer SCSI interface.

Around 1980 some other aspects of the early digital synthesizer also found their way into partially digital instruments. The computer's visual display screen has its equivalent in the small liquid-crystal display window. The knobs and switches on synthesizer consoles were often replaced by touch-pads (as in the Moog Source, and some Gulbransen organs), and the functions they control (indicated by labelling) also developed away from those introduced with the analogue instrument. There was a greater emphasis on the building and shaping of timbres, advanced by the invention of the frequency-modulation (FM) oscillator, which, by means of algorithmic structuring, can generate highly complex waveforms; oscillators of this type were used in the Yamaha DX synthesizers (fig.9), offering several 'operators' for each note, so that the user can assemble the timbre with great analytical care. Digital synthesis rapidly became sufficiently sophisticated to produce imitations of acoustic instruments, which, to the innocent listener, are indistinguishable from the instruments themselves.

Another possibility offered by digital electronics is the 'sampling' of acoustic (or electronic) sounds; any sound of up to a certain duration can be stored digitally, edited or modified, and played back by means of a keyboard or other controller at any pitch location (or many at once if the instrument is polyphonic). In the Allen organ (1971), which pioneered digital sampling in musical instruments, surprisingly authentic reproduction of pipe organ timbres was achieved with only 16 samples per second. This process (the digital equivalent of the tape-playback system in the Mellotron) was the only source of sounds in the Emulator (1981), 360 Systems' Digital Keyboard (1982) and Movement Computer Systems' monophonic Mimic (1983), as well as in several electronic percussion units from the early 1980s. It was also an element of the DMX-1000, Fairlight CMI, 4X, PPG Wave 2·2 and Synclavier II. Around 1982 the designers of the Fairlight were able to add a sampling facility for only some extra software programming, and a couple of years later the designers who had set up the new company Ensoniq with the intention of releasing a synthesizer as their first product, realized that their VLSI chip could form the basis of a sampler; thus their first product was the Mirage sampler (1985). Since the early 1980s sampling has increasingly become the predominant sound source in most electronic instruments.

Other synthesizers that were manufactured around 1980, some with a digital element, include the Wasp, several manufactured by Kawai (some under the name Teisco), single models produced by electronic organ companies such as Farfisa (Syntorchestra) and Elka (Synthex), RSF's Kobol and Polykobol, Synton's Syrinx and modular system, several marketed as kits by Powertran (including the Transcendent) and Octave-Plateau's Cat, Kitten and programmable Voyetra series. In the early 1980s many types of analogue synthesizer were controlled by small home computers in link-ups devised by the

9. Algorithm panel of the DX9 (one of the smallest in Yamaha's DX range), 1983

owners of the equipment or (in a few instances) by manufacturers.

The boom in sales of electronic instruments since the late 1970s, inspired partly by their widespread use in popular (particularly rock) music, also owes a great deal to the introduction of mass-production techniques, principally by Japanese companies. In 1976 Yamaha was the first musical instrument manufacturer to develop its own LSI (large-scale integration) microchips, each equivalent to millions of transistors and other components. From around 1978 many synthesizer manufacturers made use of the range of synthesizer chips designed by Curtis Electro Music. From the late 1980s digital signal processing (DSP) chips have increasingly been used. The only area in 20th century manufacturing in which prices were continually reduced was that of products based on electronic components, beginning with the replacement of valves by more compact transistors and diodes, then of transistors by integrated circuits, and continuing with the ever-increasing capacity that can be included on a single microchip – which will probably slow down when miniaturaization reaches the molecular level. All of these become cheaper year by year (while simultaneously computer memory and speed of operation increases substantially), and have made it inevitable that the sound generation methods and the mechanisms used in earlier electric and electronic instruments, however highly certain instruments are still regarded, can only be recreated with current technology that involves lower costs of labour and materials. By the mid-1980s the cost of designing and manufacturing custom microchips had fallen so substantially that even smaller companies could afford to do this, as with Ensoniq's VLSI chip. The availability in the early 1980s of a wider variety of microchips resulted in a rapid growth of cheap, portable keyboards, mostly battery-operated, some with narrower and/or shorter keys, but not necessarily toys. Already in 1982 the sales of such instruments totalled around 750,000.

By 1983 the larger Japanese manufacturers were beginning to introduce fully programmable digital synthesizers based on their own specialized microprocessors, with small visual displays and plug-in memory cards or floppy discs. Such production methods have appreciably reduced the cost of synthesizers, and Japanese companies have exploited their proven skill in the design of hardware and their willingness to engage external expertise in software programming when needed. Western manufacturers, by contrast – perhaps in response to the economy-consciousness of the 1980s – began to design hardware to last for a decade and to concentrate on the development and refinement of software.

A notable development in 1982–3 was the great increase in the use of home computers (from the smallest Sinclair to the Apple II – now long surpassed by more powerful machines) to control all types of synthesizers, both analogue and digital, including drum machines. Such an approach is now common among owners and users of synthesizers, at home and in the electronic music studio, many of whom understand the functioning of their instruments and have considerably expanded their capabilities by adding a computer to the system.

The agreement between several Japanese and American synthesizer manufacturers that led to the introduction of the Musical Instrument Digital Interface (MIDI) in 1983 – and its subsequent expansion as General MIDI (GM) in 1991 – has had far-reaching effects. The possibility of interconnecting instruments and devices from any two or more manufacturers, in a manner that was previously available only between the individual modules in an analogue modular synthesizer (and in a few instances between different devices from the same manufacturer) meant that the arrays of individual keyboard instruments that had recently proliferated in rock music were no longer necessary; most of the instruments could be accessed remotely, without cluttering up the stage, and did not need to have keyboards. Thus companies began to separate the CONTROLLER from the synthesis section, marketing the two sections separately: the synthesizer module (as introduced in Oberheim's synthesizer expander module, now in specialized forms such as synthesizer, digital piano and electronic organ modules and modular samplers), and the master keyboard. The latter has minimal additional MIDI controls, and is based on a weighted (usually wooden) 88-note keyboard with high quality action that gives a similar feel to that of an acoustic piano (rather than the organ keyboards used in most synthesizers), mostly with pressure and velocity (attack and release) sensitivity. Manufacturers of master keyboards include Akai, Casio, Cheetah, Deopfer, Elka, Fatar, Kawai, Korg, Kurzweil, Lync, Novation, Oberheim, Orla, Peavey, Quasimidi, Roland, Samick, Soundscape and Yamaha.

In addition to straightforward synthesizers, the so-called workstation was also introduced in the late 1980s, in which a polyphonic synthesizer is combined with a sequencer (basically a digital recorder) and substantial editing facilities. Multi-instrument keyboards (such as the 'string synthesizer' and polyphonic ensemble) were replaced by polyphonic synthesizers.

From the mid-1980s the parallel developments of microcomputers and programmable digital synthesizers (incorporating or linkable to a 'reader' of storage media such as floppy discs, plug-in microchips or data cartridges, CDs and CD-ROMs) not only permitted individual performers to create and save their own timbres instead of relying on the 'library' supplied by the manufacturer, but also opened up a new market for 'back bedroom' development of 'third-party' custom voices ('patches'). 'Patch librarians' and 'voicing software' were devised for computers that could control the parameters on a synthesizer via MIDI, showing on the screen more detailed numeric or graphic overviews than were possible on the small VDU windows of synthesizers and samplers of all the variable functions relating to a particular parameter or patch; indeed some details were otherwise inaccessible to the user. Such sample editing included substantial possibilities to 'zoom' in and out of a sampled sound, to cut, copy and paste selected sections, and to loop or reverse them, in addition to transposition. Musicians are also able to use a MIDI link from a keyboard to a computer so that any improvisation can not only be recorded and replayed but also printed out in conventional notation; performers such as the jazz pianist Oscar Peterson, although rarely if ever playing electronic instruments in public, have built up substantial studios for compositional purposes with expensive synthesizers such as the Synclavier.

Certain aspects of the contemporary development of digital techniques for modifying sounds have recapitulated those previously experienced with analogue techniques,

especially in live electronic music, where some younger composers in the late 1980s unwittingly duplicated with expensive computer systems the comparatively simple analogue transformation techniques that were available in the late 1960s and early 70s. Such parallels have also meant that the terminology adopted for certain digital features has proved to be useful in describing the equivalent analogue ones, as in the case of applying the term 'sampler' to earlier analogue instruments. Analogue equipment is designed to function in one particular manner, and anyone with relevant experience can deduce exactly what it can and cannot do. Digital equipment is the opposite, and can be called 'transparent': in many cases the hardware (the circuitry and mechanisms) could be used for radically different purposes, which are configured solely by the choice of software (computer program) that is applied.

With analogue electronic musical instruments it was always in the interests of manufacturers to supply the users and especially service engineers with complete circuit diagrams and descriptions of mechanisms; because a skilled engineer could often diagnose and replace a faulty component even without such assistance, a number of books were published from the late 1940s that consisted of abbreviated service manuals, with each chapter devoted to a single recent model from a major manufacturer. Subsequently, since digital instruments are usually based on custom-designed integrated circuit microchips containing the equivalent of thousands of individual electrical components, servicing by non-specialists is largely impossible and prevented by the deliberate unavailability of detailed internal information; as with most digital electronic equipment, with any purely electrical fault the tendency is to replace the offending circuit board rather than try to repair it. Another factor is that manufacturers wish to prevent their specialized designs from being copied by other companies (with minor changes to avoid patent infringements or legal problems), and, conversely, grandiose titles and acronyms sometimes conceal their own plagiarism of other approaches. Thus it is much harder to categorize digital sound-generating approaches other than in general terms, apart from the key aspects of sound synthesis and sound sampling.

In the musical field sales of several thousand instruments indicate a success: only 12,242 Minimoogs were manufactured, and the main Western synthesizers that have exceeded this are E-mu's Proteus (70,000) and Ensoniq's Mirage (30,000) and ESQ-1 (50,000); tens of thousands have rarely been achieved outside the major Japanese companies (Casio's sales include substantial numbers in department stores), and only the sales of the three most successful synthesizers have totalled around a quarter of a million (Korg M1, Roland D-50 and Yamaha DX7, with sales figures similar to those of the Hammond organ model B-3/C-3). By comparison, quantities of less than a thousand were achieved for some instruments that are considered to have been of major significance, many in a medium price range.

(iv) Control devices. In the preceding discussion little mention has been made of the means by which the sound-generating and -processing devices of synthesizers may be manipulated and controlled, though it will have been clear that many of the instruments referred to in §§(ii) and (iii) have music keyboards. Appropriate synthesizer controllers have been developed for performers who are not keyboard players, of which wind controllers (first proposed by Friedrich Trautwein in 1930, but not realized) are among the most successful. Following considerable interest around 1970 in devices such as octave dividers and multipliers, several wind synthesizer controllers were marketed, such as the Electronic Valve Instrument (EVI; developed from the 'blow tube trigger generator'), the Lyricon and the Variophon; the EVI was marketed by Akai in 1987 in both its original trumpet-like form and a saxophone-like derivative (known as the Electronic Wind Instrument, or EWI), while Yamaha's WX series (from 1987) was partly based on the Lyricon. Articulation of notes by means of a breath-operated control is provided in synthesizers and related instruments manufactured by Crumar and Yamaha, and in the Hohner Electra-Melodica. A number of electronic percussion instruments consist of an analogue or digital synthesizer triggered by means of special drums or drumpads. Similar, finger-operated touch-pads, in which the area of contact is itself a controlling element, were used by Hugh Le Caine in his 'printed circuit key' (1962) and in the Buchla synthesizer (from the mid-1960s), the Kraakdoos (1969), the Lambdoma (1976–7) of Dieter Trüstedt and the Buchla 400 (1982); more sophisticated touch-sensitive fingerplates, operating in three parameters simultaneously, constitute a controller manufactured in the early 1980s by Robert A. Moog's Big Briar company and the Touch-Sensitive Drum introduced in 1982 for the SSSP at the University of Toronto. More exotic control devices include the Snark (a tubular controller 1·5 metres long with buttons and switches), the Oestre (a small tubular controller using a laser beam) and the Laser Harp whose 'strings' consist of laser beams, all created in the early 1980s by the French synthesist and laser specialist Bernard Szajner; Jean-Michel Jarre has featured a similar instrument in his concerts. Interactive Light's Dimension Beam (1993) was subsequently taken up by Roland as the D Beam.

Given that most synthesizer users are rock musicians, and that electric guitarists quickly took to the various pedal-operated sound-modification devices introduced in the 1960s, it is surprising that the guitar controller has not been more popular. In the late 1960s Vox marketed the Organ Guitar, a guitar-like instrument operated by the left hand in which contact between the strings and metal inserts in the plastic frets triggered pitches generated by oscillators. In 1977 Hagström developed a similar instrument, the Patch 2000, as a synthesizer controller. David Vorhaus's Kaleidophon (1974), which resembles an electric bass guitar, has touch-sensitive flat plastic strips instead of strings; fingerboard controllers of this sort have also been used on a few synthesizers. The EMS Synthi Hi-Fli (*c*1973) consists of a small console containing various modification devices.

The first true guitar synthesizer that was both successful and reliable was introduced by Roland in around 1977. The company has produced several six-voice polyphonic instruments of this type; each consists of a specially designed guitar with switches and knobs mounted on the body (the original model had 15, one of which gives an 'infinite sustain') and a small synthesizer unit. The ARP Avatar (1978, an over-ambitious investment in which led to the company's demise) was monophonic: a special pickup unit was fitted to a normal electric guitar, and the synthesizer was controlled either by the strongest signal

received from it or by a single pre-selected string. 360 Systems' Slave-Driver (1976–8) was a monophonic pitch-to-voltage convertor, designed by Bob Easton (after a prototype from 1972) for interfacing with wind, string or other controllers; it was replaced in 1979 by the polyphonic Spectre guitar synthesizer. Another monophonic controller was marketed as part of the Korg range from around 1980. Zeta Systems have produced guitar synthesizers as well as a violin synthesizer. In the mid-1980s Octave-Plateau produced a MIDI guitar, and two computerized British systems were the SynthAxe (1985) and Stephen Randall's Stepp DG1 (1986); recent equivalents include the Ilio Digitar and the Starr Ztar.

Lightweight portable keyboard controllers, worn like a guitar, became popular with rock and jazz-rock keyboard performers around 1980, since they enabled the player to walk round the stage. Jan Hammer (who pioneered the use of the Minimoog as a 'lead' synthesizer) began around 1975 to play a rather cumbersome four-octave keyboard controller for an Oberheim synthesizer; named the Probe, it was specially designed and constructed by Jeremy Hill. Around 1979 the similar Clavitar was built for George Duke by Wayne Yentis. Other related controllers from around 1980 (with ranges between 32 notes and four octaves) include Performance Music Systems' Syntar, Electronic Dream Plant's Keytar and Sequential Circuits' Remote Prophet. The Moog Liberation, Roland SH-101 and Yamaha CS01 are self-contained small synthesizers (weighing respectively around 6·5 and 4·5 kg) that can be played on the move.

Some pedal controllers, resembling the pedal-board of an electronic organ, have been manufactured; they include the 13- and 18-note versions of the Taurus from Moog, one-octave pedal units from several companies and the two-octave Korg Synthe-Bass. Programmable machines similar to the 'walking bass' units on some home electronic organs have been marketed separately, such as the Roland Bass Line.

In recent years there has been considerable development of 'alternate' or 'alternative' MIDI controllers. These include not only the above-mentioned types that resemble certain traditional instruments but also fingerboards, which continue to be valued (as in Kurzweil's ExpressionMate, *c*1999), graphic tablets, arrays of switches, rotary faders, slide faders and photoelectric cells, as well as one-off units devised by or for individual musicians, including the Mathews-Boie Radio Drum, 'data gloves' – such as the elaborate strap-on control units of Michel Waisvisz's *De Handen* (1983), Tod Machover's Exos Dexterous Hand Master (*c*1989), Mark Trayle's adaptation of the Mattel Powerglove (1990) and Laetita Sonami's Lady's Glove (1991) – and 'space controllers' involving laser beams, ultrasonic and infra-red beams, video cameras, theremin-like capacitative fields and other types of sensor (*see* DRAWN SOUND, §3).

(v) Repertory and ensembles. Although the synthesizer came to prominence through recordings of arrangements of familiar works, the repertory also includes much original music. A number of musicians used the modular Moog live in concerts from the late 1960s, including Richard Teitelbaum, who played it as part of the ensemble Musica Elettronica Viva (which otherwise consisted of acoustic and amplified instruments), Keith Emerson and Paul Bley. Among the early performers on the popular Minimoog were Jan Hammer and Sun Ra, and the Polymoog was later used by Teitelbaum for solo playing. John Eaton specialized in live performance of his compositions for Synket, which include one of the few concerto-like works for solo synthesizer and orchestra, *Concert Piece* (1966); David Rosenboom and Bley both performed on the modular ARP 2500 and Emerson has used Korg synthesizers. Several musicians have produced multi-tracked gramophone records after the manner of Wendy Carlos, notably Isao Tomita (using a Moog), while Morton Subotnick (on a Buchla) pioneered the concept of electronic compositions designed for disc recording, sections of which were created in real time with the aid of several sequencers. Between 1972 and 1986 Dubravko Detoni included a synthesizer in 22 compositions featuring his ensemble Acezantez, mostly also with an electric organ. Recent synthesizer soloists have included Sergio Barroso and Thomas Lehn, who has continued to play an analogue instrument. Since the 1980s the synthesizer has become almost essential in the atmospheric recordings of 'New Age' music.

During the 1980s electronic keyboards, synthesizers and samplers began to appear increasingly regularly in new compositions for symphony orchestra, which often incorporated two such instruments. Composers who have featured electronic keyboards in several works include John Adams, Louis Andriessen, Gavin Bryars, Jonathan Harvey, York Höller, Michaël Lévinas and Michael Torke. Since the mid-1980s Stockhausen has included electronic keyboards in his 'modern orchestra' ensemble in many compositions. Samplers have been featured by Luciano Berio, Alexander Goehr, François-Bernard Mâche, Rolf Riehm, Manfred Stahnke, Michael Tippett, Mark-Anthony Turnage and others.

The first of several synthesizer festivals and workshops was held in Bonn in 1974. For several years from 1979 the Ars Electronica festival in Linz featured a competition for performers on synthesizers and related systems, which was won by, among others, Bruno Spoerri (Lyricon, 1979), Nyle Steiner (Electronic Valve Instrument, 1980) and Ivan Tcherepnin (Serge synthesizer with *santur*, 1982); non-commercial instruments were also entered in this competition.

Many synthesizer ensembles were formed in the 1970s and early 80s. They include Mother Mallard's Portable Masterpiece Co., Canadian Electronic Ensemble, Ensemble de Synthétiseurs de Vincennes, New Kitchen Sync., OdB and the New York Biofeedback Quartet. In groups such as Gentle Fire and Intermodulation, and in Stockhausen's composition *Sternklang* (1971) synthesizers have been used largely to process instrumental sounds and not as the principal focus. Two synthesizers, two electronic organs and two ondes martenots formed the kernel of the Ensemble d'Instruments Electroniques de l'Itinéraire. More recently (from around 1980) groups have been formed to play digital synthesizers, such as the New Computer Trio (David Behrman, George Lewis and Teitelbaum), Computer-Trio AIR (West Germany) and the First International Computer Orchestra (Linz). In California the members of the Hub pioneered interactive links between their individual computerized systems.

By 1973 the music for about 60% of broadcast commercials in the USA was produced electronically, largely with synthesizers (this application was pioneered by Raymond Scott, Eric Siday and Jean-Jacques Perrey with Gershon Kingsley); in Britain, by contrast, the

percentage of television advertisements using synthesized music was still little more than half that figure in 1983. The synthesizer has been increasingly used in film music (in the former Soviet Union and India, for example, as well as the West), and there have been isolated applications of more specialized instruments such as the Electronic Valve Instrument. In *2001* (1968) the voice of the computer Hal, singing as it is disconnected, was based on a demonstration produced with an IBM computer at the Bell Telephone Laboratories in New Jersey, while the first communication with the aliens in *Close Encounters of the Third Kind* (1977) was made through a five-note phrase played on an ARP synthesizer.

Quite other musical requirements are found in rock music, where the primary elements are high levels both of physical energy and of amplified sound, an often deliberate monotony of rhythm, and simple repetition. Neither musicians nor listeners are concerned about whether the sound of an electronic organ or piano resembles its acoustic equivalent: a desire for a wide range and variety of sound, and, not least, for visual impact, led around 1980 to players' surrounding themselves on three sides by a dozen or so instruments, stacked four or more high, which usually included an electric or acoustic piano (or both) and a Mellotron or electronic organ, as well as synthesizers, often giving over 60 octaves of keyboards. Multi-keyboard performers in rock and jazz-rock (several of whom have worked with Yes) included Rick Wakeman, Vangelis, Patrick Moraz, Chick Corea, Stevie Wonder, Herbie Hancock, Klaus Schulze, Jean-Michel Jarre, Joe Zawinul, Larry Fast (under the name Synergy) and George Duke; most of these musicians also produced at least one solo record based on multi-track tape techniques. The advent of MIDI meant that such multi-keyboard setups soon became outmoded, with additional keyboard or modular instruments no longer visible onstage. Other types of synthesizer, besides those with keyboards – for example the wind- and guitar-controlled instruments mentioned in §(iv) – found their chief application in rock music; electronic percussion units (or drum synthesizers), achieved phenomenal success in 1982, not long after they first became widely available, and subsequently formed the basis of many of the styles popular in the 1990s.

The first pop groups to lay particular emphasis on their use of synthesizers (which often made up the entire instrumentarium) began to appear in about 1977; they included the Yellow Magic Orchestra, Human League, Orchestral Manoeuvres in the Dark and Depeche Mode. A rather different approach was adopted by synthesizer groups such as Tangerine Dream, whose music is drawn out, enveloping and hypnotic, and Kraftwerk, whose performing style was intended to be mechanical, even robot-like. A similar restraint could be seen in the work of Brian Eno, who largely restricted himself to the use of a single instrument, the Putney. With the exception of Sun Ra, Paul Bley and Annette Peacock, jazz musicians came later to the synthesizer.

In the early 1980s the synthesizer began to be known in non-Western countries. It has found its way into the popular music of African countries such as Nigeria, and (as mentioned above) has been employed by the Indian film industry. Touring rock musicians have introduced it into countries where it was not otherwise available – Jean-Michel Jarre, for example, was the first Western musician to perform on synthesizers in China.

6. Newly invented instruments and sound systems. The majority of electronic instruments have been those that electrical engineers have invented and manufacturers have made and marketed. But composers, performers and musical instrument inventors have also devised their own electric and electronic instruments and sound-generating systems; they include (in the earlier period) Mager, Helberger, Martenot, Obukhov and Sala, and, later, inventors who have been primarily musicians (Percy Grainger, Raymond Scott, Nyle Steiner, Michel Waisvisz, Serge Tcherepnin, Salvatore Martirano and William Buxton) or have had substantial musical training or involvement (Hugh Le Caine, Robert A. Moog, Donald Buchla and Thomas Oberheim). In 1975 Gordon Mumma published a wide-ranging survey of these aspects of electronic music. The area of sound-generating systems overlaps to some extent with that of Sound sculpture.

(i) Electroacoustic and electromechanical techniques. During the 1930s there was considerable activity in the area of electroacoustic instruments, especially string instruments of every sort. But it was only after World War II that such activities began to include inventions that bore little or no resemblance to conventional instruments. From the late 1940s music on tape (electronic music and *musique concrète*) produced in a studio became the mainstream of experimental work in creative musical electronics, and it was not until the work of composers such as John Cage (from 1960) and Stockhausen (from 1964) that the subcategory of live electronic music created in 'real time' began to be identified. (At some point in the future it is likely that the two will be reversed, with studio-composed recorded music being reserved for certain procedures that will continue to be too time-consuming or require too much computer power for live performance to be practical.) Four areas can be identified, in each of which the majority of work features real time transformation (sometimes only the last of several stages of processing) of sound sources by means of electronic equipment: sounds played on traditional instruments; sounds played on specially modified or constructed acoustic or amplified instruments or other sound sources; electronically-generated sound sources including those of synthesizers, other electronic instruments and acoustic feedback; and sounds from sources external to the performance space, often pre-recorded. This article has so far been primarily concerned with the third of these areas; the present section concentrates on systems developed by composers and improvisers in the fourth area.

In the second area John Cage pioneered the amplification of unusual sound sources in his *Cartridge Music* (1960; amplified 'small sounds'), which has been followed by the use of electromagnetic and piezoelectric pickups to amplify acoustic sounds in many contexts. Between 1964 and 1969 Max Neuhaus amplified some of his solo percussion installations; similar applications include Walter de Maria's sculptural 'Instrument for La Monte Young' (1965), in which an aluminium ball is rolled very slowly to and fro inside an amplified aluminium trough, and the Artaudofoon sculptural metal percussion instrument constructed by Frans de Boer-Lichtveld for Peter Schat's *Electrocutie* (1966), which contained 40 contact microphones. Besides percussion instruments, Allan Bryant constructed a series of amplified instruments in which sounds are produced by rubber bands, steel springs and strings (1966–7). Similar applications of amplification to

invented string instruments have been carried out by Mauricio Kagel in his *Rahmenharfe* (1969) and by Dieter Trüstedt in the series of *ch'in* instruments (based on the Chinese *qin*) and wind harps constructed since 1975. Amplification is used in most of Hugh Davies's concert instruments (since 1968), the sound installations of Richard Lerman and the Terrain Instruments of Leif Brush (all three have explored sources that are acoustically virtually inaudible), some of the sound sculptures of Takis, and instruments built since the 1970s by Paul Lytton, Godfried-Willem Raes, Tom Nunn, Chris Brown, Mario Bertoncini, the Sonde group, Max Eastley, Peter Appleton, Adam Bohman and many others.

During the 1960s a number of composers began building live-electronic transformation equipment for use with conventional instruments and other acoustic sound sources. Mumma was especially active in this area: his 'cybersonic consoles' interact with the musicians in *Hornpipe* (1967) and other works, and he designed the Sound-Modifier Console that was used in the Pepsi-Cola pavilion at Expo '70 in Osaka; he also created works involving telemetry belts with accelerometers (sensitive pickups) and frequency-modulated VHF oscillators.

Although the fourth area of live electronic techniques, that involving sound sources pre-recorded on sound playback equipment, was initially the least common, it has in recent years taken on a similar importance to that of the third area. A number of musicians have devised instruments based on electromechanical sound playback equipment such as the tape recorder, gramophone and compact disc player; these techniques are in some cases related to those of drawn sound, applications of which to musical instruments are detailed in §I, 3(ii), above. A method of composing directly on to magnetic tape without the assistance of a tape recorder was developed in the late 1940s in New York by Abraham A. Frisch who invented special magnetic stencils for the purpose; like McLaren and other film makers, Frisch made a set of magnetic dies to enable him to record a wide range of sounds with great precision, using 35 mm sprocketed magnetic tape subdivided into five parallel tracks. Further creative uses of magnetic tape (the standard ¼″ width), in which a complete tape recorder is not required, include several applications that involve moving the tape past a fixed tape head, such as the 'tape bow violin' of Laurie Anderson and an early instrument built by Michel Waisvisz, in both of which the tape is moved manually. The Lateral Thinking Instrument made by Akio Suzuki consists of lengths of pre-recorded ¼″ magnetic tape, glued together to form a large rectangle over which tape heads are moved manually; the same principle was developed in MAP_1 and MAP_2 (1967–8) by the American composer Jon Hassell, but here the tape carries additional layers of sound pre-recorded over the tape square in different directions by means of a hand-held recording head.

Gramophone records have been manipulated in related ways: in Cage's *Imaginary Landscape* no.1 (1939) and no.3 (1942) 78 r.p.m. shellac discs are subjected to speed changes and the performer lifts and replaces the arm carrying the cartridge so that there are breaks in the sound; subsequent works by Cage that feature multiple turntables are *31/3* (1969) for audience participation and *Europeras 3 & 4* (1990), with six machines. From the early 1980s Christian Marclay specialized in performing on a dual 'disco' turntable unit, manipulating long-play vinyl discs that were deliberately warped, scratched or assembled as a collage from several different recordings; in 1991 Marclay devised the installation One Hundred Turntables. Other turntable specialists include David Shea, Martin Tétreault, Otomo Yoshihide, Merzbow (Masami Akita), Claus von Bebber, Rik Rue, Erik M, Frank Schulte, Philip Jeck (his *Vinyl Requiem*, 1993, requires up to 180 1950s record players), Pierre Basatien (*Musiques paralloïdres*, *c*1998) and Janek Schaefer (whose variable speed and reversible 'tri-phonic turntable' has three arms and pick-ups). Similar techniques were devised from the early 1970s by disc jockeys with two turntables in what became hip hop and rap, including SCRATCHING, in which a distinctive rhythm squeaking and whistling sound is prodcued when records are rotated backwards and forwards by hand (requiring a more flexible and robust stylus mounting). A favourite machine has been the Technics SL-1200 Mk.2 (1978), which features a slide potentiometer for varying the speed; other companies soon followed suit, sometimes in the form of a special disco unit containing twin turntables and a mixer, and since 1994 several equivalent CD machines have been available.

Such manipulations of sound recordings have not been limited to the medium of analogue discs; equivalent treatments are possible with the digital format of the compact disc. Since 1984 Yasunao Tone has 'prepared' compact discs by attaching to them thin strips of perforated tape that partially mask the reading of the encoded digits, thus affecting pitch and timbre (*Music for 2 CD Players*, 1985). Nicholas Collins, David Weinstein, Tim Spelios and Ikue Mori, in the group Impossible Music, have modified the functioning of compact disc players by software control, creating, for example, repeated loops of selected passages. A compact disc player with 'scratching' facility has been marketed, and similar features have been included in the 1990s in dance-oriented sampling keyboards from manufacturers such as Casio, Roland and Yamaha.

From the 1980s other musicians whose work was based on pre-recorded materials opted for several analogue cassette tape recorders (in many cases replaced during the early 1990s by digital DAT cassette machines) with a wide range of their own recordings that could be rapidly interchanged (an impossibility in the handful of earlier pieces that were based on material pre-recorded on reel-to-reel tapes). In the mid-1990s it became affordable for musicians to 'burn' their own recordings onto compact discs; these have often replaced cassette tapes or other recorded media for the introduction of external sounds into the performance space. Such musicians also often adopted samplers when they became increasingly affordable in the second half of the 1980s, often in combination with other sound processors (sometimes specially constructed or adapted) and/or commercial synthesizers, in some cases under computer control. Musicians who have worked with such combinations of 'black boxes' include David Tudor, Ron Kuivila, Richard Teitelbaum, Marek Chołoniewski, Voice Crack (Norbert Möslang and Andy Guhl), Rolf Julius, Michael Prime, Andres Bosshard, members of the Hub, Bob Ostertag, Arcane Device (David Myers), Otomo Yoshihide, Yamatsuke Eye, Sachiko M, Matt Wand, Mats Lindström, Matt Rogalsky, Richard Barrett, Rik Rue, Jérôme Noetinger, Lionel Marchetti, Gert-Jans Prins, and the sound poet Jörg Burkhard. In

some cases a specially designed or modified controller is used, mostly with MIDI, as with Michel Waisvisz (*De Handen*), Nicholas Collins ('trombone-propelled electronics', in which the trombone does not sound) and Peter Beyls (Oscar), as well as several musicians who employ 'space control' or 'data gloves' (see §5(iv) above); similar systems have been used in combination with traditional instruments, among others by Pauline Oliveros (the Expanded Instrument System, with an accordion tuned in just intonation), by Peter Cusack ('bouzouki-controlled samples'), by Pamela Z (BodySynth controller, primarily for processing her voice) and by several violinists: Jon Rose, Takehisa Kosugi, Philipp Wachsmann, Carlos Zingaro, Phil Durrant and Kaffe Matthews.

Another approach to using existing external sound is the live treatment of broadcast sounds 'from the air', for example, sounds captured from radio broadcasts in Collins's *Devil's Music* (1985), by Disinformation (Joe Banks) – often recorded in advance, from a variety of natural and man-made sources such as electrical storms and data transfer broadcasts – and by Scanner (Robin Rimbaud), based on mobile telephone conversations.

(ii) Acoustic feedback. The phenomenon of acoustic feedback (described in §I, 5(ii), above) has been widely exploited as a source of sounds and as a means of modifying sounds produced by other sources. A number of composers have devised different methods of altering the pitch of the feedback sound: in Mesías Maiguashca's *A Mouth Piece* (1970) microphones are moved around and their relationships with the loudspeaker are modified by means of cardboard tubes and the performers' mouth cavities, while in Hugh Davies's Quintet (1967–8) the connections between individual microphones and loudspeakers are permutated. The interaction of feedback and acoustic sound sources has been explored by David Behrman in *Wave Train* and *Players with Circuits* (both 1966), in which vibrating objects such as piano strings are used, Max Neuhaus in his realizations for percussion of Cage's *Fontana Mix* (from 1965), and Robert Ashley (*The Wolfman*, 1964) and Maiguashca who have combined feedback with singing. Alvin Lucier has mixed electronically generated sounds with feedback in *Bird and Person Dyning* (1975), and in David Tudor's *Microphone* (1973) a high degree of filtering is applied to feedback sounds. The phenomenon has also been exploited in Steve Reich's *Pendulum Music* (1968) by members of Composers Inside Electronics (particularly in the work of John Driscoll) and by Nicholas Collins and Paul Earls.

(iii) Electronic oscillators. Considerable use has been made of oscillators in concert performances. To begin with composers and performers utilized oscillators manufactured for non-musical purposes (as test equipment), but later they had them specially made for greater stability or took them from modular synthesizers. In some cases they are employed to produce static pedal points and drones, in others to create glissandos, sometimes very slowly; pulse oscillators generate periodic clicks which can be accelerated to produce sustained pitches. The earliest works to include electronic oscillators manipulated as instruments were the two by Cage mentioned above: in *Imaginary Landscape* no.1 the discs used have oscillator frequencies recorded on them for test purposes, and in no.3 they are combined with oscillators operated directly. Similar applications were made by Paul Boisselet in several works begun in the mid-1940s and completed between 1949 and 1964 (including *Symphonie rouge* and *Symphonie jaune*), and by the Turkish composer Bülent Arel who composed a work for string quartet and electronic oscillator in 1957.

Cage's close associate David Tudor began to use oscillators in 1964 in *Fluorescent Sound*, and from the late 1960s he constructed his own oscillator circuits for works such as the first of the 'Rainforest' series (1968). Between 1969 and 1977 he collaborated with the composer Lowell Cross and the physicist and sculptor Carson Jeffries on the 'Video/Laser' series of performances and sound environments, in which electronic sounds and laser images are controlled by the same circuitry; Cross continued this work with a team at the University of Iowa. Cross was also the designer of the photoelectric control circuitry built into a chessboard for *Reunion* (1968), in which moves executed on the board in the course of a game between Cage and Marcel Duchamp controlled the sounds of live-electronic and electroacoustic works by Behrman, Cross, Mumma and Tudor.

Alvin Lucier's work is largely concerned with acoustical phenomena and has frequently involved specially designed electronic oscillators for delineating and exploring specific sound environments; his first work of this kind was *Vespers* (1968), in which hand-held echolocation devices called Sondols ('sonar dolphins') produce short periodic pulses, the speed of which can be altered. The interference patterns formed by two or more sine waves, which set up standing waves, are explored in *Still and Moving Lines of Silence in Families of Hyperbolas* (1973–4), and similar patterns, caused by the diffractions of sine waves, are the basis of *Outlines of Persons and Things* (1975) and *Crossings* (1982–4), in which respectively physical objects and the sounds of an amplified orchestra create the interference; many subsequent works have explored the latter combination with either soloists or ensembles. An 'electronic bird' is the principal sound-source in *Bird and Person Dyning* (1975), a sine wave electromagnetically drives a long metal string in *Music on a Long Thin Wire* (1977) and two sine waves are combined in the body of a cello in *Directions of Sound from the Bridge* (1978). Two other works, *The Queen of the South* (1972), based on the visual (Chladni) patterns produced by different frequencies, and *Tyndall Orchestrations* (1976), which concentrates on the responses of gas flames to sounds, may use any sound-sources, but are particularly effective when oscillators are employed.

Other composers have made more occasional use of oscillators and of instruments based on them. Stockhausen's *Alphabet* (1972) pursues similar applications to those in the last two works by Lucier mentioned above: several oscillators create Chladni patterns, shatter panes of glass and affect gas flames and the movements of fish swimming in a tank of water. Hugh Davies has exploited difference tones between oscillators and other sound sources in Quintet (1967–8) and *Mobile with Differences* (1973). For *Organica I–IV* (early 1970s) David Johnson devised a set of hand-held tubes containing small oscillators.

Oscillators have found a number of applications in sound environments built since the 1960s. Systems controlled by photoelectric cells were designed by Toshi Ichiyanagi for Takamatsu City (1964) and a Tokyo department store (1966) using oscillators specially created by Jyunosuke Okuyama, and by James Seawright and

Howard Jones for sound sculptures in the mid- to late 1960s. Sustained and pulse oscillators have been incorporated in several environments constructed since 1967 by MAX NEUHAUS and since 1969 by Michael Brewster, and in open-air installations by Stuart Marshall; similar work has been carried out by Maryanne Amacher and Liz Phillips. From 1966 Takehisa Kosugi explored the fluctuations of audio and radio frequency oscillators and receivers when they are moved by currents of air, and since the early 1980s he has constructed quiet installations of banks of miniature pulse oscillators ('electronic crickets') that, especially in the *Interspersion* series, produce complex patterns of clicks; similar approaches are the installations of Rolf Julius and the electronic 'frogs' of Felix Hess. Also in 1966 La Monte Young began work on his environmental *Drift Studies* for two or more precisely tuned, custom-built sine-wave generators.

(iv) Synthesizers and other sound systems. A number of musicians have developed their own specialized electronic sound systems and synthesizers, of which the best-known are the Serge and Waisvisz's Kraakdoos family. In the mid-1960s the jazz saxophonist Gil Mellé constructed several small electronic instruments, which included the Electar (a simple form of string synthesizer), the Doomsday Machine (electronic cymbal sounds), the Effects Generator and Tome VI (a miniature synthesizer built inside a soprano saxophone), and subsequently (for science fiction film scores) the Percussotron III and the Tubo Continuum (a string instrument 9 metres in length) with a digital modulator. Modular synthesizers were built by Allan Bryant (around 1968) and David Rosenboom, whose Neurona (1969) was briefly manufactured. Self-playing synthesizers and other electronic systems were devised by Stanley Lunetta for sound sculptures and concerts from 1967, and two small synthesizers were constructed by Dieter Trüstedt in 1974 and 1976–7. Two unusual large-scale programmable instruments are Léo Küpper's GAME and Martirano's Sal-Mar Construction; in both of these prepared musical sequences are stored for immediate access for further processing in live performance. In 1989–92 Forrest Warthman constructed a unique 'neural-network synthesizer' for David Tudor.

During the 1970s musicians began to work with increasingly miniaturized circuitry and microcomputers. Since around 1972 Behrman has developed special modules, some of which are controlled by microcomputers, while Paul de Marinis's Pygmy Gamelan (1973) produces melodic patterns that are affected by changes in its environment. Microcomputer systems have been an area of particular interest to Californian musicians: the poet and musician Larry Wendt has built small modules for use in his performances and the members of the Microcomputer Network Band (including Jim Horton, John Bischoff and Rich Gold) have invented various devices. A percussion synthesizer was built in 1973–4 by Jim Gordon, and small synthesizers were devised in Australia by Carl Vine and in Belgium by Godfried-Willem Raes. 'Low-level' electronic systems have been assembled by Warren Burt and Ron Nagorka. A comparatively recent development is the activity of amateur musicians working at home for their own amusement, who have assembled synthesizers from commercial modules or entirely from basic components.

(v) Miscellaneous equipment. Some composers and instrument builders have been inventive in their use of electronic equipment not normally regarded as having musical applications. This approach was encouraged in the USA by the formation in the mid-1960s of Experiments in Art and Technology (EAT), which promoted projects in which creative artists and engineers cooperated on a one-to-one basis. In 1966 EAT presented a series called 'Nine Evenings: Theatre and Engineering' in New York, for which Tudor composed *Bandoneon!* and Cage his *Variations VII*; Cage's work uses electronic sounds derived from communications and monitoring equipment such as a radio receiver, a sonar device and a Geiger counter.

Since 1973 several members of the group Composers Inside Electronics have explored somewhat peripheral aspects of electronics and electromechanical systems: Ralph Jones has constructed circuits incorporating old and reject electronic components, and similar explorations have been carried out by Philip Edelstein and Bill Viola.

(vi) Control devices and techniques. The traditional relationship between performer and instrument – the physical manipulation by the player of the sound-generating device – has been extended by some composers and inventors who have exploited certain properties of the human body, such as its ability to supply capacitance and resistance in an electrical circuit, and the various functions of the nervous system. The theremin was the earliest instrument to make use of variable body capacitance, which was provided by movements of the performer's hand in front of the instrument's antenna; similar tactile control methods are employed in Eremeeff's Gnome, Hugh Le Caine's 'printed circuit key', the Kraakdoos, and the Sal-Mar Construction. Alpha rhythms (brain-waves), picked up by electrodes attached to the performer's head, have been used to control acoustic sound sources in Lucier's *Music for Solo Performer* (1965) and electronic devices in works by Manford Eaton, Richard Teitelbaum, David Rosenboom, and Pierre Henry in collaboration with Roger Lafosse. Control voltages derived in other ways from the state of the human body have been exploited by Ruth Anderson (*Centering*, 1979) and Gordon Mumma, and similar voltages taken from plants have been used in works by John Lifton and Jeremy Lord, in the Stereofernic Orchidstra of Ed Barnett, Norman Lederman and Gary Burke, and in Mamoru Fujieda's *Ecological Plantron* and *Plantron Mind*.

Other specially devised control systems have depended on more conventional electronic equipment. Robert A. Moog developed a set of proximity-sensing antennae for use in Cage's *Variations V* (1965), and in the mid-1970s Walter Stangl constructed the light-sensitive Moviophon for the K & K Experimentalstudio of Dieter Kaufmann and Gunda König for use in music-theatre works. Various 'musical stages', the movements of the performers on which trigger sound-generating equipment, have been constructed; they include Termen's Terpsitone (1932), the Pedaphonic Dansomat (1967) developed at the University of Hawaii, the Aanraker (1978) made by Michel Waisvisz to control a variant of his Kraakdoos, and the Soundstair (1977) devised by Robert Dezmelyk for Christopher Janney, who has developed this idea in various public spaces, such as a shopping mall, a subway station and an airport. Interruption of light and other beams has been used in a variety of systems, by composers such as Jacques Serrano, Qubais Reed Ghazala, Rolf

Gehlhaar and Godfried-Willem Raes (Holosound); some of these are described in DRAWN SOUND.

Ghazala has coined the term 'circuit-bending' to indicate electronic instruments that have been created by means of home-made modifications to either existing battery-powered electronic instruments or to other electronic apparatus that is intended to produce sound; in some cases this can be achieved with minimal electronic knowledge. The early electronic experiments of Termen, Martenot and Béthenod, dating from late World War I, were based on the fact that a radio receiver could be made to oscillate when someone's hand was placed in close proximity to its circuitry. In the 1950s Louis Barron devised self-destructive electronic circuits (as in the soundtrack for *Forbidden Planet*, 1956, composed in collaboration with Bebe Barron). Other 'creative mis-wiring' was an early speciality of Michel Waisvisz (starting with a VCS-3), Godfried-Willem Raes, Robin Whittle and Mats Lindström.

Electronic sound installations, often requiring many loudspeakers, have been devised by Max Neuhaus, Christina Kubisch, Maryanne Amacher, Robin Minard and Sabine Schäfer (*TopoPhonien*).

7. PROSPECTS. Two of the most significant aspects of the development of electronic technology have been the steady progress towards smaller and more complex components, and the substantial lowering of their prices once each new stage of miniaturization was established. At the end of the 20th century the miniaturization of electronic components had advanceed so far that a circuit equivalent to that of a large electronic organ of the 1930s, with a separate oscillator for each note, could be accommodated on a single very large-scale integration (VLSI) microchip; recent electronic organs, pianos and synthesizers can contain as many such circuits, lined up in rows, as an early electronic instrument had components.

Three approaches that were new to music were introduced and established in (or in association with) electronic music studios in the late 1940s and the 1950s: the use of individual devices for generating, shaping and processing sound signals (leading to the individual devices for generating, shaping and processing sound signals (leading to the synthesizer), the manipulation and storage of sounds on tape (leading to the digital sampling and storage of sounds) and computer synthesis (leading to digital sound synthesis); all three are now integrated in the digital synthesizer, which can replace nearly all the equipment in an electronic music studio. Historical precedent shows that a period of separate evolution of a new element is followed by its increasing fusion with the previous mainstream. This phenomenon previously manifested itself in the mutual influence of synthesizers and earlier electronic instruments based on the established acoustic instrumentarium, such as the electronic organ, electric piano and electric guitar; synthesizer designers, however, lacking an acoustic model to mimic, have not had the same motivation to reach any form of standardization, even within the range of models that are on the market at any one time.

Many of the most recent and likely future developments in electronic instruments can be seen as the ramifications of the end of what can be called the 'first digital era' in the late 1870s (see §II), and, following a century of analogue methods of producing and storing sound, the recent beginning of a second digital (or hybrid) era. The only method or recording sound that was available in the first digital era was that employed in mechanical musical instruments, primarily in the form of pinned barrels – a far cry from today's sophisticated methods made possible by the harnessing of electrical technology. A comparison between the capabilities of analogue sound recording and the subsequent digital methods shows substantial quantitative – especially as applied to samplers – and (at least potentially) qualitative improvements. It is often more effective to control a system indirectly, via an interface from a different framework. Thus although music is primarily analogue in nature, its individual parameters in both synthesis and sampling can be codified in numerical terms, which are more easily handled in a digital format. The digital future of electronic instruments will inevitably reflect computer developments.

Although music has long been seen as being closely related to mathematics, and its various parameters can easily be quantified numerically, the elements that contribute to expressivity and richness of timbre are, on what might be called a 'microsonic' level, mathematically highly complex. A solo violinist, for example, playing *mezzo forte* in a medium register can still be heard clearly against the main body of orchestral strings because the sound of a group of acoustic instruments playing in 'unison' has a blurred sheen to it that results from a combination of very slightly different versions of the same pitch, uncoordinated speeds of vibrato, varying dynamic levels and so on; the solo part itself contains similar irregularities in pitch, vibrato and dynamic. No instrumental sound is as 'perfect' as its electronic equivalent, and it is difficult to recreate these features accurately by means of electronic circuitry, requiring sophisticated methods of mimicking – in addition to the imperfections mentioned above – almost imperceptibly out-of-tune or even out-of-phase octaves and unisons, and minute delays to lower pitches. Samples of acoustic instruments go some way to remedying this, but few samplers or sample CD-ROMs to date offer sufficient samples to recreate every possible imperfection for every pitch within the range of a single instrument. If such subtleties of musical expression cannot yet be effectively recreated on digital electronic instruments, the failure to do so is temporary, being largely dependent on the amount of computer memory available and its speed of operation.

The analogue era enabled the application of electricity to music and many other areas of everyday use to expand rapidly from what had been achieved previously, and in doing so initiated major changes that profoundly affected the lives of every human being who was alive in the 20th century. An example of its effect on music can be seen in the field of home entertainment, where the cylinder phonograph and the disc gramophone, and especially the advent in the early 1920s of civilian radio broadcasting and electrical amplification, largely superseded domestic music making.

A more direct link with the changeovers between digital and analogue methods can be seen with the player piano. Improvements in its mechanism continued to be made in the early years of the 20th century, but, because as a keyboard instrument it is more digital than analogue in nature, progress petered out around the time that other, less taxing, forms of home entertainment became widely available. Between 1917 and 1930 a number of composers wrote music for player pianos and mechanical organs,

but subsequently attention became focused on the newer analogue resources of electronic instruments, hand-drawn film soundtracks and manipulation of gramophone records. Thus it comes as no surprise that in the second digital era, particularly from the mid-1980s, and in parallel with the development of the computer, a variety of sophisticated forms of the player piano have appeared, both for recording music and for playing it back; since in a piano the discrimination of individual pitches is far more straightforward than on monophonic instruments, being a purely mechanical function, designers have been able concentrate on methods of detecting miniscule variations in attack, key pressure, and so on. As far as the involvement of composers has been concerned, several isolated activities prior to the digital innovations of the 1980s are the exceptions that prove the rule: Conlon Nancarrow began to explore hitherto neglected possiblities of the player piano in around 1948, but a revival of interest in the instrument only came about in the 1980s after his music became better known, while the use of the barrel organ by Dutch composers from the late 1960s can be attributed partly to a museum's interest in generating new repertory for a newly acquired street organ and partly to the sociopolitical ideas that pertained in Holland at that time. The best-known recent form of player piano, Yamaha's Disklavier, has already attracted a range of composers.

A major difference between analogue and digital methods is that whereas a specialist can examine any item of analogue equipment and deduce everything that it is capable of (short of someone modifying its internal circuitry), all items of digital equipment consist of 'transparent' hardware that can be configured, through software programs, into any one of a wide variety of often unrelated simulations of analogue devices (such as mimicking a typewriter in a word-processing program). With electronic instruments, and especially the synthesizer (the major innovation in 20th century instruments), greater flexibility can be achieved, sometimes even providing access to options that the manufacturer decided not make available, when they are linked to separate microcomputers, and, when this link involves MIDI, their functioning can be affected by any changes carried out on an external device (or vice versa).

The rapid growth in digital technology at the end of the 20th century, as exemplified by the introduction of MIDI and the proliferation of ever more powerful microcomputers in all areas of work and recreation has seem some unusual realignments in the types of manufactured electronic musical instruments. Master keyboard controllers have been introduced, keyboardless sound modules have proliferated, synthesizers now often incorporate a sequencer, a sampler or a drum machine (occasionally even a vocoder), and in their basic funtions have partly replaced single-manual electronic organs; analogue tape recorders have largely given way to multi-track sequencers, electric pianos have been replaced by digital pianos with samples of the timbres of earlier electric pianos, and keyboard samplers have consigned the string machines of the 1970s to the scrapheap. More powerful computers and more sophisticated software are beginning to make practicable the software equivalent of earlier devices such as popular analogue synthesizers, and in future much more is likely to be achievable entirely in software.

Outside music, existing categories of electronic equipment have found strange bedfellows. In the early 21st century it is possible to view films on a home computer and to listen to tracks of popular music (in the MP3 music format) on a mobile telephone, in both cases 'downloaded' from the internet; some rock groups have begun to issue recordings on the internet rather than on CD, and this also provides opportunities for musicians who lack a recording contract to issue their music publicly. The extraordinarily rapid growth at the very end of the 20th century of the internet (the term is used here not only to cover its meaning as the interlinked global computer network, but also the World Wide Web, consisting of millions of cross-linked web sites, that first became possible with software written in 1990 by Tim Berners-Lee, and has potentially brough access to the internet to everyone on the planet) was initially achieved via existing copper-wire telephone cables, designed for use with a much earlier analogue system. These are beginning to be replaced with fibre-optic cables, that are suitable only for digital transmissions, and include two different new systems: Integrated Services Distributed Network (ISDN), which offers a much faster transmission of information over two parallel lines, and Asymmetrical Digital Subscriber Loop (ADSL), which is intended to provide a permanent internet connection for subscribers. European telephone tariffs for local calls are being restructured to approach more closely those in North America, where they are unmetered, thus making internet access more affordable. It is impossible to imagine how great the effect of the internet will be on the diffusion of recorded music and, to a lesser extent, the development of new electronic instruments and software.

In the long run it is unlikely that the range of different types of equipment will be reduced, either in music or in other contexts, even if most functions were to be available on stand-alone computers; apart from other considerations, completely independent applications would sometimes require simultaneous access to a single computer. In the near future the existing forms of computer, widespread at the end of the 20th century, which feature an alphanumeric keyboard and a screen (usually a bulky monitor that resembles a television set), are unlikely to become so cheap that an average household would invest in several such machines, which feature elements that are superfluous in certain contexts. A wider variety of more specialized 'dedicated' computers will be needed for very different purposes, with differently-sized consoles, screens (which will increasingly be flat liquid crystal displays (LCD), as in today's portable computers, or more expensive plasma screens), memory capacity and optional features such as controllers; apart from the existing desktop, laptop and palmtop consoles, some forms will be closer to the electronic organizer or Personal Digital Assistant (PDA), the electronic games console or the latest generation of mobile telephones with small screens and sometimes a miniature alphanumeric keyboard. Among other factors, this will be aided by the development of new, more economical chips (as in Transmeta's Crusoe microprocessor, introduced at the turn of the 21st century as an alternative to chips such as Intel's Pentium), and simpler and more flexible operating systems (like the somewhat earlier freely available Linux, originally devised by Linus Torvalds, which offers a completely different direction from that of the ever-more complex Windows

systems from Microsoft). Speech recognition software, becoming increasingly sophisticated at the end of the 20th century, will become standardized in many situations, and may make the alphanumeric keyboard largely redundant. The range of systems for music, for example, will include composition machines with larger screens to show scores in a double-page spread, while electronic organ enthusiasts will want large instruments with two manuals and a pedal-board, but comparatively simple computerized features (apart from the internal sound generation), such as a drum machine or a sequencer, just as some models in the 1970s incorporated a cassette machine.

From the mid-1980s it became possible for more and more of the functions available in analogue equipment to be executed in software, either on electronic instruments or, via MIDI, on microcomputers. A single page on a computer screen can show far more information about the settings used in various parameters than is possible on an electronic instrument's own screen, although there are inevitably too many details for most purposes; early software tended to show most of the information in tabular form, sometimes with several dozen numeric values, but without a method of highlighting the most important settings for each particular context. More appropriate graphic forms of presentation, often directly modelled on the layout of the equivalent piece of equipment, have largely resolved this problem.

Flat loudspeakers, an early dream that was first attempted in Quad's electrostatic loudspeaker in the 1950s, are likely to be perfected in the near future in the form of flat panels; an alternative possibility, at least in certain contexts, is the ability to create audible sound only within a small area at the intersection of two ultrasonic beams, one modulated, the other a carrier. A solution to another old problem, that of the tangle of wires found in most concert set-ups and recording studios, is currently a major area of research; it is more complex than the wireless element of radio broadcasts, walkie-talkies, mobile telephones, the ultra-high frequency transmission used with radio microphones, and the infra-red remote controls for televisions and other domestic equipment. Wireless connectivity for high-speed data transmission, based on Bluetooth radio communication standard, will become available early in the 21st century, initially with the most popular digital equipment (computers, mobile telephones, television sets and cameras). Developments are likely in methods of controlling synthesizers: apart from a growing range of unusual and flexible controllers, exploration of direct control by the brain has been carried out in medical research (the idea of such a man-machine interface is a familiar one in science fiction), with an interface fitted to the back of the head (or even by means of an implanted microchip). Features like this and speech communication with machines have been under investigation for over two decades, and in some cases early initiatives were overtaken by technological progress.

The last 20 years of the 20th century have seen research, leading to book publication, on several of the pioneers of electronic music (primarily analogue), including Thaddeus Cahill, Lev Termen, Maurice Martenot and Hugh Le Caine. Similar researches on the work of Jörg Mager, Friederich Trautwein, Benjamin F. Miessner and Harald Bode are still needed. Although many electric and earlier electronic instruments survive, and some are still in use, until the 1980s there were few systematic attempts to assemble collections of such instruments. The first was that of the privately owned Electronic Arts Foundation in Tampa, Florida, founded in 1972, which closed after a major fire. A more specialized collection was that held by the Hugh Le Caine Project in Toronto. A few electronic instruments are in public collections, such as the Smithsonian Institution in Washington, DC, and the Musikinstrumenten-Museum in Berlin. Since the mid-1980s several public and privately-owned museums devoted to electronic instruments have been established, mostly containing over 100 instruments (many second-hand dealers who specialise in this field often have an equivalent quantity of instruments in stock, not all of which are of similar interest); public museums include the Haags Gemeentemuseum, the Museum of Hammond Organs (Peninsula, OH), the New England Synthesizer Museum (Nashua, NH), the EMIS Synthesizer Museum (Bristol), the Museum of Synthesizer Technology (near Bishop's Stortford), the Audio Playground (Orlando, FL) and Das Keyboardmuseum (Austria). This interest has been shared by many rock musicians, some of whom have accumulated substantial quantities of 'vintage' instruments, considerably increasing the secondhand value of the more significant ones. In the long term, however, most of the existing supplies of essential spare parts will be exhausted; an alternative is the availability of the sounds of such instruments as samples on CD-ROMs. This nostalgia is similar to that regarding vinyl gramophone records now that they have been almost entirely superseded by compact discs.

Electronic music. *See* ELECTRO-ACOUSTIC MUSIC.

Electronic organ. The term is used in this article to denote pipeless electronic keyboard instruments that have the following three features in common with pipe organs: the ability to sustain the tone indefinitely, the ability to play chords (unlike certain electronic keyboard instruments which are monophonic), and the ability to increase or decrease any sustained tone, a function comparable with that of the Swell box of the pipe organ. In addition, most electronic organs have a wide selection of timbres, similar to the stops and mixtures of the acoustic instrument. In a few instances selected registers (e.g. 16′ and 32′ bass ranks) on a pipe organ have been created electronically.

After Lee de Forest was granted an American patent on his vacuum tube in 1906, the way was paved for the possibility of generating and amplifying musical sounds. However, it was not until after World War I that the first electronic organs were produced. The Coupleux-Givelet organ, named after its two French inventors, was first constructed in 1928; it used electronic oscillators to imitate and replace a pipe organ and had two or three manuals and a full pedal-board. Several of these instruments were built in the next few years and installed in churches; one was used at the Poste Parisien broadcasting station. In 1931 Richard H. Ranger demonstrated his Rangertone organ, developed from the principle of an interrupted light source in conjunction with photo-electric cells. Laurens Hammond in Chicago began to develop an organ for commercial production in 1933; the Hammond organ first appeared in 1935 and rapidly established itself – by the end of 1937 the company had sold over 3000 instruments. In 1934 the Orgatron, invented by Frederick Albert Hoschke, was marketed by the Everett Piano Co.; this used vibrating reeds as its sound source, and is thus classified as an ELECTRIC ORGAN. It was taken over by the Wurlitzer Co. in 1946 and used as the basis of their electric organ until the mid-1960s.

The most significant differences between the various instruments lie in their manners of tone production. The electromechanical Hammond organ uses the principle of electromagnetic tone production with tone-wheels. For each frequency generated a profiled metal wheel rotates in close proximity to a coil-wound permanent magnet. As the wheel rotates it creates a disturbance in the magnetic field, inducing an alternating current in the coil. The number of projections passing the magnet per second gives the frequency; the waveshape is very close to a sine wave. Altogether 91 (later 96) such tone-wheels are used; all those producing pitches of the same pitch class rotate on the same shaft and all 12 shafts are driven by one synchronous motor. This ingeniously ensures that the instrument can never go out of tune within itself. The other characteristic principle of the Hammond organ is that of the drawbars (*see* HAMMOND ORGAN, illustration): these govern the timbre by selecting pitches close to those of the harmonic series to sound along with the fundamental. Since these are drawn from the tone-wheel system, they are not true harmonics, but rather lie within equal temperament. This method does, however, provide a very wide range of timbre synthesis, limited mainly by the fact that partials only up to the 8th (and omitting the 7th) are employed. Preselected timbre combinations, usually given the names of common organ stops, are available by pressing tabs.

An English instrument which received the greatest praise for its faithfulness to acoustic models was the electromechanical Compton Electrone invented by Leslie Bourn. Its success in imitating acoustic organs was largely attributable to the fact that it could create a large number of harmonics by means of waveforms engraved on an electrostatic disc; there were 12 such discs, one for each of the notes of the octave, the pitch of each being determined by the speed at which an associated scanning disc revolved.

For all of these organs the quality of the sound is ultimately dependent on the quality of the loudspeakers. In more sophisticated instruments a large loudspeaker cabinet is usually separate from the console of the instrument, and can be placed in any convenient or acoustically advantageous position. Since many instruments are designed for the home, manufacturers now

invariably incorporate some form of reverberation unit or electronic equivalent which can compensate for a very dry room acoustic. Often a special type of tremulant loudspeaker is incorporated or connected externally, particularly the LESLIE, which contains a rotating curved reflector that causes interesting phase-change relationships and a distinctive quality of sound.

Each of the principles of tone production so far discussed has relied upon some electro-acoustic or electromechanical device. By far the most common source used in electronic organs from the 1940s to the early 1980s, however, was that of the electronic oscillator, one per note in the more expensive instruments, otherwise a set of 12 oscillators, one for each pitch class, in conjunction with frequency dividers – electronic circuits that produce one cycle for every two at their input – or a single master oscillator with two sets of frequency dividers. Commonly the 12 source oscillators generate the frequencies of the top octave of the organ, while the frequency dividers are used to derive each lower octave. Although each set of octaves derived from a single source oscillator is perfectly in tune with the rest, there are disadvantages with this system: frequency dividers naturally generate the square wave-form, which, containing only odd harmonics, is suitable primarily for simulating stopped organ pipes. Sawtooth waves, which contain all harmonics, are necessary to simulate open organ pipes and these can only be approximated by mixing square waves of particular frequencies and amplitudes. With a harmonically rich waveform, however, the number of 'stops' available by means of switching in different formant filters is limited only by expense. Size is not so much a problem, since the valves used in electronic organs up to the 1960s were superseded first by solid-state transistors and then by integrated circuits; from the 1980s the sounds have been generated digitally (pioneered in the Allen organ from 1971), more recently based on sampled timbres. Most analogue electronic organs are fully polyphonic, with a separate oscillator or frequency divider for each note; digital organs have frequently had fewer up to the late 1990s often with only 16, at the end of the 20th century normally with 32 or 64 oscillators (most keyboards comprise 61 notes).

The question of the identity and function of the electronic organ is an interesting one. At one extreme it has nearly always been related to the church organ, to be compared with it, usually unfavourably, although special church models often offer a choice of completely different registrations, and Hammond church organs have omitted the 'out of tune' overtones. Expensive concert models have been produced by several companies, especially by Allen and Yamaha (Electones), and electronic instruments largely replaced pipe-based cinema organs. The electronic organ began to find a niche in popular music in the 1950s, especially with portable models suitable for small bands; in the 1960s 'combo' organs, such as the Farfisa Compact and Vox Continental, had considerable success. But it has found its greatest popularity as a home entertainment instrument; organs designed for this area of the market now often include a range of special effects and features, such as rhythm and 'walking bass' units, arpeggiators, memories and a choice of chord systems. In the late 1970s the development of the polyphonic synthesizer began to blur the differences between the two types of instrument; larger digital organs still retain their uniqueness, even though composers such as Stockhausen have chosen synthesizers instead of electronic organs in recent performances of their earlier works. (For further discussion of the development of the electronic organ since 1945, *see* ELECTRONIC INSTRUMENTS, §IV, 3.)

For instruments classifiable as electronic organs *see* ALLEN ORGAN; BALDWIN ORGAN; BODE, HARALD; HAMMOND ORGAN; KORG; LOWREY ORGAN; ROLAND; YAMAHA. Other significant electronic organ manufacturers or specific models (including 'organ modules') have included Ahlborn, AWB, Bradford Computing organ, Cellulophone, Conn, Copeman Hart, Dereux, Elka, Gulbransen, Johannus, KdF-Grosstonorgel, Kimball, Kinsman, Kristadin, Lichtton-Orgel, Magneton, Makin, Mastersonic, Midgley-Walker, Miller, Minshall, Norwich, Novachord, Organo, Philicorda, Rodgers, Syntronic organ, Thomas, Tuttivox, Vierling, Voce, Wyvern and Yunost'. Electronic organs are classified according to different methods of sound production in ELECTRONIC INSTRUMENTS, §I, 3(i) and 4.

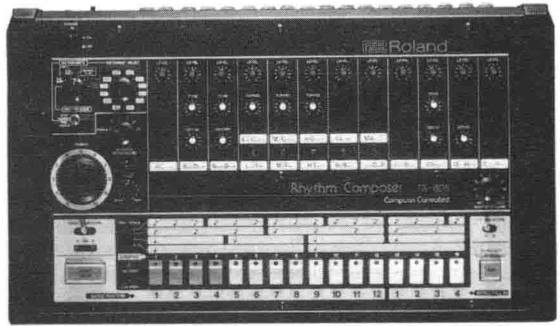
RICHARD ORTON/HUGH DAVIES



Electronic percussion [electronic drum, drum machine, rhythm machine] (Fr. *percussion électronique*, Ger. *elektronisches Schlagzeug*, It. *percussione elettronica*). An electronic instrument that synthesizes percussion sounds or stores and reproduces the sounds of percussion instruments; it is either played on controllers resembling conventional percussion instruments but equipped with a pickup or other sensor, or operated by an electronic drum machine or rhythm machine. The earliest electronic percussion instruments were the Rhythmicon by LEV SERGEYEVICH TERMEN (1931) and his oscillator-based 'keyboard electronic timpani' (1932). Around the same time Benjamin F. Miessner, with the collaboration of his

brother, independently produced his own similar Rhythmicon, and about 1935 the 'chromatic electronic timpani' with amplified strings. Electronic percussion was first developed consistently during the 1950s and 60s in the form of the 'rhythm box' (related to the electronic metronome) and as an addition to some models of home electronic organ; these produced rhythms electronically but the imitation of percussion timbre and attack was not very realistic. The earliest commercial electronic drum machine was Wurlitzer's Sideman (1959), which was soon followed by models from other organ manufacturers, such as Kinsman's Rhythm King, Korg's Doncamatic and MiniPops, Ace Electronics' Rhythm Ace (Ace Tone), Bentley's Rhythm Ace and units by Farfisa and Hammond; the incorporation of such devices into electronic entertainment organs recalls the inclusion of percussion sections in the 19th-century orchestrion and the cinema and theatre organs of the 1920s and 30s. Synthesizer companies entered the field in the 1970s, with PAIA's Programmable Drum Set (1975), Paice's drum synthesizer (1976) and the Ludwig 'Moog' drum, a drum controller for the Minimoog (early 1970s). Since 1986 finger-sized drum pads have been included on various electronic keyboards.

With the constantly increasing volume of rock music during the 1970s, even drum kits began to need amplification. Furthermore, problems arose in recording studios, where the recording of each percussion instrument from its own microphone was affected by substantial leakage from other instruments in the kit. The strong vibrations produced in the instruments necessitated the development of special contact microphones and other sensors. In the late 1970s a new generation of electronic percussion devices became possible through advances in electronic technology; they combine the sequencer with a microcomputer memory, and found widespread use in rock music. These updated versions of the rhythm box, in which everything is programmed by a combination of knobs and switches, are often controlled or triggered by special drums or drum-pads (touch-sensitive rubber or plastic-coated foam rubber surfaces resembling practice pads, usually incorporating piezoelectric crystal or other sensors which in some cases provide additional information about the position of impact). The sounds were originally synthesized electronically, as in the Kit (fig.1), Space drum, Synare, Synsonics drums and Syndrum, in Pearl Music's Syncussion (special drums), the Klone Kit and models (largely lacking any facility for real-time performance) made by the synthesizer and electronic organ

1. The Kit by MPC Electronics, 1982, with additional Tymp and Synkit consoles (giving respectively timpani and non-imitative percussion sounds)

2. Rhythm Composer (model TR808) by Roland, c1980, capable of storing programs on 12 tracks, each up to 64 bars long

manufacturers Cheetah, Elka, Godwin, Kawai, Korg, Lowrey, Multivox, Roland (over a dozen models; fig.2), Technics, Thomas, Wersi and Yamaha; the sounds of sampled percussion instruments were the basis of the E-mu Drumulator, LinnDrum, Movement Computer Systems' Percussion Computer (the only model to incorporate a VDU screen) and Digital Drum Kit (with one drum-pad), MXR's Drum Computer, Simmons electronic drums and two models made by Oberheim, and of most instruments since the early 1980s. The availability of MIDI since 1983 has meant that drum controllers such as Roland's Octapad, the drumKAT series, and models produced by Akai, Alesis, Aphex, Cheetah, Clavia (ddrum), Dynacord (Rhythm Stick), Korg, Kurzweil, Roland, Simmons, Yamaha, Zoom and others need no longer be limited to the manufacturer's own selection of timbres, which have occasionally included handclaps. In addition to electronic drums this approach has occasionally been applied to keyed percussion, as in Simmons' Silicon Mallet and the malletKAT.

Programmable drum machines have been common in rap music and some areas of reggae, usually to create unvarying repetitive rhythmic patterns. A few composers have integrated such inflexible devices into more experimental musical contexts, including Mauricio Kagel in the theatrical *Die Rhythmusmaschinen* (1978), the text-sound poet Charles Amirkhanian in several works around 1981 (such as *History of Collage*), and Vinko Globokar in *Ombre*(1989). Around 1990 Ikue Mori began performing with adapted drum machines controlling samplers.

HUGH DAVIES

Electronic piano. An electronic keyboard instrument capable of producing electronically generated piano-like sounds. Many models also offer related timbres such as harpsichord, honky-tonk piano, vibraphone, clavichord and clavinet. Electronic pianos, based on electronic oscillators, were first manufactured from the 1970s, mainly in Italy; digital pianos were introduced in the early 1980s, originally based on digital synthesis, from around 1986 featuring sampled timbres. Around 1985 their increasingly realistic timbres and comparatively low cost led to the demise of the ELECTRIC PIANO, based on the

amplified vibrations of an electro-acoustic or electromechanical sound-source (common usage makes little or no distinction between the two approaches). Apart from a continuing Italian involvement (Farfisa, GEM, Orla and Viscount), recent digital pianos have been marketed (also in the form of 'piano modules' without keyboards) by Alesis, Baldwin (Pianovelle), E-mu, Ensonig, Kurzweil, Lowrey, Madison, Peavey, Rhodes, Rodgers, Samick, Voce, Wurlitzer and the Japanese companies Akai, Casio (Celviano), Kawai, Korg, Roland, Suzuki, Technics and Yamaha (including the Clavinova and GranTouch). They have a 'polyphony' of notes that can be sounded simultaneously from 12 to 128 voices (usually 24, 32 or 64), and are presented as uprights, grands or 'home keyboards', mostly with a weighted-hammer action resembling that of an acoustic piano and incorporating a sequencer or digital recorder.

HUGH DAVIES

Electronic sackbut. A monophonic keyboard SYNTHESIZER (not a sackbut). It was developed by HUGH LE CAINE in consultation with Peter Jermyn (who advised on musical features) in Ottawa between 1945 and 1948; it was modified at the National Research Council of Canada in Ottawa in the late 1950s and in 1969–73. *See* ELECTRONIC INSTRUMENTS, §IV, 5(II) and fig.7.

Electronium. A monophonic electronic keyboard instrument. It was developed by René Seybold in 1948 and manufactured by HOHNER from around 1950. *See* ELECTRONIC INSTRUMENTS, §IV, 4(iii).

Electrophone [electronophone]. General term for instruments that produce vibrations that must be passed through a loudspeaker before they are heard as sound. It is applied to instruments in which vibrations are created by acoustic means but which require amplification to make them audible (incorporating pickups, special microphones or other transducers) and to instruments in which the sound-generating system is based on electro-mechanical or electronic oscillators. It is not applied to those instruments in which electricity is employed in an auxiliary capacity to power part of the action (as, for example, a pipe organ with electro-pneumatic action). Electrophones form a fifth class of instruments, in addition to the four (aerophones, chordophones, idiophones and membranophones) devised by Erich M. von Hornbostel and Curt Sachs in their system of classification (published in the *Zeitschrift für Ethnologie*, 1914; Eng. trans. in *GSJ*, xiv, 1961, pp.3–29; repr. in *Ethnomusicology: an Introduction*, ed. H. Myers, London, 1992, pp.444–61). By 1914 only a handful of electromechanical instruments had been devised, and, with one exception (William DuBois Duddell's 'singing arc'), none that was fully electronic, so that no term for such a group was included. By the end of the 20th century the classification system had still not been formally extended.

With the rapid development of electrophones from the late 1920s it was not long before organologists, musicologists and critics coined generic terms for them, in particular 'electrophonic' and 'electrotonic'. Sachs appears to have been the first to introduce the term 'electrophone' into the classification system; in *The History of Musical Instruments* (1940), he subdivided the group into 'electromechanical' and 'radioelectric' instruments. A more detailed and accurate subdivision of 'electrophonic' instruments, into three categories, was proposed by F.W. Galpin in *A Textbook of European Musical Instruments* (1937): 'autophonic' (a word derived in the same way as 'idiophonic' and applied to instruments that produce sound by means of electronic oscillators); 'electro-magnetic'; and 'electro-static'. Galpin modified this system in a lecture given to the Musical Association in the following year, in which he put forward 'autophonic', 'mechanical' (combining his earlier 'electro-magnetic' and 'electro-static', and adding 'photo-electric') and 'acoustical' categories.

Galpin's three categories of 1938 remain the most appropriate ones (though his names for them are no longer used), and they can be further subdivided to advantage. Since some of the basic principles of sound-generation were not employed, at least in commercially manufactured instruments, until the late 1930s, the first useful subdivisions of Galpin's categories were not proposed until after World War II (Dräger, 1948; Lewer, 1948; Douglas, 1949; and Meyer-Eppler, 1949).

(1) Electronic instruments may be subdivided according to the type of oscillator circuit they employ; or according to the waveforms produced by the oscillators; or according to the relationship between the frequency of the signal generated and that of the sound heard (the frequency of the sound heard may be the same as that of the signal generated; or it may be the difference between the frequencies produced by two VHF oscillators; or it may be the result of dividing the frequency produced by a VHF oscillator by means of one or more frequency dividers). It is also possible to base subcategories on combinations of these three basic factors.

(2) Electromechanical instruments produce sound by means of rotating 'tone-wheels' (either with a profiled rim or an inscribed face) or an equivalent device such as moving lengths of prerecorded tape or film, which themselves generate no acoustic sound but form part of an oscillator circuit. They may be subdivided according to whether the electrical circuit contains an electromagnetic, electrostatic or photoelectric component.

(3) Electroacoustic instruments are those in which vibrating strings, reeds, plates, rods, tuning-forks or other components function exactly as in an acoustic instrument, but the vibrations are converted into voltage variations in an electrical circuit. In these instruments the acoustic sound is normally deliberately reduced, for example by removing the energy-absorbing soundboard of string instruments (as in the electric guitar and electric piano), or by enclosing the sound source in a virtually soundproof chamber (as in some electric organs using reeds). Electroacoustic instruments may be subdivided according to whether the electrical circuit contains an electromagnetic, electrostatic, photoelectric or piezoelectric component.

In each of these categories further levels of subdivision can be introduced, just as with acoustic instruments, according to whether an instrument is monophonic, partially polyphonic or fully polyphonic, whether the pitch control is continuous (as with a string) or discrete

(as with a keyboard), how the sound is shaped and resonated, and so on.

In certain cases, especially in commercial instruments based on traditional models, there is such a close physical resemblance between an electroacoustic instrument and its acoustic ancestor that some have argued that these instruments could also be classified as a subcategory of the acoustic form (e.g. an electric guitar could be classified as a subcategory of CHORDOPHONE – necked lutes). This, however, ignores both the substantial reduction of the acoustic sound and the electrical components that have been integrally incorporated or are externally essential (such as an amplifier and loudspeaker). Since the pickups are an integral part of the instrument's design, their functioning cannot be considered as electronic processing of an acoustic sound source, the argument used in most objections to this category. Furthermore an instrument, such as a reed organ, furnished with electrostatic transducers (that are not true pickups) cannot be described as 'amplified'; the sounding objects – such as strings or reeds – actually carry a voltage (thus functioning as half of a variable capacitor) and their vibrations in the vicinity of small 'plates' create an electrical oscillation. Certain electroacoustic instruments are capable of producing additional variations in timbre or other parameters that would not be possible on an equivalent acoustic instrument, and this is more pronounced in those instruments which bear only a distant relationship to traditional instruments.

Two comparatively recent additions to the first category of electrophones are the computer-controlled digital oscillator, in which a continuous waveform is not generated directly but assembled by means of a 'sampling' technique that normally requires a rate of at least 20,000 samples per second, and digitally 'sampled' recordings of sounds from any source. In practice, both approaches have frequently been inseparably combined, as with a sampled attack added to a digitally-generated sound.

It is possible to consider the various methods of storing sound information (all of which may be creatively modified, and have been used as the basis for instruments) as special cases of the three main categories:

(1) Electronic: analogue and (particularly) digital oscillators can be controlled or programmed by a plug-in card, floppy disc, hard cartridge or other information storage device.

(2) Electromechanical: variations in an electromagnetic field, similar to that produced by a tone-wheel, are caused by playing back a pre-recorded magnetic tape disc; the photoelectric principle, now common in the compact disc, is paralleled in the 'optical' film soundtrack (*see* DRAWN SOUND).

(3) Electroacoustic: the playing back of a shellac or vinyl gramophone record produces acoustic vibrations which, in modern equipment, are nearly always electrically amplified; this is exemplified by the hand-manipulated 'scratching' of LP records by disc jockeys and others.

Ki Mantle Hood (1982) has proposed for 'electronophones' a set of organogram symbols for the various types of sound-generating, -processing and -diffusing devices found in electronic instruments; they are partly derived from the relevant electrical symbols. This appears to have had only limited application and influence, apart from the use of the term in the GAMES (Generators and Modifiers of Electronic Sound) system proposed by Bakan and others (1990), devised primarily by students of ethnomusicology, which contains inconsistencies and omissions in its subdivisions of the classification system as well as inaccuracies in the description of several earlier instruments and principles. The clarity and universality of a similar set of electrically-based symbols, adopted by some composers (notably Stockhausen) but still ignored by many others, has much to commend it in this context, since it can be applied with equal appropriateness to the items of equipment that are connected together in an electronic music studio or in a live electronic concert performance and to the elements or modules of a synthesizer or other electronic instrument. An aspect that has been comparatively neglected in existing classification systems is the complexity of even the simplest action of a performer, regarding the various combinations of the parameters of pitch, timbre, loudness and articulation, which in electrophones are frequently allocated separate controls; this is remedied in Hugh Davies's unpublished system, which combines elements of a flowchart and those of an electrical block diagram.

Electrophonic instruments. *See* ELECTRONIC INSTRUMENTS.

Eleftheriadis, Emilios. *See* RIADIS, EMILIOS.

Elegy (Fr. *élégie*; Ger. *Elegie*). A setting of a poem, or an instrumental piece, lamenting the loss of someone deceased. The word is from the Greek *elegos*, a poem written in distichs of alternate dactylic hexameters and pentameters, and sung to the flute. Classical elegies embraced a wide variety of subject matter, but prominent among them were laments and commemorative songs; Echembrotus (*c*586 BCE) was specially noted for the gloomy

character of his flute-accompanied elegies. The music of such classical elegies has not survived, but elegiac distichs by Boethius and Ovid were set by Robert Gaguinus and Glarean and appear in the latter's *Dodecachordon* (1547). In his 20 *Elegies* John Donne used the term in its prosodic sense, and the poems are, like the elegies of Ovid and Catullus, mainly love-poems; but in modern usage the term has been increasingly reserved for verses lamenting the death of either a famous person or someone known intimately to the poet. Well-known English examples are Spenser's *Astrophel*, Milton's *Lycidas*, Shelley's *Adonais*, Arnold's *Thyrsis* and Tennyson's *In memoriam*, most of which have been set to music.

The earliest surviving type of musical elegy is the medieval PLANCTUS, whose history dates from at least the 7th century. From the 14th century to the 17th two parallel traditions existed for musical elegies: those commemorating patrons (e.g. Isaac's *Quis dabit pacem populo timenti?* for Lorenzo de' Medici, Coprario's collection *Funeral Teares for the Death of the Right Honorable the Earle of Devonshire*, 1606); and those mourning the deaths of colleagues and mentors (e.g. Josquin's *Nymphes des bois* for Ockeghem, Byrd's *Ye sacred muses* for Tallis, Purcell's *What hope for us remains* for Matthew Locke). Such compositions were given a wide variety of generic titles, including DÉPLORATION, NENIA and EPICEDIUM.

It is necessary to distinguish the elegy from the monodic LAMENTO widely cultivated during the Baroque period, particularly in Italy. The famous laments from operas such as Monteverdi's *Arianna* (1608) and Purcell's *Dido and Aeneas* (1689), and from oratorios such as Carissimi's *Jephte*, cannot properly be classed as elegies, since they are occasioned by the impending death of the character who is singing and not by the death of someone else. Among the finest examples of the elegiac cantata is Carissimi's *Lamento di Maria di Scozia* ('Ferma, lascia ch'io parli'), which is both a lament in the operatic sense and a true elegy, since the piece is a tribute to the memory of the character whom the singer is impersonating. The scenes in Handel's *Samson* (Act 3) and *Saul* (Act 3) lamenting the deaths of the respective protagonists are often called elegies, although, like the Italian lament, they mourn dramatic characters rather than real historical figures.

Elegiac sentiments are prominent in German Romantic poetry, and thence in the vocal works of Beethoven, Schubert, Schumann, Strauss and Wolf. 19th-century composers often regarded the elegy less as an epicedium for a departed friend or hero than as a vehicle for expressing personal feelings about death. For example, the preoccupation of Brahms and Mahler with elegiac texts reflects both composers' concern with death. Brahms's *Schicksalslied*, *Nänie* and *Vier ernste Gesänge* are not commemorative works, neither are Mahler's *Kindertotenlieder* and *Das Lied von der Erde*, yet they are all imbued with the kind of expression associated with the elegy. A great deal of late Romantic music might be described as elegiac, and it is no coincidence that the use of the word 'elegy' as a title for purely instrumental pieces is common from the late 19th century.

The instrumental elegy can, however, be traced back to the 17th century with such pieces as Froberger's *Lamento sopra la dolorosa perdità della Real Maestà di Ferdinando IV* (1656) and the various French pieces for lute or harpsichord known as *tombeaux* (*see* TOMBEAU and DUMP). Closely allied to these is the APOTHÉOSE, exemplified in François Couperin's *Le Parnasse, ou L'apothéose de Corelli* (1724) and his *Concert instrumental sous le titre d'Apothéose composé à la mémoire immortelle de l'incomparable Monsieur de Lully* (1725). Such commemorative instrumental works began regularly to be called elegies only in the 19th century. Examples (all for keyboard) include Loewe's *Grande sonate élégiaque* op.32, Raff's 'Elegie in Sonatenform' (first movement of his Suite op.162), Stephen Heller's *Aux mânes de Frédéric Chopin: élégie et marche funèbre* op.71 and the elegies composed by Dussek (1806–7) and Liszt (1842) in memory of Prince Louis Ferdinand of Prussia (the latter using motifs from the prince's own compositions, in the manner of many Renaissance and Baroque elegies). It would not be difficult to mention several dozen other elegies (see *MGG2* for a list). Any comprehensive survey of the instrumental elegy, however, should include the numerous pieces that are elegies in all but name, like Berg's Violin Concerto (in memory of Manon Gropius) and Hindemith's *Trauermusik* (for the death of King George V). Of special interest are the elegiac works of Stravinsky, particularly those written during his last years in memory of distinguished friends (e.g. Raoul Dufy, Aldous Huxley, John F. Kennedy).

Eler, André-Frédéric [Heller, Andreas-Friedrich] (*b* Alsace, 1764; *d* Paris, 29 April 1821). French composer and teacher. In 1787 he went to Paris, where he probably changed his name to its French form. On 15 August 1789 his *Scène française* was sung at the Concert Spirituel by François Lays; this work was repeated later in the year, and a *scène avec choeur* was performed there in December. In 1794 he was a member of the selection committee for a competition established by the Institut National de Musique. When the Paris Conservatoire was formed from this institute in 1795 he served as its librarian (until 1797) and later as a teacher of accompaniment (1798–1800), solfège (1800–01, 1807–16), vocal training (1801–7) and counterpoint and fugue (1816–21). During this period he wrote numerous vocal works and pieces for wind ensembles which were performed by the students there. In his last years he collected examples of vocal music from the 16th and 17th centuries; seven volumes of this music, which were given to the Conservatoire library after his death, are in the Bibliothèque Nationale under the title Collection Eler.

Eler's music demonstrates a solid technique characterized by pure and 'correct' harmonies, derivative, some-

what Classical melodies, and an interest in counterpoint unusually great among his French contemporaries, which no doubt helped to bring about his final appointment at the Conservatoire. Though he was interested in opera, and wrote well-orchestrated stage works with a good sense of drama, he had little success in the genre; his *La forêt de Brama*, a lyric drama on an oriental theme which he felt to be his best and most polished work, was accepted by the Opéra but never performed. He also wrote much interesting chamber music, at a time when the genre was little cultivated in France, as well as orchestral pieces, vocal canons and a few works for the Revolutionary cause.

WORKS

all printed works published in Paris

STAGE

Apelle et Campaspe (op, 1, C.-A. Demoustier), Paris, Opéra, 12 July 1798, *F-Po*

L'habit de la Duchesse de Grammont (oc, 1), Paris, 8 Jan 1801 (n.d.), lost

L'habit du Chevalier de Grammont (oc, 1, J. Bins de Saint-Victor), Paris, Opéra-Comique, 6 Dec 1803 (n.d.)

La forêt de Brama (op, 4, M. Bourdic-Viot), unperf., *Pc*

Le chant des vengeances (?intermède, 1, C.J. Rouget de Lisle), Paris, Opéra, 7 May 1798, mentioned by Fétis

OTHER VOCAL

12 canons, 2–4vv, pf acc. (n.d.); other canons, *Pc*, *D-Bsb*; Ode sur la situation de la République en prairial, an VII (Lebrun), 1v, 2 cl, 2 hn, 2 bn, 1799, *F-Pc*, vs in C. Pierre, ed.: *Musique des fêtes et cérémonies de la révolution française* (Paris, 1899); other works incl. scènes, perf. Paris, Concert Spirituel, 1789

GEORGES FAVRE/R

Eler [Elerus], **Franz** [Franciscus] (*b* Uelzen, shortly after 1500; *d* Hamburg, 22 Feb 1590). German music teacher and composer. He referred to himself as 'Ulisseus' (i.e. born in Uelzen). He joined the staff of the Johannes Gymnasium in Hamburg after 1529. The suggestion that he was Kantor there, however, and later director of music at Hamburg Cathedral has not been substantiated, although it is likely that he was at some time succentor of the Jakobikirche.

Eler's work, *Cantica sacra, partim ex sacris literis desumta, partim ab orthodoxis patribus, et piis ecclesiae doctoribus composita, et in usum ecclesiae et iuventutis scholasticae Hamburgensis collecta, atque ad duodecim modos ex doctrina Glareani accommodata et edita*, significant in the history of the liturgy and hymnology, was published in two parts at Hamburg in 1588; the second part has its own title: *Psalmi D. Martini Lutheri et aliorum eius seculi Psalmistarum, itidem modis applicati*. This and similar publications by Johann Spangenberg (1545), Lucas Lossius (1553), Johannes Keuchenthal (1573) and Mattäus Ludecus (1589) are the main sources for the predominantly monophonic repertory of the Lutheran liturgy in the 16th century.

Whereas the first part of Eler's work is devoted almost exclusively to Latin hymns, the second part, albeit in Low German dialect, forms the basis of the Lutheran vernacular hymn tradition. The collection contains very few polyphonic compositions. It is thought that the organist of the Jakobikirche, Hieronymus Praetorius, whose father and predecessor, Jacob Praetorius, had already prepared a similar collection in 1554, undoubtedly shared some responsibility in the production of the *Cantica sacra*, although it has so far not been possible to establish the exact circumstances of its publication: Eler made no mention of Praetorius in the work. Apart from its liturgical function, the work had an expressly didactic purpose, as the words of the title indicate: 'ad duodecim modos ex doctrina Glareani accommodata'.

WALTER BLANKENBURG

Elevation. (1) The raising of the host and chalice in turn, after their consecration, by the celebrant at Mass. During the Middle Ages the custom arose of playing the organ or singing a motet during and after the consecration (as far as the *Pater noster*), except when this position was occupied by the Benedictus of a lengthy polyphonic Sanctus; such pieces were often identified by the use of the term 'Elevation'. References to the playing of the organ at the Sanctus of the Mass occur from the 13th century, and the practice is inherent in the provision of *alternatim* organ music for the Sanctus in the 15th and 16th centuries. In Italy the custom developed of playing only two short organ versets at the Sanctus and a long piece during and after the consecration (see Banchieri: *L'organo suonarino*, Venice, 1605). The most famous Elevation pieces of this kind are those of Frescobaldi: two long toccatas from his second book of toccatas and other pieces (1627) and three shorter ones from *Fiori musicali* (1635). Later examples are found in the works of Floriano Arresti and Pasquini, while two of Froberger's toccatas are intended for the Elevation.

In France, the Elevation normally occurred in the context of a longer *alternatim* scheme, replacing the Benedictus (e.g. in the organ masses of Couperin, 1690).

More recently single movements of this kind have been written by Berlioz, Reger and others, while the 'Consécration' was a normal feature of the 20th-century French organ-mass suite. The unique interlude between the Sanctus and Benedictus of Beethoven's *Missa solemnis* should also be mentioned.

Motets sung at the Elevation are first documented in Milan in the late 15th century in the context of the *motetti missales*, where compositions following the Sanctus are labelled 'ad elevationem' or 'post elevationem'. They are often on a eucharistic text, and as such would be indistinguishable from motets appropriate for Corpus Christi, except for their style, in block chords with fermatas. Otherwise the Benedictus, nearly always set as a separate section in polyphonic masses, would have coincided with the Elevation; Andrea Adami, in his *Osservazioni per ben regolare il coro dei cantori della Cappella pontificia* (Rome, 1711), states that the Benedictus should be delayed until the celebrant has genuflected after raising the chalice. The practice of singing motets at the Elevation is recorded in the papal chapel from the 16th century and in S Marco from the 17th, by which time it had become widespread. Papal legislation, while at first forbidding the use of texts not in the liturgy, by the mid-18th century allowed the performance of motets in honour of the Blessed Sacrament during the Elevation.

Elfman, Danny (*b* ?Los Angeles, ?29 May 1953). American composer, rock singer, arranger and guitarist. With his brother Richard he formed the theatre company the Mystic Knights of the Oingo Boingo in the 1970s, which in 1979 became Oingo Boingo, an eight-piece, new wave band led by Elfman as vocalist and songwriter. During the 1980s the band developed a distinctive synthesizer and horn-based sound; occasionally its songs were featured in youth-market films, such as for the title song of *Weird Science* (1985), but its ten or so albums had limited commercial success and it formally broke up in 1995.

Beginning in 1985 Elfman also began scoring films, becoming especially well known for his association with the director Tim Burton; after *Batman* (1989), he became one of Hollywood's most sought after younger composers. He has worked on all but one of Burton's films, creating colourful, rhythmically driving and knowingly referential scores, well matched to Burton's surreal style. Elfman has also worked for many television shows, notably *The Simpsons*. Objecting to the overbearing use of sound effects in such action-driven films as *Batman* and *Batman Returns* (1992), he has sought out projects that give greater prominence to music. His lyrical gifts are evident in *Edward Scissorhands* (1990; one of several scores in which he included a wordless choir) and *Black Beauty* (1994). More recent films, especially *Dolores Claiborne* (1995), *Good Will Hunting* (1997) and *A Civil Action* (1998), show increasing subtlety and inventiveness, particularly in blending synthesized timbres with both standard and exotic instruments.

Elfman has acknowledged the influence of such film composers as Rota, Herrmann and Korngold, as well as of classical works such as Stravinsky's *Histoire du soldat* (to which he wittily alluded in *Beetle Juice*, 1988). He has defended himself, somewhat abrasively, against criticism for his lack of formal training and seeming dependency on orchestrators and conductors, particularly Steve Bartek (a member of Oingo Boingo) and Shirley Walker: such claims have been well-refuted.

WORKS
(*selective list*)

Film scores (dirs. in parentheses): Pee-Wee's Big Adventure (T. Burton), 1985; Back to School (A. Metter), 1986; Beetle Juice (Burton), 1988; Midnight Run (M. Brest), 1988; Scrooged (R. Donner), 1988; Batman (Burton), 1989; Darkman (S. Raimi), 1990; Dick Tracy (W. Beatty), 1990; Edward Scissorhands (Burton), 1990; Batman Returns (Burton), 1992; The Nightmare Before Christmas (H. MARTIN MARKS

Elford, Richard (*b* Lincoln, bap. 3 Jan 1677; *d* London, 29 Oct 1714). English tenor-countertenor and composer. He was a boy chorister at Lincoln Cathedral from October 1684 and a singing-man at Durham Cathedral from 1695. In February 1699 he drew two quarters' salary in advance and apparently went to London; he was admonished and then dismissed for 'neglecting ye Quire, & Singing in ye Playhouse'. Thomas Tudway related that he was unsuccessful on stage because of his awkward manner. Over a dozen of his songs, some specifically for the theatre, were published singly and in musical periodicals and collections from November 1699. He entered the Chapel Royal choir in August 1702 and quickly became the foremost London church singer, being also in the choirs of Westminster Abbey and St Paul's Cathedral. Burney and Hawkins referred to him as a countertenor, but his name is in a tenor partbook at Durham, and Eccles, Blow, Clarke, Weldon and Croft wrote for him in the high tenor range, as did Handel, whose 1713 *Ode for the Birthday of*

Queen Anne had important solos for 'Mr Eilfurt'. An elegy on Elford's death by Henry Carey, set by Croft, refers to Anne as Elford's patron. Weldon's *Divine Harmony* (London, 1716) consists of six solo anthems 'Performd by the late Famous Mr. Richard Elford', and in his preface to *Musica sacra*(London, 1724) Croft singled out Elford for high praise, especially for giving 'such a due Energy and proper Emphasis to the Words of his Musick'.

OLIVE BALDWIN, THELMA WILSON

Elgar, Sir **Edward (William)** (*b* Broadheath, nr Worcester, 2 June 1857; *d* Worcester, 23 Feb 1934). English composer. His abundant invention, largeness of vision, and strength and singularity of musical character place him high among European Romantic artists and at the peak of British music of his time. He drew inspiration from the culture and landscape of his own country, resourcefulness from the study of his continental colleagues; and contributed to all the major forms except opera, creating a significant body of symphonic literature, the finest oratorio by an Englishman, and in his popular music a style of direct national appeal.

1. Early years. 2. The 1890s. 3. Fame. 4. Hereford and London. 5. Last years. 6. Works to 1899. 7. Works 1899–1907. 8. Works after 1907.

1. Early years. Elgar's father, William Henry Elgar (1821–1906), a Dover man, was apprenticed to a London music firm, and then in 1841 settled in Worcester, establishing a piano-tuning round and in 1863 opening a music shop. Among his early clients was the dowager queen Adelaide, and through this appointment W.H. Elgar came to tune the instruments of the local county families. Though a Protestant, he was engaged in 1846 as organist of St George's Roman Catholic Church, Worcester, and, a handy violinist and pianist as well, quickly became an influence in the city's musical life. In 1848 he married Ann Greening (1822–1902), a country woman from the nearby village of Claines, with a taste and inclination for the arts.

Edward, the fourth of their seven (possibly eight) children, was born in the country cottage where the Elgars briefly lived (1856–9), and his formative years were spent in Worcester, from 1863 over the shop, Elgar Bros., at 10 High Street. But he was sent back to Broadheath for holidays at a farm, and the hamlet – its beauty, isolation, and view of the Malvern Hills – took hold of his imagination. That he alone of the Elgars' children was born there must early have set him apart. At about the age of ten he composed music for a family play on which he later drew for the *Wand of Youth* suites (1907, 1908) and *The Starlight Express* (1915).

His schooling was local and Catholic, first at a dame school, then just outside Worcester at Spetchley Park and (from 1868) at Littleton House. At 15 he had to earn his living, and worked in a solicitor's office (1872–3). He won praise as a child for his piano improvisations, but he had no formal training in music beyond violin lessons from a Worcester teacher and, in 1877 and 1878, from Adolf Pollitzer on brief visits to London. He absorbed what he could, in his father's shop and organ loft, in the cathedral services and in the city's music societies. Plans for studying at the Leipzig Conservatory foundered for lack of means. At 16 he left business and became, for the rest of his life, a freelance musician, never again holding a regular secure post.

There was plenty of local work. He became assistant, then successor (1885–9), to his father as organist of St George's. As a violinist his name appeared regularly from 1873. He was leader of the Worcester Amateur Instrumental Society (1877) and the Worcester Philharmonic (1879), accompanied then conducted (1879) the Glee Club, played the bassoon in a wind quintet (with two flutes and no horn), and became 'composer in ordinary' to the County Lunatic Asylum at Powick, coaching and conducting the staff (1879–84). He also established a violin-teaching practice. There was more music-making in Worcester than in many a comparable English city, for with Hereford and Gloucester it was host once every three years to the Three Choirs Festival, which involved the townspeople as well as the Anglican cathedral choirs. Elgar played in the violins for the Worcester festivals of 1878 (in the seconds), 1881 (in the firsts) and 1884 (under Dvořák), and in subsequent festivals until 1893. He became conductor of the Worcester Amateur Instrumental Society (1882–9) and in 1882 took his first regular job outside his city as a violinist in W.C. Stockley's orchestra at Birmingham. There, on 13 December 1883, Stockley performed Elgar's *Intermezzo: Sérénade moresque*. On 1 May 1884 the Worcester Philharmonic Society under William Done, the cathedral organist, gave his *Sevillana*; Elgar had shown the score to Pollitzer, who brought about a London performance under August Manns at the Crystal Palace on 12 May 1884. From the late 1870s Elgar made regular day-trips from Worcester to London: in 1883 he was at Manns's memorial concert for Wagner; in 1884 he heard Richter conduct Schumann's and Brahms's third symphonies; and in 1886 he attended an all-Liszt concert, in Liszt's presence.

Such all-round activity would have satisfied and supported many a young musician. But Elgar, who had relinquished the idea of becoming a concert violinist, had been composing all the time, in moments snatched between travelling, or at the end of a day's teaching – and he was not robust. Original music exists for choir, orchestra, wind quintet, and string ensembles, and also arrangements and exercises. His school was the sharp one of performance; if he lacked guidance, he suffered no false influence; and he acquired craft and speed. Though some of the early music is personal, none is exceptional, and Elgar must have been sustained at this time by an inward sense of power. In his private life he had suffered rebuffs. Helen Weaver, the daughter of a tradesman in his own street, was studying music in Leipzig, where Elgar joined her and her friend Edith Groveham for a fortnight's holiday, packed with concert-going, early in 1883. That summer they were engaged; but it came to nothing – unless some of Elgar's later music enshrined his love. He may have met with other refusals. In 1889 he found a partner to share his belief in himself. He had extended his teaching to Malvern, and there in 1886 Caroline Alice Roberts came to him as a piano pupil. She was a person of some consequence, the daughter of Major-General Sir Henry Gee Roberts, KCB. She had been born in India (on 9 October 1848) and, when she met Elgar, was living

with her widowed mother at Redmarley d'Abitot. She had accomplishments a little beyond those of the traditional daughter-at-home: she had published a novel, had a facility for verse, knew German, and sang in a choir. In Elgar she saw a slight, dark, youngish man, whose aloof manner could not hide his nervous sensibility and his dissatisfaction with his manner of life. She was prepared to take instruction in the Catholic faith – Elgar was born a Catholic, his mother having in 1852 entered the Church her husband served as organist. Edward and Alice were married quietly, in a side-chapel at Brompton Oratory, London, on 8 May 1889 (fig.1).

2. THE 1890S. Resigning most of his Midlands appointments, Elgar moved to London, first to a rented house, then to a borrowed house in Norwood, close by the Crystal Palace, where he was able to hear the enterprising programmes August Manns conducted there. Elgar is reckoned of provincial origin, but Alice gave him the independence to absorb the most recent music the capital could offer. In March 1890 they moved to 51 Avonmore Road, West Kensington, and in August their only child, Carice, was born. Elgar strove to establish himself. Some small pieces were in print, and he sold more, including *Salut d'amour* – for years his most frequently played piece – for only a few guineas (though later his publisher Schott paid him a fair royalty). Manns conducted the orchestral version on 11 November 1889, and the Suite in D the following February. Elgar secured no further London performances, and no pupils came. His disappointment was acute. But he composed there his first major work, the assured and uninhibited *Froissart*, in response to an invitation from the Three Choirs Festival, and conducted it in the Worcester Public Hall on 10 September 1890. London did not take it up, and after a cold, hard winter the Elgars retreated; in June 1891 they took a house, Forli, in Malvern, and Elgar resumed his old activities.

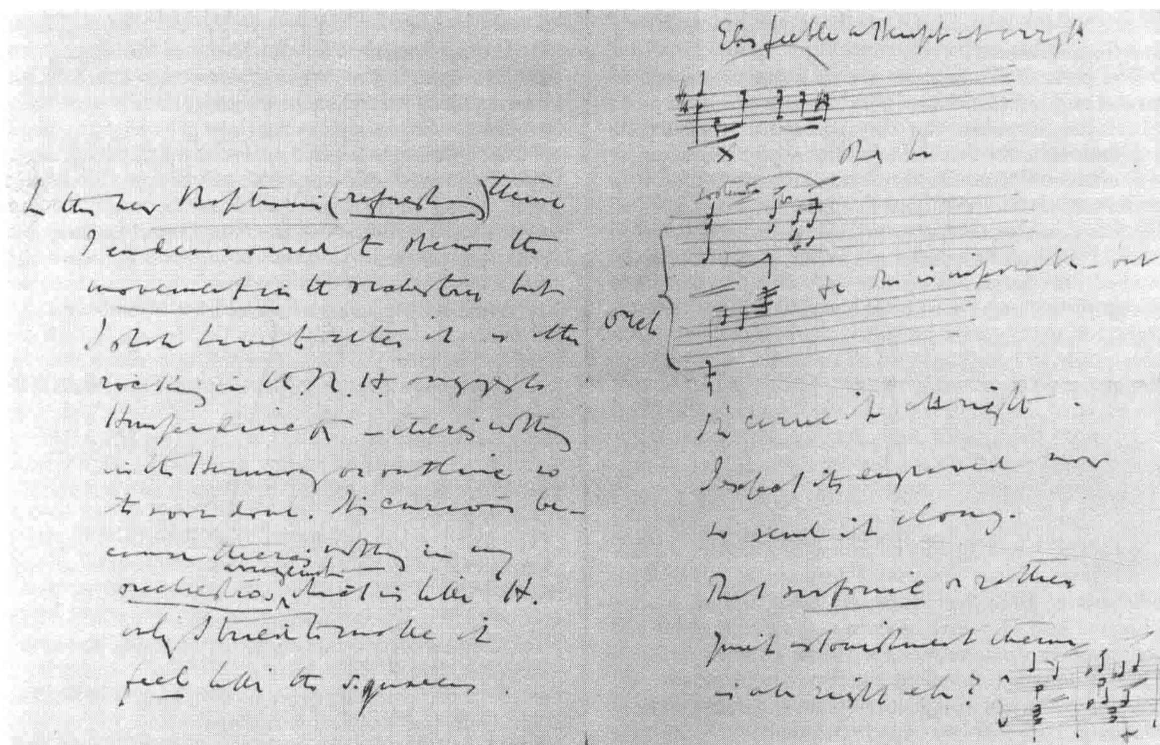
1. Edward Elgar and his wife, Alice, c1891

It was, to his mind, defeat: some humiliation was bound to be felt by a composer who had made a bid for London and had had to fall back on Kapellmeisterish jobs in the provinces. But Elgar had other reasons to feel an outsider. He was a Catholic in a staunchly Protestant community. Though from early days he had cherished the Romantic belief that the artist was a visionary and a man apart, his neighbours knew him as a shopkeeper's son; and to be in trade, according to the rigid class structure of the time, was to be unacceptable. He had made his position the more equivocal by marrying above him, taking a wife conscious of niceties of convention which meant little to him. He disliked any work other than composing – teaching, he once said, was in general like turning a grindstone with a dislocated shoulder – yet few composers have been able to live without uncongenial supplementary work. Elgar felt his divided position keenly. By temperament volatile, proud and shy, he developed during these years a tendency to severe and exaggerated depressions, masked by a manner sometimes jocular, sometimes touchy. At the time of Queen Victoria's Diamond Jubilee in 1897, when he was a national figure, he sent a card on the morning of a formal luncheon party which he had previously accepted: 'You would not wish your board to be disgraced by the presence of a piano-tuner's son and his wife'.

That was an extreme moment. His happier nature, and the trust and tenderness between him and his wife, are revealed at the centre of his existence, on his autograph scores and sketches. There is a skeleton draft of *The Black Knight* signed 'Alice and E. Elgar, Aug: 29, 1889', three months after their marriage; and 'Braut' (as he had called Helen Weaver, and now called Alice) occurs in many such jottings as 'Braut helped a great deal to make these little tunes' or 'Mrs Edward Elgar begs to say that these pens are infinitely too good for a wicked Braut'.

During the 1890s his achievement and reputation in the provinces grew steadily. The overture *Froissart* had been accepted by the London publishers Novello, who specialized in the cantatas then popular at provincial festivals. Elgar now turned his attention to that market. *The Black Knight* was completed, and produced on 18 April 1893 by the Worcester Festival Choral Society. 1896 saw the first performances of his oratorio *The Light of Life (Lux Christi)* at the Worcester Three Choirs Festival on 18 September, and of *Scenes from the Saga of King Olaf* during the North Staffordshire Festival at Hanley on 30 October. The acclaim won by *Olaf* was such that the work was repeated at the Crystal Palace on 3 April 1897; and Elgar's *Imperial March*, composed for the Jubilee, was performed there on 19 April 1897; Queen Victoria accepted the dedication of a commission for the Leeds Festival, the large-scale cantata *Caractacus*, which Elgar conducted on 5 October 1898. From the start he was involved in the production of his music, and performances increasingly took him to London and to the regional centres. In 1897 the Worcestershire Philharmonic Society was formed, as recognition of his growing status (though he was still teaching), and this he conducted until 1904, introducing works by composers he was now meeting professionally, such as Bantock, Cowen, Walford Davies, Mackenzie, Parry, Stanford and Sullivan, as well

as playing the classics and much contemporary French and German music.



The plots of the cantatas are historical romances, at several removes from Elgar's life (though each has a point of self-identification). But they show clearly that, if he was looking to the British festival for their promotion, he was also looking across the channel for matters of style and vocabulary. In 1892 a friend took the Elgars to Germany, where they returned five times for holidays until 1902; there he heard much Wagner, and at home he studied and performed other composers' scores, from Weber to Gounod. When, after Elgar's death, the cantatas went for many years unheard, there was speculation about how he had developed so suddenly as to produce *Enigma* and *Gerontius*. It was not sudden at all. Some of his music of the 1890s is trite or overblown, a good deal is no more than picturesque, but the proximity of the masterpieces is to be heard at every other turn. Released from words altogether into an orchestral variation set, or disciplined by fine words on a subject both personal and universal, he found the freedom and the pressure he needed.

3. FAME. The Variations on an Original Theme ('Enigma') op.36 were begun 'in a spirit of humour and continued in deep seriousness', Elgar recalled in 1911. They acquired a threefold interest. Quite simply, the music is the most distinguished British orchestral work to that date. Then there was the entertainment of identifying the friend 'pictured within' each variation: the genesis of the work had been Elgar's improvising at the piano on one theme in the manner of a dozen friends, all met during the preceding weeks. Their identities quickly became known and were found to include G.R. Sinclair (the organist of Hereford Cathedral); 'Nimrod' (A.J. Jaeger, publishing office manager at Novello); Worcestershire friends, some of them amateur musicians, some not (an author, a country squire, an architect); Alice Elgar (the first variation) and Elgar himself (the last). But this was still not the solution of the 'enigma' which has teased musicians ever since. Elgar wrote: 'The Enigma I will not explain – its "dark saying" must be left unguessed . . . further, through and over the whole set another and larger theme "goes", but is not played'. (The second tune, which may or may not exist, has often been sought, but never convincingly found.) His wife and Jaeger are thought to have been the only people who knew the secret. In the early years Elgar seemed to want it guessed, but later he avoided the subject. In letters of the time he spoke always of 'my Variations', and, though the work is now known as the *Enigma Variations*, 'enigma' applies to the theme only, and was added in pencil in Jaeger's hand to the autograph. At the end of the score Elgar set words adapted from Tasso: 'Bramo assai, poco spero, nulla chieggio' ('I long for much, I hope for little, I ask for nothing'), and in *The Music Makers* (1912) he quoted the music of the theme to symbolize the loneliness of the creative artist.

The Variations brought him to national prominence on their first performance by Hans Richter at St James's Hall, London, on 19 June 1899. That autumn Clara Butt introduced his orchestral song cycle *Sea Pictures* at the Norwich Festival. By then he was considering a commission, offered on the strength of *Caractacus*, for the major choral work for the Birmingham Triennial Festival of 1900. As if to emphasize and fully to face one element in his isolation, he chose as his text the greater part of the outstanding English Catholic poem of the day, John Henry Newman's *The Dream of Gerontius* (1866). It had meant so much to him that, even before their engagement, he and Alice had marked in their copies passages that had sustained General Gordon during the Khartoum siege. Elgar began work early in 1900. His progress is vividly, searingly told in the letters exchanged between him and Jaeger (1860–1909), who since 1897 had become his champion, confidant and, on occasion, critic. (It was he who persuaded Elgar to lengthen the finale of the Variations, and to compose music for the moment when the Soul sees God in *Gerontius*.) In letters full of the hilarious 'enharmonic' puns and phonetic misspellings he loved, decorated with lively pen-and-ink drawings, Elgar poured out in an unselfconscious torrent his practical directions for the printing of his music (fig.2), his teasing warmth to his friend, his joy in creation, in his own powers, in matching himself to his great subject; and his humility to his God.

The first performance of *The Dream of Gerontius* on 3 October 1900 fell short of the work. There were several reasons: the chorus master had died during the preparation; the complexity and strangeness of the idiom had been underestimated; there was only one full score, the autograph, which Hans Richter first saw only ten days before the performance; Elgar's overwrought tactlessness at the combined rehearsal caused resentment; Richter was unable to prevent the chorus from sounding apprehensive and losing pitch; and the soloists, Edward Lloyd, Plunket Greene and Marie Brema, were not ideally cast. Though many musicians grasped the work's stature, to most of the audience it was a comparative failure. Elgar's bitter disappointment burst out: 'I always said God was against art . . . I have allowed my heart to open once – it is now shut against every religious feeling and every soft, gentle impulse for ever'. But quickly he was disclaiming the depths of his feeling, attributing his depression to other causes, protesting his interest in golf: adopting a defensive mask.

Cockaigne (In London Town), the 'healthy, humorous' overture first performed under him on 20 June 1901 in London, and dedicated to 'my many friends, the Members of British Orchestras', showed every sign of cheerfulness. But Elgar's autographs often reveal more than his printed scores, and that of *Cockaigne* bears a quotation from Langland's *Piers Plowman*: 'Meteless & moneless on Malverne hilles'. Elgar confided to Jaeger in December 1898 that he needed £300 a year, and that year had earned only £200. As a reward for *Gerontius* the Elgars had to go without fires. Novello were not markedly generous, and Elgar held it against them that in the 1890s they printed only vocal, not full scores, which did not encourage performances: orchestral scores of *King Olaf* and *Caractacus* were not published until 1905. For a short time in 1899 he changed to Boosey & Co. (fig.3). That year the Elgars had moved to a slightly larger house, Craeg Lea (E.A.C. Elgar in anagram), at Malvern Wells, and between 1898 and 1904 they rented a summer cottage, Birchwood Lodge, in thick woods on the north slopes of the Malvern Hills, which gave Elgar the informal life he so much needed. (His love of the country was down-to-earth and intense.) But in autumn 1900 he was talking, with perhaps not much exaggeration, of having to take up a trade, and in 1904 even of teaching the violin

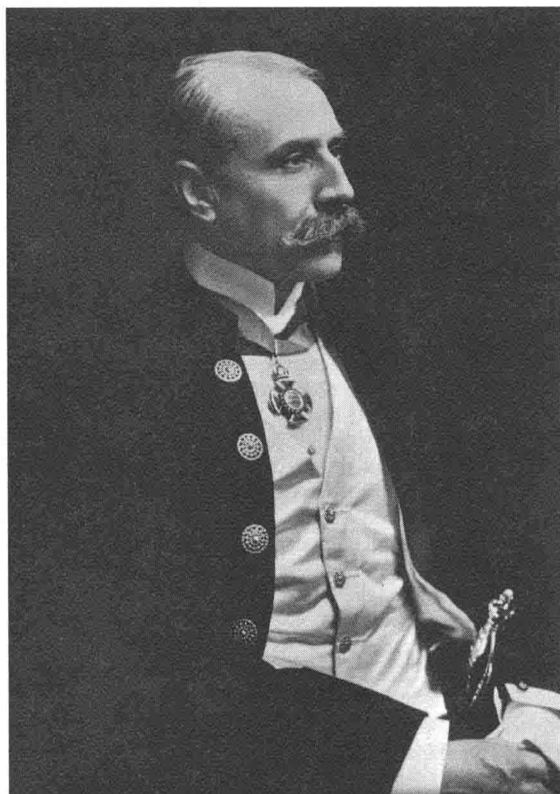
2. Part of an autograph letter (dated 7 July 1906) from Elgar to Jaeger, referring to the reduction to vocal score of a passage ('The Sign of Healing') from 'The Kingdom' (Elgar Birthplace, Lower Broadheath)

again. He had since 1898 been wanting to compose a symphony inspired by General Gordon's heroism and religious zeal; he had even offered it for the 1899 Three Choirs Festival, but then he withdrew it. By 1904, asking where the money would come from while he composed such symphonies and chamber music, he was showing some cynicism – unless, again, he was masking a deeper unease.

Yet by now he was famous. In recognition of the Variations the University of Cambridge conferred an honorary doctorate on him in November 1900, the first of many such British and foreign honours. At Jaeger's persuasion, prominent German musicians had attended the première of *Gerontius* and had been so impressed that performances followed under Julius Buths at Düsseldorf in December 1901 and again at the Lower Rhine Festival, in May 1902 (when Muriel Foster sang the Angel's role). Elgar, present and much lauded, was hailed by Richard Strauss as the 'first English progressivist'. On the continent Weingartner, Steinbach, Busoni and Colonne, among others, began to show interest. However the second English performance (without the difficult Demons' Chorus) was given by Elgar's own Worcestershire Philharmonic Society on 9 May 1901. After it, Elgar particularly asked that the *Musical Times* report should record favourably the first performance in the same concert of a piece by John Austin, the orchestra's leader; if he was touchy about his own feelings, he was also alive to those of others. Performances of *Gerontius* at the 1902 Worcester Three Choirs Festival, and in Sheffield, Manchester, Hanley, Chicago and New York, came before the first in London, in the Catholic Westminster Cathedral (as yet unconsecrated) on 6 June 1903. The first two *Pomp and Circumstance* marches had carried a broader appeal, and the trio melody from no.1, re-used in the *Coronation Ode* of 1902 for Edward VII, began to gain worldwide celebrity to A.C. Benson's words as 'Land of Hope and Glory'.

4. Hereford and London. As a boy Elgar had been struck by his schoolmaster's comment that Christ's apostles, before their calling, had been unremarkable men, and he planned a sequence of three oratorios illustrating their training and the work of the early church. Sustained effort on the first, *The Apostles*, which he conducted at Birmingham on 14 October 1903, exhausted him, and, though this time the performance was a complete success, the ailments of stress that he succumbed to for most of his life – eye weakness, indigestion, throat trouble – became overwhelming. The Elgars wintered in 1903–4 in Italy, which then became, as Bavaria had been in the 1890s, their favoured holiday place (they made further visits in early 1907, 1907–8, 1909 and 1913). It seems that this most English of composers was at his most relaxed abroad. The hoped-for symphony, however, eluded him, and it was his third concert overture, *In the South (Alassio)*, that became the new work at the three-day Elgar Festival, devoted entirely to his music, held at the Royal Opera House, Covent Garden, on 14–16 March 1904. Such an honour had never been accorded a living English composer.

After his wife's death in 1920 Elgar must have read through the diaries she meticulously kept throughout their marriage, for he began a précis of the most significant dates. Her first lesson with him, 6 October 1886, is there. And there are two pages of jottings for 1904: the command



3. Title-page of Elgar's 'Cockaigne (In London Town)' (London: Boosey & Co., 1901)

to dine with the king, the levée, the Festival, Elgar's election to the Athenaeum club, his knighthood, the invitation to become Peyton Professor at Birmingham, the move to a substantial house, Plas Gwyn at Hereford, and even the installation of a telephone.

Richard Peyton, a business man, endowed a chair of music at Birmingham University on the condition that Elgar should become the first professor. Reluctant in some respects, Elgar was in others gratified, for in this way he joined the academics from outside their ranks. He delivered eight lectures between March 1905 and November 1906, largely on the state of British music at the time. (They were published in 1968.) All his life he detested the world of musical commerce and held a low opinion of the taste of the British public. He allowed these feelings to show in his lectures, and he commented on the general want of fire in compositions and performances of the time. He advocated building up the University library, better training, subsidized music, and a national opera, but spoke with more common sense and courage than tact, and his remarks were given wide and controversial publicity. When, talking of Brahms's Third Symphony, he championed absolute music, Ernest Newman demanded to know why Elgar had composed so much descriptive music. Elgar was thankful merely to recommend speakers for the next series of lectures and in 1908 to relinquish the chair to Granville Bantock. The *Introduction and Allegro* (London, 8 March 1905), the sequel to *The Apostles* called *The Kingdom* (Birmingham, 3 October 1906), and the First Symphony (conducted by Richter, Manchester, 3 December 1908) constituted his real work in his first years at Plas Gwyn. The symphony in particular was acclaimed; there were over 80 performances in its first year, in cities as far apart as Vienna, St Petersburg, Leipzig and New York.

The *Introduction and Allegro* was dedicated to S.S. Sanford, professor at Yale University. Elgar visited America in 1905, to accept a Yale doctorate, and to conduct his music in 1906, 1907 and 1911. Elgar's dedications merit attention: they include 'the greater glory of God' (the prime religious works), Hans Richter (First Symphony), the memory of Edward VII (Second Symphony), the music critic Ernest Newman (the Piano Quintet); colleagues such as Landon Ronald (*Falstaff*);

cultivated men of substance who delighted in furthering his career, such as Alfred Rodewald in Liverpool, Nicholas Kilburn in Bishop Auckland, Edward Speyer and Frank Schuster near London; and later in life men of letters, Sir Sidney Colvin (Cello Concerto) and George Bernard Shaw (*Severn Suite*). The Violin Concerto is dedicated to Kreisler, who gave its first performance in London on 10 November 1910. The man closely involved in the violin technicalities of its composition, however, was W.H. Reed, a member of the LSO and its leader from 1912, whose kindly, admiring memoir of Elgar (B1936) is an important source of first-hand memories, joining those which cover the earlier Malvern days by 'Dorabella' (Powell, B1937), the tenth 'Enigma' variation, and Rosa Burley (B1972), headmistress of the Malvern school where Elgar taught. Each book tells much about its author as well as about its subject who, as he passed into his 50s, presented an increasingly complex face. Soon after the première of *Pomp and Circumstance* no.1, Ernest Newman perceived Elgar as a 'self-divided and secretly unhappy man'. The pressure of completing *The Kingdom* taxed his faith and his resilience: he repeatedly spoke of ending his life. Honestly rejoicing in the Order of Merit bestowed on him in 1911 (fig.4), he was to the public gaze a figure of military bearing with something of the bluff country squire. Yet in his creative self-examination he needed to re-enter his childhood (the *Wand of Youth* suites), in his letters he could exult in the 'emotionalism' of his music on the one hand, and on the other curse the providence that gave him gifts; and, while defending his right to privacy, he invited speculation by publishing 'enigmas'.

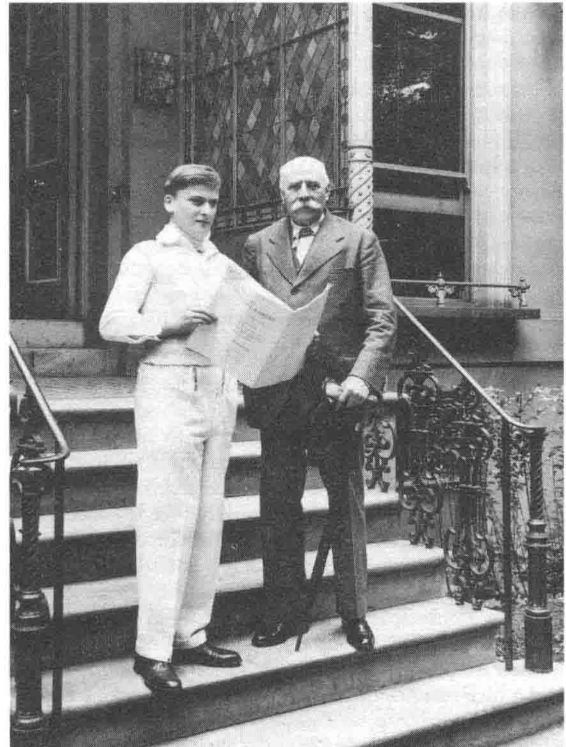
4. Elgar wearing the insignia of the Order of Merit, 1911

The Violin Concerto of 1910 bears a quotation, with five dots instead of the final name, 'Aquí está encerrada el alma de .....' from the preface of Le Sage's novel *Gil Blas*. The 'soul enshrined' in this intimate, regretful music could be that of Helen Weaver; of an American friend, Julia Worthington; of an English friend, Alice Stuart Wortley; of the violin; or of Elgar himself. As with all Elgar's riddles, the answer may be allegorical, and yield most when it is pressed least. His music draws deeply on private sources and allusions, and in that sense, as in others, is as romantic as any composed. 'Music is in the air', he said in the 1890s, 'you simply take as much as you require!'; and in 1908 he described his First Symphony as 'a composer's outlook on life'. In retirement he refused to write his autobiography; in a way, he had already written it through his music.

Around the time of the Violin Concerto it seems probable that his attachment to Alice Stuart Wortley deepened into romance. He called tender themes in the concerto by his private name for her, 'Windflower', and for some years she was his musical confidante, receiving sketches as they were composed. Five years younger than he, she was a woman of grace and sensibility, a daughter of the painter Millais, and a talented amateur pianist. Her husband was Conservative MP for a Sheffield constituency and was made a peer in 1916. All four people concerned were loyal and circumspect, and if indeed there was a flame between the composer and his other Alice, its fire was surely creative. After the deaths of her husband and his wife, there remained between them a warm bond of affection. Most of her letters to him, and some of his to her, were destroyed.

The last major work composed in Hereford was the Second Symphony, first performed under Elgar in London on 24 May 1911. By 1912 the Elgars were living in London; this time, their move to the capital was to the imposing Severn House, in Hampstead, built by Norman Shaw. There they entertained (Lady Elgar's autograph book reads like the offspring of *Grove* and *Debrett*), and could indulge their delight in theatre-going. There Elgar composed *The Music Makers* (Birmingham, 1 October 1912) and *Falstaff* (Leeds, 1 October 1913); both are strangely autobiographical, the ode with self-quotations from earlier works, the symphonic study – for all Elgar's learned literary essay printed at the time – less Shakespearean than Elgarian. Only two London years passed before war came. 'Land of Hope and Glory' swept through the nation, and Elgar, who had reacted to the outbreak of war with a near-hysterical cry of fear for what might happen in battle to horses, let alone the men, begged for new, less swaggering words to his tune; but he quickly realized that the public was in no mood to want them. Musically, the war took Elgar further (after *The Crown of India* of 1912) into theatrical ground with *Carillon* and other dramatic recitations, incidental music (*The Starlight Express*) and ballet (*The Sanguine Fan*). Elgar loved the theatre, plays and opera, and was a frequent visitor to Covent Garden. In 1902–3 he went some way towards composing a ballet on the subject of Rabelais – a project enthusiastically accepted by the Grand Opera Syndicate – but then he dropped the idea. Had he really wanted to compose an opera, it would surely have been welcomed after his 1904 Covent Garden Festival. Hardy's *The Dynasts* and *The Pilgrim's Progress* were among the many suggestions made to him, but he complained in

1919 that the librettos offered him were nothing but 'blood and lust'. It was not until too late that he found a subject for himself.



His most enduring war music is *The Spirit of England*, three choral settings in temper far removed from the romantic patriotism of his earlier years. It has come to seem as though his 'war requiem' is the Cello Concerto, composed, with the chamber music, under the stimulus of Brinkwells (1917–21), an isolated Sussex cottage in the woods, the Birchwood of his later composing days. The String Quartet and Piano Quintet had their first public performance at the Wigmore Hall, London, on 21 May 1919, and Felix Salmond introduced the Cello Concerto (though Beatrice Harrison soon became more closely associated with it) at the Queen's Hall on 27 October 1919. It was the last first performance that Lady Elgar attended.

It was in fact the last first performance of any major Elgar work. Alice Elgar, who had been failing for some months, died on 7 April 1920, and with her died a part of Elgar's creativity. In an attempt to understand this, one might consider what had first drawn the young struggling music teacher, of high aspiration, to propose to a tiny lady of gentle manners, strong in will and spirit: his pupil in music, his teacher in ways of the world, and some eight years older than him. The piety and idealism of Elgar's mother had bred in him a distrust of 'modern young women' (his phrase to Jaeger in 1898), and in Alice he found someone to cherish and revere. As the years passed and his stature grew, the nature of their bond might have changed, and it is hard to know with quite what feelings of grief, abandonment, guilt, and defensiveness he may have reacted to her death. So he went out into the world alone once more – 'only I am disillusioned and old'.

5. Last years. With the help of his daughter, Carice, Elgar set about selling Severn House, and in 1921 he moved into a London flat. In 1923 he surprised everyone by taking a cruise up the Amazon, returning excited by the opera houses he had seen. Then that year he went back to his roots, taking houses near Worcester and in Stratford-upon-Avon until in 1929 he moved into his final home, Marl Bank, in Worcester. His interest in horse-racing, in his dogs, in the good life, had now taken the place of such pastimes as golf, kite-flying, chemistry and heraldry, in which he had before found recreation and which may have been useful for staving off untimely inquiries. Some could discern neither the poet nor the dreamer in this courtly man, his hair and moustache now white, his high nose more pronounced – a Master of the King's Music (1924) who brushed aside talk of music, affecting ignorance of it. Others, recognizing that the musical and moral values of his world had given way to newer, sharper attitudes, understood his reluctance to commit himself to composition, and his haunting fear that the day of his music was done.

In 1930 E.J. Dent's article on modern English music in Adler's *Handbuch der Musikgeschichte* provoked controversy. (The article appeared in the first edition of 1924, but attracted notice in England only after the 1930 edition.) Dent wrote dismissively that 'for English ears Elgar's music is too emotional and not quite free from vulgarity'. Peter Warlock gathered senior musicians, together with Augustus John and George Bernard Shaw, to write to leading English and German newspapers in Elgar's defence. Though the young BBC consistently broadcast his music, it was true that in British concert halls and on the Continent Elgar was less played than before the war. He found comfort and companionship with his Worcester relations and with such lifelong colleagues as the cathedral organist Ivor Atkins, whose son Wulstan's account of that friendship (A1984) is a valuable supplement to the earlier first-hand memoirs. And as late as 1931 Elgar formed a touching attachment with a young woman violinist, Vera Hockman, who found in him 'a gorgeous medley of Michelangelesque grand faults and virtues' and who briefly became for the aging composer 'my mother, my child, my lover and my friend'.

Some theatre music, suites and arrangements date from his retirement, but possibly his most valuable work lay in the recording studio. Fred Gaisberg of the Gramophone Company had the foresight to engage Elgar in conducting the bulk of his instrumental music. From the acoustic records of 1914 to the last electric records of 1933, Elgar wholeheartedly cooperated, and the result is a superb series, unrivalled in documentary significance, of early composer-conductor recordings (all eventually reissued). After the Worcestershire Philharmonic days and an LSO engagement for the 1911–12 season, Elgar only occasionally conducted other composers' music; in his own he was unmatched for eloquence, vitality and justness of proportion. With the 16-year-old Menuhin he recorded the Violin Concerto in 1932 (fig.5), and the following year they performed it together in Paris; Elgar visited Delius at Grez-sur-Loing, and the two elderly composers talked of music, books and gardens. In 1931 Elgar was created 1st Baronet of Broadheath. A brief film was made that year of him conducting (see the vivid series of stills, Moore,

5. Elgar with Yehudi Menuhin, with whom he recorded the Violin Concerto in 1932

A1974; and the television programmes *Hope and Glory*, 1984, and *Elgar: Masterworks*, 1999), and this includes his speaking a few sentences; his voice was also recorded during a rehearsal, and he can be heard playing the piano in five 'improvisations' (1929). Neither the bust by P. Hedley in the National Portrait Gallery nor the portrait by Philip Burne-Jones in Worcester Guildhall is thought to do him justice, but, besides many occasional snapshots, there exist fine studio photographs (see Moore, A1972). In 1901, the year after *Gerontius*, he measured 5' 9½" and weighed 10 stone 6 lb.

Elgar in his seventies was still being urged to complete the oratorio trilogy, but whether because of his deflection after 1906 to symphonic literature or because of spiritual disillusion, *The Last Judgement* was not to be. Bernard Shaw had a part in what appeared at last to be a resurgence of power. Their sparkling friendship revived Elgar's interest in opera, and Sir Barry Jackson, the director of the Malvern Festival, was drawn into helping him extract a libretto for *The Spanish Lady* from Ben Jonson's *The Devil is an Ass*. Then in 1932 the BBC, prompted by Shaw and others, commissioned a Third Symphony. Elgar's frequent grumbles that his music was unwanted had led people to suppose that it was part written. Work on both opera and symphony progressed fast, and sketches accumulated, but in autumn 1933 an operation revealed that the sciatic pain from which he suffered was caused by a malignant tumour. In November Elgar appeared to be sinking. Carice sent for Reed, who gave Elgar the assurance he pleaded for that no-one should 'tinker' with the incomplete symphony. He rallied enough to return home, to listen in his last weeks to his own records, even to supervise by post office circuit a final recording session in London. His thoughts returned longingly to his early days beside his beloved river Teme, where he had wished to be buried. He died, after being given the last sacrament, on 23 February 1934.

He was laid beside his wife in the place she had chosen, St Wulstan's Church, Little Malvern, and is commemorated by a window based on *The Dream of Gerontius* in Worcester Cathedral (1935) and a tablet in Westminster Abbey (1972). From their earliest days Elgar's wife preserved letters, press cuttings, manuscript sketches and autographs: the Elgar archives are among the richest of any composer. In 1938 the cottage at Broadheath where he was born was opened as a museum (and expanded during the 1990s) to illustrate his home, his fame and his work.

6. Works to 1899. Elgar began composing before he understood notation, and his phrase 'music is in the air' takes literal and imaginative force with his attempt to write down the singing of the reeds by the river. As a youth he invented copiously, and he returned all his life for themes and inspiration to his early sketchbooks. They hold, for an untrained boy of his period, some adventurous fragments. The suave, devotional style of his early church pieces may be partly derived from the music of the Catholic Emancipation movement familiar to him in his own church. Violin and piano romances, written for himself as composer-performer, have grace and fluency and a nice balance of sentiment and display – one reason for the popularity of *Salut d'amour*, apart from its endearing tune, may be that it is easier than most of his pieces to play. The wind quintet music (1878–81) is remarkable for his thorough and stylish investigation of classical sonata forms along the lines of Haydn, Schubert and Mendelssohn, and for the young man's relish for his craft. The Powick Asylum orchestra music often shows the Elgarian turn of phrase. *Sevillana* (1884), too, reveals Elgar's personal sonority, and his love of sliding in a new counter-melody under a repeat; he often mined a colourful Spanish vein though he never visited that country. In *Ecce sacerdos magnus* (1888) his grand processional note first sounds.

At the age of 32, Elgar had composed nothing of sustained originality, and his self-trust in moving to London is the more astonishing. If he had little to offer the capital, he had much to gather. In July 1889 he went three times to *Die Meistersinger* at Covent Garden. From October 1889 to March 1890 he attended the Crystal Palace concerts, day after day, hearing Weber overtures, Meyerbeer selections, Gounod and Massenet, Mendelssohn, Schumann and Brahms, Liszt (*Les préludes*), Berlioz (*Benvenuto Cellini* overture) and Wagner (excerpts, from *Rienzi* to *Die Walküre*). On 6 April 1890 he began composing his concert overture *Froissart*, and though there are plainly responses to what he had heard, his intensive course of self-education had released his own personality. 'When Chivalry lifted up her lance on high' from Keats is quoted on the score; Elgar's lance was lifted too. The brilliant opening gesture, the generous cut of the melodies, the long, dying string cadence before the tender clarinet tune, the romantic-bravura atmosphere are as much of Elgar as moments in the development are of *Fingal's Cave* and *Der fliegende Holländer*.

The Serenade for strings, composed in 1892 but probably worked from the lost 1888 pieces, is slighter, but its slow movement is the first of Elgar's many with a commandingly sculptured melody held in a diatonic but tense harmonic relationship. A similar tune forms *Sursum corda*, though this relies more weakly on rhythmic sequences, more strongly on the aural imagination of timpani rolls and brass calling through a rich texture; the climax has a feverish, *Gerontius*-like quality. In happy contrast are the *Spanish Serenade* and the six choral songs *Scenes from the Bavarian Highlands*. It may have been an advantage of Elgar's provincial surroundings that he could write music as simple, pretty, and melodious as this. It was a gift he kept all his life.

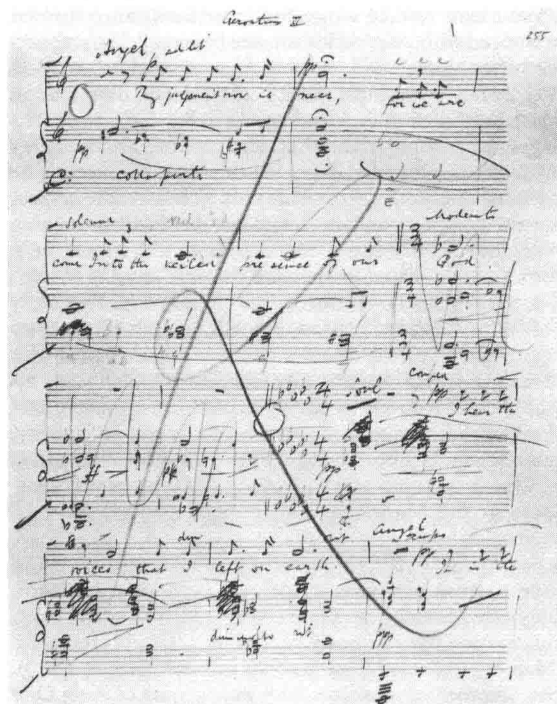
The main works of the 1890s are the substantial choral and orchestral *The Black Knight*, *The Light of Life*, *King Olaf* and *Caractacus*. Elgar's reading was wide and deep, as well as quirky, but here he chose texts which are sometimes muddled dramatically and often commonplace in style. It seems that he could ignore these liabilities if he found the emotional stimulus he needed. He certainly found strong, picturesque situations. *The Black Knight* and *King Olaf* are mainly by Longfellow, a poet he was brought up on as a child, and *Caractacus* is set on his own Malvern Hills. A further personal element may have significance: in each story there is an outsider. The Black Knight attacks the established court and castle, King Olaf takes Christianity by force to a pagan land, and the Blind Man (*Light of Life*) and the Bard (*Caractacus*) are cast out by their companions when they gain vision. Possibly without realizing it, Elgar, rejected by the metropolis, identified with these situations. That may not make the cantatas better or worse, but it does make their strengths and weaknesses more easily understood.

In performance the want of niceties in the words is only just noticeable, for on the whole the pace is strong and swift. More damaging is the curious form: a dramatic cantata that half cries out for staging but in which 'on-stage' murders, for example, have to be narrated. Elgar's talent does at points seem operatic; there is a love duet and a lover's curse in *King Olaf*, a 'resolution' trio and a thanksgiving quartet in *Caractacus*, where the voices expand and bloom. Had he been born in a continental town, he might have developed into an opera composer. But he wanted to describe *The Black Knight*, which has no soloists, as a symphony founded on the poem, and there is little doubt that his heart all this time was with the orchestra. No wonder he resented Novello's failure to print the full scores of these works: the vocal scores give scant account of both their colour and their complexity. The orchestral writing is lavish, and there is a skilful use of solo strings, of registers, of tremolo and other effects, and of expressive percussion (as in the awe-inspiring rolled cymbal in *Caractacus*).

In all four works Elgar used leitmotifs, most freely and imaginatively in *King Olaf* (1896), most intricately in *Caractacus* (1898). He claimed to have learnt the technique from Mendelssohn's *Elijah*, but in 1892 he heard *Parsifal*, *Tristan* and *Die Meistersinger* at Bayreuth, and in 1893 the complete *Ring* in Munich. He knew the difference all right between the reminiscence motif and (as he wrote in a Worcester programme note of 1898) Wagner's way of 'illustrating characters and ideas . . . in poetic and suggestive touches'. There are passages in the works from the 1890s of real 'Wagner sound', and of harmonic resources expanded by chromatic and augmented progressions. There are other influences, as wide apart as Gounod and Schumann, and though Elgar's personality is strong enough not to be subdued, in sum the works are uneven. At times the mood turns mawkish or aggressive, when the interaction of melody, harmony and rhythm can seem facile. There is some dull invention (mostly in *The Light of Life*), and some trivial (for example, the choric measure in *Caractacus*). But the best of *The Black Knight* is direct, the best of *The Light of Life* intense. Ironbeard's death in *King Olaf*, and Caractacus's 'O my warriors', reveal an Elgar capable of sombre introspection. The first five scenes of *King Olaf* are all memorable, with a young man's athletic vigour; there are grand, rolling passages anticipating the symphonies: both choral ballads go with a swing. *Caractacus*, though more ambitious, is stiffer, but the control of pace over certain spans – the long diminuendo of hope dying into the Lament, for instance – is Elgar at his best. The organ sonata of 1895 shares the harmonic and melodic world of the choral works; demanding but rewarding to play, it is important in the English romantic organ repertory, and significant in Elgar's output as his first quasi-symphonic piece. The 1890s works can still be heard with enjoyment; if the inspiration in them is fitful, their energy and eloquent melodies are irresistible.

7. WORKS 1899–1907. Whatever the 'enigma' of the Variations on an Original Theme (1899), one puzzle is how Elgar should in the year 1898–9 have so shrewdly diagnosed his need, after the loosely narrative choral works, for the discipline of variations. (The work was not commissioned, and does not seem to have been prompted by Parry's Symphonic Variations of 1897 or by Brahms's Variations on a Theme by Haydn which he heard in September 1898.) Concentration on short, separate pieces, on drawing variety from a single source, defined Elgar's style and enlarged his powers. The work was his self-discovery: after trying on 13 personalities over his theme, in the 14th variation he 'came to himself'. Each is a delicious character-piece capturing Elgar's feelings about 'C.A.E.', 'Nimrod', 'Dorabella', 'B.G.N.' and the other friends. His sureness of voice matches his technical skill. The variations are motivic, and do not necessarily retrace the theme's harmonic ground-plan. The work is also impressive as an absolute structure. The G minor–major–minor theme's ending on a major chord implies more contrast of tonality than in fact there is, though variations 5–7 move to C major-minor, and 'Nimrod', the Adagio core of the work, drops with serious, intimate effect from a single sustained G to the key of E♭. 'Nimrod' is among Elgar's most impassioned utterances, a great-hearted melody, the 7ths built by characteristic sequences into a magnificent long crescendo, the end suddenly deflating from *ff* to *pp* in a bar and a half – a moment of heart-catching humility. There are 'dark sayings' at points in the Variations, but in sum it is the lightly-worn skill, the spontaneity of the theme's transformations, and the natural thinking in orchestral terms that give the work its lustre.

Elgar's scoring is so much a part of his composition that invention and colour seem indivisible: the thought is in the sound. At times the brilliance of his flamboyant moods has been found almost suspect. As essential, however, are his melancholy chording for clarinets, bassoons and horns; his string textures which sometimes allow a tune to take wing, and sometimes simply hold it in tranced stillness; and his sombre brass calls. His repeats are often intensified, with a new thread of melody (Larghetto, Symphony no.2), or a fresh illumination ('C.A.E.', *Enigma*) or withdrawal ('R.P.A.', *Enigma*). His pages look fuller than they sound, for, although his orchestra is generally large, his doubling is selective; he gives the doubling instruments only a chosen note or two, not the complete melody. That has the effect of making even his most assured tunes sound not wholly self-confident, presented as they are through shifting sonorities. Sometimes he reinforces the rhythm (opening of *In the South*); or adds delicate points of colour (Symphony no.1, figure 66); or doubles just the highest notes of a phrase (*Enigma* theme). Elgar in fact phrased with his whole orchestra. He probably learnt this colouring and clarifying technique from French composers – Chabrier, Saint-Saëns, Delibes – whose music he chose to conduct at Worcester (on a trip to Paris in 1880 he heard Saint-Saëns at the Madeleine, and bought a piano score of Delibes' *Sylvia*).



Sea Pictures (1899), an orchestral cycle of five songs, have a sense of commitment and expanding horizons. 'Sabbath Morning at Sea' is very nearly a great song, anticipating the solemnity of Mahler's 'Um Mitternacht' (Mahler conducted Elgar's songs in New York in 1910). 'Sea Slumber Song' shares with the opening of *King Olaf* and the *Enigma* 'Romanza' an atmosphere of distance and wonder. The final song, 'The Swimmer', though awkwardly strenuous, carries great excitement.

In *The Dream of Gerontius* (1900), widely considered one of his three or four finest works, Elgar found a subject of private but universal significance. The death of an old man and his rebirth in the next world can be taken as

Christian doctrine, or as an allegory. Gerontius's predicament touched Elgar's own anxieties. His need of faith was the more urgent because of his outwardly exuberant temperament, his late self-discovery, and his near-acceptance of the materially prosperous world around him. *Gerontius* is an affirmation, yet the note of doubt and despair in Part 1 rings as true as the vision of eternity in Part 2.

Newman's poem stood for the Catholic Church's authority and for the value of revelation in an age in which questioning intellectuals were turning towards free-thinking rationalism. So for Elgar to set it was an act of courage, almost of defiance. Many of the words and phrases must have recalled the spiritual memories of childhood and of his organist days: the intercessions, the quotations from the Offices, and from Psalm xc. In coming to grips with a subject of such magnitude – treated from a viewpoint which involved his personal life and forced him to turn into an artistic asset that which had been a social drawback – Elgar created his most intense, fervent and individual score (fig.6).

Elgar stressed that Gerontius was 'a man like us and not a priest or a saint'. So this is the death of an Everyman, *l'homme moyen sensual*, about whose earthly life we learn only what is implied by the style of the music given him. The role is both taxing and grateful to sing, wide-compassed, lyrical but at times needing a Verdian drive. Elgar developed further the fluent vocal line of Olaf's Return, which moves easily between speech-rhythms and lyrical expansion. In 'Firmly I believe and truly' he casts the regular trochaic rhyming verse in triple time, skilfully playing the verbal and musical stresses against each other (sketches show how assiduously he worked at this). The bass's 'Go forth in the name' is one of Elgar's most majestic melodies; and the contralto's 'Softly and gently' one of his most compassionate. The point of extreme dissonance is reached in the solo of intercession as the Angel of The Agony recalls Christ's own death.

6. Intermediate stage in the composition of Elgar's 'The Dream of Gerontius', composed 1899–1900 (GB-Lbl Add.47902, f.255r); this page was copied in pencil and ink from an earlier sketch, with the change of octave in bars 8–10 written in red ink; the deleted passage in bars 5–7 is the 'Novissima hora est' motif, and the placing of the Soul's entry over the 'Proficiscere' chords was later modified; the large K (in red crayon) stands for 'Koppied'

Gerontius is through-composed with a break only between the two parts. During the whole of part 1, however often the moods and tempos change, the concentration and the architectural grasp never slacken. Many of the leitmotifs, set out in the Prelude, modulate inside their own length (partly because they are sequential), ending in ways which could lead off in different harmonic directions. This flexibility and the fluid chromaticism mirror every shudder and pang of Newman's poem. The score is the first in English choral music to raise the orchestra to equal expressive partner with the voices; but the choral writing is almost as much of an advance (though the work's weaker moments occur in the Demons' Choruses and in 'Praise to the Holiest'). Soloists, chorus, and orchestra are integrated, dovetailed in complicated and subtle ways – one reason why early performers found the work so hard.

Elgar was more artist than theologian and a few early reactions against *Gerontius* were largely against the Catholic text. But the stress on human sin, shame and guilt, and the idea of Purgatory, where the soul 'lies motionless and happy' in pain, are bound to be alien to some people, who may also find the music so intense as to be oppressive. Not only in *Gerontius*, but in many of Elgar's major works there are passages so exposed and vulnerable that while most listeners find them a welcome education in sensibility, a few flinch, as they might from elements in Franck, Liszt, Tchaikovsky and Messiaen, or from *Parsifal*.

Act 1 of *Parsifal* and Part 1 of *Gerontius* have strikingly in common their anguished chromaticism, the distant unaccompanied semi-choruses, the evocation of the liturgy in the Dresden Amen and the 'Noe' litany, and the closing ritual marches – ostinatos in *Parsifal*, pedal points in *Gerontius*. However, *Gerontius* moves more swiftly than *Parsifal*: the words are uttered faster, and Elgar's rate of harmonic change, compared with Wagner's, is lively, even restless. Many of Elgar's motifs are longer, more lyrical and self-sufficient than Wagner's. One reason for their length may be the greater part the chorus has in the concert work. *Gerontius* must also be set in the context of works like Schumann's, Liszt's, Berlioz's and Busoni's Faust music; Mahler's Second and Eighth symphonies; and, orchestrally, Strauss's *Tod und Verklärung*. The singularity of *Gerontius* lies in how surely Elgar took what he wanted from his own past and from his predecessors to form a work conditioned by his country's festival demands at the moment when his religious and his romantic fervour were perfectly matched. A fine performance is at once a lacerating and an uplifting experience. At the end of the autograph (now in the Oratory at Birmingham) he quoted from Ruskin: 'This is the best of me'; more colloquial, no less illuminating, is his comment to Jaeger: 'I've written it out of my insidest inside'.

The two linked oratorios, *The Apostles* (1903) and *The Kingdom* (1906), were begun as a single work, then

planned as the first two in a trilogy (Elgar's earliest scheme), which was to expound the schooling of the early church, the result on earth, then in the next world. Elgar compiled his own text from the Scriptures: he used the Acts of the Apostles as a synopsis, then selected words from the Old and New Testaments and the Apocrypha (Powell, E1948) to comment and allow for lyrical expansion within the narrative. In this way he hoped to achieve a non-sectarian text with authority and consistency of language. Wagner's writing of his librettos must have encouraged Elgar in this: the planned trilogy has been seen as his *Ring* – 'oratorio reviewed in the light of Wagnerian music-drama'. However, Elgar had not settled his design before he began composing: libretto and music grew together, as, working against time, he staved off his publisher's inquiries. Some have seen in this the cause of the oratorios being episodic, while others claim that Elgar deliberately wished to create a series of frescoes. The lack of an overall plan may have contributed to his failure to complete the trilogy. All the same, he designed the oratorios with some didactic thought, choosing Mary Magdalene as a sinner who repents, Judas as one who despairs. Judas is seen as a misguided zealot who attempts to force Christ into a display of supernatural power; he dominates Part 2 of *The Apostles* and his gripping monologue on the transience and hopelessness of life is ironically set against a background psalm. Elgar employs other such theatrical devices for Mary Magdalene, who becomes a spectator of Christ's walking on the water and has a flashback of her past life; in this he followed Longfellow's *Divine Tragedy*.

The Apostles and *The Kingdom* share motifs which Jaeger scrupulously docketed; whether listeners know them by name matters less than that the motifs act on the musical memory, and make allusions beyond the power of words alone. The oratorios gain greatly by being performed in sequence, as Elgar intended. More elaborate and ambitious even than *Gerontius*, they contain sublime stretches – the finest pages are ardent and mystical – but others that depend on the sanctity of the words to carry less distinguished music. *The Apostles* touches extremes of self-abasement in Mary Magdalene's music and of glory in the final chorus, when the 'ascended Lord is received by the hierarchy of heaven'. The oratorio is as progressive as anything Elgar composed: the parallel triads, whole-tone progressions and false relations, and the exoticism of the Morning Psalm, are unmatched elsewhere in his music. But there are also in both works conservative elements: the two Marys sing sensuous lines that recall Massenet, and it is easy to visualize them as pre-Raphaelite figures. For the unfinished third oratorio Elgar had composed music for Simon Magus, which at the end of his life he intended to use in his opera for another subversive character, Meercraft.

The concert overtures *Cockaigne* (1901) and *In the South* (1904), with their physical delight in energy and frank tunefulness, are to some extent programmatic – the brass bands in the earlier work, the pugnacious Roman passage in the later – and easily bear comparison with Richard Strauss, whose music Elgar did not hear until 1902. *In the South*, lasting some 18 minutes, is sunny and ebullient (the opening theme is one of several composed earlier as a 'mood' of Dan, G.R. Sinclair's bulldog; the moods are listed in Young, B1955). Elgar said he learnt to write for strings from Handel; his tribute is the *Introduction and Allegro*, for string quartet and string orchestra (1905), in which the concerto grosso is realized in Romantic terms and finally resolved in song. This intricate piece is rich and free in invention, grand and haunting in resonance. Elgar relished two and three-part counterpoint, the interplay of independent parts, and the variety of textures they afford. The fugue, which at first seems new material, is shown to be connected with the Introduction when a phrase from the bass in bars 7–8 sings out over it. Elgar's contrapuntal thinking is not a consequence of harmonic emancipation, as it was in late Mahler or early Schoenberg, but in his free Romantic polyphony he linked apparently unrelated themes in a poetic and individual manner.

Of the five military marches for symphony orchestra called *Pomp and Circumstance* (what an ear for a quotation Elgar had!), no.1, with the popularity of its big tune, has outshone the others. All are stirring, but nos.2 and 3 are in minor keys: the opening of no.2 is tonally ambiguous, of no.3 oddly suppressed, and in each horn calls rip through the Allegro. These are not unthinking celebrations of military might. Elgar's unaffected love of English ceremonial, however, and of the grand moments in Meyerbeer and Verdi, prompted him to compose marches all his life: independent pieces like these, or marches for particular occasions (*Imperial March*, 1897; *Coronation March*, 1911; *Empire March*, 1924), or as parts of longer works (*Caractacus*, *The Crown of India*). Mostly they are magnificient display pieces, apt for their time, and still of worth, if they can be listened to without nostalgia or guilt for an imperial past. The 'heroic melancholy' that Yeats found in the funeral march from *Grania and Diarmid* is that of the symphonic slow movements. Elgar's march style causes embarrassment only where it sits uneasily, as in the finales of some early choral works, or as an occasional bluster in symphonic contexts. Part of his strength, his appeal to a wide public, lies in that simplicity which enabled him to gather an open, honest emotion and cast it into a tune which has entered the national consciousness. When 'Land of Hope and Glory' is bellowed out heedlessly, it should be remembered that Elgar introduced the tune *dolce* and *pianissimo* into the *Coronation Ode* played by the orchestra alone, the voices picking up the second phrase, 'all that hearts can pray'.

As he approached 50, and the challenge of a symphony could no longer be evaded, Elgar returned to his childhood sketchbooks. The two *Wand of Youth* suites (1907 and 1908), like *Enigma*, concentrated his instrumental thinking and reached deep into the earliest stirrings of his imagination. It is this that touches off such tenderness in, say, 'Slumber scene', such fun and brightness in the scherzandos – their deft execution is a match for Bizet or Tchaikovsky. Elgar's comment in 1921 that 'as a child . . . no single person was ever kind to me' is a shocking example of how he could colour one experience with the resentment of another. In this music he knew better. He wrote very little for children to perform, but his withdrawals into the adult's world of childhood (*Dream Children*, 1902; *The Starlight Express*, 1915; the *Nursery Suite*, 1931; also often in larger works) are ravishingly beautiful, the music of a loving nature. Elgar's nostalgia, his obsession with youth and dreams, is understandable in one whose mature years were so removed from his childhood. For a sensitive man, ambition may be achieved

at the cost of continuity, so that memory, not actuality, becomes life's link.

8. Works after 1907. The two symphonies, in A♭ (1908) and E♭ (1911), rank high not only in Elgar's output but in English musical history. Both are long and powerful, without published programmes, only hints and quotations to indicate some inward drama from which they derive their vitality and eloquence. Both are based on classical form but differ from it to the extent that, compared with Brahms (then an accepted model in England), they were considered prolix and slackly constructed by some critics. Certainly the invention in them is copious; each symphony would need several dozen music examples to chart its progress.

The search for extra-musical 'meanings' should not obscure the symphonies' strengths as musical structures, as adventures in tonality, and as explorations in motivic, thematic relationships. In all Elgar's larger works, as in the *Introduction and Allegro*, themes are subtly interrelated, internal references fleetingly revealed, sometimes as late as the restatement. This kind of allusiveness, by glancing cross-references, even by a texture or a colour, is more poetic than classically symphonic. A rare example of Elgar's showing an allusion as it comes about is the metamorphosis of the theme common to the two middle movements of the First Symphony; here the likeness is candid, the transformation itself magical. The symphonic works literally need the passage of musical time, for some themes are recalled as if to uncover the significance of the past by looking back through more recent experience. Elgar's nervous instability of harmony, his sequential writing, mobile basses, avoidance of root positions and fluctuations from active to withdrawn tonal planes all propose key relationships that need time and space for their resolution. Often it is more accurate to say that a passage is in a tonal region rather than in a key. Indeed, Meikle (see Monk, C1993) argues that the first movement Allegro of the First Symphony is not, as long accepted, in D minor but in A minor – either key is startling in a Symphony in A♭. Moreover, subsequent movements begin in F♯ minor, D major and D minor. Only the fact that the motto theme is so solidly diatonic in A♭ major grounds the work tonally; even that calm, processional theme is formed by asymmetric phrase lengths, giving the 'nobilmente e semplice' less than total security.

Though Elgar has none of Bruckner's monumental patience and little of Mahler's self-parody, public familiarity with their lengthy symphonies helped to raise critical opinion – which had begun to drop in the 1920s – of Elgar's. Both in Mahler and in Elgar an emotional narrative is held together by the force and sensibility of the composer's musicianship. Elgar called his Second Symphony 'the passionate pilgrimage of a soul' as well as heading it with the Shelley quotation 'Rarely, rarely comest thou, Spirit of Delight'; vaunting themes strive to exult, but from time to time energy ebbs away, and there are unnerving glimpses of wraiths and anxieties. These assume nightmare strengths when a weird theme from the first movement batters its way into the third; the seeds of that horror are found in a passing progression in the symphony's opening phrases. The slow movement is a great elegy, not for Edward VII (though the work was dedicated to his memory) but for personal as well as ceremonial grief. The last movement opens positively, its main theme made from one repeated rhythm, an Elgarian trait found all through his music (*Falstaff*, the Cello Concerto). The symphony's final pages unforgettably mingle delight, regret and acceptance. Here is the apotheosis of Elgar's expressive appoggiaturas and suspensions; their alternate flexing and relaxing propel his great themes, and form emotional crises from the king's anguish in *The Black Knight* (1893) to the cadenza of the Cello Concerto (1919).

In both symphonies the mettlesome spirit, the soar and plunge of the melodies, the steep dynamics, give untold energy. Occasionally Elgar takes a refined idea and subjects it to so much violence that it seems raw. Such inflation is common to many Romantic composers; in Elgar, a latecomer, it was intensified by a sophisticated technique at the service of a complex but unsophisticated man. At its most characteristic his music does not aspire to pure expression, but to a complex of emotions – rich, ambivalent, often conflicting – that is truly Romantic. If the symphonies are to some extent autobiographical, admitting frailties and doubts as well as strengths and visions, then their occasional overworkings, rhythmic monotony and inferior ideas can be accepted as part of a comprehensive and adult perception of his world.

The Concerto in B minor (1910) for violin, Elgar's own instrument, has for all its virtuosity the nature of a confessional. The impulse partly to reveal, partly to conceal, lies at the heart of this music. (Berg's Violin Concerto is comparable in this respect.) Classical in design, Elgar's Concerto is in three contrasted movements, the first with traditional orchestral exposition. But Elgar begins it tonally off-centre, on a dominant chord with a flattened leading note. Not once in the exposition is there a tonic in the bass on a strong beat; so everything is ambiguous. Not until the soloist enters does the harmony settle onto a tonic pedal, giving a sense of expectancy satisfied. The soloist rhapsodizes ardently and freely, but the bravura is seldom just decorative: almost every twist and turn is organic and poetic. Elgar knew well that a single voice can be more flexible, more wayward, than a group (the principle defines the *Introduction and Allegro*). All his music, and this Concerto particularly, asks for rubato, the subtle lingerings and hastenings, only partly derived from his liberal expression marks, that a fine performer makes sound spontaneous. This rubato is one secret of his performing style; played without it, or with too much, his music lacks flow. His own recorded performances are never indulgent; he pounces onto the crux of a phrase and draws a keen, supple line. The opening of the Violin Concerto is a group subject of four shortish phrases, an example of his composing method sometimes criticized as short-winded; but his own performance (or indeed any fine one) sweeps them into a single paragraph. The third movement brings resolute high spirits until the cadenza, accompanied by thrummed pizzicato tremolando. Most cadenzas thrust the soloist into the spotlight; Elgar withdraws his into the twilight, where, in his words, 'the music sings of memories and hopes'.

Falstaff (1913), Elgar's most explicit programme music, is a ripe and genial study of a big-spirited man. It is his largest instrumental movement, masterly in having so many strong themes which can be treated in witty fugal devices or run together contrapuntally to illustrate the action. Elgar's attitude to Falstaff was protective, his view partial, drawn only from Shakespeare's *Henry IV* and

Henry V, and in his analysis he credits Morgann's essay of 1777. Flatterer, braggart, charmer and law-breaker he may be, but this Falstaff is above all a gentleman. The tavern scene is mild, neither bawdy nor erotic. Though Elgar could compose a passionate apotheosis, there is scarcely a trace of eroticism in his music. Bearing in mind the voluptuous sounds of such contemporaries as Rachmaninoff, Strauss or Puccini, it would seem that Elgar's chaste instincts were fostered by the Victorian world in which he grew up. Chaste is a word few would use about Falstaff, yet it describes the interludes, both of innocence regained, first in a dream of youth, then in a country orchard. Falstaff's final 'rejection' by the new king and his death are so heart-rending that one sees in them Elgar's own fears – he was not deaf to the changes of taste in 1913 – that he too might be rejected by the new musical regime.

Elgar's solo songs range from conventional drawing-room ballads to intimate utterances of great charm. The most poignant are the three from the op.59 cycle, with, like *Sea Pictures*, orchestral accompaniment. More important are his choral songs. Prompted by the competition festivals, he composed a skilful set from the *Greek Anthology* for unaccompanied male voices, and for mixed voices grand and elaborate pieces such as *Go, song of mine*, *There is sweet music* and *Love's Tempest*. While they are very singable, they are scored almost instrumentally. Of Elgar's music for the Anglican rite the most festive is the Te Deum and Benedictus, full of sequences and insistent rhythms, more effective in its orchestral dress. The most personal is *O hearken Thou*, for the 1911 coronation. The tiny late carol *I sing the birth* is simple and austere enough to suggest Holst.

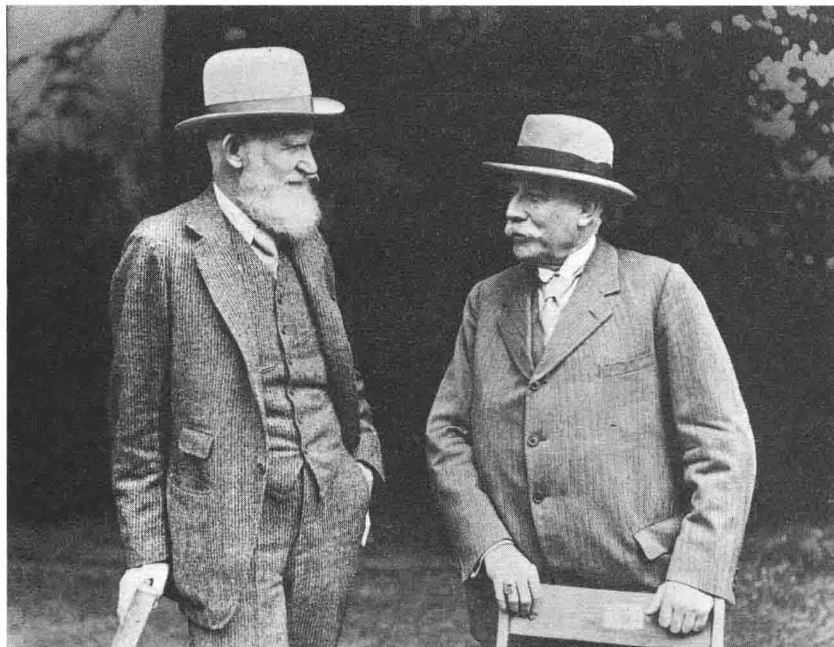
Elgar's secular testament is *The Music Makers* (1912). His chosen poet, O'Shaughnessy, affirms that the artist, set apart from the world, yet shapes its destiny. In a wish to identify with that sentiment, Elgar used apt quotations from his earlier works (listed in Kennedy, B1968). A knowledge of his life and music is needed for their appreciation, and their use has been questioned; but the quotations fall movingly into place. It is some of the new invention that seems less strongly motivated, apart from the promising opening and the soloist's disturbing harmonies at 'Great hail! we cry to the comers from the dazzling unknown shore'.

The Spirit of England (1915–17), Elgar's last choral work, is the finest of his patriotic and wartime music. The first of the three movements, 'The Fourth of August', begins with a sequential upward-leaping melody, his signature for an elevated, aspiring mood, constant from the early String Serenade through the great symphonic movements. The broad choral writing has something of Parry in it. 'For the Fallen' opens as a dead march; later, at 'They went with songs to the battle', comes a quick march tune, rangy and awkward as the scarecrow army in *Falstaff*, a direct and bitter Mahlerian irony rare in Elgar. (Britten described it as 'an agony of distortion'.) Following that, among twisting, sliding harmonies there is an isolated diatonic chord, to stress 'we will re*mem*ber them'. This harmonic side-slip is characteristic of Elgar, a moment's withdrawal into a private world.

Some works from the London years contain worthwhile music but are dependent on their original circumstances. Elgar approved suites drawn from *The Crown of India* (1912), a spectacular masque to celebrate the Delhi Durbar, and *The Starlight Express* (1915), a play for 'children of all ages'. Reaction in the 1940s and 1950s against sentiments thought to be imperialist or whimsical kept the music unknown. Some of *The Crown of India* is trumpery in a colourful and dashing manner, but some equals *The Wand of Youth*; and the Interlude is as rapt a self-communion as 'The Sun goeth down' in *The Kingdom*. *The Starlight Express* is a different case. Blackwood's novel *A Prisoner in Fairyland*, though long and rambling, is a sensitive allegory on the clear-sighted sympathy shared by children and artists. Elgar's music put back the poetry partly lost in the stage version, but much of it was to be played behind speech so is not independent. The songs are only part of a long score that is a captivating blend of Edwardian light music and Elgar's more thoughtful tones. He quoted and developed themes from *The Wand of Youth*, and the complete score is more fluent than might be expected. (A radio broadcast, as in 1965, proves an ideal medium.)

The Sanguine Fan (1917) is his only completed ballet score, some 20 minutes of floating, continuous music, reminiscent of the lyricism in his symphonic as well as in his light style. The scenario was an 18th-century pastoral, based on a fan design drawn in sanguine by Conder. *The Fringes of the Fleet*, *Carillon* and two other recitations with music, and *Polonia* depended more for their success on the mood of wartime audiences. Attractive in its various ways as all this music is, it does suggest that Elgar's ideas were less significant than those that concerned him during the first decade of the century. Oversimplifying, it could be said that he turned towards either propaganda or fantasy, and, viewing his career at 1917, it is not his virtual stop to composing after 1920 that is unexpected, but his suddenly being engaged on four abstract instrumental works in 1917–19.

As a group, the three chamber works are conservative, both for their own date, and if compared with Elgar's earlier big works. Possibly, recognizing in himself a reluctance to absorb recent idioms, he turned his affections to the music he had played during his youth. The noble Adagio of the Piano Quintet and the first movement of the Violin Sonata are markedly Brahmsian. Both outer movements of the sonata are unusual for Elgar in how exactly they fulfil the promise of their opening bars – no less, but no more. In the central Romance he returned to clichés of his early salon and Spanish styles, but now they are 'used' – if not quite stylized, then compressed elliptically into fantasy. The String Quartet has most of the old nervous energy, but with some difference. The first movement shares with the *Introduction and Allegro* and the Cello Concerto a questioning, speculative mood, but without the zest of the earlier work or the open heartache of the later. The mood is wry, the rhythmic gestures are at odds with the hollow, irresolute harmonies: a possible third-period style may be discerned, an experienced but undogmatic voice. The Piano Quintet is larger, and the implications of conflict in the opening (which caused Shaw to declare it the 'finest thing of its kind' since *Coriolan*) lie behind it all and come up to trouble the surface in the last movement; but, grand though it is, it has occasionally an improvisatory air.



It was to a virtuoso form that Elgar confided his most private thoughts. So much is made of the poignancy of the Cello Concerto that its daring can be overlooked. There is consummate technical confidence in opening a

concerto with a solo recitative of such panache, allowing it to die to nothing, and then presenting so gentle and unobtrusive a main theme for violas alone. In the tension between the risks taken by the craftsman and the shyness of the aging man, Elgar turned his disillusion to positive account. The concerto is in simple lyrical and rondo forms. The scherzo is a shadowy, fantastic *moto perpetuo*, the Adagio a passionate lament. The Falstaffian last movement runs a humorous course before the stricken cadenza, in which soloist and orchestra sing the pain and poetry of Elgar's most searching visions, reaching stillness in a phrase from the Adagio. Elgar cut resolutely into this with the formal recitative of the opening; and the end is abrupt. The Concerto is the more harrowing for its constraints.

After that, Elgar published nothing of real consequence. He took refuge behind other music, in the exuberant transcriptions for full orchestra of Bach (1921–2), Handel (1923) and (less interestingly) Chopin (1932), and in motets for specific Three Choirs Festival programmes. He could easily produce a piece for a carillon (1923), music for the Wembley British Empire Exhibition (1924), a civic fanfare (1927). The theatre still attracted him, and his music for Binyon's play *Arthur* (1923) contains passages he re-used in his Third Symphony and opera. In the *Severn Suite* (1932), commissioned for the National Brass Brand Contest, the similarity between two fugatos for two great riverside cathedrals is a pleasant reminder that Elgar admired Schumann's symphonies. The *Nursery Suite* (1930) has the charm of the earlier children's music and of the Serenade, and two pieces have rather more: under its pictorialism 'The Wagon passes' offers the fears and apprehensions, and 'Dreaming' the sweetness, of Elgar's truest nature.

The works he left unfinished, in particular the opera and the Third Symphony, cannot be completed as he would have completed them. His method of composing has been described by Reed (B1936) and Maine (E1945), who observed it, and by Kent (A1978, E1982), Moore (B1984) and Anderson (A1990), who have studied it. Elgar would amass cogent material, some old, some new; some mere pencil scraps, some fully scored. Then he worked at the piano until, as he told Sanford Terry in 1911, 'in every movement its form and above all its climax were very clearly in his mind . . .. But withal there was a great mass of fluctuating material which might fit into the work as it developed in his mind to finality'. 'In his mind' is the crux: Elgar did not lay out a continuous short score on paper: his sketches were on loose sheets, to be arranged and rearranged. He often cut, added and re-shaped until late in a composition (the 'Brahmsian' second subject of the First Symphony finale was added in manuscript full score). Though he has been criticized for using up old material in his unfinished symphony, this he habitually did throughout his life: it was not necessarily a mark of failing invention. In both the completed symphonies he used music once intended for earlier works; the first Dream Interlude in *Falstaff* uses a theme discarded from the *Coronation March*. Music did exist for *The Spanish Lady* and the Third Symphony; Percy Young for the opera and Anthony Payne for the symphony have brought that music to life. To the symphony's 'elaboration from the sketches' there was opposition, because of Elgar's ban. Scholars over the years had agreed it should not, could not, be attempted. It needed a composer, and one of Payne's audacity, intuition, and commitment, to reveal, in an Elgarian phrase, 'what might have been'. The success of Payne's elaboration has been extraordinary: the work received performances in 15 countries in the two years following its première. Both Young and Payne, in their reconstructions, showed fidelity to the composer, who himself – had he had time – might have sorted out some muddles in the opera and excised some repetitions in the symphony.

Elgar's voice is individual, instantly recognizable. Melody, harmony and sonority are equally striking and combine into a musical character that provokes strong reactions. Coming to maturity at the zenith of British

7. Elgar and George Bernard Shaw, 1929

imperialism, he was bound to share that age's vigour, and his music glows with colour and opulence. Reaction against the period's excesses made for reaction against Elgar himself. The first years of the 20th century, the decade of his highest achievement, have acquired some dubious shadows as they recede, but it would be as limiting to deny the element of celebration in Elgar's music as to overrate that of nostalgia. The pull between outward certainty and inward despondence is what makes his mature music rich and humane. Much of Elgar's music is idealistic. His riverside, his orchards, his romantic aspirations, his regal *nobilmente*, his land of Cockaigne, his spirit of England, his dream of 'strange refreshment' – all were created in his imagination and ever threatened by his vulnerability. But in his music he gave permanence to his visions.

Elgar worked mostly in traditional forms, but inside the boundaries of development and recapitulation he allowed himself poetic and allusive discursiveness. Although some of his most moving passages are diatonic, he stretched chromatic implications to their limits without departing from fundamental tonality. Unlike Vaughan Williams, he was not interested in the revivals of Tudor music or folksong, and his Englishness can more easily be felt than defined. For a time his countrymen adopted a proprietorial air towards him; this changed in the 1960s when his music came to be more widely performed by international interpreters. Less radical than Holst, less hermetic than Delius, he was more complex than either. It took a man of high courage and receptivity to embrace all that he did. He was not an innovator; he had no composition pupils; his work remains a great English summation of the European tradition.

WORKS

for additional unpublished juvenilia and unfinished works see Kent (A1993)

Edition: *The Elgar Complete Edition*, 43 vols., ed. R. Anderson (London, 1981–) [E]

DRAMATIC

op.

— Music for the proposed Elgar children's play, 1869 or 1871, unpubd; used in orch suites The Wand of Youth

DIANA McVEAGH

El Hefny, Mahmoud Ahmad [al-Ḥifnī, Maḥmūd Aḥmad; el-Hefni, Mahmoud] (*b* Dundît, 14 April 1896; *d* Cairo, 29 March 1973). Egyptian musicologist. He was sent by his father to Berlin to study medicine; he later studied under Curt Sachs at the Hochschule für Musik, taking the doctorate with a dissertation on Ibn Sīnā. Returning to Egypt in 1930, he immediately became involved with preparations for the 1932 Cairo Conference and was responsible for the publication of the proceedings. In 1935 he founded the journal *al-Mūsīqā* (later *al-Majalla al-Mūsīqiyya*), and in 1949 he launched *al-Mūsīqā wa-al-Masraḥ*; he wrote frequently (often unsigned) in both publications.

El Hefny was the first Egyptian to work on the rediscovery of Pharaonic music; he also focussed on the history of Arab music and Egyptian popular and folk music and published the first overview of Western music in Arabic. He also wrote for pedagogical purposes, and this was probably his best contribution to the field of musicology. From 1931 to 1952, as inspector of music for the Egyptian Ministry of Education, he was one of the most important figures in Egyptian music. After the 1952 revolution, his official importance declined, but he maintained his importance as a distinguished musicologist and was invited to many musicological conferences throughout the Arab world. His writings are characterized by their simple language, often unadorned by references or critical apparatus; his books are hence written for the general reader.

WRITINGS

CHRISTIAN POCHÉ

Elias, Brian (David) (*b* Bombay, 30 Aug 1948). English composer. He was educated at St Christopher's School, Letchworth, and afterwards at the RCM (1966, 1968), where he was officially a pupil of Searle and Bernard Stevens, while at the same time studying privately with Lutyens. He had already begun to earn his living as a freelance editor, arranger and copyist when he decided to take time off, going to New York to work as a mail-room clerk with a finance company. He was soon promoted, first to statistical assistant, then to statistician – a post he continued to fill for the next five years, following his return to London in 1973. In 1979 he opted finally to resume the life of a full-time musician, working as the composer and freelance teacher he has since remained.

The instinctive, confidence-inducing mastery of the Webernesque *La chevelure* (1967) was not immediately to lead to anything else on such a scale or for comparable forces. The eight short pieces that followed were nevertheless important staging posts on the journey towards the large-scale developments of the 1980s. 12 years on, *Somnia* is considerably more daring in both scope and expression, while the valedictory intensity and symphonic proportions of *L'Eylah* (1983) seem fit to close a second cycle of musical events. But it was almost a decade later before the exquisite *Five Songs to Poems by Irina Ratushinskaya* were to show him in command of a technique able to clothe words in emotionally descriptive music that places the work alongside the great orchestral song cycles of the past. Although written as a one-act ballet to Elias's own scenario, *The Judas Tree* (1992) ought nevertheless to find a place in the orchestral repertory as of right; as an instance of visual ideas transmuted into musical form, it has few equals.

WORKS

SUSAN BRADSHAW

Elías, José (*b* *c*1678; *d* *c*1755). Catalan organist and composer. He was a native of Catalonia and learnt more than 300 works by Cabanilles in his youth (from which it has been assumed that he was a pupil of the Valencian master). He entered the priesthood and served as organist at SS Justo y Pastor in Barcelona from 1715 to 1725, when he moved to Madrid to become 'Capellan de su

Majestad' and principal organist of the convent of the Descalzas Reales. A 'Joseph Elias' was organist at the Hieronymite monastery of El Parral, Segovia, between 2 May 1739 and 2 April 1741, but it is not known whether this was the same person. Llorens deduced that he must have died about 1755. The high esteem in which Elías was held by his contemporaries is shown by the statements of the royal organists Nebra, Albero and Oxinaga that preface his 1749 *Obras de órgano*, praising the excellence of his music and referring to him as the 'father and patriarch of good organists'. Soler credited Elías with pioneering work in the use of remote keys (*Satisfacción a los 'Reparos precisos'*, Madrid, 1765).

Elias's organ works fall into two major categories: the larger pieces (variously termed *pieza*, *obra*, tiento, *paso*, *tocata*, *intento* etc.), and the sets of brief versets for *alternatim* use in Mass or Office psalms. The textures in the larger pieces include chordal progressions, often with dissonant suspensions (*falsas*), virtuoso figuration against sustained harmonies, and close fugal imitation. Many of the larger works are sectional and show all three styles, sometimes in a kind of 'prelude and fugue' arrangement. The short versets are generally fugal.

Elías remained faithful to the polyphonic Spanish organ tradition; while certain Italian Baroque influences are apparent in his music, there are few signs of the Rococo style or of an idiom more suited to the harpsichord than to the organ. His music is notable for its sweeping and imaginative thematic material, colourful and often chromatic progressions, clear key-schemes and sparkling imitative counterpoint; but the weaknesses in his larger works, especially the late ones, cannot be overlooked: longwindedness, repetitiousness, insufficient variation of material and excessive use of sequential progressions. It is probable, however, that the music was highly embellished and varied in performance.

WORKS

Edition: *J. Elías: Obras completas*, ed. J.M. Llorens and J. Sagasta y Montserrat Torrent, PBC, xxiv–xxvi, xxxi (1971–86)

Org: Entrada, juega de contras, mass versets, obras, Pange lingua settings, pasacalles, pasos, piezas, psalm versets, tientos, tocatas, versos: *E-AS*, *Bc* (4 MSS, 1 dated 1749), *Boc*, *Mn* (dated 1717), *MO* (15 MSS)

ALMONTE HOWELL/LOUIS JAMBOU

Elías, Manuel de (*b* Mexico City, 5 June 1939). Mexican composer and conductor. After taking lessons with his father, the composer Alfonso de Elías, he studied at the National School of Music and at the National Conservatory. He then took courses in *Musique Concrète* with Marie (1967) and Stockhausen (1968). He founded the Music Institute of the University of Veracruz (1975) and the Jalisco PO (1988), with which he has made important recordings of Mexican composers. He was also director of the Las Rosas Conservatory in Morelian (1990–91) and in 1992 he received the National Prize for Arts and Sciences. He has conducted the most important Mexican orchestras, including the Xalapa SO and the National SO, of which he was the assistant conductor (1968–72). He has also been a guest conductor in France, Switzerland, Belgium, Poland, Spain, the USA and Argentina.

The musical language developed by Elías is characterized by meticulous elaboration, shown both in the construction of complex textures and in a carefully worked out development. His melodies frequenly arise from 12-note series. He often uses graphics in order to give his scores greater structural clarity, as in *Sonante I*. In the works entitled 'Sonante', which emphasizes the preponderance of sound over form, Elías sought an organic ordering, remote from classical forms, of the materials which shape his compositions. On the other hand, in works such as *Mictlán-Tlatelolco*, dedicated to the victims of the massive eathquake which hit Mexico City in September 1985, the contrasts and drama are relevant to contemporary life and reflect extra-musical intentions.

Elias Salomo. *See* SALOMO, ELIAS.

Eliasson, Anders (Erik Birger) (*b* Borlänge, 3 April 1947). Swedish composer. After early experience as a jazz trumpeter he attended the Royal College of Music, Stockholm (1966–72), where he studied composition with Ingvar Lidholm and counterpoint with Valdemar Söderholm. From 1972 to 1973 he was a member of the artistic committee of the Electronic Music Studio Foundation, Stockholm. In 1993–4 he was a guest professor at the Sibelius Academy, Helsinki. His numerous awards have included the Christ Johnson Prize (1977, 1983), the Hilding Rosenberg award (1987), two prizes from the City of Stockholm (Arts Award, 1973; Honorary Award,

1994) and the Nordic Council Music Prize (1992) for his Symphony no.1.

Although Eliasson speaks of his musical inspiration almost exclusively in philosophical, poetic and metaphysical terms, his compositions show a consistent preoccupation with abstract musical problems. His pursuit of these deliberately circumscribed technical goals – for instance, a concern with the organization of acoustic densities, the investigation of the relationship between certain metrical possibilities, or the development of a particular interval or texture – is generally highly focussed and single-minded, resulting in individual compositions with their own distinctive parameters of sound, style and structure. This concentration on musical essentials is especially evident in his *Disegni* (1974–87), a series of chamber and solo instrumental works which, employing neither electronics nor extended instrumental techniques, stretch conventional methods of playing to their utmost. His larger-scale compositions, such as the First Symphony, tend on the other hand to involve the simultaneous outworking of different and often complementary processes. Despite the resultant increase in density and complexity, the overall precepts remain simple and clearly articulated in their service of a single argument. The result is music of considerable emotional impact, with an impressive range of contrast and nuance.

GILES EASTERBROOK

Elie, Justin (*b* Cap-Haïtien, 1883; *d* New York, 3 Dec 1931). Haitian composer and pianist. He studied piano with Antoine-François Marmontel and Charles-Wilfrid Bériot at the Paris Conservatoire. Around 1900 he returned to Haiti to pursue a musical career. Between 1905 and 1909, he gave piano recitals in Cuba, Jamaica, St Thomas, Curaçao, Venezuela, Puerto Rico and the Dominican Republic. In 1921, Elie moved to New York and worked as a composer, pianist, arranger and conductor. He had a weekly radio programme entitled 'The Lure of the Tropics', on which he conducted some of his own orchestral works. Elie was also active as a composer for silent films and musical dramas. *Voo-doo Moon*, a theatrical production performed with the dancer and nightclub owner Gilda Gray, was loosely based on the music of the Haitian voodoo religious ceremony. Many of Elie's compositions were programmatic and were inspired by the folklore of indigenous Americans or Africans in the diaspora. His *Kiskaya Suite*, whose title derives from the Arawak name for the island of Hispaniola, fuses the folklore of the Inca empire and the Amazon River basin of Brazil in a multi-movement work for orchestra. *Fantaisie tropicale*, Elie's last complete work, is a single-movement work for piano and orchestra which is still popular with Haitian concert audiences.

MICHAEL LARGEY

Eliezer, Bentzion (Nissim) (*b* Sofia, 8 Sept 1920; *d* Sofia, 9 Sept 1993). Bulgarian composer and teacher. He received degrees in music education from the Sofia State Academy of Music in 1952 and in conducting and composition in 1953; his principal teachers were Haddziev (harmony) and Pancho Vladigerov (composition). In 1953 Eliezer became Haddziev's assistant at the academy. He was promoted to assistant professor (1964) and full professor of harmony (1970), and was twice deputy rector between 1972 and 1986. He conducted the orchestra of the Theatre for Satire in Sofia from 1956 to 1958.

Eliezer's musical style was formed from both classical and popular genres. His early musical experience began as a self-taught saxophonist and clarinettist in Ovcharov's Big Band, whose repertory included the music of Goodman and Ellington. In the early 1960s when jazz was

considered a decadent western bourgeois art, Eliezer was a strong advocate of the greatness of its tradition. Later in his career as a professional composer, he was the first in Bulgaria to fuse pop elements with the peasant folk tradition: his *Fantazia* (1962) for piano and jazz orchestra, the model for which was Gershwin's *Rhapsody in Blue*, quotes the Bulgarian folk dance *Bouchimish* throughout. His list of compositions is wide-ranging and includes many popular songs, children's songs, over 250 arrangements of folksongs in the tradition of Philip Kutev and stage works. Eliezer received many national awards for his compositions including the highest honour, People's Artist. He was an outstanding teacher at the State Academy of Music and the author of a standard Bulgarian textbook on harmony.

ANNA LEVY, GREGORY MYERS

Elimot (*fl* early 16th century). Franco-Flemish composer. *See* BARRA, HOTINET.

Elin, Hanns. *See* JELINEK, HANNS.

Eliot, T(homas) S(tearns) (*b* St Louis, 26 Sept 1888; *d* London, 4 Jan 1965). English poet of American birth. In his poetic language, Eliot demonstrated a sensitive awareness of possible analogies with music, while avoiding suggestions of a direct correspondence between the two art forms. Reference to musical genres is already apparent in such titles as 'Preludes and Rhapsody on a Windy Night' from his first published collection, *Prufrock and Other Observations* (London, 1917). Musical analogies are more fully realized in Eliot's mature work, with its radical approach to poetic form. The modernity of *The Waste Land* (1922) is constructed through the juxtaposition of image and texture, the fragmentary projection of a wide range of allusions suggesting parallels with certain contemporary developments in music. The *Four Quartets* (1935–42) display, beyond the obvious musical connotations of the title, a concern with issues of temporality and, in particular, with what he characterized in the essay 'The Music of Poetry' as developmental, transitional and 'contrapuntal' possibilities comparable to those in music.

Eliot's poetry has not provided composers with an especially rich source of musical settings. Notable exceptions include Pizzetti's operatic realization of the play *Murder in the Cathedral* (1957) and Stravinsky's setting of an extract from 'Little Gidding', the last of the *Four Quartets*, in his Anthem 'The dove descending breaks the air' (1962). Other composers have turned to Eliot for imagery rather than text: George Benjamin's orchestral work *Ringed by the Flat Horizon* (1979–80), for instance, takes its title from a specific moment in *The Waste Land*. But the composition on which Eliot had perhaps the most significant, albeit indirect, impact was Tippett's oratorio *A Child of Our Time* (1939–41). Eliot was approached to write the libretto in the first instance, and though he refused, in the process persuading Tippett to write it himself, the resultant text is imbued with specific images drawn from Eliot's poetic language.

KENNETH GLOAG

Elisagarus. *See* HELISACHAR.

Elizabeth I, Queen of England (*b* Greenwich, 7 Sept 1533; *d* London, 24 March 1603). English patron of music. She was the second daughter of Henry VIII (by Anne Boleyn), came to the throne in 1558 and reigned until her death. She received the classical education of a Renaissance prince, including studies in Latin and Greek with Roger Ascham. Shortly after Elizabeth's death John Clapham, a courtier in Burghley's household, wrote that 'in matters of recreation, as singing, dancing and playing upon instruments, she was not ignorant nor excellent'. There are no contemporary accounts of her singing, but of the 1599 Twelfth Night revels the Spanish ambassador reported that 'the head of the Church of England and Ireland was to be seen in her old age dancing three or four galliards' (Calendar of Letters and Papers in the Archives of Simancas, iv, 650). As for her 'playing upon instruments', according to Playford (*An Introduction to the Skill of Musick*, 11/1687) 'she did often recreate herself upon an excellent Instrument called the Polyphant, not much unlike a Lute but strung with Wire'. She also played the virginals: Sir James Melville, an ambassador from Mary Queen of Scots, wrote of an occasion in October 1564 when

> after dinner my Lord of Hunsdean drew me up to a quiet gallery ... where I might hear the Queen play on the Virginals .... I entered within the Chamber, and stood a pretty space hearing her play excellently well, but she left off immediately, so soon as she turned her about and saw me.

It is often said that Elizabeth played the lute, but the only evidence for this seems to be the presence of a lute-like instrument in a needlework representation of *The Education of Princess Elizabeth* (Irwin Untermeyer's private collection; not listed in Strong, 1963), Hilliard's miniature of Elizabeth holding a lute (Strong, 1963, miniature no.4; see illustration) and a report that 'in 1565 Henry Lord Berkeley bought a lute of mother-of-pearl for his Lady, for which Queen Elizabeth had offered 100 marks' (T.D. Fosbroke: *Berkeley Manuscripts*, London, 1821, p.102).

Early in her reign Elizabeth issued a proclamation (1559, Injunction 49; before 19 July), which made clear her views on the musical side of worship: there should be

Elizabeth I with a lute: miniature by Nicholas Hilliard, c1580 (private collection)

a modest distinct songue, so used in all partes of the common prayers in the Church, that the same may be as playnely understanded, as yf it were read without syngyng, and yet nevertheless, for the comfortyng of suche as delyght in musicke, it may be permitted that in the begynning, or in the ende of common prayers, eyther at morning or evenyng, that there may be song an Hymne, or such like songue, to the praise of almightie god, in the best sort of melodie that may be conveniently devised, having respect that the sentence of the Hymne may be understanded and perceyved.

Her devotion to church music was recognized by John Boswell, who wrote in 1572: 'What say I, music one of the seven liberal sciences; it is almost banished the realme. If it were not the queenes majesty that did favour that excellente science, singing-men and choristers might go a-begging, together with their master the player on the organes'.

Music played a significant part in all royal state occasions, and the queen often gave detailed instructions to her courtiers as to the nature of the music she wished to have (a memorandum made by Hunsdon for the 1601 Twelfth Night celebrations is quoted in Hotson). Music arranged by host courtiers or civic bodies on her progresses was an integral part of their entertainment. The arrangements for the progresses to Kenilworth (1575), Norwich (1578) and Elvetham (1591) have perhaps become best known, but contemporary accounts of others show that music was just as important to their success, though it is now not known what music was heard. Of music that is known to have been heard on various occasions the following works are perhaps representative: Tallis's *Spem in alium* (probably first heard on Elizabeth's 40th birthday, 1573), Dowland's *His golden locks* (sung on Accession Day 1590 to mark the retirement of Sir Henry Lee, the originator of the tilts) and Morley's collection of madrigals by various authors, The *Triumphes of Oriana* (RISM 1601[16], probably heard as part of the May Day celebrations in 1601).

Of the various instruments that Elizabeth is said to have owned, only the spinet now in the Victoria and Albert Museum, London (R. Russell: *Victoria and Albert Museum: Catalogue of Musical Instruments*, i: *Keyboard Instruments*, London, 1968, no.7), is likely to have had any strong links with her. Similarly, of the many manuscripts she is said to have owned (e.g. the Fitzwilliam Virginal Book and the 'Winchester' Partbooks of Flemish music, *c*1564), none has a credible provenance.

Music was heard at the beginning and end of Elizabeth's life: it is said that 'Te Deum was sung incontinently upon her birth', and Jacques Bonnet in his *Histoire de la musique et de son effets* (1715) cited the memoirs of the Abbé Victorio Siri (1677–9) to the effect that when she was dying she called for her musicians to play around her bed; 'so that, she said, she might die as gaily as she had lived, and that the horrors of death might be lessened; she heard the music tranquilly until her last breath'.

DAVID SCOTT/R

Elízaga, José Mariano (*b* Morelia, 27 Sept 1786; *d* Morelia, 2 Oct 1842). Mexican composer, teacher, pianist and organist. He made his first public appearance by command of the viceroy in Mexico City at the age of six. After studying with José María Carrasco (1781–1845), *maestro de capilla* of Morelia (then Valladolid) Cathedral, he received a grant from the cathedral *cabildo* to defray the expenses of his study in Mexico City with Soto Carrillo, a Haydn enthusiast and the leading piano teacher in the capital. Upon his return home in 1799 Elízaga was

appointed assistant organist at the Colegio de S Nicolás, and the cathedral chapter simultaneously purchased 'the best available pianoforte in Mexico City' for him to instruct the local aristocracy in the new art of piano playing. Among his pupils was Doña Ana María Huarte, later the wife of Agustín Iturbide, first emperor of Mexico.

In 1822 Elízaga was appointed imperial *maestro de capilla*, but his duties were merely nominal; he prepared a notable didactic work *Elementos de música*, published at Mexico City in 1823 (copy in the Biblioteca Nacional). In 1824 he united with José Antonio Gómez in founding the Sociedad Filarmónica, which the next year sponsored the first conservatory in the infant nation. In 1826 he founded a music press and issued an original *Vals con variaciones* followed by a set entitled *Ultimas variaciones*. After his second marriage in 1828, he acted as *maestro de capilla* in Guadalajara Cathedral (1829–30); but he returned to the capital thereafter and taught privately during the next eight years. In 1835 he published a second didactic work, *Principios de la armonía y de la melodía*. He retired to Morelia in 1842.

Two masses (one for Guadalajara and the other for Morelia), a *Miserere*, a set of Lamentations, a set of responses and music for the matins of Transfiguration survive in the Morelia Cathedral archive; the extant works are all written for chorus with orchestral accompaniment. Elízaga was acquainted with the works of Mozart and Beethoven and was one of the first to promote their music in Mexico.

ROBERT STEVENSON

Elizalde, Fred [Federico] (*b* Manila, 12 Dec 1907; *d* Manila, 16 Jan 1979). Filipino bandleader, pianist, conductor and composer of Spanish parentage. He studied at the Madrid Conservatory, with, among others, Trago and Perez Casas. In 1921 he went to England for two years' study at St Joseph's College, London, and later entered Stanford University, California, where his parents intended him to study law. However, under the influence of Bloch, with whom he had composition lessons, he left in 1926 to give his attention to music. At this point his fascination for jazz and dance music began, and he led the Stanford University Band for a season at the Biltmore Hotel, Los Angeles, while continuing formal composition studies. After cutting his first discs with his Cinderella Roof Orchestra in Hollywood, he returned to England to read law at Cambridge University (where his brother, the saxophonist Manuel (Lizz) Elizalde, was also a student) in September 1926.

Over the next three years Elizalde became the single most influential figure in the development of jazz in Britain, and he abandoned his university career after a year to concentrate on bandleading, finally breaking up his orchestra on Christmas Eve 1929, in the wake of the Wall Street Crash. His importance was to instil in his musicians a sense of American rhythm, making their efforts at jazz far more convincing than most stilted European bands, which he derided as 'Viennese'. Nevertheless, he wrote a number of no less stilted compositions himself, which attempted to blend elements of jazz with European concert music; these include the suite *The Heart of a Nigger*, first performed by Ambrose and his orchestra at the London Palladium in June 1927, with dancers and décor by Oliver Messel, and the symphonic poem *Bataclan*, first performed by Elizalde's own band at the Shepherd's Bush Pavilion in June 1929.

By March 1927 Elizalde had already made his first British jazz recordings, with a group of fellow students initially called the Quinquaginta Ramblers, but whom the record companies styled as his Varsity Band or his Cambridge Undergraduates. These discs consisted of well-known jazz tunes arranged by Elizalde, but his talent for original jazz composition was revealed in his miniatures for piano such as *Siam Blues*, *Pianotrope* (both 1927, Bruns.) and later pieces such as *Vamp til Ready* (1933, Decca). In the autumn of 1927, he was invited to bring a band into the Savoy Hotel, for which he assembled several of Britain's leading jazz musicians including the trumpeters Norman Payne and Jack Jackson and the saxophonist Harry Hayes, together with a number of their New York counterparts, including the trumpeter Chelsea Quealey and the saxophonists Bobby Davis, Fud Livingston and the brothers Adrian and Arthur Rollini. This versatile and accomplished group not only played jazz standards, but original compositions by Elizalde and his bandmembers, including Livingston's *Singapore Sorrows* (1929, Parl.).

Despite complaints to the BBC about out-of-tempo introductions, and the difficulty of following the tune during jazz improvisations, Elizalde's band remained at the Savoy until July 1929, and broadcast regularly, winning the 1928 *Melody Maker* readers' poll as most popular dance orchestra. It was augmented with strings for formal dances and quasi-symphonic pieces, but by using a smaller sub-set of his band for 'hot' playing and recording, and encouraging the solo improvising of Livingston and the Rollini brothers, he introduced the sounds of American jazz at first hand to the British public. The onset of the Depression, which forced his American musicians to return home, and a disastrous tour of Scotland in late 1929, led him to disband, although he temporarily reassembled a group to play for the *Intimate Review* at the Duchess Theatre, London, in 1930. He made his last jazz recordings on a brief return visit to Britain in 1933.

By this time, he had already shifted the focus of his musical attention, having returned to the Philippines to conduct the Manila SO in 1930, and spent successive periods in Biarritz, Paris and Madrid, interrupted by a world concert tour as a conductor in 1931. In Paris he worked as a guest conductor and associated with Ravel and Milhaud. In Spain he struck up a close friendship with Falla, with whom he studied. He integrated himself with Spanish intellectual life, writing an opera *La Pajera Punta*, a sinfonia concertante for piano and orchestra (first performed at the ISCM Festival in Barcelona, 1936) and settings of *Titeres de Cachiporra* and *Don Pimperlin* by Lorca. He served in the Basque regiment under Franco in the Spanish Civil War, but was invalided home to Manila, before returning to France, where he was confined

to his château near Bayonne during the World War II German occupation.

His confinement led to a fruitful period of composition, including the opera *Paul Gauguin* (libretto by Théophile Briant, 1943; first broadcast by French radio, 1948), a violin concerto, string quartet and piano concerto. He gave the first London performance of his Piano Concerto in 1948 (after a brief period in Santa Monica, California), and his Violin Concerto was recorded by the LSO in 1950. He returned to Manila in 1948, where he became president of the broadcasting company, conductor of the Manila SO, and founder of the Manila Little SO. He worked as a guest conductor in Japan, but an increasing range of family business interests and his work in broadcasting curtailed extensive international travel until his retirement in 1974, apart from occasional journeys as a competitive sportsman, when he captained the Philippines shooting team, winning several gold medals in the 1954 Asiad.

WALTER STARKIE/CHARLES FOX/ALYN SHIPTON

Elizza, Elise [Letztergroschen, Elisabeth] (*b* Vienna, 6 Jan 1870; *d* Vienna, 3 June 1926). Austrian soprano. Her teacher in Vienna was Adolf Limley who became her husband. She sang first in operetta, then joined the opera company at Olomouc in 1894. The following year she made her début, as Inès in *L'Africaine*, at the Vienna Staatsoper, where she remained as a valued and versatile member of the company until 1919. Her roles there ranged from the Queen of Night to Brünnhilde, though she was probably happiest in the lyric-coloratura repertory, such as Violetta and Marguerite de Valois in *Les Huguenots*. She later taught in Vienna, where Lotte Lehmann was among her pupils. A prolific early recording artist, she reveals on records a voice of exceptional beauty with a highly accomplished technique and a sensitive style.

J.B. STEANE

Elkan, K. *See* DILTHEY, WILHELM.

Elkan-Vogel. American firm of music publishers. In 1928 Henri Elkan (*b* Antwerp, 23 Nov 1897; *d* Philadelphia, 12 June 1980) and Adolph Vogel (*b* West Orange, NJ, 12 Feb 1893; *d* Merion, PA, 28 July 1981) founded the music retailing firm of Elkan-Vogel, and they were joined in 1929 by a third partner, Bernard Kohn. First based in Philadelphia, the company soon expanded and began publishing music; in 1952 Elkan severed his relationship with the firm, and Vincent Persichetti became director of publications for the company. Elkan-Vogel credits much of its success to its early acquisition of important French agencies and assignment of copyright in the USA; these included Durand and Jobert, whose catalogues contained most of the works of Debussy and Ravel. Elkan-Vogel added to its own catalogue compositions of such major composers as Langlais, Harl McDonald, Milhaud, Persichetti and Yardumian; it also acquired the American agencies of Lemoine, Editions Rideau Rouge, Editions Philippo, Hamelle, Consortium Musical, La Schola Cantorum & Procure Général and Dolmetsch Recorders. In January 1970 Elkan-Vogel became a subsidiary of Presser and moved to Bryn Mawr, Pennsylvania.

W. THOMAS MARROCCO, MARK JACOBS/R

Elkus, Albert I(srael) (*b* Sacramento, CA, 30 April 1884; *d* Oakland, CA, 19 Feb 1962). American composer, pianist and teacher. He received early musical training from his mother, Bertha Kahn Elkus, and then studied piano with Hugo Mansfeldt in Sacramento and San Francisco. He attended the University of California, Berkeley (BLitt 1906, MLitt 1907). A gifted pianist, he gave many public recitals during this period throughout northern California, particularly with the Saturday Club of Sacramento. In 1907–8 he studied theory and composition with Hugo Kaun in Berlin and, on his return to the Bay area in 1909, with Oscar Weil. He again went abroad for three years (1912–14) and studied privately with Harold Bauer (piano) in Paris, Josef Lhévinne (piano) and Georg Schumann (composition) in Berlin, and Robert Fuchs (composition), Karl Prohaska (counterpoint and composition) and Franz Schalk (conducting) in Vienna. In 1915 he joined the faculty of the Jenkins School of Music in Oakland, and went on to teach at the San Francisco Conservatory (1923–5, 1930–37), returning as director from 1951 to 1957. He also taught at Dominican College, San Rafael (1924–31), and Mills College (1929–44). His association with the music department at Berkeley extended from 1931 to 1959; as chairman (1937–51), he brought in such distinguished musicians as Bloch, Sessions, Bliss, Bukofzer and the Griller Quartet.

As a composer Elkus was not prolific, yet his music is accessible, well-constructed and effective, written in a conservative, post-Brahmsian tonal style with emphasis on chromatic harmonies tinged with Impressionism. His vocal settings are instrumental in character, and this quality results in an unusually cohesive text-music relationship. His works have been performed by symphony orchestras in San Francisco, Los Angeles, New York, Paris, London and elsewhere. With Flora Arnstein and Stewart Young he edited *The Letters and Papers of Oscar Weil* (San Francisco, 1923).

JOHN A. EMERSON/MICHAEL MECKNA

Elkus, Jonathan (Britton) (*b* San Francisco, 8 Aug 1931). American composer and arranger. He studied composition with Cushing and Denny at the University of California, Berkeley (BA 1953), with Bacon and Ratner at Stanford University (MA 1957), and with Milhaud at Mills College (1957). He taught at Lehigh University from 1957 to 1973 and became director of music at Cape Cod Academy in 1979. In 1993 he was appointed Davis Lecturer in Music and Director of Bands at University of California, Davis. He has been guest conductor with concert bands throughout the USA and in 1998 was made arranger to the United States, Marine Band.

As an editor, Elkus has been closely associated with the music of Charles Ives. He has edited critical editions for the Ives Society and is the author of *Charles Ives and the American Band Tradition* (1974/*R*). A vital interest in extending the repertory of concert bands has resulted in a number of compositions and numerous transcriptions. In 1984 he founded Overland Music Distributors who publish books and music by composers including Armer, Cushing and Ali Akbar Khan. Elkus's musical vocabulary draws on several 20th-century idioms, resulting in a highly individual style with strong definition of pitch and chord centres.

WORKS
(*selective list*)

Dramatic: Tom Sawyer (musical, 1, Elkus, after M. Twain), 1953; The Outcasts of Poker Flat (op, 1, R.G. Bander, after B. Harte), 1959; Treasure Island (musical, 2, B.M. Snyder, after R.L. Stevenson), 1961; Medea (op, 1, Elkus, after Euripides), 1963; Will of Stratford (incid music, C. Lengyel), 1964; The Mandarin (ob, 3, R.F. Goldman, after E. de Queiroz), 1967; Helen in Egypt (op, 1, J. Knight, after H.D.), 1970; A Little Princess (musical, N.D. Watson, after F.H. Burnett), 1980; Act Your Age! (musical, M. Dispezio), 1983; incid music for plays by Euripides, W. Shakespeare, Molière, H. Ibsen, J.M. Synge, T. Wilder, J. Anouilh, and others

Band: Camino real, 1955; Serenade, hn, bar hn, band, 1957; CC Rag, 1974; The Apocalypse, rag, 1974; Pipers on Parade, 1976; Chiaroscuro, suite, 1977; Cal Band March, 1978; numerous fanfares; transcrs. and arrs. of works by Berlioz, Dvořák, Ives, Joplin, Saint-Saëns, Verdi, Wagner, and others; many arrs. of popular and college songs; pedagogical works

Vocal: The Oxen (T. Hardy), high v, pf, 1956; 4 3-part Catches, chorus, 1958; The Dorados (W. Smith), male vv, pf, 1961; Triptych (H.D.), Mez, 4 bn, 1962; In the Time of your Life (W. Saroyan), Ct, pf, 1963; 2 Sonnets (E.St V. Millay), medium/low v, pf, 1964; After their Kind (F.J. Arnstein), medium/high v, pf, 1965; 3 Hangtown Ballads (trad.), high v, pf, 1968; Of Players to Come (C. Lengyel), chorus, pf, 1974; The Age of Fable (T. Bullfinch), 3 choruses, 1978

Chbr and solo inst: 5 Sketches, 2 cl, bn, 1954; 3 Medieval Pieces, org, 1959; The Charmer, rag, cl, trbn, pf, 1972; Laurel, hpd, 1973; pf rags incl. Silver Echo, Oregon, Tombstone, 1970–73

Principal publishers: Novello, Peer, J.B. Elkus & Son

RICHARD SWIFT/*R*

Ella, John (*b* Leicester, 19 Dec 1802; *d* London, 2 Oct 1888). English concert manager and critic. He was apprenticed to his father, a baker and confectioner, before taking violin lessons with François Fémy in London (*c*1819). His initial interest in music seems to have been nurtured by William Gardiner, who may also have introduced him to London musicians, and in the early 1820s he began working as a violinist at the Philharmonic Society, Concerts of Ancient Music and Royal Italian Opera. In 1825 he sought harmony lessons from Thomas Attwood at the RAM, and taught there as a sub-professor of the violin; two years later he studied counterpoint briefly with Fétis in Paris. He was active as a teacher and 'fixer', and wrote music criticism for the *Morning Post* (1826–42) and *The Athenaeum* (1830–34), and contributed to the *Musical World* and the *Court Journal*. From 1826 to 1846, under the aegis of Lord Saltoun, he directed the Società Lirica (or 'Saltoun Club'), a group of aristocratic amateurs who met privately to perform (with judicious professional 'stiffening') arrangements from Italian operas. He also organized private concerts and music-making for other wealthy patrons.

Ella had a deep-rooted love and appreciation of chamber music, both as a recreational player and listener, and attended quartet performances in Paris in the 1820s and 30s as well as many of the chamber music concerts that sprang up in London in the decade from 1835. In 1845 he founded the Musical Union, a socially élite concert society (with the Duke of Cambridge as its president) devoted to high-quality performance and serious contemplation of chamber music; many subscribers were women. The society engaged distinguished foreign artists such as Vieuxtemps, Ernst, Piatti and Clara Schumann, and had a distinctive intellectual focus. For each concert Ella produced analytical programme notes with musical examples (the first of their kind) which were distributed in advance to subscribers (the notes formed part of the *Record of the Musical Union*, which was compiled by Ella, 1845–80); he also encouraged the reading of miniature scores during concerts and developed a reputation for his insistence on quiet and attentive listening.

Throughout his career Ella made regular trips to Europe, where he forged important contacts with foreign musicians. Thalberg, Meyerbeer and Berlioz were among his friends. Although he gave up orchestral playing in 1848, he maintained other activities. In the 1850s he set up evening chamber music concerts (Musical Winter Evenings, 1852–5; Musical Union Soirées, 1857–9), and from 1860 to 1868 was director of the Musical Union Institute. Privately funded, and under the presidency of Sir George Clerk, the institute provided at 18 Hanover Square a venue for concerts, lectures, trials of new music and a library. In the 1870s Ella revived the Società Lirica (its repertory now embracing Meyerbeer and Wagner), and in 1871 he was appointed professor of music at the London Institution, where he had delivered lectures since 1855. He led the Musical Union until failing eyesight forced him to retire in 1880.

Ella contributed much to musical life in London, though his courting of the aristocracy, his favouring of foreign performers (and virtual exclusion of British players) at the Musical Union, and his tendency to exaggerate his own achievements in print led to criticism from some contemporaries. His published writings include *Musical Sketches, Abroad and at Home* (London, 1869, 3/1878) and *Lectures on Dramatic Music and Musical Education* (London, 1872).

CHRISTINA BASHFORD

Eller, Heino (*b* Tartu, 7 March 1887; *d* Tallinn, 16 June 1970). Estonian composer. He studied composition at the Petrograd (now St Petersburg) Conservatory (1913–15, 1919–20), where his teachers included Kalafati, and later taught at the Tartu Higher Music School (1920–40) and the Tallinn Conservatory (1940–70). A number of his composition students, among them Tubin and Pärt, attained international prominence. His compositions, almost all of which are instrumental, combine characteristic features of early 20th-century styles with classical formal principles and elements of Estonian folk music. Rather than abandoning tonality, he enriched it with non-traditional idioms and structures; the northern colouring of his compositions makes his style most closely comparable to Impressionism.

Eller's early works, which show the influence of Grieg, Debussy and Skryabin, mark the beginning of a new development in Estonian music. To Romantic nationalism, the predominant style of the period, Eller added an impressionistic sound, heard in the tone poems *Koit* ('Dawn', 1920) and *Ööhüüded* ('The Night Callings', 1921), and expressionistic tendencies, apparent in the tone poem *Viirastused* ('Phantoms', 1924). Lyrical writing, common to *Varjus ja päikesepaistel* ('In the Shadow and in the Sun', 1926) and the symphonic suite *Valge öö* ('White Night', 1939), was characteristic of his middle period. Works of epic and dramatic force, such as the Second String Quartet (1931) and the First Symphony (1936), also appeared around that time. In the 1940s and early 1950s Eller placed special emphasis on elements of Estonian folk music, a notable feature in the *13 pala eesti motiividel* ('13 Piano Pieces on Estonian Motifs', 1941) and *Tantsusüit* ('Dance Suite', 1942). At the same time a desire for greater depth of expression, realized in his last compositions, is present. A synthesis of stylistic traits from earlier periods is typical of his late works, among them the Third Symphony (1961) and the Sinfonietta for strings (1967).

MART HUMAL

Ellerton, John Lodge (*b* Cheshire, 11 Jan 1801; *d* London, 3 Jan 1873). English composer. He was born John Lodge, son of Adam Lodge of Liverpool, and in 1838 or 1839 adopted the name Ellerton. He was educated at Rugby and at Brasenose College, Oxford (BA 1821, MA 1828). Encouraged by the success of some early compositions, he embarked on a career as a composer. He studied counterpoint under Pietro Terziani at Rome for two years, and frequently visited Germany. Much of his music, more remarkable for quantity than quality, was published at his own expense. He tried his hand at almost every existing genre, including opera, church music and the programme symphony (his *Waldsymphonie*, first performed at Aachen on 22 December 1857, is a six-movement work based on Thomson's *Seasons*). He accomplished most in chamber music: the size of his output in this area is most unusual for the 19th century, and is probably surpassed only by that of another amateur, the Anglo-French Georges Onslow. Wagner had his reasons for forming a high opinion of Ellerton: 'My portrait has been hanging in his room for two years. He is the first Englishman I have seen who does not care particularly for Mendelssohn'. Ellerton's music is, in fact, closely modelled on that of the Classical masters; it is pleasant and well wrought, but lacking in individuality.

WORKS

NICHOLAS TEMPERLEY

Elleviou, (Pierre-)Jean(-Baptiste-François) (*b* Rennes, 14 June 1769; *d* Paris, 5 May 1842). French tenor. He made his début in 1790 as a baritone in Monsigny's *Le déserteur*

at the Comédie-Italienne, Paris. The following year he made his début as a tenor, in the première of Dalayrac's *Philippe et Georgette*. He created about 40 roles during the next 20 years, including Versac in Dalayrac's *Maison à vendre* (1800), the title roles of Boieldieu's *Beniowski, ou Les exilés de Kamtschatka* (1800), Isouard's *Michel-Ange* (1802), Méhul's *Joseph* (1807) and Boieldieu's *Jean de Paris* (1812). His repertory included Blondel in *Richard Coeur-de-Lion*, Azor in *Zémire et Azor*, and roles in other operas by Grétry, for whose music he had a special fondness. He wrote the libretto for Henri-Montan Berton's *Délia et Verdikan*, performed at the Opéra-Comique in 1805, and possibly for other operas as well. He retired in 1813, after Napoleon had refused to increase his already huge salary. Although, according to contemporary accounts, his voice was not especially powerful it was sweet-toned and very flexible. Early in his career he relied too heavily on a handsome stage presence and great charm of manner, but he later became an excellent actor and comedian, noted for the eloquence of his diction, and much loved by Paris audiences. One of his most popular roles was Forlis, a naval officer in Isouard's *Le médecin turc* (1803), captured by pirates and sold into slavery, who has a spectacular (simulated) mad scene designed to illustrate the tenor's superb technique.

ELIZABETH FORBES

Ellice Islands. *See* POLYNESIA, §III, 5.

Ellicott, Rosalind Frances (*b* Cambridge, 14 Nov 1857; *d* London, 5 April 1924). English composer. She was educated privately apart from two years at the RAM (1874–76) studying the piano. Her earliest surviving songs and chamber music were published and performed in the early 1880s; she then studied composition with Thomas Wingham for seven years from 1885. She was a member of the International Society of Musicians and the National Society of Professional Musicians, as well as an ARAM. Although she was sometimes criticized for heavy scoring, Ellicott achieved a considerable number of performances of large-scale orchestral works. Her first success was the *Dramatic Overture*, given at the Gloucester Festival in 1886 and repeated over the next few years in Bristol, Cheltenham, London and Chicago. Her cantata *Elysium* (1889), a lyrical work with imaginative use of percussion, was also first performed at Gloucester, as was her cantata *The Birth of Song* (1892) and her Fantasia in A minor for piano and orchestra (1895). Most of her large-scale chamber music, despite well-received performances in London and elsewhere, has not survived, but the smaller pieces demonstrate a fondness for expansive themes.

SOPHIE FULLER

Elling, Catharinus (*b* Christiania [now Oslo], 13 Sept 1858; *d* Oslo, 8 Jan 1942). Norwegian composer and ethnomusicologist. He studied the piano and composition in Leipzig (1877–8) and took the BA at Kristiania in 1883. Houen's scholarship took him to Berlin in 1886 to study with Herzogenberg for about a year at the Hochschule für Musik. He then settled in Berlin for the next decade, planning and completing some of his most considerable works, the opera *Kosakkene* ('The Cossacks'), the oratorio *Den forlorne søn* ('The Prodigal Son') and the Symphony in A major. In 1896 he returned to Norway to teach counterpoint and composition at the Kristiania Conservatory, a position he held until 1908. He was conductor of the Drammen Choral Society (1897–1901) and organist of Gamlebyen Church (1909–26). In 1898 he was granted a state scholarship to collect and classify Norwegian folk music. His collaborator Olav Sande travelled in the regions from Lista to Sogn while Elling collected in other parts of the country. He notated about 1400 melodies, principally from Setesdal, Sunnfjord, Gudbrandsdalen, Valdres and Telemark. Elling's music is of a lyrical character with diatonic themes and simple harmony; he showed a predilection for polyphonic treatment, while orchestration received less attention.

HANS MAGNE GRAESVOLD

Ellingson, Ter (*b* St Paul, 26 Feb 1944). American ethnomusicologist. After completing the BA in music at Concordia College (1966) and the MA in religion at the University of Chicago (1970), he took the doctorate in anthropology and Buddhist studies in 1979 at the University of Wisconsin. In 1981 he joined the faculty at the University of Washington, where he has been associate

professor (from 1986) and head of the ethnomusicology department (1988–90; 1994–5; from 1997), teaching a range of subjects, including ethnomusicology, anthropology, South Asian studies and comparative religion. He has conducted fieldwork in India, Sri Lanka, Thailand, Japan and Nepal, concentrating on the Tibetans, Newar and other ethnic groups, and has written on the Buddhist musical traditions of Sri Lanka, Japan, Thailand and on the art of anthropological representation of Amerindians. His theoretical interests include symbolism, ritual, the notation and transmission of traditional music and the history of anthropological and ethnomusicological theory.

SEAN WILLIAMS

Ellington, Duke [Edward Kennedy] (*b* Washington, DC, 29 April 1899; *d* New York, 24 May 1974). American jazz composer, bandleader and pianist. He was for decades a leading figure in big-band jazz and remains the most significant composer of the genre.

1. Life. 2. Style and musical language. 3. Compositions.

1. Life. Ellington's father was a butler and intended him to become an artist. He began to study the piano when he was seven and was much influenced by the ragtime pianists; at the age of 17 he made his professional debut. His first visit to New York, in early 1923, ended in financial failure, but on Fats Waller's advice he moved there later that year with Elmer Snowden's Washington band, the Washingtonians: Sonny Greer (drums), Otto Hardwick (saxophones), Snowden (banjo) and Artie Whetsol (trumpet). Between 1923 and 1927 this small group, which played at the Hollywood and Kentucky clubs on Broadway, was gradually enlarged to a ten-piece orchestra by the addition of Bubber Miley (trumpet), Tricky Sam Nanton (trombone), Harry Carney (baritone saxophone), Rudy Jackson (clarinet and tenor saxophone) and Wellman Braud (double bass); Fred Guy replaced Snowden on banjo. The band's early recordings (*East St Louis Toodle-oo*, 1926, Vic., and *Black and Tan Fantasy*, 1927, Bruns.) reveal growing originality.

During the following period (1927–30), at the Cotton Club in Harlem, Ellington began to share with Louis Armstrong the leading position in the jazz world. The orchestra grew to 12 musicians, including Barney Bigard (clarinet), Johnny Hodges (saxophone) and Cootie Williams (trumpet). The group went to Hollywood to appear in the film *Check and Double Check* (1930) and in New York made about 200 recordings, many in the 'jungle style' that was one of Ellington's and Miley's most individual creations. The success of *Mood Indigo* (1930, Vic.) brought Ellington worldwide fame, and in 1931 he began experiments in extended composition with *Creole Rhapsody* (Bruns.), later to be followed by *Reminiscing in Tempo* (1935, Bruns.) and *Diminuendo and Crescendo in Blue* (1937, Bruns.). The decade from 1932 to 1942 was Ellington's most creative. His band, consisting now

Duke Ellington, 1969

Ex.1 Introduction to *Clothed Women* (1947, Col.); transcr. G. Schuller

of six brass instruments, four reeds and a four-man rhythm section, performed in many American cities and made highly successful concert tours of Europe in 1933 and 1939. In 1939–40 there were more important additions to the band: Jimmy Blanton (double bass), Ben Webster (tenor saxophone) and most notably Billy Strayhorn, as arranger, composer and second pianist. At this time Ellington created several outstanding short works, in particular *Concerto for Cootie*, *Ko-Ko* and *Cotton Tail* (all 1940, Vic.).

In the mid-1940s the orchestra was enlarged again: by 1946 it included 18 players. But the previous stability of personnel declined and Ellington's writing, based on his members' individual styles, began to suffer from the constant changes. Some excellent soloists, however, were added: Ray Nance (trumpet and violin), Shorty Baker (trumpet) and Jimmy Hamilton (clarinet). In January 1943 Ellington inaugurated a series of annual concerts at Carnegie Hall with his monumental work *Black, Brown and Beige*, a 'tone parallel' originally conceived in five sections and intended to portray the history of the black people in the USA through their music. Other ambitious works followed. After Ellington abandoned these concerts in 1952, the development of the long-playing record allowed him to create other multi-movement suites.

From 1950 Ellington continued to expand the scope of his compositions and his activities as a bandleader. His foreign tours became increasingly frequent and successful (including one of the USSR, in 1971); many of these stimulated him to write large-scale suites. He composed his first full-length film score, for Otto Preminger's *Anatomy of a Murder*(1959), and his first incidental music, for Alain René Le Sage's *Turcaret* (1960). He also made recordings with younger jazz musicians such as John Coltrane, Charles Mingus and Max Roach (*Money Jungle*, 1962, UA). In his last decade Ellington wrote mostly liturgical music: *In the Beginning God* (for a standard jazz orchestra, narrator, chorus, two soloists and dancer) was performed in Grace Cathedral, San Francisco (1965), and this was followed by other 'sacred services'. Among his numerous awards and honours were doctorates from Howard University (1963) and Yale University (1967) and the Presidential Medal of Honor (1969); in 1970 he was made a member of the National Institute of Arts and Letters, and in 1971 he became the first jazz musician to be named a member of the Swedish Royal Academy of Music in Stockholm. A documentary film of Ellington and his orchestra, *On the Road with Duke Ellington*, was made in 1974. Ellington directed his band until his death, when it was taken over by his son Mercer Ellington.

2. Style and musical language. Ellington taught himself harmony at the piano and acquired the rudiments of orchestration by experimenting with his band; his orchestra was a workshop in which he consulted his players and tried out alternative solutions. During the formative Cotton Club period Ellington was obliged to work in a variety of musical categories: numbers for dancing, jungle-style and production numbers, popular songs, 'blue' or 'mood' pieces, as well as 'pure' instrumental jazz compositions. During this period, too, Ellington developed an extraordinary symbiotic relationship with his orchestra – it was his 'instrument' even more than the piano – enabling him to experiment with the timbral colourings, tonal effects and unusual voicings that became the hallmark of his style; the 'Ellington effect' (Strayhorn's term) was virtually inimitable because it depended in large part on the particular timbre and style of each player. Remarkably, though no two players in Ellington's orchestra sounded alike, they could, when called upon, produce the most ravishing blends and ensembles of sonority known to jazz.

An outstanding early example of the 'Ellington effect' may be heard on *Mood Indigo* (1930), in which the traditional roles of the three front-line instruments in New Orleans collective improvisation – clarinet (high-register obbligato), trumpet (melody or theme) and trombone (bass or tenor counter-themes) – are inverted so that the muted trumpet plays on top; the plunger-muted trombone functions as a high-register second voice, and the clarinet sounds more than an octave below in its chalumeau register.

In the early and mid-1920s orchestral jazz arrangements were rudimentary, serving only the simplest functions of dance music. However, Ellington (along with Don Redman, Fletcher Henderson and John Nesbitt) developed an elaborate, diversified concept of arranging, which

incorporated the essence of the current 'hot' style of solo improvisation. In this he was greatly aided and influenced by the extraordinary expressive and technical capabilities of his two principal brass players, Bubber Miley and Tricky Sam Nanton, who were both experts of the so-called growl and plunger style. These often pungent sonorities, when blended or juxtaposed with the smoother sounds of the saxophone, provided Ellington with an orchestral palette more colourful and varied than that of any other orchestra of the time (with the possible exception of Paul Whiteman's). Faced with the formal problem posed by jazz arrangement – how best to integrate solo improvisation – Ellington learnt to exploit expertly the contrast produced by the soloist's entry, so as to project him into the music's movement and entrust him with its development. This partly explains why even Ellington's finest soloists seemed lustreless after leaving his orchestra. He also had a singular gift for devising orchestral accompaniments for improvisation; no arrangers, except perhaps Sy Oliver and Gil Evans, have imagined instrumental combinations as beautiful as those of *Mystery Song* (1931, Vic.), *Saddest Tale*(1934, Bruns.), *Delta Serenade* (1934, Vic.), *Azure* (1937, Master), *Subtle Lament* (1939, Bruns.), *Dusk* (1940, Vic.), *Ko-Ko* (1940, Vic) and *Moon Mist* (1942, Vic.).

Ellington's talents as a pianist are generally neglected or underrated. While he rarely featured himself as a soloist with his orchestra, he was nevertheless a remarkably individual contributor to the overall 'Ellington effect'. He saw himself primarily as a catalyst and an accompanist, a feeder of ideas and rhythmic energy to the band as a whole or to its soloists. In this unobtrusive role, playing only when necessary, he was known for remaining silent during entire choruses or indeed pieces. His piano tone, produced deep in the keys, was the richest and most resonant imaginable; it had the ability to energize and inspire the entire orchestra. Although he was an erratic soloist in his early years and sometimes relied on pianistic clichés – incessant downward-fluttering arpeggios, for instance – Ellington could on occasion vie with the best players. An outstanding example of his work as a pianist-composer is *Clothed Woman* (1947, Col.), remarkable for its virtually complete atonality (ex.1). He also wrote a *Piano Method for Blues* (New York, 1943).

3. Compositions. Ellington is generally recognized as the most important composer in jazz history. Most of the enormous number of works he recorded are his own; the exact number of his compositions is unknown, but is estimated at about 2000, including hundreds of three-minute instrumental pieces (for 78 r.p.m. recordings), popular songs (many consisting of instrumental pieces to which lyrics by Irving Mills and others were added), large-scale suites, several musical comedies, many film scores and an incomplete and unperformed opera, *Boola*. Ellington combined a flair for orchestration with extraordinary gifts as a bandleader; while other jazz composers had comparable talent, they lacked the organizational abilities necessary to create and maintain a permanent orchestral vehicle. The excerpt from *Ko-Ko* (ex.2), showing the orchestration of a passage from an ensemble section, is one of the most remarkable pieces in all of Ellington's writing.

Ellington was one of the first musicians to concern himself with composition and musical form in jazz – as distinct from improvisation, tune writing and arranging. In *Concerto for Cootie*, ten-bar phrases are combined into a complex ternary form which abandons the chorus structure common to most jazz. In *Cotton Tail*, from the same period, Ellington made use of a call-and-response technique of writing in order to heighten the drama of the last climactic chorus (ex.3). *Black, Brown and Beige* uses symphonic devices (the fragmentation and development of motifs, thematic recall and mottoes) as well as symphonic proportions in its several sections; it is thus perhaps unique among Ellington's earlier works, showing a preoccupation with form far in advance of his contemporaries. Only a few jazz musicians (among them Thelonious Monk, Charles Mingus and Gil Evans) have followed Ellington in this respect.

Ellington's prodigious productivity makes an overview of his work virtually impossible. But it is generally agreed that he attained the zenith of his creativity in the late 1930s and early 1940s, and that he worked best in the miniature forms dictated by the three-minute ten-inch disc. His creativity declined somewhat after the 1940s, many of the late-period extended compositions and multi-movement suites generally suffering, despite their occasional visionary inspirations, from a diminished, less consistent originality and hasty work, mostly occasioned by incessant touring. But even 'lesser' Ellington is bound to be of above-average quality, and the work in recent years of Wynton Marsalis and his Lincoln Centre Jazz Orchestra's championing of Ellington's late work has led to a more favourable assessment in many quarters. Serious study of Ellington's oeuvre has also been hampered by an almost total absence to date of his scores in published form, having thus to rely on transcriptions from recordings. However, in recent years the newly acquired holdings of several hundred thousand sheets of Ellington's scores and parts at the Smithsonian Institute has at last provided easier access to the immensity of Ellington's oeuvre.

ANDRÉ HODEIR/GUNTHER SCHULLER

Elliot, Thomas (*b c*1759; *d* 1832). English organ builder. He was first recorded in business as an organ builder in 1791, when he was in Wharton's Court, Holborn, London. By 1794 he was at 10 Sutton Street, Soho, and by 1804, at 12 Tottenham Court. The latter may be the premises in Tottenham Court used by the organ builder Nutt, who died early in 1804; Nutt was a partner of Jonathan Ohrmann (*d* 1803) who is said to have continued Snetzler's business, and this, together with an unproven tradition that Elliot and Nutt were partners, accounts for the further tradition that the Elliot and Hill firms descended from Snetzler. Elliot took William Hill as a partner about 1825, when the firm became Elliot & Hill (*see* HILL (i)).

Elliot's organs were typical of the period, and he seems to have had a large output, including many chamber organs. He was a pioneer in the use of pedal pipes during the 1810s; these were chiefly of 8′ pitch, but Elliot was one of the first to make 16′ open pipes (All Saints, Derby; 1808). He was also among the earliest English builders to make extensive use of a second open diapason on the Great of three- and even two-manual organs. In other respects, his instruments exhibit conservative features; he retained the solo Cornet quite late (e.g. Bromsgrove, 1808) and continued to build the occasional Choir in a separate case (Montreal Cathedral, 1816; Waterford Cathedral, 1817). Under the influence of Hill, the firm's work became more ambitious, with the building of some very large instruments at the end of the 1820s (Oldham Parish Church and Christ's Hospital, London, now Horsham; both of 1830, with surviving pipework). Most ambitious of all was the new organ for York Minster; the contract was signed in 1829, but Elliot died before the instrument was complete. Organs by Elliot survive at All Saints, Thornage, Norfolk (1812), Scone Palace, Perth (1813), Ashridge, Hertfordshire (1818), Crick Parish Church, Northamptonshire (1826) and Belton Houses, Lincolnshire (1826).

NICHOLAS THISTLETHWAITE

Ellis [Sharpe], **Alexander J(ohn)** (*b* Hoxton, London, 14 June 1814; *d* London, 28 Oct 1890). English philologist and mathematician. His surname was changed in recognition of a legacy from a relative named Ellis, which made possible a life of independent and active scholarship. He was educated at Shrewsbury, Eton and Cambridge, where he read mathematics and classics. At first a mathematician, he became an important philologist who did more than any other scholar to advance the scientific study of English pronunciation. Intrigued by the pitch of vocal sounds, he became a writer on scientific aspects of music. He was elected a Fellow of the Royal Society in 1864. His musical studies led to an English translation of Helmholtz's *Die Lehre von den Tonempfindungen*; its second edition (London, 1885) contains an appendix consisting of a summary of Ellis's own papers on musical scales, theory of harmony, temperament and pitch, added with Helmholtz's approval. Ellis's view of harmony and temperament is controversial because it derived from the idea that music has a discoverable scientific basis, but his essay, 'On the History of Musical Pitch' (1880), is obligatory reading. In this essay Ellis describes that he had 'purposely relied on mechanical evaluation, to the exclusion of mere estimation of ear' in his studies of pitch. It is highly unlikley, however, that there was any truth in the description of him as 'tone-deaf' (as given in E.J. Hipkins's MS *A Few Notes on the Engaging Personality of Dr. A.J. Ellis*, *GB-Lbl*).

W.R. THOMAS, J.J.K. RHODES/R

Ellis [née Caughie], **Catherine J(oan)** (*b* Birregurra, Victoria, 19 May 1935; *d* Adelaide, 30 May 1996). Australian ethnomusicologist. After graduating in music at the University of Melbourne in 1956, she worked at the University of Adelaide analysing the Central Australian recordings collected by the linguist Theodor Strehlow. She took the doctorate in Glasgow in 1961 with a dissertation on Strehlow's recordings of Aboriginal music. On her return to Adelaide she joined the university music department as a research fellow (1964–9) and subsequently lecturer (1970–84). She was professor of music at the University of New England (1985–95). During her time in Australia she and her husband, A.M. Ellis, did intensive fieldwork among the Pitjantjara tribe in the northern part of South Australia, analysing and comparing the results with those of earlier expeditions. In 1968 she started a musical education programme for both tribal and urban Aborigines which, whenever possible, involved people of different races in inter-cultural activities. In 1974 she made a study tour of Canada and of the western part of the USA, where she investigated musical education programmes for minority groups. In 1975 she established the Centre for Aboriginal Studies in Music at the University of Adelaide. In the latter part of her career she worked with Udo Will on the analysis of frequency performance in Aboriginal vocal music.

WERNER GALLUSSER/R

Ellis [Elsas], **Mary** (*b* New York, 15 June 1900). American soprano. After an operatic training she appeared in New York at the Metropolitan Opera House during the last days of World War I, performing alongside Chaliapin and Caruso. She turned to lighter music in 1924, creating the title role in Hammerstein and Friml's *Rose Marie*, and then began acting in plays and films. Admired by Ivor Novello, he brought her to London to take the leading female role, that of opera singer Militza Hajos, in the first of his Drury Lane musicals, *Glamorous Night* (1935), whose success was partly due to Ellis's varied talents. Her operatic training showed in the strength and quality of her higher notes, and made her ideal as opera singer Maria Ziegler in Novello's *The Dancing Years* (1939). It was in this role that she introduced one of Novello's most poignant songs, 'My Dearest Dear', which was written to show the purity of her voice to its most dramatic effect. Her third role for Novello, as the opera singer Marie Foretin in *Arc de Triomphe* (1943), was less successful. She spent the rest of the war doing charitable work and afterwards moved into straight theatre, appearing as Mrs Crocker Harris in Rattigan's *The Browning Version* (1949). By the time she returned to musical theatre for Coward's *After the Ball* (1954), her voice, though still attractive, had lost its original range and she accepted no further musical roles.

Ellis's continued popularity, despite the failure of *After the Ball*, rested on recordings of the Novello shows and the public's memory of her performances. During the 1930s she enjoyed the rare combination of a voice that was as comfortable in opera as in operetta, a glamorous appearance and an acting ability that allowed her to dominate such vast auditoriums as that of Drury Lane. Her autobiography was published as *Those Dancing Years* (London, 1982).

PAUL WEBB

Ellis, Osian (Gwynn) (*b* Ffynnongroew, Flintshire, 8 Feb 1928). Welsh harpist and composer. He studied at the RAM with Gwendolen Mason, whom he succeeded as professor in 1959, remaining in the post until his

retirement in 1989. He has had an illustrious career as a recitalist, in chamber music and as an orchestral harpist. His compatriot Alun Hoddinott wrote him a concerto for the Cheltenham Festival of 1957, and an early recording of Handel harp concertos with Thurston Dart won the Grand Prix du Disque in 1959. Significant recordings from the 1960s include French chamber works with the Melos Ensemble (1962) and the Glier Harp Concerto (1969). William Mathias's Harp Concerto was commissioned by him for the Llandaff Festival of 1970. Other composers who have written concertos for him include Jørgen Jersild (1972), William Alwyn (1979) and Robin Holloway (1985), while Menotti, William Schuman and others have written chamber works for him.

Ellis's consciousness of his Welsh identity and the musical and poetic heritage of his native country have been a major influence both on his performing career and on his own compositions, which include two Welsh folksong cycles for tenor and harp with various combinations, settings of medieval poems in the strict metres and the Diversions for two harps, with their eloquent central movement based on a *cerdd dant* setting of a poem by Dylan Thomas. An important aspect of Osian Ellis's career was his association with Benjamin Britten, who wrote for him the harp parts in *A Midsummer Night's Dream*, the *War Requiem* and the three church parables, in addition to the Suite for Harp (written for the Aldeburgh Festival in 1969) and a series of late works composed for Ellis and Peter Pears: *The Death of St Narcissus*, *A Birthday Hansel*, and Five Songs and Eight Folksongs.

ANN GRIFFITHS

Ellis, Vivian (John Herman) (*b* Hampstead, 29 Oct 1904; *d* London, 19 June 1996). English composer, lyricist and pianist. His grandmother Julia Woolf (1831–93) was a pianist and composer, publishing piano pieces, songs and the comic opera *Carina* (1888), and his mother was a violin pupil of Ysaÿe. He won a music scholarship to Cheltenham College and later studied the piano with Myra Hess at the RAM; his recordings of piano medleys of his own work, especially that from *Streamline* (1934), reveal a strong technique. Inspired by the music of Paul Rubens, particularly after seeing a revival of *Tonight's the Night*, he turned to composing light music, contributing additional songs to shows including *The Curate's Egg* (1922) and *By the Way* (1923). He learned about songwriting styles as a song plugger for Francis, Day & Hunter, and in 1928 became a composer for Chappell. His first transatlantic hit was achieved with 'I never dreamt' in the revue *Will o' the Whispers* (1928), made popular by 'Whispering' Jack Smith; then through Max and Louis Dreyfus at Chappell he received the commission from Julian Wylie to compose the music for *Mr. Cinders* (1929), a West End hit which also received continental success under the title *Jim und Jill*. Further success followed with the *Cochran's 1930 Revue*, which included Ellis's 'The Wind in the Willows'. In the early 1930s he began to write songs for films, and, with 'Me and my Dog' in 1936, began regularly to write his own lyrics. In 1938 an extended cruise took Ellis to Hollywood where Universal Pictures bought some of his songs for Deanna Durbin; he briefly stayed to write more, returning to England in the spring of 1939.

At the outbreak of war he became a Lieutenant in the RNVR at Devonport, and later was appointed Command Entertainments Officer, in 1944 becoming a Lieutenant Commander at Plymouth. He had effectively suspended composition until after the war, when C.B. Cochran invited him to write the music for *Big Ben* (1946), the first of four stage works with A.P. Herbert as lyricist and author. In 1947 their *Bless the Bride* became a major success, and has become one of the main shows upon which Ellis's reputation rests. His later shows include *And So to Bed* (1951), based on J.B. Fagan's dramatic adaptation of the diaries of Samuel Pepys, and *The Water Gipsies* (1955), after Herbert's novel. Although he faded from public prominence in the 1960s and 70s, a resurgence of interest in his work began when the pop singer Sting had a hit with 'Spread a little happiness' in 1982, and in 1983 a revised *Mr. Cinders* (1983) went into the West End. A subsequent compilation show, *Spread a Little Happiness*, was performed in London in 1992.

The origins of Ellis's style lay in a desire to produce elegant and sophisticated, yet accessible, popular music. Such numbers as 'Other People's Babies' (*Streamline*) and 'She's my lovely' (*Hide and Seek*, 1937) reveal a naturally fluid sense of melody combined with subtle rhythmic animation, while livelier numbers such as 'Sweep' (*Falling for You*, 1933) and 'I'm on a see-saw' (*Jill Darling!*, 1934) show his effective and original approach to word-setting. Many songs proved ideal for dance band use in the 1930s and added to Ellis's popularity; his songs were particularly associated with Billy Ternent, who used 'She's my lovely' as his band signature tune. Evidence of his classical training and stylistic aspirations can be seen in 'The Wind in the Willows', whose unusual inclusion of a whole-tone modality was directly inspired by Debussy, and the art-song quality of 'Little Boat' (1931), written for the 1932 film of *The Water Gipsies* and subsequently used in the show of the same name. Further examples include his use of pastiche in *And So to Bed*, Gilbert and Sullivan parody in *Perseverance or Half a Coronet* (*Streamline*) and his choral arrangements in the *The Water Gipsies*. Yet Ellis often found popular appeal through the most deliberately simplistic pieces, such as 'The flies crawled up the window' (*Jack's the Boy*, 1932).

Of his stage works *Bless the Bride* (1947), with a plot reminiscent of his grandmother's opera, is notable for its subtle underlining of character through musical motifs and rhythms, and the uplifting 'Ma belle Marguerite' and emotive 'This is my lovely day' remain two of its best-known numbers. In *The Water Gipsies* the contrast of the elegant waltz 'Castles and Hearts and Roses' with the up-beat comic number 'It would cramp my style' provide testament to Ellis's versatility. Of his instrumental music, he is particularly known for *Coronation Scot*, adopted as the theme tune to the BBC radio programme 'Paul Temple', and *Alpine Pastures* for BBC Radio 4's long-running panel game 'My Word'.

Ellis was a director of the Performing Rights Society from 1955, Deputy President (1975–83) and President

(1983–96). He gained many honours, including Ivor Novello awards for outstanding services to British music (1973) and a Lifetime Achievement Award (1984), and most significantly in 1984 the Performing Rights Society sponsored the establishment of the Vivian Ellis Prize for young British composers. He was appointed a CBE, also in 1984. His extensive catalogue has both established and informed the repertory of British popular music in the 20th century and as such Ellis remains one of its most important figures.

WORKS
(*selective list*)

STAGE

dates those of first London performance unless otherwise stated; where different, writers shown as (lyricist; book author)

The Grass Widow (musical comedy, W. Helmore; L. Wylie, after F. Mackay), Bristol, 8 Aug 1927
The Other Girl (musical comedy, Helmore and Collie Knox; Wylie, after Mackay: *Brown at Brighton*), Bristol, 17 Oct 1927
Peg O' Mine (musical comedy, D. Carter; F. Jackson after J. Hartley Manners: *Peg o'my Heart*), Sunderland, 31 Oct 1927, collab. P. Charig and others
Mr. Cinders (Jim und Jill) (musical comedy, 2, Grey, G. Newman and L. Robin; Grey and G. Newman), Adelphi, 11 Feb 1929, collab. R. Myers [incl. Ev'ry Little Moment, On the Amazon, Spread a little happiness; film 1934]; rev. 1983 [incl. Please, Mr. Cinders]
Follow a Star (musical comedy, 2, D. Furber and J. Yellen; Furber and D. Titheradge), orchd L. Lucas, Winter Garden, 17 Sept 1930 [incl. Don't wear your heart on your sleeve, The First Week-End in June, Follow a star, If your Kisses can't Hold the Man you Love, I never can think of the words]
Little Tommy Tucker (musical comedy, 2, D. Carter; C. Garth, R.P. Weston and B. Lee), Daly's, 19 Nov 1930, collab. A. Schwartz [incl. Let's be sentimental, Out of the Blue]
Song of the Drum (musical play, 2, D. Carter; F. Thompson and G. Bolton), Drury Lane, 9 Jan 1931, collab. H. Finck [incl. Song of the Hillmen, Within my Heart]
Blue Roses (musical play, 2, Carter; Carter and Garth), Gaiety, 20 Jan 1931
Stand Up and Sing (musical play, 2, D. Furber; J. Buchanan), orchd R. Russell Bennett, Hippodrome, 5 March 1931, collab. P. Charig
Out of the Bottle (musical comedy, 2, Grey and Thompson, after F. Anstey: *The Brass Bottle*), Hippodrome, 11 June 1932, collab. O. Levant [formerly titled If It Happened to You; incl. Put that down in writing]
Jill Darling! (musical comedy, 2, D. Carter; M. Edgar), orchd C. Prentice and others, Saville, 19 Dec 1934 [formerly titled Jack and Jill; incl. I'm on a see-saw, Let's lay our heads together]
Hide and Seek (musical play, 2, V. Ellis; Bolton, Thompson and Furber), Hippodrome, 14 Oct 1937, collab. S. Lerner, A. Goodhart and A. Hoffman [incl. Follow the Bride, She's my lovely]
The Fleet's Lit Up (musical frolic, 2, Ellis; Bolton, Thompson and Lee), orchd Geraldo and B. Byrd, Hippodrome, 17 Aug 1938 [incl. The fleet's lit up; How do you do, Mr Right?]
Running Riot (musical show, 2, Ellis; Furber, after Bolton and F. Shephard), orchd D. Somers, Gaiety, 31 Aug 1938
Under Your Hat (musical comedy, 2, Ellis; A. Menzies, A. Macrae and J. Hulbert), Palace, orchd. B. Frankel, 24 Nov 1938 [incl. Together Again, The Empire depends on you]
Big Ben (light op, 2, A.P. Herbert), orchd Prentice, Adelphi, 17 July 1946
Bless the Bride (musical show, 2, Herbert), orchd P. Cardew, Adelphi, 26 April 1947 [incl. I was never kissed before, Ma belle Marguerite, This is my lovely day]
Tough at the Top (musical play, 2, Herbert), orchd Cardew and Lucas, Adelphi, 15 July 1949
And So to Bed (musical comedy, 2, Ellis; J.B. Fagan), orchd Cardew, New, 17 Oct 1951 [incl. Gaze not on swans, Love me little, love me long]
Listen to the Wind (play with music, 3, Ellis; A.A. Jeans), Oxford, Playhouse, 15 Dec 1954; rev. 1996
The Water Gipsies (play with music, 2, Herbert), Winter Garden, 31 Aug 1955 [incl. Castles and Hearts and Roses, Little Boat]
Half in Earnest (musical, Ellis, after O. Wilde: *The Importance of Being Earnest*), New Hope, PA, Bucks County Playhouse, 17 June 1957
Contribs to other musicals, incl. Mercenary Mary, 1925; Just a Kiss, 1926; Kid Boots, 1926; My Son John, 1926; The Girl Friend, 1927; A Yankee at the Court of King Arthur, 1929 [incl. I don't know how]
Many contribs. to revue, incl. The Curate's Egg, 1922; By the Way, 1923; The Punch Bowl, 1924; Yoicks, 1924; Still Dancing, 1925; Cochran's Revue, 1926; Palladium Pleasures, 1926; Blue Skies, 1927; Clowns in Clover, 1927 [incl. Little Boy Blues]; Charlot 1928, 1928; Vogues and Vanities, 1928; Will o' the Whispers, 1928 [incl. I never dreamt]; The House that Jack Built, 1929 [incl. My Heart is Saying]; Cochran's 1930 Revue, 1930 [incl. The Wind in the Willows]; Folly to be Wise, 1931; Over the Page, Please!, 1932; Streamline, 1934 [incl. The First Waltz, I will, Other People's Babies, Perseverance or Half a Coronet, You turned your head]; Going Places, 1936; The Town Talks, 1936 [incl. The Trees in Bloomsbury Square]; Floodlight, 1937; It's Foolish but it's Fun, 1943; Fine Feathers, 1945; Henson's Gaieties, 1945; Over the Moon, 1953; 4 to the Bar, 1961; Chaganog, 1964
Incid. music: O Mistress Mine (farce, B. Travers), 1936 [incl. When a Woman Smiles]; The Sleeping Prince, 1953; Mr Whatnot (play, A. Ayckbourn), 1964

JOHN SNELSON

Ellis, William Ashton (*b* London, 20 Aug 1852; *d* London, 2 Jan 1919). English writer and translator. His father was a surgeon and following medical studies at St George's Hospital, London, Ellis held the post of Resident Medical Officer at the Western Dispensary from 1878. In the mid-1870s, however, he became (in his own words) 'a devotee of Wagner's works' and resigned his post in 1887, devoting himself over the following 28 years to the single-minded pursuit of Wagner studies.

From 1888 to 1895 he edited (and largely wrote) the macaronically titled journal of the London Wagner Society, *The Meister*, founded primarily to publish English translations of Wagner's more substantial prose works. Out of this project grew the first of Ellis's chief undertakings, the eight-volume English translation of *Richard Wagner's Prose Works* (1892–9). His other major endeavour was the six-volume *Life of Richard Wagner*, which was initiated as 'an English revision' of the

'authorized' biography by C.F. Glasenapp, but which from the fourth volume omitted Glasenapp's name from the title-page, on the grounds that it had become Ellis's own work. The latter project – flawed, idiosyncratic, but containing a wealth of detail not available elsewhere – remained uncompleted: volume six takes the story only to 1859.

No less idiosyncratic are Ellis's translations of Wagner's prose works; indeed, their excessive fidelity to the lexical and syntactical structures of the original have made them a byword for risible impenetrability. There is, however, a palpable empathy for the style, content and tone of Wagner's prose that has not always been captured in subsequent translations of individual essays (no English edition of the complete writings has been published since Ellis's) and undoubtedly his mystical inclinations – he was a member of the Theosophical Society and closely associated with the movement's founder, Madame Blavatsky – enhanced his awareness of the esoteric nature of some of Wagner's later work.

After the outbreak of war, in 1915, Ellis returned to his previous post at the Western Dispensary. He remained an isolated individual, never marrying and having no children. No photographs of him are known, and the autographs of his writings have not survived.

BARRY MILLINGTON

Elman, Mischa (*b* Talnoye, 20 Jan 1891; *d* New York, 5 April 1967). American violinist of Russian birth. He studied in Odessa with A. Fiedemann (1897–1902), then he was discovered by Auer, who taught him at the St Petersburg Conservatory (1903–4). Elman's meteoric career began in Berlin on 14 October 1904; sensational débuts in London (21 March 1905) and in New York (10 December 1908) followed, and he quickly established himself as one of the great violinists. He settled in the USA in 1911 and became a citizen in 1923, but his tours took him around the world. In 1926 he founded the Elman String Quartet. During the 1936–7 season he presented five concerts at New York's Carnegie Hall, 'The Development of Violin Literature', in which he played more than 15 concertos. Martinů composed his concerto for Elman, who gave its first performance in 1944. Elman's popularity was enhanced by his gramophone records, of which more than two million were sold.

Elman's most glorious attribute was his rich, sensuous and infinitely expressive tone, which became legendary. His temperament was fiery and passionate, and there was a pulsating vitality in his playing. His improvisational style was best suited to the Romantic repertory, but with maturity his exuberance became tempered. His technique was reliable without being a dominant factor in his success. He composed a few short pieces, and made many arrangements. A Mischa Elman Chair for Violin Studies was established at the Manhattan School of Music in 1974 by Elman's widow, Helen Elman.

BORIS SCHWARZ/MARGARET CAMPBELL

Elmendorff, Karl (Eduard Maria) (*b* Düsseldorf, 25 Oct 1891; *d* Hofheim am Taunus, 21 Oct 1962). German conductor. After first studying philology he became a student of Steinbach and Abendroth at the Cologne Conservatory in 1913. His conducting début was at Düsseldorf in 1916, and he held posts in Mainz, Hagen and Aachen. He was first conductor at the Berlin and Munich Staatsopern (1925–32) and in 1927 he made his début at Bayreuth with *Tristan und Isolde*; he returned there regularly until 1942. During this period he became widely renowned for his broad readings of Wagner, whose operas he conducted throughout Europe and in South America. He was appointed Generalmusikdirektor of the Staatstheater at Kassel and of the Hessische Staatstheater at Wiesbaden in 1932, moving to a similar appointment at Mannheim in 1935, and to the Dresden Staatsoper in 1942, in succession to Böhm. There he conducted the première of Joseph Haas's *Die Hochzeit des Jobs* (1944), and in the same year added *Capriccio* to the Dresden Strauss repertory, as well as a brilliant revival of Hermann Goetz's *Der Widerspenstigen Zähmung*, shortly before the wartime destruction of the opera house. He returned to Kassel and Wiesbaden (1948–56), and thereafter toured extensively. Elmendorff's talent extended over a wide repertory in style and period, and he was particularly concerned to foster reciprocal interest in German and Italian opera styles by conducting Wagner in Italy (notably at the Florence Maggio Musicale) and introducing lesser-known Italian operas into Germany; he conducted the German première of Wolf-Ferrari's *La dama boba* at Berlin and of Malipiero's *Torneo notturno* at Munich.

□

Elmenhorst, Heinrich E. (*b* Parchim, Mecklenburg, 19 Oct 1632; *d* Hamburg, 21 May 1704). German theologian, poet and librettist. His parents were originally from Hamburg. He studied theology at Jena, Wittenberg and Leipzig from 1650. He later worked at two Hamburg churches: on 18 March 1660 he became deacon at St Katharinen, from 1673 he was archdeacon and from 19 December 1696, presumably until his death, preacher at St Hiob. His *Dramatologia antiquo-hodierna* (Hamburg, 1688/*R*) is an important pamphlet in which he defended opera against the virulent attacks of the Pietist preachers who, since the founding of the Hamburg Opera in 1678, had led impassioned assaults on opera from the pulpits of several of the city's churches. As one of the members of the orthodox Lutheran clergy opposing the Pietists, Elmenhorst viewed opera as a reasonable form of entertainment, clearly not morally wicked and in no way condemned by biblical pronouncements. His publication

helped to gain the support of the city council and their permission to allow the opera to continue. He was himself an important early writer of librettos for Hamburg opera composers, including J.W. Franck, Förtsch and probably Theile. But of greater significance for the history of music are his texts for the *Geistreiche Lieder*, 100 poems which had appeared in several editions since 1681 before being published under this title in 1700. In the final edition, the music of these sacred solo songs with continuo (in DDT, xlv, 1911) is by Franck (73), Böhm (23) and P.L. Wockenfuss (4). Elmenhorst used biblical passages as the rhetorical topic on which to develop his poetry, and the collection is organized in part around the church calendar and divided into ten sections (i. *Hoher Fest-Lieder*, for Advent, Christmas and New Year; ii. *Der Passions-Lieder*; iii. *Hoher Fest-Lieder*, for Easter and Ascension; iv. *Anderer Fest-Lieder*; v. *Buss- und Communion-Lieder*; vi. *Christlichen Lebens und Wandels Lieder*; vii. *Kreuzes-Lieder*; viii. *Zeit-Lieder*; ix. *Todes- und Sterb-Lieder*; x. *Himmels-Lieder*). The volume, which incorporates characteristics of the Protestant chorale and the operatic aria, is a landmark in the history of the sacred song.

WORKS

LIBRETTOS

Orontes, Singspiel (Hamburg, 1678); authorship uncertain; music by J. Theile

Michal und David, op (Hamburg, 1679); music by J.W. Franck

Charitine, oder Göttliche Geliebte, geistliche Opera (Hamburg, 1681); music by J.W. Franck

Polyeuct, Singspiel (Hamburg, 1688); trans. from Corneille; music by J.P. Förtsch

SACRED SONG TEXTS

J.J.N. Geistliche Lieder, Theils auff die Hohen Feste ... Theils auff unterschiedliche Vorfallungen im Christenthum gerichtet ... mit J.W. Franckens, C.M. anmuhtigen Melodeyen (Hamburg, 1681)

Ferner besungene Vorfallungen im Christenthum. Die Melodeyen setzte J.W. Franck (Hamburg, 1682)

Geistliches Gesangbuch (Hamburg, 1685); pubd as Odeum spirituale Elmenhorstianum (Hamburg, 1695)

Geistreiche Lieder ... an jetzo aber bis auff 100 vermehret, mit schönen anmuhtigen Melodeyen versehen ... auch geordnet von M.J. Jauch (Lüneburg, 1700)

GEORGE J. BUELOW

Elming, Poul (*b* Ålborg, 21 July 1949). Danish baritone, later tenor. He studied at the conservatories at Ålborg and Århus, and with Paul Lohmann at Wiesbaden, before making his début, as a member of the Jutland Opera, in Århus in 1979. He sang many leading baritone roles with the company, including Malatesta, Giorgio Germont and Posa, before retraining as a tenor at the Juilliard School in New York. Elming made his début as a tenor at the Royal Opera in Copenhagen in 1989 in the title role of *Parsifal*, adding Erik the same season. In 1990 he made his successful first appearance at the Bayreuth Festival as Siegmund. He has returned to Bayreuth in succeeding years either as Siegmund or as Parsifal, and also performed these roles at Covent Garden, the Berlin Staatsoper, the Vienna Staatsoper, Chicago, San Francisco and elsewhere. In 1994 he made his Covent Gardin début, as Siegmund, and added Max (*Der Freischütz*) to his repertory in Madrid and Copenhagen. He has also appeared widely as a concert artist, particularly in works by Scandinavian composers. Elming's heroic, typically Scandinavian timbre and notable gifts as an interpreter can be heard and seen in Barenboim's recording of *Die Walküre* from Bayreuth (1992).

ALAN BLYTH

Elmo, Cloe (*b* Lecca, 9 April 1910; *d* Ankara, 24 May 1962). Italian mezzo-soprano. She studied in Rome, making her début as Santuzza at Cagliari in 1934. She then sang Orpheus in Rome, and from 1936 to 1945 she was leading mezzo-soprano at La Scala, where her roles included Mistress Quickly, Ulrica, Azucena and the Princess (*Adriana Lecouvreur*). In 1947 she was engaged at the Metropolitan, and while in America was chosen by Toscanini to sing Mistress Quickly in his broadcast performance and recording of *Falstaff*. She returned to La Scala in 1951 and created roles in Rocca's *L'uragano* and Castro's *Proserpina y el extranjero* (1952); she also created Moraima in Ghedini's *Re Hassan* (1939, Venice) and Goneril in Frazzi's *King Lear* (1939, Florence), and sang Signora Susanna in the first staged performance of Malipiero's *Il festino* (1954, Bergamo). She also sang works by Bach under Klemperer and Molinari. She had a richly coloured voice and a dynamic stage personality.

HAROLD ROSENTHAL/R

Elmore, Robert (Hall) (*b* Ramapatnam, India, 2 Jan 1913; *d* Philadelphia, 22 Sept 1985). American organist and composer. In 1914 his missionary parents returned to the USA and settled in Lincoln, Nebraska. He started music studies at the age of six, and within five years showed unusual talent. In 1925 the family moved to the Philadelphia area. Thanks to a family benefactor Robert was able to commute several times a week to New York City, where he studied the organ, the piano and music theory with Pietro Yon. A young virtuoso of extraordinary ability and power, he started touring nationally and internationally, winning many awards and honours. He received a BMus degree from the University of Pennsylvania in 1937 and continued to teach there until 1950. He also received degrees from the RAM in London. His church appointments were in the Philadelphia area: the Church of the Holy Trinity, the Central Moravian Church in Bethlehem and the Tenth Presbyterian Church. In addition to activities in performing and teaching, Elmore was a prolific composer. His compositions included many sacred and secular cantatas and anthems, a comic opera, *It Began at Breakfast*, and many works for organ and mixed ensembles. Elements of Wagner, Strauss, jazz and film music contributed colour and rhythmic vitality to his style. Among his best-known works are *Three Psalms*, *Psalm of Redemption*, *Three Short Anthems for Lent* for voices and *Rhythmic Suite*, *Rhumba*, many hymn preludes and a difficult sonata for organ.

CHARLES KRIGBAUM

Elorduy (Medina), Ernesto (*b* Mexico City, 11 Dec 1853; *d* Mexico City, 6 Jan 1913). Mexican composer and pianist. With his brother he began a European tour in 1871, which developed into a 20-year period of residence. He lived in Hamburg for several years, where he studied with Raff and Clara Schumann and also met Anton Rubinstein who gave him some lessons, and to whom he dedicated his first composition, the waltz *A orillas del Elba*. In 1880 he travelled to the Balkans and Turkey which influenced his later compositions. He then lived in

Paris from 1880 to 1884, and subsequently worked as Mexican consul in Marseilles, Santander and Barcelona. Elorduy returned to Mexico in 1891, and gave three successful recitals of his own work, the first Mexican composer-performer to do this. Almost all of his works were published, and many become very popular, notably his zarzuela *Zulema* (1902) and the *Marcha heroica*, composed for the installation of the Campana de la Independencia at the National Palace. He also taught at the Mexico Conservatory from 1901 to 1906.

Elorduy composed about 100 short piano pieces; the mazurkas, berceuses and songs without words in particular show the influence of Chopin and Schumann both in their piano writing and their lyricism. But their unique character comes about from the combination of these styles with the popular rhythms of Mexican dances (especially the *danzas habaneras*, of which he composed several sets), or, in such works as the *Serenata árabe*, *Airam*, *Aziyadé*, from the evocation of oriental atmospheres, an idiom also evident in the zarzuela *Zulema*.

RICARDO MIRANDA-PÉREZ

Eloy, Jean-Claude (*b* Mont-St-Aignan, nr Rouen, 15 June 1938). French composer. While studying at the Paris Conservatoire, where he was awarded *premier prix* in the piano (1957), chamber music (1958), counterpoint (1959), the ondes martenot (1960) and composition (under Milhaud, 1960–62), he attended the Darmstadt summer schools (1957, 1960, 1961), where he studied with Pousseur, Scherchen, Messiaen, Boulez and Stockhausen; he also attended Boulez' composition masterclasses at the Basle Musik-Akademie (1961–3). Some 20 youthful compositions, strongly influenced by the experiments of the 1960s avant garde, date from this period. *Etude III* for orchestra (1962) and *Equivalences* for 18 musicians (1963) soon became known through performances under the direction of Boulez, Bour, Gielen, Maderna, Weisberg and others.

From 1966 to 1968 Eloy taught at the University of California, Berkeley. Though he had been a favoured pupil of Boulez, he swiftly removed himself from the influence of the avant garde; works such as *Faisceaux-Diffractions* (1970) and *Kâmakalâ* (1971) began to show the influence of Asian philosophy and aesthetics. Invited by Stockhausen to work at the electronic music studio of WDR, Cologne (1972–3), Eloy embarked on an exploration of timbre and musical time. *Shânti* (1972–3, rev. 1974), for electronic and concrete sounds, is notable for the richness of its musical material and the breadth of its temporal dimensions. Conceived as a work of 'eternal recurrence', *Shânti* can return to its own beginning, or stop at a point where a new *Kâmakalâ* can begin. *Fluctuante-Immuable* (1977), which created an outcry at its première, transfers the results of statistical perception experiments to the orchestral medium.

With the aid of the electronic studio of Tokyo Radio (NHK), Eloy produced *Gaku-no-michi* (1977–8), a fresco of sounds (almost four hours in duration) that refers to cinematic form and generates its fluid architecture from dialectical relationships between sounds of everyday Japanese life and abstract (electronic) materials. The following year, at the invitation of Xenakis, Eloy collaborated with the Center for Musical Mathematics and Automation in Paris to create *Etude IV*, a work that pushes the potential of the UPIC computer to its limit. *Yo-in* (1980), music for an imaginary ritual produced at the Instituut voor Sonologie, Utrecht, pointed in a new direction; in the work, a percussionist creates a musical ritual by elaborating the complex network of relationships between a percussive and an electronic score realized from the same acoustic sources. *A l'approche du feu méditant* (1983), commissioned by the National Theatre of Japan, is scored for the instruments of a traditional gagaku orchestra and two choirs of Buddhist monks. *Anâhata* (1984–6) brings together the vast proportions of *Gaku-no-michi*, the rich percussion sounds and ritual of *Yo-in* and Japanese voices and instruments.

After founding a centre for musical research (CIAMI) in collaboration with the French Ministry of Culture (1983), Eloy dedicated himself to the composition of the cycle *Libérations*. In *Butsumyôe* (1989) and *Sappho hikètis* (1989), he explored the possibilities of the female voice by inventing sounds from imaginary ethnic musics. *Erkos* (1990–91) brought together and unified material drawn from the most ancient civilizations and the most up-to-date technology. Although continuing to stretch soloists beyond traditional limits (as in *Galaxies*, 1996), Eloy later returned to orchestral and choral projects, a process paralleled by his development of synthesizer and sampler orchestras.

A musician possessing extremely wide cultural knowledge and a strong, free spirit, Eloy has developed outside of trends, institutions and schools of composition. His works erode and transcend the barriers between Western and non-Western music. His syntheses of diverse musical traditions disrupt established attitudes by including non-Western instruments and techniques, and by challenging traditional listening habits through extremely large temporal dimensions. In doing so, he has posed and convincingly resolved one of the central problems of the late 20th century, namely how to form a relationship with the 'other', not as an object of curiosity, admiration or submission, but as a vitalizing source of creative inspiration. His honours include the Biennale prize (Paris, 1963), the grand symphonic music prize of SACEM (1971); the grand prize of the Academie Charles Cros (1974), the grand national music prize of the French Ministry of Culture (1981), appointment as Chevalier of the order of arts and letters (1983) and the grand symphonic music prize (1985).

IVANKA STOÏANOVA

Eloy d'Amerval (*b* ?Amerval, Pas-de-Calais, *fl* 1455–1508). French composer and poet. He is first recorded as a tenor (listed separately from other singers) in the ducal chapel of Savoy from 1 May 1455 to 31 August 1457; the choirmaster during the first 12 months was Du Fay. The remainder of Eloy's career was spent in the secular and ecclesiastical institutions associated with the French royal family. Four wage lists of 1464–5 include 'Eloy le teneur' among the singers in the chapel of Duke Charles d'Orléans. The identity of the singer is proved by an autograph quittance dated 25 June 1471 for back wages owed to 'Eloy d'Amerval' by Charles (who had died in 1465). The same document describes him as master of the choirboys at the royal church of St Aignan, Orléans. He has been identified with an 'Eligio' or 'Elloy' who sang in the ducal chapel in Milan from 1474 to at least 1482, but other Milanese documents show that this man came from Brussels and was surnamed Cokere.

Eloy d'Amerval may never have left the Loire valley: he was master of the choirboys at Ste Croix Cathedral, Orléans, in 1483 (long the only biographical fact known about him). Brenet surmised that he may have gone on from there to St Barthélemy, Béthune, but the next certain record of him is as 'priest and canon of Châteaudun', about 50 km north-west of Orléans, in 1504. He was granted a special payment by King Louis XII, son of Charles d'Orléans, for having been formerly in his service – presumably in the early years of his reign, which began in 1498. He was still alive in 1508, when Louis granted him a privilege for the publication of his *Livre de la déablerie*.

A five-voice *Missa 'Dixerunt discipuli'* (ed. A. Magro and P. Vendrix, Paris, 1997) is ascribed in its only source (*I-Rvat* C.S.14) to 'Eloy'. The mass is based on the first seven notes of the Vespers antiphon *Dixerunt discipuli* from the Office of St Martin of Tours, using a single rhythmic pattern employing all the note-values from minim to maxima and presented exhaustively in all 16 possible mensural combinations. Vander Straeten presumed the Milanese Eloy was the composer, but Eloy d'Amerval has a better case. Tinctoris (who was active in Orléans in the early 1460s and probably had direct contact with Eloy) referred to the mass in his *Proportionale musices*, written about 1472–5, calling Eloy 'most learned concerning the [mensural] modes' (CSM, xxii/2a, 1978, p.55; paraphrased by Gaffurius in *Liber practicabilium proportionum* (MS, 1480, *US-CAh* Mus.142) and *Practica musice*, 1496). The frequent use of imitation involving three or four voices, however, would place the composition of the mass not much earlier than 1470. It was still engaging the attention of Giovanni del Lago and Pietro Aaron as late as 1539 (*SpataroC*). The document recording Eloy's employment in Orléans in 1483 mentions payment for having composed a motet for the annual celebration commemorating the city's liberation from the English in 1429 by Joan of Arc. An inventory of 1486 describes the manuscripts into which the motet and possibly other works by Eloy were copied, raising the possibility that he was also a music copyist, but neither the manuscripts nor the motet have survived.

Eloy is best known as the author of the long poem *Le livre de la déablerie* (Paris, 1508; ed. C.F. Ward, Iowa City, 1923; ed. R. Deschaux and B. Charrier, Geneva, 1991). It is cast as a dialogue between Lucifer and Satan on the ills of the age, with interjections by 'the author'. Among many other topics, Eloy wrote of music as a 'science plus angelique que humaine', and at one point (chap.193) taunted Lucifer and Satan with the power of the great composers, whom he represented as being in paradise (though some of them were still living):

> La sont les grans musiciens,
> Qui composent tousjours liens,
> Comme j'aperçoy en maint lieu, . . .
> Comme Dompstable et du Fay, . . .
> Et plusieurs aultres gens de bien:
> Robinet de la Magdalaine,
> Binchoiz, Fede, Jorges et Hayne
> Le Rouge, Alixandre, Okeghem,
> Bunoiz, Basiron, Barbingham,
> Louyset, Mureau, Prioris,
> Jossequin, Brumel, Tintoris
> Et beaucoup d'aultres, je t'asseure,
> Dont n'ay pas memoire à ceste heure.

Fede and Le Rouge, like Tinctoris, had been active in Orléans in the 1460s (and Busnoys was then not far away in Tours, Basiron in Bourges), while Alexander Agricola, Ockeghem, Loyset Compère, Prioris and possibly Josquin were all members of the French royal chapel about the time Eloy served Louis XII. The list must be regarded not as random name-dropping but (as the author stated) as a tribute to some outstanding composers Eloy had come into personal contact with.

PAULA HIGGINS, JEFFREY DEAN

El-Qaṣṣabguī, Moḥamad (*b* Cairo, 1892; *d* Cairo, 25 March 1966). Egyptian composer. He secretly learnt to play his father's *'ūd*, later receiving instructions from his father, a composer, singer and reciter of the Qur'an. After two years as a teacher (1915–17) Moḥamad decided to devote himself to music, studying the traditional vocal repertory with Kāmel El-Kholaï'y and (from 1919) playing the *'ud* in the *takht* (small ensemble) of Mohamad El-'Aqqad sr. His earliest songs, using light-hearted lyrics, became popular and were performed by all the famous singers of the time, including Mounira Al Mahdiyya. His songs were widely disseminated in a number of recordings: for example Um-Kalthoum's recording for HMV of *In*

Kont asāmiḫ (lyrics by Aḥmad Ramy) sold one million copies.

From the late 1920s El-Qaṣṣabguī played the *'ūd* in Um-Kalthoum's ensemble and composed many of the most famous songs in her repertory, including those for five of the six films featuring the singer. His film songs were in a lighter style than the rest of his output, enjoying greater success than his operettas. He introduced certain innovative features such as waltz rhythm (in the film *Love and Revenge*), and coloratura (in *Ya toyour* [The Birds], a song written for Asmahan). One of his masterpieces is the long narrative love song *Rai' el ḥabeeb*, in which a recitative-like and free rhythmic style is used for atmosphere and psychological effect.

SAMHA EL KHOLY

Elsaedi, Ahmed (*b* Rasheed by Beheira, 10 Nov 1947). Egyptian conductor and composer. He studied piano and cello at the Alexandria Conservatory, then (1967–71) composition at the Cairo Conservatory. After graduating he studied for one year at the Moscow Conservatory (1973–4), then took postgraduate studies at the Vienna Hochschule für Musik (1976–85), where he studied conducting with Suitner, composition with Cerha and Schenkerian theory with Franz Eibner. On obtaining his Magister Artium he returned to Egypt in 1985. He taught composition and conducting at the Cairo Conservatory, first as an associate professor (1988–92), then as a full professor (from 1997). From 1991 to 1993 he was an assistant conductor of the Cairo SO, then its resident conductor (1993–6), then, from 1996, its principal conductor and music director.

Elsaedi is a leading Egyptian conductor who is well versed in many musical styles. He was one of the first to conduct 20th-century works in Egypt, and has also toured with the Cairo SO in Europe (1996) and conducted the RPO in the Queen Elizabeth Hall in London (1997).

As a composer, Elsaedi has written numerous works for solo instruments, as well as chamber music and orchestral music. His early works, such as the Romance for cello and orchestra and the String Quartet, are post-Romantic in style. More recently he has assimilated some elements of 20th-century music, combining them with the pentachords and tetrachords of Arab music, as in the Passacaglia for string orchestra and *Taqaseem* for clarinet and string orchestra. In 1994 he received a state prize for composition.

AWATEF ABDEL KERIM

El Salvador, Republic of (Sp. República de El Salvador). Country in Central America. El Salvador, with over six million inhabitants in an area of 21,200 sq.km., has both the smallest national territory in the mainland Americas and the highest population density. The small number of Africans brought in during the colonial period have been thoroughly subsumed into the majority *ladino* or mestizo population, a mixture of indigenous American and European peoples and cultures. A significant indigenous presence still persists, especially in the western region, where up to 40% of the population of the Sonsonante department can be identified as Nahuat, and along the northern zone bordering Honduras, where the Lenca make up 15% of the northern part of the San Miguel department.

I. Art music

The first record of a school dedicated to musical instruction dates from the late 1700s in the western city of Sonsonante. The first music school in the capital, San Salvador, was founded in 1846 by Escolástico Andrino (*d* 1862), an émigré from Guatemala, who also co-founded the first orchestra in 1860. Governmental support began in 1864 when the Academy of Fine Arts established a school of music in San Salvador. This school and several other institutions provided sporadic instruction until the foundation of the National School of Music in 1930, renamed the National Conservatory of Music in 1952, and replaced by the National Centre for the Arts in 1969.

During the first half of the 20th century, various short-lived orchestral ensembles were organized, the most successful directed by the Italian Antonio Gianoli from 1910 to 1920. In 1952, an orchestra was founded within the Armed Forces, becoming the National SO in 1960. Military bands have provided the highest degree of continuity of all national musical institutions and have been important vehicles for composers. The Banda de los Supremos Poderes (Band of the Supreme Powers), the pre-eminent band, based in the capital city, was originally founded in 1841 as the Banda Marcial (Military Band). Smaller ensembles in other major cities were also founded in the 1800s. In recent years, European-derived art music has received wider exposure from the daily broadcasts of Radio Clásica.

Systematic research on the music of the colonial and early independence periods has yet to be undertaken. The earliest record of major compositions in the classical idiom is of Escolástico Andrino, who was active in the third quarter of the 19th century and composed two symphonies, three masses and an opera. Jesús Alas (*b* 1866), a military bandleader who composed short orchestral works as well as several violin pieces, gained the national order of *Mérito artístico* in 1929. Domingo Santos (*b* 1892) studied in Rome. He was director of the National School of Music and, from 1928, conducted the military band in Santa Ana, the nation's second largest city. In addition to many marches and hymns for the band, he wrote three piano sonatas, six Requiems, the overtures *Martita* and *Dorita* and a suite of four piano pieces published in Paris. In his short career, Felipe Soto (*d* 1914) obtained distinction as a cellist and composer of waltzes. Other important composers in the first half of the 20th century include David Granadino, Manuel Muñoz and Fermín Panameño.

Maria de Baratta (*b* 1894) pioneered investigation of traditional folk music. Her two-volume work *Cuscatlán típico* remains the only significant attempt to give an overview of Salvadoran folk music, though her research suffered from conceptual limitations and has been criticized for inaccurate transcriptions. She studied composition in Bologna and in San Francisco. Many of her works are based on Amerindian-related themes. Two of her most celebrated compositions are the orchestral piece *Danza del incienso*, orchestrated by Alejandro Muñoz and first performed by the Banda de los Supremos Poderes in 1931, and the ballet *Nahualismo*, orchestrated by Ricardo Húttenrauch and first performed by the same ensemble in 1936. In both pieces, she employs devices to integrate aspects of folk music, such as an alternation of duple and triple metre in the manner common to mestizo Salvadoran (and much Mesoamerican) folk music. To evoke an imagined pre-Columbian musical style, she used altered minor scales or percussive ostinatos.

Esteban Servellon (*b* 1921) studied composition in Rome and became director of the National SO in 1962. The use of post-Romantic techniques in his ballet *Rhina* marks a new stage in Salvadoran classical composition. His other works include the orchestral suite *Retrospectivas* (1959), three string quartets, piano pieces and film scores. Gilberto Orellana (*b* 1921), who studied with Servellon and briefly with the visiting American composer Charles H. Robb, wrote orchestral, chamber, piano and vocal music, cultivating an individualized, conservative harmonic approach. However, in the early 1960s, he was the first Salvadoran to use 12-note technique in the orchestral pieces *Impresiones de un viaje* and *Psicosis*. The latter also calls for unconventional playing techniques to obtain special timbres. His son, Gilberto Orellana Castro jr (*b* 1939), also studied with Robb and has used various compositional approaches.

Hugo Calderón, composer and pianist, has lived in the USA for many years but many of his compositions integrate folk music material, evident in the title of his major works: *Tecana*, *Ilobasco* and *Variaciones sobre 'El Carbonero'*. An essentially tonal approach characterizes his writing, most of which is for piano. Victor Manuel López Guzmán (*b* 1922), who studied in Morelia, Mexico, and began directing the National Choir in the 1950s, has written for various instrumentations in a neo-Romantic style. Ion Cubicec, who migrated from Romania in 1946, has been an important choral director, teacher and chronicler of Salvadoran classical music; his compositions have been exclusively in Romanian style, closely following Enesco.

II. Traditional and popular musics

The largest pre-Columbian population within the current borders of El Salvador were the Pipil, Nahuatl speakers who migrated from Mexico into central and western regions of the country during the period 900–1200 CE. They displaced the Chortí Maya, who moved to the north-west. Shortly before European contact in 1524, the Pokoman Maya settled in the south-west region of Ahúachapán. No musical archaeological record or study of contemporary practices of either Mayan group has been published. Substantial archaeological evidence of Nahua-Pipil whistles and flutes establish a clear link with other Nahuatl speakers from central Mexico. The majority of flutes are of a three-chamber globular design, most with only one or two tone holes; almost all exhibit anthropomorphic or zoomorphic shapes. Several flutes from the eastern area around Quelapa, 18 cm in length, have a single tubular cavity containing a small ball. When played in a horizontal position, the breath of the player can control the placement of the ball to produce a graduated pitch set within the range of a minor 6th. While not noted in publications, the pre-contact existence of the *tepunahuaste* (slit-drum) and other percussion instruments found in Mexican archaeo-musicological research is highly probable given their use in post-contact indigenous groups.

The small African population introduced four instruments during the colonial period: the *caramba*, a musical bow with gourd resonator related to the Honduran *caramba*, now nearly extinct; the *charrasga*, or *quijada de burro*, a donkey's jaw whose molars rattle when struck from the side or when scraped with a stick or thin metal bar; the *sacabuche*, or *zambumbia* (also *zambumba*), a friction drum that sounds when a wooden stick is pulled through the taut skin-head; and the marimba (see below). No discernible African musical stylistic traits can be found in contemporary mestizo music.

During the colonial period, music was a key element within the different strategies adopted by the Spanish to impose their culture: prohibition of outward manifestations of Amerindian religions, including their associated musics; inculcation of Iberian musical norms, especially through singing by the general population in compulsory Catholic rites and through instruction of musicians to provide accompaniment; and the attempted appropriation of indigenous celebrations by incorporating them into patron saint celebrations and other Catholic rituals. Scattered references from colonial records and brief descriptions from travellers and local writers in the independence period attest to a general process of Iberian musical acculturation among the growing mestizo population similar to that of the rest of Mesoamerica. The perseverance of Amerindian music, especially the repertory sung in indigenous languages, was significantly disrupted with the 1932 *Matanza* (massacre), a cultural watershed in the nation's history. In that year, forces allied with the aristocracy killed over 30,000 'campesinos' (peasants), specifically targeting groups maintaining an indigenous identity. As a result, a significant part of the population felt obliged to renounce symbols of Amerindian identity, drastically accelerating the loss of indigenous music and dance performances, the use of several musical instruments (many *marimba de arco* musicians burnt their instruments), and the near disappearance of non-European language and dress. Although official descriptions claim a total assimilation into mestizo culture, since the late 1980s several groups, especially in the western departments, have openly reasserted their continued indigenous identities.

A principal occasion for traditional folk music performance remains dances tied to celebrations determined by the Catholic calendar. These, together with their accompanying music, range along a continuum from higher levels of retention of indigenous elements to greater assimilation of Iberian musical practices. Indigenous retentions are evident in the use of *tepunahuaste* and vertical cane flute to accompany the *Caza del tunco de monte* (Hunt for the Cripple from the Hills), a dance-drama still widely dispersed in the country. The slit-drum used to accompany women's singing in the *Baile del San*

Tingo (Dance of St Tingo) is also probably derived from the *tepunahuaste*. Many dances are accompanied only by a small vertical, end-blown cane or wooden flute of two to six holes, often called a *calambo*, and a double-headed drum *c*20 cm in diameter that is beaten with sticks. This instrumentation is no doubt related to the European pipe and tabor and, in fact, it is sometimes executed by a single player in Iberian fashion. However, the use of drums and vertical flutes also predates European contact.

A more marked European musical foundation is characteristic of musical accompaniments for dances that employ string instrumentation. Found in various parts of the country, such instrumentation includes two guitars and a *requinto* (a five-string guitar usually pitched a 4th higher than a standard guitar) used in the *Baile de los chapetones* (Dance of the Spaniards); guitar and *guitarilla* (a small, higher pitched, four-string guitar) used in the *Baile de los pastores machos* (Dance of the Male Shepherds); and accordion and guitar used in the *Baile de los chiraguaquitos* (Dance of the Chiragua Indians). The *Baile de los enplumados* (Dance of the Feathered Men) is performed by Lenca in Cacaopera, Dept of Morazán, to the accompaniment of two guitars, violin, small drum and *chinchines*, small shakers played by the dancers.

Various combinations of instrumentations and musical forms are found within the amalgam of indigenous and European influences. String instruments are the predominant accompaniment for Christmas processions and dances. However, in Sonsonante, vertical flutes and singing mark Las Posadas, celebrated throughout most of December. This contrasts with the instrumentation reported before the 1930s, that is, *marimba de arco* (hooped marimba), *sacabuche* (friction drum) and *cántaro* (clay jar partially filled with water and struck over the opening to produce low notes). In Izalco, Sonsonate, the *tabal* or *jeu jeu* is performed on Christmas Eve with vertical flute, drum and *zambumbia*. Later in the same ceremony, a *cantador* declaims *bombas* in *copla* form (*AA′BB′* rhyme scheme) to which those in attendance respond with the acclamation 'Jeu!'. The *Baile de los diablitos* (Dance of the Little Devils) in Salcoatitán, Sonsonate, correlates musical instrumentation with a symbolic social structure derived from medieval Spain and El Salvador's colonial period: guitar captain, violin captain, first king of *cacho* (a cow's-horn trumpet), two vassals of *zambumbia* (friction drums), two vassals of *charrasgas* (donkey's jawbones), two vassals with small handbells and other characters without instruments. This ensemble provides interludes between the verses declaimed by the main devil character, accompanied by the violin.

The contemporary three-octave *marimba de arco* (marimba with a hoop) has developed from the re-creation of marimbas found in several parts of West and Central Africa. Each of the hardwood keys is amplified by a hollow gourd resonator suspended from the frame. Bees' wax is built up around a small hole in each resonator to hold a stretched membrane that produces a buzzing sound, a characteristic of American and African marimbas. The hoop holds the instrument away from the player's body with the marimba suspended by a strap around the musician's shoulders, but in other versions the hoop is large enough for the player to sit upon, eliminating the use of a strap. *Marimba de arco* music is always instrumental and generally can be divided between a repetitive bass pattern played by the left hand, alternating between the tonic and dominant of the given chord, and a melodic line played by the right hand using strict parallel 3rds (ex.1). The most common accompaniment is a guitar, placed to the left of the musician playing the *marimba de arco* in order to complement the lower register, as in the Nicaraguan *marimba de arco* ensemble. Small percussion instruments, such as a shaker or *charrasga*, may also be added. Though perhaps once found more widespread throughout the country, with the growth of the mestizo population the *marimba de arco* became strongly identified with indigenous communities. In recent years, it has enjoyed greater public exposure and is still used in the town of Izalco, in Sonsonante, as part of the annual *Toma del Alcalde del Común*, the swearing-in ceremony of the mayor of the indigenous community.

The development of double-rowed, chromatic marimbas on four legs in neighbouring Guatemala at the end of

Ex.1

right hand
marimba
left hand
guitar
charrasga

the 1800s led to the popularity of the *marimba doble* in El Salvador. Sometimes large enough to accommodate four players, *marimba doble* ensembles may include a double bass as well as a great variety of wind, brass and percussion instruments. Their repertory has included imported styles such as North American swing and Cuban popular forms, as well as Salvadoran popular song.

The greatest international exposure of Salvadoran music and musicians came from large marimba ensembles. In the 1920s, the Marimba Centroamericana achieved regional fame and recorded for several US-owned labels; two decades later, the Marimba Atlacatl toured Europe and the USA. Marimba ensembles lost their leading role as suppliers of entertainment within El Salvador from the late 1950s with the advent of relatively inexpensive phonographs and the popularity of rock and roll, which could not be successfully adapted to the instrument as previous styles had been. *Marimbas dobles* are still common instruments of instruction in public and private schools.

With the arrival of victrolas at the turn of the century, followed soon after by phonographs, music from outside the nation had a growing impact on the population, especially among the small middle class. The first radio broadcasts date from 1926, but full-time commercial radio did not appear until the early 1940s. In the 1930s and 40s, the Mexican *canción ranchera*, disseminated through both recordings and film, became strongly rooted throughout much of the population. *Rancheras*, together with Cuban *sones*, Cuban-Mexican boleros, Argentine tangos, waltzes and foxtrots – and Salvadoran adaptations of these and other forms – continue to comprise the instrumental repertory of the municipal bands and large marimba ensembles. Pancho Lara was the best-known singer-songwriter of this repertory; he composed the enduring song *El carbonero* in the 1930s.

The Salvadoran Nueva Canción (New Song) movement grew in importance throughout the 1970s and played an important role in the nation's social upheavals in the 1980s. These groups combined socially committed lyrics with a heterogeneous array of musical styles. In the 1980s, several campesino groups from the northern and eastern zones, particularly Los Torogoses de Morazán, became nationally famous through broadcasts on the opposition Radio Venceremos. Their rural, campesino sound, with instrumentation of guitar, violin and *chanchona* (Mexican *guitarrón*), contrasted with the musical style of most urban-based New Song groups. These latter groups, such as Güinama and Grupo Indio, fell within the broad pan-Latin American musical style typical of much continental New Song. For example, Xoltl, one of the most influential groups formed in the late 1960s, consistently used Andean folk instruments, such as panpipes, to interpret compositions with lyrics that spoke directly of the Salvadoran experience. Government repression and the ensuing civil war in the 1980s forced a substantial part of the national population to migrate to the USA, and several New Song groups were driven into exile. New Song groups that toured and recorded albums in Latin America and the USA, such as Cutumay Camones and Yolacamba Ita, provided the greatest exposure of Salvadoran musicians outside the country since the touring of marimba ensembles in the 1940s.

The increasingly strong influence of North American music and culture, especially in urban areas, has come from continuing contact with the large émigré population in the USA, together with the return of some refugees and continued scheduling of US cultural products on radio and television. The gradual substitution of evangelical Christianity for Catholicism in the late 20th century contributed to the diminution of dance and music traditions linked to celebrations of saints' days and other occasions derived from the Catholic religious calendar. Although the peace accords of 1992 allowed for more open cultural activity, such as the *Casas de Cultura* (Houses of Culture), which extended formal musical instruction to smaller municipalities around the country, deteriorating economic conditions jeopardized support of cultural institutions generally. Despite legislative recognition of copyright protection in the early 1990s, El Salvador rapidly became the regional centre for unauthorized cassette duplication and distribution, which is currently the most vibrant part of the nation's music industry.

T.M. SCRUGGS

Elsbeth, Thomas (*b* Neustadt [?nr Coburg], Franconia, ?mid-16th century; *d* ?Jauer [now Jawor], Silesia, after 1624). German composer. He described himself in 1616

as 'poor and old' and was thus probably born in the mid-16th century. Since he always called himself 'Neapolitanus Francus' he must have been born in a Neustadt in Franconia, and since he published the *Dritter Theil neuer ausserlesener geistlicher und weltlicher Lieder* at Coburg in 1602, it is likely that the Neustadt in question is the one near Coburg. His first few publications appeared at Frankfurt an der Oder, so he may have had connections with Bartholomäus Gesius, who was Kantor there. Despite contemporary reports that he attended the Viadrina University in Frankfurt, his name is not found in the university register. The dedication of the *Neue geistliche zu christlicher Andacht bewegende Lieder* to the 'honorable councilmen of the city of Breslau' reveals local knowledge of the city, so he may have resided there before coming to Frankfurt. The publication of his *Selectissimae & novae cantiones sacrae* at Liegnitz in 1606 and subsequent publications there, with dedications to local figures, indicate that he may have resided for some years at this seat of the dukes of Silesia. His occupation in Liegnitz, however, is not known; he is not mentioned in the city records of Kantors, organists and other musicians. Dedications also suggest that he spent the years 1616–24 at Jauer, near Liegnitz, and he may have died there.

Elsbeth is worthy of note as the composer of some 100 songs for three, four and five voices, some in major keys, some in a mixture of major and minor, and also of about 150 motets, the early ones in Latin, most of the later ones in German. Elsbeth's lieder primarily consist of two types – the simple, homorhythmic cantional lied and the polyphonic chorale motet. Of the motets, the two collections of *Evangelien* are specially interesting. Each contains 30 settings of the Gospels for consecutive Sundays – from Advent to the fourth Sunday after Easter in the 1616 volume and from then to Advent in the 1621 volume. These settings differ from those of other composers in that they comprise not only the actual Gospel texts but explanatory introductory paraphrases too; thus the parable of the Pharisee and the Publican for the 11th Sunday after Trinity is preceded by the words 'Den Pharisaeer verdammt sein stolz Gebet' ('The Pharisee's proud prayer condemns him'). These Gospel settings, which are examples of the *Spruch* motet type, have been described as poetic exegeses for the sermon. They were most likely performed either in place of the intoned Gospel reading or as an independent composition just before the sermon. Elsbeth did not adopt the continuo (which was being introduced from Italy during his later years); nearly all of his settings are in five parts, most with the direction 'to be sung and played'.

FRITZ FELDMANN/DALE ALLEN SCOTT

Elschek, Oskár (*b* Bratislava, 16 June 1931). Slovak ethnomusicologist. He studied musicology, philosophy and ethnography at the University of Bratislava, where he received the doctorate in 1954 for his dissertation on the expansion of tonality in the music of the 16th century. He began his scholarly career at the Institute of Musicology at the Slovak Academy of Sciences, which afforded him wide-ranging opportunities to undertake diverse field-work projects, to edit journals and publication series, and to establish the Eastern European Centre for systematic musicology. He taught in various capacities at the University of Bratislava, but it was not until 1989 that he was appointed to a professorship and then in 1990 to the headship of the Institute of Musicology. He has also taught at the University of Vienna, where in 1987 he completed the *Habilitation* and was appointed Dozent for comparative-systematic musicology. He was chairman of the Slovak Society of Musicology (1985–93) and vice-president of the ICTM (1988–97). The Slovak Academy of Sciences awarded him the DrSc in 1997.

Elschek's ethnographic studies and editorships did much to influence the course of ethnomusicological research in Eastern Europe during the second half of the 20th century, and with the political and ideological transformations of 1989–91, his efforts were of singular importance in the rapprochement between scholarly communities in Western and Eastern Europe. His primary contributions were to the study of folk music in Slovakia, the Carpathians, and the Pannonian Basin of East-Central Europe, to instrumental folk music, and to the emergence of systematic musicology as an international field.

Complementing his anthologies and analytical publications devoted to Slovak and Hungarian traditions, many of them written with his wife, ALICA ELSCHEKOVÁ, Elschek's extensive use of documentary film established new standards for comparative and systematic research.

In addition to his extensive publications, he has produced numerous documentary films, ethnographic videos and sound recordings. He focussed considerable attention on the history of European folk music scholarship and ethnomusicology, and his monographs on the theories and methods of modern systematic scholarship have become standard works. Among his most significant editorships were those of *Slovenská hubdá* (1963–71) the *Annual Bibliography of European Ethnomusicology* and *Systematic Musicology* (1993–, with A. Schneider). In 1997 Elschek received the Herder Prize for his lifetime contribution to ethnomusicology.

PHILIP V. BOHLMAN

Elscheková(-Stankovičová), Alica (*b* Bratislava, 21 Nov 1930). Slovak ethnomusicologist. She studied musicology and ethnography at the University of Bratislava, where she received the doctorate in 1953 with a dissertation on Slovak instruments. She graduated the following year from the State Conservatory in Bratislava. During the 1950s she undertook extensive fieldwork projects throughout Slovakia, and also elsewhere in Czechoslovakia and the Carpathians, Balkans, and the Pannonian regions of Eastern Europe. Her position at the Institute of Musicology at the Slovak Academy of Sciences was to provide the basis of her research and publishing activities throughout her career. She also held teaching positions at the University of Bratislava and contributed significantly to the ethnographic training of Slovak ethnomusicologists and folklorists.

Elscheková focussed her research activities on folk music and dance in the broadest sense. Working with colleagues throughout Eastern Europe, but especially with her husband, OSKÁR ELSCHEK, she expanded the methodologies of comparative melodic research and classification, drawing upon the historical traditions of comparative musicology but combining these with new possibilities introduced by systematic musicology. Using ritual and traditional folk music genres as a point of departure, she established new typologies and mapped these on the shifting musical landscapes of Eastern Europe. Elscheková's theoretical work was strengthened by her intensive collecting and fieldwork projects, especially those that revisited villages and regions over long periods of time, and these were regularly transformed into documentary films, videos and sound recordings, as well as folk music anthologies.

PHILIP V. BOHLMAN

Elsmann, Heinrich (*b* Brunswick; *fl* 1617–24). German writer on music and composer. He described himself in 1617 as a member of the teaching staff of the Gymnasium at Brunswick and from 1619 as Kantor at Wolfenbüttel and with the title of 'Magister'. In the performance of church music at St Marien, Wolfenbüttel, he was assisted by the church's two organists, Christoph Selle and Melchior Schildt. There is no trace of him after 1624; three years later Wolfenbüttel was destroyed.

Elsmann's Latin–German primer for the teaching of school song survives in three editions. After the model of the many versions of Heinrich Faber's *Compendiolum musicae* (1548) – especially that by Melchior Vulpius (1610) – the first edition, *Conpendiolum* [*sic*] *artis musicae latino-germanicum* (Wolfenbüttel, 1617), is limited to the treatment of the basic rules of singing and solmization. The ten rules on peculiarities of notation are noteworthy; a crotchet triplet group is to be interpreted as two crotchets and a minim. The entire contents reappeared word for word in the two later editions, except that in the third edition, *Compendium musicae latino-germanicum pro tyronibus* (Wolfenbüttel, 1624), three of the rules of notation, referring to coloration and half-coloration, were omitted. The second edition, *Compendium musicae latino-germanicum, cum brevi tractatu de modis* (Wolfenbüttel, 1619), is over four times as big. Its chapter in Latin on modes was designed for advanced pupils. Each scale is made up of a 5th and a 4th; only in the case of the Phrygian mode does the 6th appear alongside the 5th. As *repercussiones* the key note and 5th, with the appropriate octave, are given in all modes (including the Phrygian). The 1619 edition also contains an extensive section of music, consisting of three four-part metrical hymns, which were sung between classes; 17 settings, mostly by Joachim a Burck, of odes by Ludwig Helmbold; and 14 chorales, which the pupils sang in unison at funerals. The 1624 edition consists only of the basic teaching manual and the 14 chorales.

Of Elsmann's music only two wedding motets survive: *Surge, propera*, for six voices (Wolfenbüttel, 1620), and *Ein freundlich Weib*, for five voices (*D-Lr*). One printed collection, *Hymni sacri anniversarii et in ecclesia usitati*, for four voices (Wolfenbüttel, 1621), and two motets, the four-part *Si bona suscepimus* and the eight-part *Gott sey mir gnädig* (both formerly in *D-Bsb*), are lost.

MARTIN RUHNKE

Elsner, Józef Antoni Franciszek [Joseph Anton Franciskus, Józef Ksawery, Joseph Xaver] (*b* Grodków, Silesia, 1 June 1769; *d* Warsaw, 18 April 1854). Polish composer and teacher of German origin. As a schoolboy he sang in the church choir of Grodków. His interest in music developed while he was a pupil at the Dominican school, then at the Jesuit Gymnasium in Breslau (now Wrocław) (1781–8), where he sang the solo soprano part in Graun's *Der Tod Jesu*. He also sang in the opera chorus, played the violin in chamber music and began to compose, chiefly religious music (now lost). At the University of Breslau he read theology and medicine; in 1789 he went to Vienna to study medicine, but gave it up for music. In 1791–2 he was violinist and conductor of the opera orchestra in Brno and from 1792 to 1799 in Lemberg (now L'viv), where he conducted the theatre orchestra, composed symphonies and chamber music and began to work on operas; at first he used German librettos, but after 1796 turned to Polish texts, especially in collaboration with Wojciech Bogusławski, organizer of the Polish National Theatre. He also arranged weekly concerts for a musical society.

In 1799 Elsner settled permanently in Warsaw, where for 25 years he was in charge of the Opera, enriching its repertory with his own works and training many eminent singers. All his life he was very active as a teacher; he founded and organized several music schools on different levels and was the author of a number of works and textbooks. From 1817 to 1821 he taught at the School of Elementary Music and Art, from 1821 to 1826 at the Conservatory and from 1826 to 1831 at the Main School of Music, where he was professor of composition and rector. He taught many composers, above all Chopin.

From 1802 until 1806 Elsner ran a music engraving shop in Warsaw, from which he issued several publications, notably 24 numbers of the periodical *Wybór pięknych dzieł muzycznych i pieśni polskich* ('Selected beauties of music and Polish songs'). In 1805 he was nominated a member of the Warsaw Society of Friends of Science and in 1805–6, together with E.T.A. Hoffmann, he ran the music club, where Beethoven's symphonies were among the works performed. He also founded the Society of the Friends of Religious and National Music (1814). From 1811 to 1819 he was correspondent of the *Allgemeine musikalische Zeitung*, and from 1802 to 1825 contributed many reviews and articles to the Polish press.

He was an honorary member of the music society of the Leipzig University Paulinerkirche as well as of many music societies in Poland, and was also a freemason. For his services to music he was awarded the Order of St Stanisław in 1823, and three commemorative medals were struck in his honour. Elsner was twice married, the second time to one of his pupils, Karolina Drozdowska (1784–1852), a leading soprano at the Warsaw Opera.

Elsner is considered a precursor of the Polish national style in music, and his works combine aspects of Viennese Classical tradition with elements of Polish folk music. He made frequent use of Polish songs and dances in his operas, songs and instrumental music and of Polish religious songs in his sacred works, and transformed this material in accordance with Romantic principles; he was also interested in the metre and intonation of the Polish language. His debt to Mozart and Haydn is most apparent in his early instrumental works, though he stopped composing instrumental music relatively early in favour of vocal music and stage works, many of which were based on Polish historical sources, and which demonstrate the evolution of his musical language. His solo songs initially used Rococo and *galant* styles, but eventually took on Romantic characteristics, displaying heightened expressivity and exchanging strophic forms for through-composed settings.

WORKS

STAGE

(*selective list*)

Amazonki czyli Herminia [The Amazons, or Herminia] (op, 2, W. Bogusławski), Lemberg, 26 July 1797

Sułtan Wampum czyli Nieroztropne życzenie [Sultan Vampum, or The Rash Wish] (op, 2, A. von Kotzebue, trans. A. Gliński and Bogusławski), Warsaw, 1800

Siedem razy jeden [Seven Times One] (comic op, 1, L. Dmuszewski), Warsaw, 14 Dec 1804

Stary trzpiot i młody mędrzec [The Old Dolt and the Young Sage] (op, 1, E.T.A. Hoffmann, trans. Matuszewski), Warsaw, 15 Feb 1805

Wieszczka Urzella czyli To co się damom podoba [The Soothsayer Urzella, or What Pleases the Ladies] (op, 3, C.S. Favart, trans. J. Baudouin), Warsaw, 7 March 1806

Andromeda (grand op, 1, L. Osiński), Warsaw, 14 Jan 1807

Trybunał niewidzialny czyli Syn występny [The Invisible Tribunal, or The Vicious Son] (melodrama, 3, J.G.A. Cuvelier de Trie, trans. Wrzesiński), Warsaw, 24 April 1807

Karol Wielki i Witykind [Charlemagne and Wittekind] (historical drama, 2, T. Łubieńska), Warsaw, 5 Dec 1807

Chimère et réalité/Urojenie i rzeczywistość (op, 1, J. Adamczewski), Warsaw, 22 April 1808, Fr. org. 1805–6

Echo w lesie [The Echo in the Wood] (duodrama, 1, W. Pękalski), Warsaw, 22 April 1808

Leszek Biały czyli Czarownica z Łysej Góry [Leszek the White, or The Witch of the Bald Mountain] (op, 2, Dmuszewski), Warsaw, 2 Dec 1809

Wyspa małżeńska czyli Żony przez los wybrane [The Isle of Matrimony, or Wives Chosen by Fate] (melodrama, 3, A. de Pujola and C. Desnoyer, trans. Dmuszewski), Warsaw, 19 May 1811

Wąwozy Sierra Morena [The Ravines of the Sierra Morena] (op, 3, Dmuszewski), Warsaw, 31 Jan 1812

Kabalista [The Cabalist] (op, 2, F. Wężyk), Warsaw, 29 Jan 1813

Król Łokietek czyli Wiśliczanki [King Lokietek, or The Women of Wiślica] (op, 2, Dmuszewski), Warsaw, 3 April 1818

Dwa posągi [The Two Statues] (ballet, L. Thierry), Warsaw, 12 Nov 1818

Jagiełło w Tenczynie [Jagiello in Tenczyn] (op, 3, A. Chodkiewicz), Warsaw, 1 Jan 1820

Ofiara Abrahama [Abraham's Sacrifice] (melodrama, 4, Cuvelier de Trie and L. Chadezon, trans. B. Kudlicz), Warsaw, 11 Dec 1821

Powstanie narodu [The Insurrection of a Nation] (lyrical scene, 1, F.S. Dmochowski), Warsaw, 1 Jan 1831

VOCAL

Sacred: 24 Lat. masses, 9 Pol. masses; 4 orats, incl. Passio Domini Nostri Jesu Christi, d, 14 solo vv, 3 choruses, orch, hp, op.65, Warsaw, 20 June 1832; 86 offs, grads, hymns etc.

Secular: 55 cants., for state and private celebrations (most lost); *c*100 solo songs, Pol., Fr., It. and Ger. texts

INSTRUMENTAL

Orch: 8 syms., incl. op.11, C (Offenbach, 1805), op.17, B♭ (Leipzig, 1818), others lost, polonaises, marches

Chamber: 6 str qts, F, A, D, 'du meilleur goût polonois', op.1 (Vienna, 1798), C, E♭, d, op.8 (Offenbach, 1806); Pf Trio, B♭, op.2 (Vienna, 1798); Str Qnt, c (Warsaw, 1804); 3 Vn Sonatas, F, D, E♭, op.10 (Warsaw, 1805); 2 pf qts, incl. E♭, op.15 (Paris, 1805); 3 polonaises, vn, pf; Septet, D, fl, cl, vn, va, vc, db, pf, 1830, *PL-Kj*

Piano: 2 Rondos 'à la mazurek', g, C (Warsaw, 1803), Rondo à la krakowiak, B♭ (Warsaw, 1803); 3 Sonatas, B♭, D, F (Warsaw, 1805), Sonata, B♭, pf 4 hands, op.16 (Paris, *c*1805); Variations, B♭; 16 polonaises

ALINA NOWAK-ROMANOWICZ, JERZY MORAWSKI

Elsner, Jürgen (*b* Finsterwalde, 22 April 1932). German ethnomusicologist. He studied music theory at the Deutsche Hochschule für Musik, East Berlin (1950–55), and musicology with Meyer and Vetter at the Humboldt University, Berlin (1955–8); after studying Arabic there for six years, he took the doctorate in 1964 with a dissertation on Hanns Eisler's protest music and in 1970 completed his *Habilitation* with a study of the concept of the maqām in modern Egyptian music. Meanwhile he worked as an assistant at the Humboldt University (1958–64) and at Leipzig University (1964–8) and then as senior assistant (1968–70) at the Humboldt University, where he was appointed professor of ethnomusicology (1975) and director of the Institut für Musikwissenschaft und Musikerziehung (1979–90); he has also been a guest lecturer at other universities, including Tashkent, Warsaw

and Vienna. He is founder and director of the Forschungszentrum für Populäre Musik at the Humboldt University and chairman of the International Council for Traditional Music study group on maqām, whose congress reports he has edited.

Elsner's fieldwork has spanned three continents, and it includes studies undertaken in Algeria, Yemen, Iraq, Kazakhstan and Slovakia. He specializes in Arabic music and has also written extensively on Hanns Eisler and on methodologies in ethnomusicology.

HORST SEEGER/GISA JÄHNICHEN

Elson, Louis Charles (*b* Boston, 17 April 1848; *d* Boston, 14 Feb 1920). American writer on music. He studied music in Boston and at the Leipzig Conservatory. Although he gained a modest reputation as a singer and wrote some music, it was as a critic, lecturer and writer on music that he was most important. Returning to Boston from Leipzig in 1877, he became associated with several leading music journals, including *Vox humana* and the *Musical Herald*, both of which he eventually edited. He was music editor of the *Boston Courier* and then of the *Boston Daily Advertiser* from 1886 until his death. In 1880 he joined the New England Conservatory, and in 1882 was made head of its theory department. He lectured extensively in New England, at colleges and to community groups. In 1945 his widow established a memorial fund at the Library of Congress for the annual presentation of lectures on music.

L.C. Elson's son Arthur Elson (1873–1940) studied at Harvard and the New England Conservatory, and wrote and edited many books on music, including *A Critical History of Opera* (Boston, 1901, 2/1926 as *A History of Opera*) and *Woman's Work in Music* (Boston, 1903/*R*, 2/1931).

KARL KROEGER/R

El-Sonbāṭy, Riaḍ (*b* Faraskour, nr El Mansûra, 30 Nov 1906; *d* Cairo, 10 Sept 1981). Egyptian composer. His father was a composer and singer. The family moved to El Mansûra, where Riaḍ studied at a religious school (*quttab*). At the same time he taught himself the *'ūd* and learnt his father's repertory. In 1928 he went to Cairo to study at the Oriental Music Club (later the Fuad I Institute), but his playing on the *'ūd* earned him a teaching position there instead. The Odeon recording company

employed him as a manager, composer and *'ūd* player in its *takht* (small ensemble). In the early 1930s he was employed by Egyptian radio as a player and composer.

El-Sonbāṭy established a reputation as one of the leading Egyptian composers of monodic vocal music after Darwish. He wrote about 1060 songs, 83 of which he sang on the radio in concerts. Among the famous singers for whom he composed was Ibrahim Um-Kalthoum, for whom he wrote about 104 songs, including some of the finest *quaṣā-'id* (poems in classical Arabic), set in a sober style combining originality and reminiscent of classical *quaṣā-'id*. He set a wide range of poetry, the most successful settings being those of poems by Ahmad Shawqy, for example *Salou Qalby*, *Wulida a'l huda* (The Prophet's Birth) and *Al Neel* (The Nile). He introduced some Western innovations into some of his songs, introducing tango, rumba, bolero and waltz rhythms into his film songs and electric organ, piano or guitar into the introductions of his late classical Arab songs. Despite this, he is generally considered a conservative, and his style remains a model of classical beauty.

SAMHA EL KHOLY

Elssler. Austrian family of music copyists and dancers.

(1) Joseph Elssler (*b* ?Kiesling, Silesia, 1738/9; *d* Eszterháza, 26 Oct 1782). Prince Nikolaus Esterházy's music copyist from August 1764 to October 1782. He was a friend of Haydn, who witnessed his marriage (1766) to Eva Maria Köstler (*d* 1806) and was godfather to all the children of this marriage. Joseph made fewer copies of Haydn's works than his son (2) Johann Elssler, but they are a no less valuable part of the source tradition of Haydn's music; they occur particularly in the Esterházy collection at Budapest, and in Vienna, Berlin, Frankfurt and St Florian (von Zahn, 1988, pp.140ff). The magnificent manuscript volumes of baryton trios dedicated to Prince Esterházy deserve special mention, as does Joseph Elssler's role in the preparation of Haydn's 'Entwurf-Katalog' (*EK*), which was begun about 1765 (facsimile in Larsen, 1941; further specimens in Landon, 1955; *Joseph Haydn: Werke*, xiv/4, 1958; Bartha and Somfai, 1960; von Zahn, 1988; facs. parts of Sym. no.48, ed. E. Muntag, Martin, 1982). After Elssler's death his eldest son, Joseph Elssler jr (*b* Eisenstadt, bap. 7 Aug 1767; *d* Vienna, 6 Oct 1843), an oboist with Esterházy's grenadier military band from the late 1780s, and from 1 November 1800 a member of the prince's Hofkapelle, took over his father's office (*Haydn Yearbook 1970*, pp.118–19). However, because his handwriting has not been identified, the assumption that Joseph Elssler jr is identical with the Esterházy copyist Anonymous 11 (see Bartha and Somfai, 1960) cannot be verified.

(2) Johann (Florian) Elssler (*b* Eisenstadt, bap. 3 May 1769; *d* Vienna, 12 Jan 1843). Music copyist, son of (1) Joseph Elssler. Elssler himself said that he was Haydn's personal copyist and valet for 22 years until the composer's death (i.e. from 1787; in 'Tages-Ordnung', see below); however, he was presumably his valet only from the early 1790s (Schmieder, 1937, p.426). The widely held assumption that Elssler could have entered Haydn's service before 1787 clearly results from false attribution: the manuscripts of the so-called Esterházy copyist Anonymous 63 (Peter Rampl) were long thought to be Elssler's, and Landon has proposed that Anonymous 48 and the young Johann Elssler were identical (*Soundings*, ii, 1971–2, p.15). Like other authentic copies, those definitely originating with Elssler bear no date, though for his there are some clues to chronology, for example the use for some manuscripts of English paper (Elssler accompanied Haydn on the second journey to London in 1794–5), and the fact that he wrote out the 'Haydn-Verzeichnis' (*HV*) of 1805 (facsimile in Larsen, 1941; further specimens in: Landon, 1955; *Haydn-Studien*, iii/2, 1974, following p.152; Landon, 1976–80; *Joseph Haydn: Werke*, xxii/1, 1993, pp.173–4). Copies by Elssler are extant principally in Budapest (Esterházy collection), Prague (Lobkowitz archive), Vienna, Eisenstadt, London and Donaueschingen. They are particularly reliable, and in a tradition often containing gaps and uncertainties they are indispensable for a critical edition of Haydn's works. This is the case especially for original performance parts with autograph additions, for example the wind parts for the London performances of the symphonies nos.99 and 101–4 (*D-DO*), and the original parts for the late masses (*A-Ee*) and for *The Creation* and *The Seasons* (*Wst*). There are also Haydn documents in Elssler's handwriting: *Haydn-Bibliothek-Verzeichnis* (*GB-Lbl*); 'Tages-Ordnung des seel. Herrn H. Kapellmeisters Joseph Haydn' (*F-Po*); 'Haydn's vollendete Compositions Werke' (*A-Sm*); Haydn's will of 7 February 1809, in the *Haydn-Nachlass-Verzeichnis* (*Wsa*).

Haydn left his loyal factotum 6000 guilders. In spite of this legacy, later in life Elssler did not live in the best of conditions. He probably continued as a copyist; he worked in this capacity for the Schottenkirche in Vienna between 1819 and 1826. About 1810 he copied some of Haydn's works for the publisher Breitkopf & Härtel. In 1811 he boasted to this firm that he owned originals of six of the London symphonies (see Schmieder, 1937), and he offered three autographs (symphonies nos.101, 102 and 104) for sale in the *Allgemeine musikalische Zeitung* (xx, 1818, Intelligenz-Blatt, ii, col.5). Whether Elssler was entitled to describe these manuscripts as his 'true inheritance' or acquired them without authorization is questionable. He probably reserved certain manuscripts for himself before Haydn's death and later made a private business out of Haydn manuscripts (see Larsen, 1939, pp.32ff). In the 1830s his collection came into the possession of the Viennese publishing house Artaria. Some relics of Haydn (among others his death mask and sheets of sketches) remained in the possession of the Elssler family still longer.

The children from Elssler's marriage in 1800 to Therese Prinster (*d* 1832) included Johann Elssler (*b* Vienna, 31 Jan 1802; *d* Berlin, 10 March 1872), chorus director at the Königliches Opernhaus, Berlin; Therese Elssler (*b* Vienna, 5 April 1808; *d* Meran, 19 Nov 1878), an eminent dancer who entered into a morganatic marriage with Prince Adalbert of Prussia and received the title Baroness von Barnim; and (3) Fanny Elssler.

(3) Fanny [Franziska] Elssler (*b* Vienna, 23 June 1810; *d* Vienna, 27 Nov 1884). Dancer, daughter of (2) Johann Elssler. She ranks with Maria Taglioni and Carlotta Grisi among the legendary prima ballerinas of the Romantic ballet. She made her début in Vienna at the Kärntnertor-

theater and in 1824 went to Italy for further training. In Naples she learnt to apply dramatic expression to the dance. After her first great successes in Berlin (1830) and a short stay in London, she and her sister Therese were engaged by the Paris Opéra in 1834. There, amid both feud and enthusiasm, she succeeded Taglioni. She celebrated unparalleled triumphs in America (1840–42), and returned to tour the capitals of Europe with equal success. She brought her strong, passionate temperament from pure ballet into character dancing. As a leading stage dancer, she adopted elements of Spanish folklore, her *cachucha* arousing frenzied enthusiasm. In 1851 she left the stage; she then lived in Hamburg for several years and finally returned to Vienna.

HORST WALTER

Elst, Johannes [Jan] **van der** (*b* probably Ghent, 1598; *d* Ghent, 6 Feb 1670). Flemish theorist and organist. In 1615 he entered the monastery of the Augustinian hermits at Ghent and in 1616 took his vows. He was organist there from 1620 until his death and during this period successively held three other offices: procurator (1625–31), sexton (1631–40) and sub-prior (1640–52). He is known by two treatises on music: in Latin, *Notae Augustinianae, sive Musices figurae seu notae novae concinendis modulis faciliores tabulaturis organicis exhibendis aptiores* (Ghent, 1657), and, in Flemish, *Den ouden ende nieuwen grondt van de musijcke* (Ghent, 1662). The latter is considerably the bigger, though it deals with much the same material as the first one: keys and chord qualities, consonances and dissonances, counterpoint and thoroughbass, as well as the division of the monochord and instruments, the discussion of which is primarily concerned with harmonics and overblowing. In order to avoid what were in his view the confusing flags and beams attached to notes, Elst invented a new notation for values ranging from four semibreves down to a demisemiquaver, which he termed 'Notae Augustinianae' in honour of his order (see ex.1; for further illustration,

Ex.1

brevis quadrupla = □□□□
brevis = ◇ = ○
minim = ◆ = ●
fusa = ■
brevis dupla = □□
semibrevis = =
semiminima = =
semifusa = ♩

see NOTATION, fig.57). He also devised a new series of solmization syllables covering the enharmonic scale and based on the Guidonian series, the sharp being represented by the vowel 'i' and the flat by 'a': C = *ut*, C♯ = *it*, D♭ = *ra*, D = *re*, D♯ = *ri*, E♭ = *ma*, E = *mi*, F = *fa*, F♯ = *fi*, G♭ = *sal*, G = *sol*, G♯ = *sil*, A♭ = *lae*, A = *la*, B♭/A♯ = *li*, C♭/B♮ = *at*. The exposition is illustrated with 11 tables, the last of which contains, in old and new notation, the two-part song *Magne pater Augustine, preces nostras suscipe*, probably composed by Elst himself in honour of the founder of his order.

HEINRICH HÜSCHEN

Elston, Arnold (*b* New York, 30 Sept 1907; *d* Vienna, 6 June 1971). American composer of Russian-Lithuanian descent. He studied harmony and counterpoint with Rubin Goldmark (1928–30), composition with Webern (1932–5) and conducting with Arthur Fiedler (1939). In addition he attended City College, CUNY (BA 1930), Columbia University (MA 1932) and Harvard University (PhD 1939). He was an instructor in composition at the Longy School of Music, Cambridge, Massachusetts (1939–40), and also taught at Cambridge Junior College (1938–40), the University of Oregon (1941–58) and the University of California, Berkeley (1958–71), where he was professor of music. The Berkeley period saw his finest achievements as a composer, though the chamber opera *Sweeney Agonistes* (1948–50) is an equally important work from an earlier period. His music balances a wide range of colour with a sureness of line; it subordinates rhythmic suppleness in order to elevate the importance of larger phrase structure. The String Quartet of 1961 (the only work to be published during his lifetime) and the Piano Trio (1967) stand out among his chamber works. His honours include a joint award from the American Academy of Arts and Letters and the National Institute of Arts and Letters (1969–70). He contributed articles to the *Musical Quarterly* and *Perspectives of New Music* as well as to the books *Music and Medicine* (1948) and *A Modern Guide to Symphonic Music* (1966).

WORKS
(selective list)

Stage: Esther (incid music, J. Racine), 1942; The Trojan Women (incid music, Euripides), 1944; Sweeney Agonistes (chbr op, 1 scene, T.S. Eliot), 1948–50; Hotel Daedalus (incid music, P. Colum), 1953; The Love of Don Perlimplin (op, 1, after F.G. Lorca), 1957–8

ANN P. BASART

Elvers, Rudolf (*b* Plau, Mecklenburg, 18 May 1924). German music librarian. He studied at the Musikhochschule in Rostock and musicology with Gerstenberg at Rostock University (1946–8). He continued his musicological studies with Gerstenberg at the Free University of Berlin, with German philology and art history as subsidiary subjects, and he took the doctorate at Berlin in 1953 with a dissertation on tempos in Mozart's instrumental music. After working as a music dealer at the Verlag Merseburger, Berlin, he joined the Staatsbibliothek Preussischer Kulturbesitz, Berlin, in 1965, becoming director of the Mendelssohn archives in 1967 and director of the music department in 1968; he has also lectured at the Free University, the Technical University and the Hochschule der Künste, Berlin. He retired in 1988. In addition to writing exhibition catalogues for the Staatsbibliothek (on Beethoven, 1970; Felix and Fanny Mendelssohn, 1972 and 1983; J.S. Bach, 1985), he was an editor for the series Musikbibliographische Arbeiten (1973–96). He specializes in the study of source materials, the works of Mozart and Mendelssohn, musical bibliography and the history of music publishing.

HANS HEINRICH EGGEBRECHT/JUTTA PUMPE

Elvey, Sir George (Job) (*b* Canterbury, 27 March 1816; *d* Windlesham, Surrey, 9 Dec 1893). English organist and composer. He was a chorister at Canterbury Cathedral until 1831, when his elder brother Stephen was appointed organist of New College, Oxford, and George went there with him as his pupil. Later he entered the Royal Academy of Music; in 1834 his anthem *Bow downe thine ear* was awarded the Gresham Prize in preference to S.S. Wesley's *The Wilderness*. In the following year he again defeated Wesley, this time for the post of organist of St George's Chapel, Windsor, which he held until his retirement in 1882. During this long period Elvey gradually improved the choir, redesigned the organ (1843) and enlarged the musical repertory of the chapel. He also provided music for various royal occasions, including the funerals of Queen Adelaide (1849) and the Prince Consort (1861) and the wedding of Princess Louise in 1871. He was also a violinist, and insisted that his pupils should learn that instrument. He graduated BMus at Oxford in 1838 and DMus in 1840, and was knighted in 1871. He was four times married.

Elvey's anthems, services and oratorios are long since forgotten; even when they were written they were half a century out of date, using an inflexibly Handelian style. His hymn tunes, however, are all the better for their avoidance of some of the mannerisms of his period. Two of them have gained general currency and show no sign of losing their popularity: 'St George's Windsor' (*Come, ye thankful people, come*) and 'Diademata' (*Crown him with many crowns*). His other works include the oratorios *The Resurrection and Ascension* (1837) and *Mount Carmel*, three odes, 45 anthems, services, hymn tunes, chants, partsongs and songs.

Stephen Elvey (*b* Canterbury, 27 June 1805; *d* Oxford, 6 Oct 1860), brother of George Elvey, was also an organist and composer. At the age of 17 he lost his right leg as a result of an accident, but he persisted with his organ playing, using a wooden leg. After studying with Highmore Skeats in 1830 he was appointed organist of New College, Oxford, succeeding Alfred Bennett. He took the BMus (1831) and DMus (1838) and was choragus of the university from 1848 to his death. His works include Evening Services in A (a continuation of Croft's Service in A) and F; Kyrie, Credo and Sanctus in E (all in *GB-Lbl*); and a *Manual of Psalm Tunes for the Use of Oxford University* (London, n.d.).

Elwart, Antoine (Aimable [Amable] **Elie)** (*b* Paris, 18 Nov 1808; *d* Paris, 14 Oct 1877). French theorist, writer on music and composer. He was of Polish descent. He began his musical studies at the singing school of St Eustache at the age of ten, and later played second violin in a boulevard theatre orchestra. In the 1820s he entered the Paris Conservatoire where he studied counterpoint and fugue with Fétis and composition with Le Sueur. With several friends he founded the Concerts d'Emulation which provided student composers and performers with the opportunity to be heard in public; the concerts lasted from 1828 to 1834. He won the *second prix* for composition in 1831 and was assistant professor to Reicha from 1832 until 1834 when he gained the Prix de Rome. During his stay in Rome he composed, among other things, an *Omaggio alla memoria di Vincenzo Bellini*, performed at the Teatro Valle in 1835. Back in Paris in 1836, he resumed his post as assistant at the Conservatoire, and later conducted the concerts in the rue Vivienne and those of the Société Ste Cécile. From 1840 to 1871 he was a professor of harmony at the Conservatoire. In 1867 he undertook a collected edition of his compositions; only three volumes (of a planned six) were published.

Elwart's compositions include operas, masses and many other sacred works, oratorios, songs and instrumental music, but he is better known for his writings. His numerous theoretical treatises were widely used and, though lacking originality, reveal careful thought. He completed the *Etudes élémentaires de musique* of Burnett and Damour (Paris, 1838–45) and contributed articles on music to the *Encyclopédie du dix-neuvième siècle* and to the *Revue et gazette musicale de Paris*. His *Histoire de la Société des concerts* (1860) and *Histoire des Concerts populaires* (1864) are useful and interesting.

WORKS
most printed works published in Paris

Stage: Les catalans (op, 2, Burat de Gurgy), Rouen, Arts, Jan 1840; La reine de Saba (op), unperf.; Les chercheurs d'or (op), unperf.; Incid music for H. Lucas: Alceste, Paris, Odéon; other works

Sacred: 5 masses (1838–72); other masses, unpubd; Te Deum, ?1848–9; Miserere; many motets; Heures de l'enfance: recueils de prières, cantiques et récréations à l'usage des … écoles etc. (1838)

Other vocal: Noë, ou Le déluge universel, symphonic orat, 1845; La naissance d'Eve, orat, 1846; Ruth et Booz, vocal sym., 1850; Les noces de Cana, mystery, 1853; occasional cants.; other choral works; ?*c*50 songs, incl. Mélodies du soir; other works

Elwell, Herbert (*b* Minneapolis, 10 May 1898; *d* Cleveland, 17 April 1974). American composer, critic and teacher. After graduating from the University of Minnesota he studied composition with Bloch in New York (1919–21) and with Boulanger in Paris (1921–4). He received a Prix de Rome (1923), and during his stay in Rome (1924–7) he composed his best-known work, the ballet *The Happy Hypocrite*. In 1928 he returned to the USA and was appointed head of composition and theory at the Cleveland Institute. He quickly acquired a reputation as a teacher, working also at the Oberlin College Conservatory and the Eastman School summer school before he retired in 1945 to give his attention to composition and music criticism. From 1930 to 1936 he wrote programme notes for the Cleveland Orchestra, and he was music critic of the *Cleveland Plain Dealer* (1932–64), where his reviews were noted for candour and wit. Among the awards he received were the Paderewski Prize (1945), the Cleveland Arts Prize (1961) and an award from the National Institute of Arts and Letters (1969).

Ewell's music reveals him as a lyricist with a post-Romatic musical language. The majority of his works are vocal, and his sensitive word-setting shows a great admiration for Fauré. His song repertory, with its subtle settings of texts by eminent poets, best reflects his artistry. The influence of Berlioz and Bloch can be heard in Elwell's rich and colourful sonorities.

WORKS
(*selective list*)

VOCAL

Choral: I was with Him (cant., Bible), T, male vv, 2 pf, 1937; 5 Songs (Li Bai), male vv, 1943; Lincoln: Requiem aeternam (J.G. Fletcher), Bar, chorus, orch, 1946; Watch America (R. Nathan), SATB (1951)

Solo vocal: Blue Sym. (J.G. Fletcher), song cycle, S, str qt/orch, 1944; Pastorale (Bible: *Song of Solomon*), S, orch, 1948; The Forever Young (P. Hansen), S, orch, 1953

Songs: Renouncement (A. Meynell) (1942); The Road not Taken (Frost) (1942); In the Mountains (Chang Yu) (1946); Music I Heard with you (Aiken) (1946); The Sound of the Trees (Frost) (1946); Christmas Carol (M.B. Simpson) (1947); Agamede's Song (A. Upson) (1948); Suffolk Owl (T. Vantor) (1948); All Foxes (R.L. Lowe) (1969); This Glittering Grief (Lowe) (1969); Phoenix Afire (Lowe) (1969); Giorno dei morti (D.H. Lawrence) (1974); In a Boat (Lawrence) (1974); Tarantella (Lawrence) (1974)

Unpubd songs, 1950s: American Psalm (D. Morton); A Child's Grace (Carlin); He whom a Dream hath Possessed (O'Sheel); I look Back (P. Hansen); The Love Charm of Simaitha (Theocritus, trans. Robinson); Memorial Day Eternal (B.W. Drossin); The Ousel Cock (Shakespeare); The Palatine (Cather); Le pays des enfants joyeux (T. Hart); Song Against Songs (Chesterton); War is Kind (S. Crane); The Waters of Pain (Tudor-Hart); The Ways (P. Hansen); Wistful (Chin.)

INSTRUMENTAL

Orch: The Happy Hypocrite (ballet, after M. Beerbohm), 1925, suite, 1927; Orch Sketches, 1937; Introduction and Allegro, 1942; Ode, 1950; Concert Suite, vn, orch, 1957; Sym. Sketches, small orch, 1966

Chbr: Pf Qnt, 1923; Divertimento, str qt, 1926; Pf Sonata, 1926; Sonata, vn, pf, 1927; Pf Pieces, 1928; 3 Pf Preludes, 1930; Str Qt, e, 1937; Variations, E, vn, pf, 1951; Busy Day, pf, 1957; Cortège, pf, 1966; numerous pf pieces

Band: arrs. by R.E. Nelson

JOHN G. SUESS

Elwes, Gervase (Cary) (*b* Billing Hall, Northampton, 15 Nov 1866; *d* nr Boston, MA, 12 Jan 1921). English tenor. He was educated at the Oratory School, Birmingham, and Christ Church, Oxford. He served in the diplomatic service from 1891 to 1895. After singing as an amateur, he studied in London and Paris. From 1903 he made professional appearances, singing at the leading provincial festivals besides giving solo recitals. In 1904, under Weingartner in London, he first sang Elgar's Gerontius, with which he became closely identified; in 1909 he gave the first performance of Vaughan Williams's *On Wenlock Edge*. He also appeared in Germany, Belgium and the USA. He was on his way to an engagement at Harvard University when he was killed in a train accident. The high place that Elwes held among British singers owed more to a temperament sensitive to every implication of the music, as his few recordings reveal, than to his natural vocal gifts.

Ely. City in England. The earliest reference to music in the city, located near Cambridge, is found in the 12th-century *Liber eliensis* in which Cnut is reputed to have been impressed with the singing of the Ely monks. Before the Reformation, polyphony was sung in the Lady Chapel, contrasting with the plainsong of the monks' choir in the cathedral; no music from this period survives. In 1539 the monastery was dissolved and in 1541 the King's New College at Ely was established.

Tye was appointed *Magister choristarum* at the cathedral in 1543 and was succeeded in 1561 by Robert White. Some music survives from their late 16th-century successors, John Farrant, William Fox and George Barcroft. Towards the end of the 16th century the dean and chapter provided viol lessons for the choristers, although there is no evidence that viols were actually played in the services. From 1580 to 1685 reference is made in Dickson's catalogue to 'other instructors in musick and on the viols occasionally'. A considerable quantity of fine music, much of it recently published, was written by a native of Ely, John Amner, who was organist from 1610 to 1641. The music-loving dean, Henry Caesar, was a generous patron of the cathedral music and Amner dedicated some works to him. Amner enlarged the cathedral music library, copying and making new books (now in *GB-Cp*). Services were dramatically stopped in 1643 by Cromwell who, with soldiers and rabble, entered the cathedral during a service and drove out the congregation.

The 1662 statutes stipulated that the choir should include eight clerks but there soon developed a practice of appointing probationary lay clerks on half-salary, sometimes making a total of ten adult singers. John Ferrabosco and James Hawkins were organists after the Restoration; both were indefatigable copyists who set about gathering the fragments of the old partbooks, though Hawkins often remarked that a part (or parts) may be 'torn out of ye books' (Dickson). During 1690–91 Gerard Smith rebuilt the organ but Hawkins had to transpose when playing because 'the organ here is three quarters of a note higher than the pitch of the organs are now' (Dickson). Hawkins was also a prolific composer whose output includes chanted services where single chant alternates with more florid passages, a style continued by later Ely organist-composers, Thomas Kempton and Richard Langdon. In 1770 Alan of Walsingham's magnificent choir stalls were removed from the octagon, where they had been since the 14th century, to the extreme eastern end of the cathedral. They were moved again to their present position during the mid-19th century.

Robert Janes, organist from 1830 to 1866, was trained at Norwich where a previous organist, John Christmas Beckwith, had devised a system of pointing the psalms. Janes was the first to publish a pointed psalter, printed at Ely in 1837 by T.A. Hills. In 1851 the organ was rebuilt by Hill in a case designed by Sir G. Gilbert Scott in imitation of the one in Strasbourg Cathedral. In 1853 there were two daily services sung by eight lay clerks and ten choristers. During the 19th century the *Ely Confession* gained a wide reputation among choirs. It appears in the Ely Annual Choir Festival Book for 1867, where precise instructions demand that the priest and people shall sing alternately. Though often thought to be a work of Janes, there is no mention of his name in a long list of acknowledgments. His successor, Edmund Chipp, became popular as a composer and as a champion of Schumann's music, and was followed in 1887 by Basil Harwood, a prolific composer whose Service in A♭ op.6 and *Dithyramb* op.7 for organ were composed at Ely. Thomas Tertius Noble was organist from 1892 to 1898.

Most 20th-century Ely organists have maintained the tradition of composing. They have included Archibald Wilson, who also approved the specification for the Harrison organ, and Noel Ponsonby, usually remembered for his *Five Fancies for Small Organ*. Arthur Wills, organist from 1958 to 1990, was a prolific composer in many genres; notable are his organ music, mainly in the modern French style, and choral compositions showing an awareness of changing liturgical needs. He was succeeded by Paul Trepte. The entire old choir library, catalogued by precentor W.E. Dickson in the 19th century, was moved to the University Library of Cambridge in 1970.

MAURICE A. RATLIFF

Emanuel Moór pianoforte. A grand piano with two keyboards, invented in the 1920s by the Hungarian composer and pianist Emanuel Moór (1863–1931). The upper keyboard strikes the strings an octave above the lower by means of a 'tracker' to the higher strings. Coupling the two keyboards allows octaves to be played with only one key of the lower keyboard, but with added weight of touch. Some note combinations prevent the coupler's proper working. About 64 pianos were made with the keyboard, including some by Steinway and Bösendorfer. The composer's widow, the pianist Winifred Christie-Moór (1882–1965), was the instrument's main proponent. The Emanuel Moór Double Keyboard Piano Trust in England supports an annual fellowship for a young pianist and has published a history of the invention.

Embellishment. That element in music which is decorative rather than structural, and which in particular includes both free ornamentation and specific ORNAMENTS, whether indicated by notes or signs in the notation or left to be improvised at the discretion of the performer. *See* DIMINUTION; DIVISION; and IMPROVISATION.

ROBERT DONINGTON

Embouchure (Fr. *embouchure*; Ger. *Ansatz*; It. *imboccatura*). The coupling mechanism, during the playing of a wind instrument, between the air supply of the player and the instrument. Embouchure is a matter of such vital importance that its nature will influence the wind instrument player's progress and ultimate capability as a musician. Problems of embouchure are almost always dental in origin, that is, they are related to the teeth, jaws, mouth and so forth.

The embouchure is one of three parts of a physical complex, the other two being the air supply mechanism of the player and the management of the air within the instrument during playing. It consists of a superstructure which includes the muscles of the lower part of the face, converging around the lips, as well as the lips themselves. The muscles operate upon an underlying supporting structure which incorporates the jaws and teeth (fig.1). On both of these structural schemes depend the ease with which the player is able to blow the instrument, the position in which the mouthpiece is placed, the quality of tone produced, the player's 'embouchure comfort' and 'embouchure potential'.

'Embouchure' is also the French term for MOUTHPIECE.

1. Scheme of embouchure musculature (lateral view): (M) modiolus; (1) orbicularis oris (upper lip portion); (2) levator labii sup. alaeque nasi; (3) levator labii superioris; (4) levator anguli oris; (5) zygomaticus minor; (6) zygomaticus major; (7) buccinator; (8a) risorius (masseteric strand); (8b) risorius (platysma strand); (9) depressor anguli oris; (10) depressor labii inferioris; (11) mentalis; (12) orbicularis oris (lower lip portion)

1. Brass instruments. 2. Woodwind instruments.

1. BRASS INSTRUMENTS. Several factors are involved in producing a tone on a brass instrument: air quantity, speed and direction (which are affected by the back of the tongue, the angle of the instrument as it is held to the mouth, mouthpiece placement and teeth alignment); the 'push-pull' of the muscles surrounding the centre of the lips; the 'harmony' of the facial mask; the efficiency of the lips as they meet naturally; the structure of the teeth; the ability to achieve correct intonation without 'lipping' notes into tune; and a concept of sound focussing on pitch centre, fullness and intensity, and sheer beauty of tone.

(i) Air. In essence, air feeds the embouchure. A full, relaxed breath and sufficient air speed are critical. If the pressure of the air column is inadequate, the tone generator (the lips) either will not vibrate or will produce a pitch other than the one intended. The player also may find it necessary to press the mouthpiece more tightly against the lips, causing damage and pain. This is especially true of the upper lip, which most brass players describe as the 'anchor' of the mouthpiece to the lip tissue area.

Given a constant air pressure, the speed of the air column as it reaches the lips is largely determined by the arch of the back of the tongue. Many brass players think 'oh', 'ah', 'u', 'ee' or 'eek' depending on the register being attempted, 'oh' corresponding to the lowest position of the tongue and 'eek' to the highest. Control of the air stream as it passes from the windpipe into the back of the mouth, up and over the tongue, and finally through the lips illustrates Bernoulli's principle: the more open the

mouth cavity is, the more slowly the air moves; conversely, the higher the arch of the tongue (thus closing the space between the back of the tongue and the soft palate or roof of the mouth), the faster the air column moves, producing higher notes. Thus, for example, a tuba player producing a low pedal tone utilizes an air pressure of approximately 0·2 kg per square cm (emitting a correspondingly large quantity of air through the instrument), while a trumpeter playing in the third octave of the instrument utilizes an air pressure in excess of 3 kg per square cm.

The neck area in the region of the collarbone expands in correlation to the quantity, speed and intensity of air passing through the windpipe. If the player's head is tilted in an unnatural position, raised upwards and protruding forwards, a hernia of the neck tendons may result. The pressure of air inside the mouth cavity during playing often causes the cheeks to bulge outwards over positions where spaces exist between the teeth or at other relatively weak muscular points. If the player attempts to prevent such bulging by excessively increasing cheek or lip-corner tension, the muscles may become fatigued.

(ii) Lips. Fundamentally, a brass instrument is merely an amplifier of the sound produced by the vibration of the lips. The frequency of the musical pitch is determined not only by the length of the air column within the instrument, but also by the speed of vibration of the lips activated by the air stream. The 'muscles of expression' which surround the centre of the lips must push and pull in a manner appropriate for a given register. Because a muscle can only contract, this motion requires opposing sets of muscles that function in balanced tandem. It is through this muscle 'antagonism' that one's embouchure is brought into operation.

The aperture or opening in the lips is the point of vibration and is a direct result of the speed, 'size' and 'width' of the air stream. A faster, more intense, narrower air stream produces a higher pitch, and thus a smaller aperture. It is important to recognize that the aperture is created by the air column passing through the lips, rather than being pre-formed before notes are released by the valve action of the tongue. When the lip opening is either pre-formed or too large for the register being played, a condition known as 'spread aperture' results. It can be caused by playing too long at loud volume and/or low register, inserting the tongue between the lips in order to spread them apart (generally at the moment of placing the mouthpiece upon the lips) or using the tip of the tongue to stop the air ('stopped tonguing'). The sound thus created lacks core and vibrancy.

The primary muscles used in embouchure formation are the *orbicularis oris*, which compresses and protrudes the lips; the *risorius* (*platysma* strand), which depresses the lower jaw and tenses the skin of the lower face and neck; the *buccinator*, which presses the cheek against the molar teeth and helps to expel air from the mouth cavity (together with the *orbicularis oris*, these are the most active muscles during the actual formation of the embouchure); and the *mentalis*, which elevates and protrudes the lower lip (see fig.1).

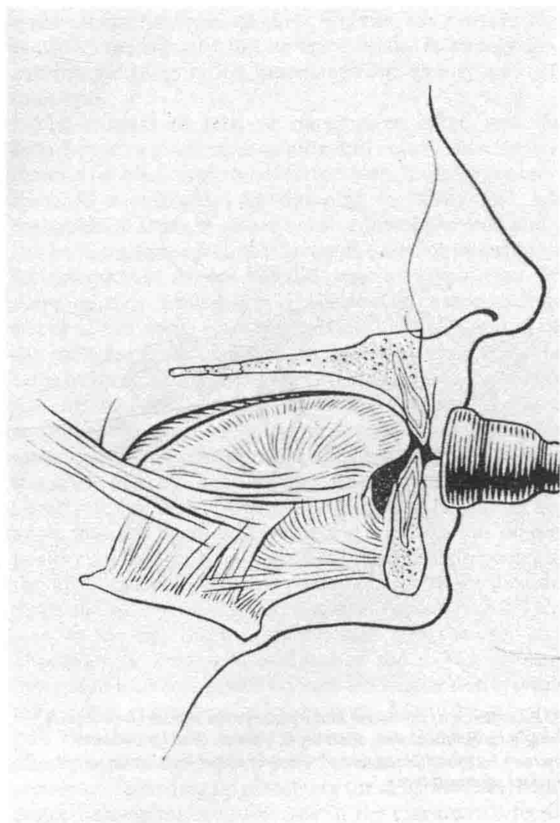
Lip tissue is 'smooth' tissue which acts as a vibrating 'reed'; it is stretched or pursed primarily by the interaction of the sets of muscles surrounding the centre of the lips. The lips themselves are not actually muscles but a covering of skin on the outside and mucous membrane on the inside. There is, however, a thin layer of muscle and fat between the two coverings. The red part of the lips is called the vermillion area and the groove in the upper lip is called the philtrum. A player's lip tissue may be either moist or fairly dry. Many players prefer a 'wet embouchure' created by moistening the mouthpiece rim and/or the lips with saliva just before placing the mouthpiece upon the lips.

It is important to allow the lips to meet naturally, as if saying the letter 'p'. On the trumpet and french horn, in particular, an exaggerated rolling inwards of the lower lip (as if over the lower teeth) can reduce sound quality and restrict range. Players of lower brass instruments experience a feeling of 'blowing over the lower lip' as the lower lip protrudes into the cup of the mouthpiece. The practice of 'lipping' notes into tune, which is actually done with the back of the tongue in conjunction with embouchure contortion, is one of the primary causes of embouchure difficulties. Other compromises of embouchure may result from such factors as improper teeth alignment or structure, unusually thick or thin lip tissue, scar tissue on either the upper or lower lip at the point where it touches the mouthpiece, and unequal 'push-pull' at one corner of the mouth (often encountered in people who smile or speak to one side or the other). Over time, however, almost all brass players find that the outer corners of their lips are naturally drawn downwards, an effect commonly known as the 'brass player's frown'.

(iii) Jaws and teeth. The functions of the jaws and teeth are akin to those of a scaffolding and girders: they support and help to brace the lips and facial muscles. The muscles of the lip region, mouth, jaw and face are at rest when all the teeth are clenched lightly. In playing, however, the teeth are slightly apart, the distance depending on register, size and placement of the mouthpiece, thickness of the lips and other dental formation factors.

The position of the lower jaw (mandible) in relation to the upper jaw (maxilla) should be such that the teeth are comfortably aligned. In the even bite, top and bottom teeth meet in precise vertical alignment. The over-bite, in which the lower teeth are slightly behind the upper teeth, is most common among brass players. In the under-bite, the bottom teeth naturally protrude forward of the upper teeth. These differences in dental structure explain why brass players hold their instruments against the teeth at varying angles. Generally speaking, the instrument should be approximately at a 90 degree angle from the vertical alignment of the teeth in order to be played most comfortably and efficiently.

On most brass instruments a vibrato is produced by slight up-and-down oscillations of the jaw. Both the speed and the depth of the vibrato are determined by the exaggeration and intensity of this movement. Many brass players also report a sensation of vibrato produced in the lower glottal area of the throat, as in singing.



(iv) Mouthpiece. The mouthpiece is usually placed in the middle of the mouth horizontally (from left to right; fig.2). Most well-known teachers advocate the following proportions of lip coverage by the mouthpiece cup:

cornet $\frac{2}{3}$ upper lip, $\frac{1}{3}$ lower lip

euphonium $\frac{2}{3}$–$\frac{1}{2}$ upper lip, $\frac{1}{3}$–$\frac{1}{2}$ lower lip

french horn $\frac{2}{3}$ upper lip, $\frac{1}{3}$ lower lip

trombone $\frac{2}{3}$–$\frac{1}{2}$ upper lip, $\frac{1}{3}$–$\frac{1}{2}$ lower lip

2. Adaptation of lips on the cup-like trumpet mouthpiece, showing the cup covered equally by the upper and lower lips (with the horn the cup covers about two-thirds of the upper and one-third of the lower lip)

trumpet $\frac{1}{3}$ upper lip, $\frac{2}{3}$ lower lip

tuba $\frac{2}{3}$ upper lip, $\frac{1}{3}$ lower lip (the upper rim of the tuba mouthpiece is located just 'under the nose', an area encompassing nearly the entire philtrum region)

Exceptions to these 'rules' are generally made to accommodate mouthpiece size, unusual teeth structures and other dental factors.

Selection of a proper mouthpiece size and a comfortable rim contour is generally guided by tessitura range and endurance considerations as well as personal taste and playing requirements. The smaller the mouthpiece in relation to the overall strength of the embouchure, the easier it is to play in the upper register. The balance between the volume of the backbore to the volume of the cup becomes critical in allowing pitch-centre stability from soft to loud playing, especially at extremes of register. In addition, each key of instrument (e.g. C and D trumpet, C and B♭ tuba, tenor and alto trombone) requires a separate mouthpiece that is balanced properly for that instrument.

(v) Breathing and articulation. When the player is not blowing into the instrument, air is taken into the body through the openings at the corners of the lips, an action that contributes to formation of the 'frown'. It is also becoming a common practice to inhale air through the nose. In 'circular breathing' the player exhales air through the mouth using the pressure of the collapsing cheek muscles and brings fresh air into the body through the nose.

The tongue serves as a valve releasing lengths and quantities of air appropriate to the length and volume of the note being played, as well as to the desired style of articulation (similar to the different articulations produced by the bow on a string instrument). Varieties of articulation are determined by the quickness or slowness of the tongue as it releases the air column, as well as by the intensity of the air column. Many players conceptualize articulations with different consonants ('too', 'doo', 'goo', 'koo', 'loo' etc.).

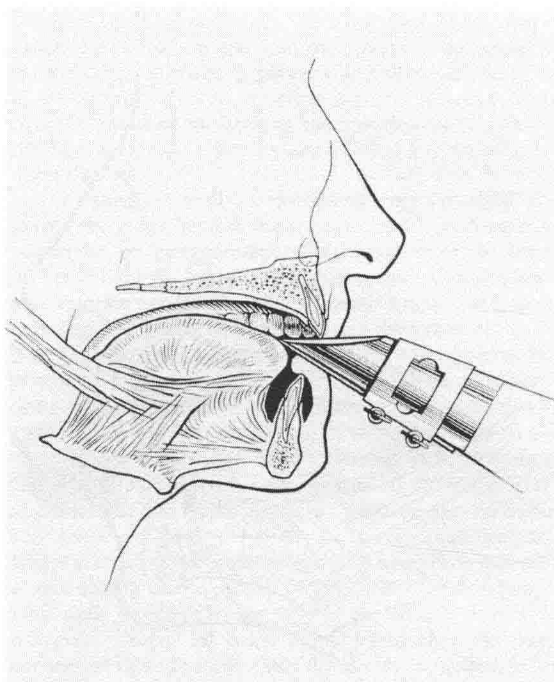
Under normal circumstances the air – and thus the sound – is stopped in the same manner as in singing; only in special cases is it appropriate to stop a note with the tongue. Rapid articulation (double or triple tonguing) is produced by a balanced action in which the front of the tongue releases a short, concise air column and the back of the tongue immediately follows with a second release ('tu-ku' or 'tu-tu-ku').

(vi) Posture. When playing, the body should be erect and the head balanced on the spine in a comfortable and relaxed 'neutral' position. This allows the most efficient release of air through the wind passage, mouth cavity and aperture of the lips into the instrument. In proper playing posture the knees must not be locked, the hips must not thrust unnaturally forwards, the breastbone should be held upwards and outwards in order to allow the rib cage to expand fully, the shoulders must remain relaxed and slightly back, the elbows should be out and away from the body, the head must remain naturally erect and vertical with the chin down and back, and the instrument must 'meet' the embouchure without contortion.

2. WOODWIND INSTRUMENTS. Woodwind embouchure is the arrangement of the lips, teeth and mouth cavity on and around the mouthpiece of a woodwind instrument in order to control its sound. Unlike brass embouchures, the woodwind embouchure does not actually vibrate to produce the tone, but through it the parameters of pitch, tone quality, dynamics and, to some degree, articulation can be controlled and modified.

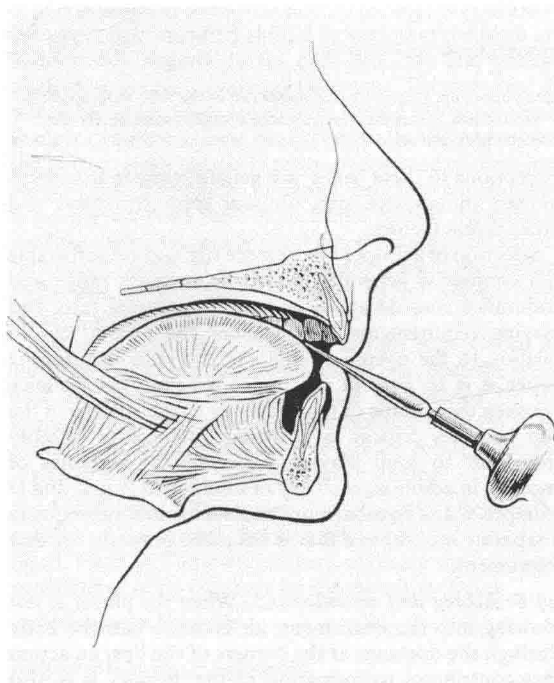
The embouchure acts as a mediator between the player's air column and the instrument. Ideally, the large muscles of the breathing apparatus (particularly the diaphragm and the muscles of the abdominal wall) provide most of the energy for playing. If the performer uses his fingers and breathing apparatus correctly, if the instrument is well made and properly adjusted, and if the demands of the score are not unusual, a woodwind player should be able to perform for hours without exhausting or overstraining his embouchure muscles. Any inadequacy or excessiveness in these elements forces the embouchure to compensate, causing strain and diminished endurance.

(i) General technique. Among the modern orchestral woodwinds three dissimilar methods of sound production are employed: the double reed used on oboes, bassoons and their kin; the single reed fastened to a beaked mouthpiece, as found on various sizes of clarinets and saxophones; and the air stream directed across an embouchure hole, as in flutes. Although each of these methods requires a somewhat different embouchure technique, certain significant points are common to all. In all reed instrument embouchures the lip muscles (*orbicularis oris*) close evenly around the mouthpiece or reed,



forming an air-tight seal (on the flute they form an aperture to shape the air column). The muscles surrounding the lips, however, pull gently away from the lips. This action is felt by the player as pulling the chin down, pulling the corners of the mouth back and so forth. Thus, one set of muscles works against the other, providing subtle control.

Two schools of thought dispute how firmly the corners of the mouth should be drawn back. The hard-cushion or 'smile' embouchure requires the sides of the mouth to be firmly drawn back in a modified smile, stretching and thinning the centre of the lips where they contact the reed and decreasing the 'lip damping' effect. This formation produces stronger high harmonics and consequently a more brilliant tone. The soft-cushion or 'pucker' embouchure (more popular among current players) has the sides of the mouth pushed forwards in a pucker, compressing and thickening the centre of the lips and increasing lip damping, thus discouraging higher harmonics and creating a mellower tone. In practice this difference is one of degree rather than kind, and some compromise is usually struck between these extreme positions. In fact, one noted clarinet teacher describes his embouchure as a 'smiling pucker'.

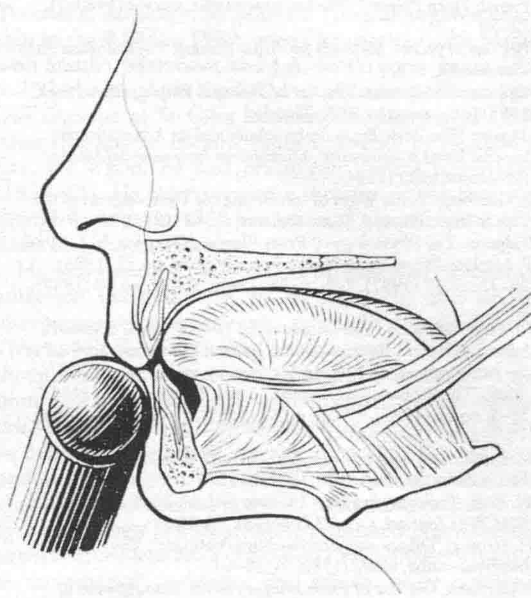


The volume of the mouth cavity affects most woodwind instruments in a similar way. A larger cavity may be produced by dropping the lower jaw and lowering the tongue (as in forming the vowel sound *o* or *aw*), while maintaining the air-tight seal around the reed or mouthpiece or the shape of the flautist's aperture. This configuration enhances low pitches and produces a deeper, richer sound. Decreasing the volume of the cavity (as in forming the vowel sound *eeee*) aids the production of high notes and creates a more brilliant sound. Generally speaking, deeper-voiced woodwinds, such as the bass clarinet, baritone saxophone and double bassoon, demand a more relaxed embouchure and a larger mouth cavity. Another similarity shared by all woodwind embouchures is that they are normally formed at the centre of the mouth. An asymmetrical oral or dental configuration, however, such as a prominent point or 'cupid's bow' at the centre of a flautist's upper lip, may require a player to play 'off centre', as some noted performers do.

(ii) Single- and double-reed instruments. Modern reed embouchures use the teeth similarly: the lips close in an air-tight seal, the teeth supporting the lips (figs.3 and 4). Except in certain unusual and extremely demanding circumstances (such as coaxing very high notes out of a bassoon), the teeth never touch the reed. The red part of one or both lips is rolled over them and acts as a cushion. On double-reed instruments both lips are rolled over the teeth, while on single-reed instruments the upper teeth usually rest on the mouthpiece and only the lower lip is rolled over. A few clarinet teachers, however, advocate using a 'double-lip' embouchure in which both lips are rolled over the teeth.

The position of the teeth is controlled by the jaw muscles, which are both stronger and less subtle than the lip muscles. Experienced woodwind players lower the jaw considerably, creating an appreciable gap between the teeth and providing only minimal support for the lips. This configuration increases the volume of the mouth cavity and allows the reed to be controlled primarily by the lip muscles. Novice players, however, may find that their lip muscles are not strong enough to sustain this

3. Adaptation of lips, teeth and tongue to the clarinet mouthpiece (single-lip embouchure), showing compression of lip on lower incisors by mouthpiece, and pressure of upper incisors on upper surface of mouthpiece



4. Adaptation of lips, tongue and teeth to the oboe reed (double-lip embouchure), showing compression of lower and upper lip against lower and upper central incisor teeth

embouchure for long. As their lips tire, the jaw muscles reinforce the faltering lips by bringing the teeth together, causing pinching, biting, restricted tone quality and loss of control.

The amount of reed or mouthpiece taken into the mouth affects pitch, tone quality and control in a similar manner for all modern reed instruments. If the lip contacts the reed near its tip, lip damping is substantial, less embouchure strength is needed to control the reed and a less brilliant sound results. Placing the reed or mouthpiece further into the mouth has the opposite result – less lip damping, more brilliance and a need for more embouchure strength. On single-reed mouthpieces the reed lies flat on the table for most of its length, but towards the tip the table begins a subtle curve away from the reed (*see* REED, esp. fig.1). At this point, called the fulcrum, the reed continues to run straight, thus separating from the mouthpiece. The correct point of contact for the lower lip is either directly beneath the fulcrum or somewhere slightly nearer the tip. Classical clarinet teachers generally agree that the lip should not move far from this unique position, whatever the demands of the music. In contrast, the lip position for double reeds is much more flexible. Since the sides of oboe and bassoon reeds touch all the way to the tip, there is no fulcrum and the reed can effectively be moved in and out of the mouth. Taking more reed into the mouth favours the higher notes, while taking less enhances the lower ones. Many bassoonists pull the lower jaw back to create an overbite, which allows maximum control over lip damping. There is no consensus regarding lip placement for saxophonists. Most concert saxophonists subscribe to the clarinetist's fixed-point approach, but jazz players (along with popular and 'folk' clarinetists) usually adopt a more flexible approach.

(iii) Flutes. The flautist's embouchure controls and directs the air stream so that it strikes the far edge of the embouchure hole at the proper angle, shape, volume and speed to produce the desired result (fig.5). A ribbon-shaped air column, vertically quite thin and no wider horizontally than the embouchure hole, produces maximum sound with minimal expense of air. In order to generate this ribbon shape, an aperture is formed by holding the lips almost closed and drawing the corners of the mouth back and somewhat downwards. The lower jaw controls the direction of the air column. Pulling the jaw back slightly directs the air stream downwards, while pushing it slightly forwards aims the air stream higher. For low notes, the speed of the air stream is diminished, and the column is made somewhat wider and flatter and is aimed lower. For higher notes air speed is increased, and the air column is made narrower and rounder and is aimed higher. Like oboe and bassoon embouchures, the flute embouchure is flexible, changing rapidly and subtly to accommodate pitch, range and dynamic variations.

(iv) Early woodwinds. The embouchure techniques for earlier woodwinds include the use of the lower lip and chin to stop the tops of vertical notched flutes, the use of the beaked whistle on recorders (*see* FLUTE, fig.1*i*), the capped double reed on crumhorns (*see* REED INSTRUMENTS, fig.1*f*; and WIND-CAP INSTRUMENTS), and the lip-controlled double reed with pirouette on shawms (*see* SHAWM, fig.2). These techniques will not be examined here, except to note that even on instruments in which there is no direct physical contact between the 'embouchure organs' and the source of vibration (e.g. recorders

5. Adaptation of lips to the flute

and crumhorns), pitch, at least, is affected by the shape of the mouth cavity.

GERALD B. WEBSTER (1), FRANKIE KELLY, JERRY VOORHEES (2)

Emerich, Johann [Emericus, Johannes] (*fl* 1487–1506). German printer, active in Italy. He came from Udenheim in the diocese of Speyer. In 1487 he printed two books with Johann Hamman, in 1492 he began printing on his own, and in 1494 for Luc'Antonio Giunta and other Venetian publishers. His speciality was liturgical books with music. Of the 71 books he issued, 67 were liturgical and at least 24 contain printed music or space for manuscript music (20 missals, one gradual, one antiphonal, two processionals and two *Libri catechumeni*). To print music he used woodcut blocks (a 1493 *Missale romanum*), metal roman plainchant types in four sizes and added mensural music type for the mensural Credos of the 1499 *Graduale*. The *Graduale* has been called the largest book printed in the 15th century; it uses a very large chant type with a variety of designs for different-sized neumes as well as ornamentation or liquescence. The mensural type, a black notation, preceded that of Petrucci by two years.

M.K. DUGGAN

Emerson, Lake and Palmer [ELP]. English rock group. Consisting of the virtuoso Keith Emerson (*b* Todmorden, 1 Nov 1944; keyboards), Greg Lake (*b* Bournemouth, 10 Nov 1948; bass and vocals) and Carl Palmer (*b* Handsworth, Birmingham, 20 March 1951; drums), it was one of the first progressive rock 'supergroups'. Formed in 1970, the group became notorious for their rock versions of classical masterpieces, the most renowned being their *Pictures at an Exhibition* (1971). Emerson was a flamboyant performer, stabbing his Hammond organ with knives and playing it as it rested on his chest. But he was also one of rock music's most talented and influential keyboard players, being among the first to employ the Moog synthesizer in a rock context. The title track from the second album, *Tarkus* (Island, 1971), is a representative example of the band's style. Cast in seven movements, driven alternately by Emerson's virtuosic playing and Lake's lyrical singing, it runs to over 20 minutes. With *Trilogy* (Island, 1972) they further refined their approach, the title track being among the best the group ever produced. *Brain Salad Surgery* (Manticore, 1973) contains the band's most ambitious

track, the 30-minute *Karn Evil 9*. After a two-year break (1975–7), the group released *Works, Volume 1* (Atlantic, 1977) and began a tour accompanied by a full orchestra. Logistical and financial problems forced the group to drop the orchestra and continue the tour as a trio. Facing waning popularity, the group broke up in 1978. Emerson and Lake regrouped with drummer Cozy Powell in 1986 to release *Emerson, Lake and Powell* (Polydor). In 1992, again reformed, *Black Moon* (Victory) was released followed by *In the Hot Seat* (London, 1994).

Emerson String Quartet. American string quartet. It was formed in 1976 as the professional continuation of a student quartet at the Juilliard School, by Eugene Drucker (*b* Coral Gables, FL, 17 May 1952) and Philip Setzer (*b* Cleveland, 12 March 1951), violins, Lawrence Dutton (*b* New York, 9 May 1954), viola, and Eric Wilson, cello, who was replaced in 1979 by David Finckel (*b* Kutztown, PA, 6 Dec 1951). From its inception the quartet's two violinists have shared the first chair in alternation. The quartet received the Naumburg Award for Chamber Music in 1978 and made its début in Alice Tully Hall, New York, on 27 March 1979, playing works by Mozart, Smetana and Bartók; its international début took place in Spoleto, on 28 June 1981. It has served as quartet-in-residence at the Smithsonian Institution, Washington, DC (from 1980), the Hartt School of Music (from 1981), the Spoleto Festival (Italy and the USA, from 1981) and the Aspen Music Festival (from 1981). Between 1982 and 1989 the Emerson was the first quartet-in-residence of the Chamber Music Society of Lincoln Center. The quartet tours frequently and in 1996 gave a cycle of Beethoven quartets at the Queen Elizabeth Hall, London.

The quartet's performances span the standard repertory and include the unprecedented presentation of all six quartets by Bartók on one programme. Their recording of the Bartók quartets won a 1990 *Gramophone* award. Contemporary works are a speciality: Davidovsky's String Quartet no.4 (1980) was commissioned by the Naumburg Foundation for the players, who gave the first performance and recorded the work. They have also given premières of works by Maurice Wright (1983), George Tsontakis (1984), Gunther Schuller (1986), John Harbison (1988), Wolfgang Rihm (1993) and Ned Rorem (1995). The ensemble has recorded many 20th-century compositions, including Webern's complete music for string quartet, Piston's Concerto for string quartet, wind and percussion with the Juilliard Orchestra (for CRI) and works by Barber, Ives, Cowell, Harris, Imbrie and Schuller. The Emerson String Quartet is noted for its impeccable ensemble, elegance of style and uniform virtuosity.

ELIZABETH OSTROW

Emery, Walter (Henry James) (*b* Tilshead, Wilts., 14 June 1909; *d* Salisbury, 24 June 1974). English musicologist and organist. After studies with Percy Fry, organist at St Thomas's, Salisbury, he gained a Threlfall organ scholarship to the RAM in 1929, where he continued his studies with Stanley Marchant and J.A. Sowerbutts. From 1932 to 1934 he taught at the RAM as assistant professor, and was organist at St Giles without Cripplegate (1931–9). After the war he became musical adviser to Novello & Co., for whom he had previously been a proofreader (1937–41). He later became a director of the firm, and though he left it in 1969 he remained general editor of its Early Organ Music series.

He wrote many articles on the problems of establishing authentic texts for the music of Bach, and on the interpretation of those texts, especially for the *Musical Times*. His book *Bach's Ornaments* (1953) gives a thoughtful commentary on ambiguities in Bach's intentions which are explained and illustrated with reproductions of Bach's autograph scores. With John Dykes-Bower he edited Bach's organ sonatas (BWV525–30) and short preludes and fugues (BWV553–60) for Novello; his edition of the Italian Concerto (BWV971) and the Overture in the French Manner (BWV831) were published posthumously as part of the Neue Bach-Ausgabe (1977). Emery's training as an organist, publisher and scholar were combined fruitfully in his work to further the understanding of Bach's keyboard music and the problems of performing it and other 18th-century music.

DAVID SCOTT/ROSEMARY WILLIAMSON

EMI [Electric & Musical Industries]. British record company, with additional interests in music publishing and electric and electronic goods.

1. Beginnings. 2. World War I and its aftermath. 3. The Great Depression, 1931–9. 4. World War II. 5. Reconstruction, 1945–61. 6. The Beatles and after.

1. BEGINNINGS. In June 1931, during the Great Depression, shareholders of the Columbia Graphophone Company and the Gramophone Company agreed to merge and form a new undertaking, Electric and Musical Industries Ltd (EMI). Although both were British-registered companies, most of the shares were owned or controlled by American interests, 43% of the Gramophone Company by RCA Victor and 80% of Columbia Graphophone by the New York bankers J.P. Morgan. Pressure from these investors, who favoured the merger

to better protect their investments, compelled the British management to accept this measure.

At the time of the merger, the Gramophone and Columbia Graphophone companies were well-established businesses and world players in the gramophone record trade. The Gramophone Company had started a British and European trade in Emile Berliner's American-made disc records and gramophones in August 1897, when Berliner sent William Barry Owen, an American salesman and speculator, to London with instructions to create a British trade in gramophone goods and to find investors. The same year, the American Columbia Phonograph Company General created a European trade in its American-made cylinder records and machines from a base in Paris, under Frank Dorian. Both businesses prospered. Owen created a dealership network and Dorian extended Columbia's trade across Europe and into Russia. By 1899, both had opened recording studios, run by American engineers from the Berliner and Columbia studios; in addition, Emile Berliner, anxious about supplies to the London business, created a German-based record manufacturing facility incorporated as Deutsche Grammophon GmbH (*see* DEUTSCHE GRAMMOPHON).

In 1899, the Gramophone Company Ltd was incorporated in London; it acquired Owen's original venture, together with a controlling interest in Deutsche Grammophon, which became the German selling agency and the base for the Russian and central European gramophone trade. Several overseas operating companies were formed, including the Gramophone Company (Italy) Ltd and Compagnie Français du Gramophon; this as a joint venture with American entrepreneur Alfred Clark, later managing director of the Gramophone Company and eventually the founding chairman of EMI. Also in 1899, Owen acquired the picture by Francis Barraud of 'His Master's Voice' (the dog listening to a gramophone) which became the company's most valuable trademark. 1900 saw the incorporation of the Gramophone & Typewriter Ltd, which acquired the Gramophone Company, the remaining shares of Deutsche Grammophon and the patents of the Lambert typewriter. The typewriter was not a success and in 1907 the name reverted to Gramophone Company Ltd: this company, renamed, is now EMI Records UK and Ireland, the principal British operating company of the EMI Group plc.

Columbia's corporate development was slower and until 1917, when the business was finally incorporated, Columbia traded as the overseas branch of a foreign-registered company. In 1900 Columbia moved its headquarters and recording studios to London and in 1904 it opened its own record manufacturing facilities there.

By controlling their recording programmes, and using local artists, the two businesses made their records an important vehicle for the dissemination of commercial musical culture. They also sent recording engineers to branches across Europe, Russia and the British Empire, where they made records for local markets. Fred Gaisberg became the Gramophone Company's most famous sound engineer active before World War I, regularly touring Europe, the Middle East, India and East Asia. He and his colleagues made important records of some of the greatest classical artists then active, including such established figures as the violinist Joseph Joachim, the pianist Ignacy Jan Paderewski and, among singers, the sopranos Nellie Melba and Adelina Patti. Their records vied with those of rising performers such as the violinist Fritz Kreisler, the soprano Luisa Tetrazzini, the bass Fyodor Chaliapin and especially the tenor Enrico Caruso, whose first records, made for Gaisberg in 1902, established the gramophone as a medium of high culture. Columbia too recorded many famous performers. These celebrity records made good sense in terms of publicity and kudos, but sales were quite modest: the Gramophone Company sold only 34,000 in 1913, a mere one per cent of total sales (this includes sales through the company's licensing deal with the American Victor Talking Machine Company, the successor to Berliner's original venture, which gave it access to recordings by the Metropolitan Opera House stars and others).

Initially, the Gramophone Company's largest and most profitable markets were central Europe and Russia; Columbia's success was in Britain. However, this changed in 1907–9 as both firms underwent dramatic changes. The Columbia Phonograph Company General, which was financially unstable, used its successful European subsidiary as a source of cash; in 1908, during a recession, it failed and, with its cash assets remitted to America, the European business collapsed. Dorian returned to the USA to help rebuild the firm and his successor rebuilt the European business. The cylinder record was abandoned and the business was refocussed on the disc. In 1909, Columbia's fortunes were boosted by orders from the Rena Record and Manufacturing Company, a venture owned by Louis Sterling, who selected recordings from Columbia's catalogue which he published on the Rena label at below the Columbia price. The following year Columbia acquired Rena; Sterling came with the deal and by 1914 had transformed Columbia's European fortunes.

The Gramophone Company too suffered setbacks. During the 1907–9 recession, its Russian branch collapsed in a sea of corruption while the German business suffered under competitive pressures. In 1908 Clark, appointed managing director, reorganized the business, creating a modern management structure allowing him to plan for long-term growth. The fruits of Sterling's and Clark's labours were starting to appear when World War I began.

2. WORLD WAR I AND ITS AFTERMATH. By 1914, the British record industry could look back on a period of astonishing expansion, with annual sales of 15 million and at least one-third of households owning a record-player. The Columbia and Gramophone companies held about 40% of the British market, with the remainder in the hands of German-owned businesses and a host of small British firms. The war ended the German presence and the Columbia and Gramophone companies could expand, particularly in the cheaper aggregate lines.

The war nonetheless disrupted both businesses, with the Gramophone Company particularly vulnerable: overseas trade accounted for 60% of turnover and profit, much of which was lost because of the war, while Deutsche Grammophon and the Russian branch were seized by their respective governments and neither was restored when the war ended. Columbia however was overwhelmingly dependent on its British business. Sterling, general manager from 1914, presided over the wartime expansion; in 1917, to protect its assets, the business was incorporated as the Columbia Graphophone Company Ltd, with shares allotted to the American parent, and Columbia acquired from the receiver of enemy

property the British record factories of the German Carl Lindström company.

After the war, both businesses were chronically short of capital. In 1920, the Gramophone Company negotiated a deal with its American partner, Victor, who took a 43% stake in the business. Columbia's early post-war experience was equally shaky, with its American parent again in the hands of receivers in 1922; Sterling engineered a management buy out of the British business and floated it on the British stock exchange.

During the 1920s, the British record industry experienced a boom of unprecedented proportions, with annual sales rising from 19 million records in 1918 to 60 million in 1929. By 1930 60 per cent of households had a gramophone. At the heart of this boom were the Columbia Graphophone and Gramophone companies.

After the floatation of Columbia, Sterling spent the rest of the 1920s integrating the world record industry. In 1926, he bought the German Carl Lindström company and its Dutch-registered overseas arm Transoceanic Training; this gave Columbia control of factories in Europe and the Americas, a worldwide distribution and selling network and the important Parlophone and Odeon labels and artists. Also in 1925, financed by J.P. Morgan, Columbia acquired a majority stake in its former American parent; Sterling became chairman of the New York board, and turned around the loss-making business. In 1927, Columbia acquired Nipponophone, then Japan's leading record company. Columbia's last major acquisition was the recording division of the French Pathé company.

Mindful of important developments in electrical engineering, Sterling created a research and development facility in London in 1924. He hired the brilliant electrical engineer Isaac Shoenberg as head. In 1929, Shoenberg recruited Alan Dower Blumlein, to become Columbia's and later EMI's most important electrical engineer, responsible for many critical developments.

The Gramophone Company also rebuilt its multinational base during the 1920s, creating a new German business, Electrola, which proved a great success. Factories were built in various parts of Europe, Australia and in India. The British factory at Hayes, west of London, was modernized, expanded and updated. In 1929, Victor came into the hands of the Radio Corporation of America (RCA), whose head, David Sarnoff, joined the Gramophone Company board; he persuaded Clark to buy Marconiphone, a large British radio manufacturer, bringing the business into the electrical appliance industry. The company updated its record-making techniques, with help from Victor. An international Artistes Department was created to manage recordings of artists, such as the tenor Beniamino Gigli, whose fees could not be borne by a single branch and whose records had international appeal; its artistic director was Gaisberg until his retirement in 1939.

With electrical recording replacing mechanical cutting in 1925, catalogues became obsolete overnight and the careers of many highly-skilled mechanical record-cutters ended. In addition to creating new catalogues, electrical recording allowed engineers to make location recordings: in 1926, the Gramophone company captured parts of Melba's farewell performance at Covent Garden, while Columbia, between 1927 and 1930, made important Wagner recordings at the Bayreuth Festival.

Negotiations to merge the two businesses began in the mid-1920s, but were hampered by the poor personal relations between Clark and Sterling. The onset of the Great Depression in 1929 brought a new urgency to the negotiations and in 1931 the deal was consummated.

3. The Great Depression, 1931–9. Between 1931 and 1934, EMI saw its sales halved and accumulated losses in excess of 1 million. Sterling, managing director, reorganized and integrated the business, closing about half the company's worldwide network of factories and in Britain consolidating all manufacturing at the Gramophone Company's Hayes factories. The hardest hit EMI line was the gramophone record: from a 1929 figure of 60 million records sold, ten years on only six million were sold, by only two major manufacturers, EMI and Decca. The collapse was so great that late 1920s volumes were not regained until 1959. The causes of this dramatic meltdown went beyond the depression; other factors included the impact of radio (by 1939 80 per cent of households had radio), and the rise of the cinema.

When EMI was formed, Sterling ordered comprehensive price- cuts and a restructuring of the business. Non-selling records were deleted and many artists were dropped. As classical records in the HMV catalogue sold in higher numbers than the same works in Columbia's, more HMV records were released. There was one exception: the Columbia artist Sir Thomas Beecham, who negotiated a deal that enabled him to form the London Philharmonic Orchestra. In 1931, the Abbey Road Studios were opened in London. Built by the Gramophone Company, the three-studio complex (later extended to five) became the world's first purpose-built record studio. It was opened by Elgar and the London Symphony Orchestra.

The depression brought EMI a windfall of classical talent dropped by American record companies. The producer Walter Legge, who joined the Gramophone Company in 1927, introduced the idea of a Society series, with subscribers guaranteeing sales and costs by paying for a specific set of records before they were made. The first Society set was of Hugo Wolf songs, by Elena Gerhardt. It was in the Society series that Artur Schnabel recorded Beethoven's complete solo piano works. Legge's colleague David Bicknell broke new ground with a series of Mozart opera recordings from the new Glyndebourne opera house. Gaisberg remained active and made a series of complete opera recordings with Beniamino Gigli; he also made records of Elgar conducting his own works, among them the 1932 collaboration between Elgar and the 16-year-old violinist Yehudi Menuhin in his Violin Concerto, one of the 20th century's great recordings. Gaisberg retired in 1939, having rounded off his career the previous year with a final tour of Europe, where in Vienna he recorded Bruno Walter conducting the Vienna PO in Mahler's Ninth Symphony; other works followed, including recordings of Furtwängler and the Berlin PO, Rubinstein playing all Chopin's nocturnes and (back at Abbey Road Studios) the final recordings of his old friend and Gramophone Company pioneer the pianist Paderewski.

4. World War II. Shortly before the war, Sterling resigned after years of tense relation with Clark; his departure ushered in 15 years of mediocre management. With the coming of war, conscription reduced the pool of available artists and prevented new ones breaking

through; and most of the roster of artists EMI had built up in the 1930s moved to the USA and signed new contracts with American companies. EMI's record business went on to a care-and-maintenance basis and its catalogues were supplemented mainly by repertory from its American licensors RCA Victor and American Columbia. Towards the end of the war, British Council funding made possible the making of previously unrecorded works by British composers, including Walton's *Belshazzar's Feast* and Elgar's *Dream of Gerontius*.

5. Reconstruction, 1945–61. With the return of peace, EMI faced the daunting task of rebuilding its shattered international base; it had also to find new artists to rebuild the HMV, Columbia and Parlophone catalogues. In 1945 annual sales of records in Britain stood at ten million; in the postwar boom, and despite high rates of tax, sales grew. 1945 saw the retirement of Clark; Ernest Fisk headed the management team but his reorganization was unsuccessful and he left in 1952, when a further reorganization was necessary.

When Legge and Bicknell returned from war service, they went to Europe to sign up new talent. Legge went to Austria and Germany, where he recorded Edwin Fischer and Wilhelm Backhaus and signed contracts with new artists such as Dinu Lipatti, Elisabeth Schwarzkopf, Wilhelm Furtwängler, Herbert von Karajan and the Vienna PO; Bicknell went to Italy, where he met Gigli and signed contracts with Tito Gobbi and the violinist Gioconda Di Vito. Legge founded the Philharmonia in 1945 and it flourished as EMI's house orchestra, under such conductors as Karajan and Klemperer. In 1946, with guarantees of work from EMI, Beecham founded the Royal Philharmonic Orchestra.

The technical innovations of the postwar industry, especially the introduction of 33⅓ r.p.m. LP and 45 r.p.m. records, caused serious embarrassment to EMI. American Columbia had developed the LP and RCA Victor had produced the 45. EMI was dependent on the licensed repertory of those companies, and was anxious not to offend them. Doubting the British chemical industry's capacity to supply enough vinyl resin for the new records and noting the buoyant sales of 78 r.p.m. records and the need for new equipment to play LPs, Fisk hesitated; his rejection of the new records allowed Decca to take the field. In 1952, after his departure and 18 months behind Decca, EMI released its first LP and 45 r.p.m. records. Later, the company introduced stereo recording, based on the technology developed by Blumlein in the 1930s; as a result, much of the new LP catalogue had to be remade, at enormous cost.

After the war, America and American artists dominated British popular music. In the late 1940s, EMI hired four artist and repertory managers to discover and promote the best of British popular music, Walter Ridley, Norrie Paramour, Norman Newall and George Martin. Among their early signings were a Josef Locke, Shirley Bassey, Donald Peers, Eartha Kitt and Ruby Murray, and the orchestras of Joe Loss and Victor Sylvester, as well as Edith Piaf (through the French branch, Pathé-Marconi). They were also responsible for American licensed repertory. In 1956, Ridley released the first Elvis Presley records in Britain, which were poorly received. EMI was fortunate to spot three young British rock and roll artists, Helen Shapiro, Adam Faith and Cliff Richard, all of whom made important hit records. They also helped popularize rock and roll with British teenagers.

American Columbia and RCA Victor ended their licensing agreements with EMI in the 1950s, leaving EMI without representation in the USA; reacting to this, in 1955 the company acquired Capitol, a relatively new though highly successful company, with a galaxy of star names in the popular music business including Frank Sinatra, Nat 'King' Cole and Peggy Lee. New licensing agreements were made with American record companies.

From the mid-1950s, EMI classical records were released in the USA under the Angel trademark (the company lacked the right to use the HMV trademark in America and East Asia). The need to create an American classical record catalogue led Legge to undertake an extensive programme of complete operas with Maria Callas and many with Giuseppe Di Stefano. At this time, the Philharmonia, mainly under Karajan and Klemperer, together with Beecham's RPO, became almost permanent residents at Abbey Road Studios, where they made some particularly fine orchestral recordings.

In the late 1950s EMI underwent major reorganization under Joseph Lockwood, chairman and managing director from 1954; by 1961, EMI was highly profitable and its worldwide record business boomed. The British music business held around 40 per cent of the record market and the classical catalogue was the finest it had ever produced.

6. The Beatles and after. In June 1962, Brian Epstein, a Liverpool record retailer and manager of Merseyside pop musicians, brought George Martin, then Parlophone's artist and repertory manager, a tape of his top rock and roll group, the Beatles. This heralded an extraordinary decade at EMI. In Britain, during the first three years of EMI's association with the group, nine million Beatles singles were sold, together with 2.5 million extended-play and 3.5 million copies of their first five albums and that was just the beginning. In the USA, during the decade to 1973, 35 million Beatles albums were sold; at one point they accounted for 20% of EMI's record revenues. The Beatles and their mentor George Martin transformed the record industry: they used multi-tracking technology in their seminal album *Sergeant Pepper's Lonely Hearts Club Band* and generally pushed forward the boundaries of technology.

Epstein brought George Martin a raft of Merseyside talent including Billy J. Kramer and the Dakotas, Cilla Black and Gerry and the Pacemakers. Reacting to this, EMI's managers went in search of the next generation of rock and pop musicians and came up with bands like the Hollies, Pink Floyd and in the 1970s Queen, led by the flamboyant Freddy Mercury. This rich seam of creative talent caused an historic reversal of the postwar American domination of British popular music. The Beatles' first highly-acclaimed tour of America was followed by other British rock acts. Britain, EMI and Abbey Road Studios became the home of rock music. British consumers also bought records of new and established American artists: one of Capitol's successes in the 1960s were the Beach Boys, a close harmony group, whose single *Good Vibrations* became the first of many million-sellers in Britain and by the 1990s their album world sales exceeded 65 million. EMI's licensing deal with Tamla Motown brought artists including Diana Ross and the Supremes, Stevie Wonder and the Jackson Five. In 1974, EMI was

caught up in an unprecedented public row with one of its own acts, the Sex Pistols, a new signing, whom they dropped after an infamous television appearance.

For EMI's classical business, the decade began on a sour note when in 1963 Legge, the leading maker of EMI classical records, left, unable to accept increasing restrictions over his creative work under Lockwood, who was determined to exercise control over the company's classical business, which he saw as profligate and wasteful. This was partly because of the division between HMV and Columbia, who each had their own organizations, exclusive artist rosters and often competing programmes; in addition, overseas branches often released locally-made records in direct competition with EMI and there was no label uniformity, with different branches using different labels (Odeon, Columbia, Parlophone or HMV). Lockwood tried to create a common corporate identity, although the problem of labelling was not resolved until 1990, when the EMI Classics label was used on all EMI's classical CDs.

During the 1960s and 70s, EMI was at the cutting edge of change in classical music tastes. The rise of early music, pioneered by EMI in the 1930s, became popular, partly owing to the work of David Munrow and his records. New EMI artists during these years included Daniel Barenboim, Jacqueline Du Pré and Janet Baker. In 1969, Peter Andry succeeded Bicknell as head of EMI's International Artistes Department. Over the next 20 years, he consolidated EMI's worldwide classical recording and marketing activities and signed important contracts with many successful performers such as the Choir of King's College, Cambridge, André Previn and the LSO, Karajan, Rostropovich and the King's Singers.

Although EMI's record business, consolidated as EMI Music in the 1970s, flourished during the 1960s and into the 70s, profits were not ploughed back; instead, the company ventured into films, pubs and cinemas. It suffered heavy losses in medical technology; this coincided with a serious downturn in the record business, which at the time was destabilized by international piracy, counterfeiting and bootlegging. In 1979 EMI had to merge with Thorn Electrical Industries to form Thorn EMI Ltd.

In 1985, Thorn EMI appointed a fresh management team with Colin Southgate as managing director; he became chairman in 1987. The company now focussed on core businesses, music, rental and retailing. EMI Music was able to increase its market share by acquiring established record businesses: in a process, begun in 1979 with the acquisition of Liberty/United Artists, it bought Chrysalis Records and in 1992 Virgin Records. By the early 1990s, the policy came to fruition. EMI Music also benefited as consumers replaced their LP collections with CDs, and the business grew at unprecedented rates despite the early 1990s recession.

By the time of EMI's centenary in 1997, records from the roster of established classical and pop artists were still among the company's best sellers. But reliance on back catalogue and established artists to sell records was never an EMI policy, and during the 1980s and 90s new artists came to the fore, including Simon Rattle, Roger Norrington, Nigel Kennedy and Roberto Alagna; they complement EMI's roster of rock and pop talent including the Pet Shop Boys, Eternal, Blur and Radiohead.

In 1996, just before the centenary, Southgate demerged the business from Thorn, creating the largest independent record company in the world. EMI Music then held about 15% of the world market, had under contract some of the leading classical, pop and rock talent, with a catalogue stretching back to the beginnings of the business.

PETER MARTLAND

Emidy, Joseph Antonia (*b* West Africa, *c*1770; *d* Truro, 23 April 1835). African violinist and composer, active in England. According to Buckingham, the primary source for details of Emidy's early life, he was born in Guinea, West Africa, taken in childhood as a slave by Portuguese traders to Brazil and, subsequently, to Lisbon. In 1795 he was second violin in an unidentified Lisbon opera house orchestra when he was kidnapped by an English captain, Sir Edward Pellew, whose frigate *The Indefatigable* was in the Tagus under repair. Pellew required a musician to entertain the sailors and, as the Royal Naval records show, Emidy remained imprisoned aboard until 1799. He was discharged in Falmouth where he earned his living predominantly as a violinist, leading amateur harmonic societies and teaching. In 1815 Emidy and his family moved to Truro.

Newspaper reports, advertisements and memoirs confirm that Emidy established a local reputation as a composer, performing his own violin concertos, as well as writing orchestral and chamber works. In 1807 Buckingham tried to advance Emidy's career by taking 'a quartett, a quintett, and two symphonies' to Salomon in London. Though the works were privately performed – apparently successfully – and a subscription raised, nothing further came of the venture. Emidy remained in Cornwall until his death. The details of the concerts he promoted suggest a taste formed by the early Classical idiom, but, in the absence of any of his music, the style and quality of his compositions remain a mystery.

RICHARD McGRADY

Emingerová, Kateřina (*b* Prague, 13 July 1856; *d* Prague, 9 Sept 1934). Czech pianist, teacher, writer on music and composer, sister of the painter Helena Emingerová (1858–1943). She studied the piano with Josef Jiránek, Karel Slavkovský and Karl-Heinrich Barth in Berlin (1882–3), then composition (privately) with Zdeněk Fibich and probably with Vítězslav Novák. She gave concerts and taught at the Prague Conservatory until 1928; she promoted and also published music, notably old Czech piano works. Her own compositions – piano

pieces for two or four hands – were mainly dances, published by Klemm (Dresden, 1882) and Barvitius (Prague). Her *Polka melancholická* was published as a supplement to the magazine *Zlatá Praha* in 1901; earlier works include a violin sonata (1881), songs (published by František Urbánek, 1882) and music for women's choir (Urbánek; 1900). *Starosvětské písničky* ('Songs from the Old Time') appeared in *Česká hudba* (xxxiv, 1930–31).

Even more important than her activities as a composer was her work as a lecturer and writer on music. She wrote on the history of music – on old Czech masters, Beethoven, Berlioz, Weber, Liszt and Smetana – as well as on musical pedagogy, the inheritance of musical gifts and the development of the musical ear. Her writings were published in the periodicals *Dalibor*, *Hudební revue*, *Hudba a škola*, *Ženský obzor*, *Český čtenář* and (from 1896) the Prague daily papers.

Emiolia (It.). *See* HEMIOLA.

Ėmiriton. A monophonic electronic instrument. It was developed in Moscow at the Research Institute of the Musical Instrument Industry and the Research Institute for Theatre and Music from around 1932 by Aleksandr Antipovich Ivanov and Andrey Vladimirovich Rimsky-Korsakov, with V.P. Dzerzhkovich and V.L. Kreytser. (The name of the instrument is derived from the initials of 'electric musical instrument', Rimsky and Ivanov.) Originally controlled by a fingerboard, later versions had conventional keyboards. *See* ELECTRONIC INSTRUMENTS, §III, 1(iv).

HUGH DAVIES

Emmanuel, (Marie François) Maurice (*b* Bar-sur-Aube, 2 May 1862; *d* Paris, 14 Dec 1938). French composer and musicologist. In 1869 his family moved to Beaune, and the landscape and monuments of Burgundy instilled in Emmanuel a love of nature and the visual arts, which was encouraged by his mother, a skilled and perceptive artist. Here Emmanuel interested himself in folksong and frequent visits to the Hôtel-Dieu in Beaune stimulated his feeling for the beauty of the liturgy. Both of these factors played an important part in the evolution of his music. He passed his baccalauréat at Dijon and, following the encouragement of a local composer, Charles, Marquis d'Ivry, entered the Paris Conservatoire in 1880. Here his teachers were Savart (solfège), Dubois (harmony), Bourgault-Ducoudray (history) and Delibes (composition). He also studied classics, poetics, philology and history of art at the Sorbonne and the Ecole du Louvre, gaining the licence ès lettres in 1887. His free approach to rhythm and the introduction of medieval modes into his early works (notably the Cello Sonata op.2, cast in the Phrygian mode) met with strong censure from Delibes who branded his *Ouverture pour un conte gai* 'baroque and unperformable' and forbade his entry for the Prix de Rome. As a result Emmanuel studied privately with the more liberal Ernest Guiraud and so came into close contact with Debussy.

In 1896, after a viva voce examination involving dancers from the Opéra and ambitious projections by Jules Marey, Emmanuel was awarded the doctorat ès lettres for his thesis on ancient Greek dance, a comprehensive study which stressed its freedom and eurhythmic qualities in contrast with the greater rigour of the contemporary French dance, in which the mimetic element was almost entirely absent. After a report on the state of music in German universities, the Collège de France decided in 1898 to create the post of lecturer in musical history for Emmanuel, but vigorous opposition from Berthelot forced it to abandon this idea, and Emmanuel, in the absence of other more congenial employment, spent the period until 1904 lecturing on the history of art at secondary level. He was then appointed *maître de chapelle* at Ste Clotilde, but his revival of Gregorian chant led to his dismissal in 1906. In 1909 he was appointed lecturer in the history of music at the Paris Conservatoire in succession to Bourgault-Ducoudray, continuing his predecessor's pioneering interest in folksong and the ancient modes. He held the post until his retirement in 1936; his pupils included Migot, Casadesus and Messiaen.

Emmanuel was unusually self-critical, and of the 73 works he composed between 1877 and 1938, he destroyed all but 30. His compositions reflect his strong views on the 'tyranny' of the major scale, the conventional cadence, the dominant 7th and the bar-line. As Koechlin wrote, 'he used modes through taste and natural instinct; he thought modally'. Like Koechlin, he demonstrated how modality and folksong could be used constructively in 20th-century music. While his prose works are perceptive and scholarly in the extreme, there is nothing pedantic about his compositions, which are remarkable for their virility and concision, as well as their polymodal and polyrhythmic originality.

His eight purely orchestral works (including the overture to *Salamine* and the prologue to *Prométhée enchaîné*) cover the whole of a career which was planned with extreme care. None of these was performed before 1920. Apart from his *Suite française*, each is accompanied by a literary 'argument', although only in his last work, *Le poème du Rhône*, did he approach the symphonic poem beloved of his contemporaries d'Indy, Roussel and Koechlin. Each work entailed a new approach: *Zingaresca* recreates the improvisations of a Hungarian gypsy orchestra; the First Symphony expresses the sentiments felt on the death of the aviator son of his friend Louis de Launay, making no attempt to follow Classical sonata form; the short, programmatic Second Symphony was suggested by the Breton legend of King Grallon of Ys.

Emmanuel's three major stage works (opp. 16, 21 and 28) reflect his great sympathy with ancient Greek civilization, and his knowledge of Greek rhythms and methods enabled him to go beyond Fauré's refined interpretation of ancient beauty, nobility and simplicity to achieve powerful, tautly constructed dramas of considerable intensity. One of his greatest gifts was the creation of balanced, large-scale sections filled with a wealth of

detail which is more remarkable for its harmony and rhythm than for its melody. Even so, his stage works deserve to be revived. Most important among his pieces for lesser forces are the six piano sonatinas written between 1893 and 1925, of which the fourth is based on Hindu modes and prefigures Messiaen. It is through these striking and consistently inspired piano works that Emmanuel is most widely known.

One of the few genuine independents in French music, he sought to liberate it from all that limited its scope, deriving his material from sources almost entirely outside the Classical and Romantic traditions.

WORKS

STAGE

all unpublished

op.	
1	Pierrot peintre (pantomime, 2 tableaux, Emmanuel and F. Régamey), A/Mez, spkr, orch, 1886, French radio, Sept 1938
16	Prométhée enchaîné (op, 3, Emmanuel, after Aeschylus), 1916–18, Paris, Champs-Elysées, 23 Nov 1959
21	Salamine (op, 3, Emmanuel after Aeschylus), 1921–3, orchd 1924, rev. 1927–8, Paris, Opéra, 19 June 1929
28	Amphitryon (incid music, Plautus, trans. A. Ernout), 1936, Paris, Amphithéâtre de l'Institut d'art et d'archéologie, 20 Feb 1937

OTHER WORKS

Orch: Ouverture pour un conte gai, after P. Bergon and E. Meurant, op.3, 1890; Zingaresca, fantaisie, op.7, 2 pic, 2 pf, timp, str, 1902; Prologue de Prométhée enchaîné, op.16, 1916; Sym no.1, A, op.18, 1919; Ouverture de Salamine, op.21, 1923–8; Sym no.2 'Bretonne', A, op.25, 1930–31; Suite française [5 of 6 movts from Sonatine no.5], op.26, 1934–5; Le poème du Rhône, sym. poem after F. Mistral, op.30, 1938 [orch. M. Béclard d'Harcourt]

Chbr and solo inst: Sonata, op.2, vc, pf, 1887; 3 Pieces, op.14, org/hmn, 1892–1911; Sonatine no.1 'Bourguignonne', op.4, pf, 1893; Sonatine no.2 'Pastorale', op.5, pf, 1897; Sonata, d, op.6, vn, pf, 1902; Str Qt, B♭, op.8, 1903; Suite sur des airs populaires grecs, op.10, vn, pf, 1907; Sonata [Trio], op.11, fl, cl, pf, 1907; Sonatine no.3, op.19, pf, 1920; Sonatine no.4 'sur des modes hindous', op.20, pf, 1920; Sonatine no.5 'alla francese', op.22, pf, 1925; Sonatine no.6, op.23, pf, 1925; Sonata, B♭, op.29, cornet/bugle, pf, 1936

Vocal: O filii, op.9, 1v, SATB, 1905 [after trad. Easter melody]; In memoriam (R. Vallery-Radot), op.12, 1v, vn, vc, pf, 1908; Musiques (L. de Launay: *Crépuscules et nocturnes*), 12 songs, op.12/2, 1v, pf, 1908; 3 odelettes anacréontiques (R. Belleau, P. de Ronsard), op.13, 1v, fl, pf, 1911 [arr. 1v, orch, 1911]; 30 chansons bourguignonnes du pays de Beaune (after folksongs collected by C. Bigarne, A. Bourgeois, C. Masson), op.15, 1v, pf, 1913, 6 arr. chorus, orch, 1914–15, 1930–35; 10 arr. 1v, orch, 1914, 1932–6; Vocalise, op.24, A/B/cl, 1926; 2 chansons populaires (after folk carols), op.27, 1935: 27/1, 1v, pf; 27/2, 1v, va da gamba/vc, pf unpubd

ROBERT ORLEDGE

Emmelēs (Gk.: 'in tune', 'harmonious'). A term in ancient Greek music theory referring to notes of definite pitch (as opposed, for example, to speech). More particularly, it is used to decribe intervals smaller than a 4th that can be calculated as superparticular proportions (e.g. the whole tone measured as the ratio 9:8 or 10:9).

□

Emmer, Huib (*b* Utrecht, 6 Sept 1951). Dutch composer. He studied composition with van Vlijmen and Schat at the Hague Conservatory (composition prize, 1977). He played bass guitar in Louis Andriessen's group Hoketus (1976–86). In 1992 he organized the event 'Nacht van de electriciteit' and since then electronics have assumed a significant role in his work. Emmer draws his inspiration chiefly from non-musical sources and is guided by examples from other disciplines. For instance he borrows his montage technique and method for playing layered

music at different speeds from the film medium (the Russian director Dziga Vertov) and literature (the American writers William Burroughs and John Dos Passos). Although he has been inspired by Schoenberg, Varèse, Shostakovich and Xenakis, the only musical style demonstrably present in Emmer's work is techno (Detroit, late 1980s), in which funk-like rhythms and black music come together. His music is characterized by nervously oscillating figures and pounding rhythms beginning with a short note on the downbeat, and by energetic melodies resounding in parallel intervals in several instruments. The compositions are generally rapid and breathless, giving the impression of constantly interrupted introductions. His instrumentation is deliberately rough and unpolished, reflecting his predilection for violent stories and films.

TON BRAAS

Emmerik, Ivo van (*b* Amsterdam, 21 Oct 1961). Dutch composer. He studied composition with Robert Heppener at the Amsterdam Conservatory (1981–6) and Ferneyhough at The Hague Conservatory (1986–9). He also attended summer courses in Middelburg given by Feldman and Cage (1986–8). Van Emmerik has an intellectualist approach to composition and often allows the musical invention to be controlled by the notation. His pieces deal with such questions as the relationship between stasis and movement, or stagnation and change (*Air?*), the optimization of the sound qualities of the wind instruments (*Web*), the creation of spatial illusion (*Travelogue*) and, as several of his titles indicate, the parallelism of colour in painting and music. He associates his compositions with works of art and literature by Paul Klee, Jasper Johns, Marcel Duchamp, Marcel Proust, Italo Calvino and Raymond Roussel. For example, the starting-point for his orchestral piece *Architektur der Ebene* is Klee's watercolour of the same title. This piece consists of 'panels' with areas of sound, 13 short parts, each comprising two symmetrically constructed pages of score. It shares its static character (emphasis on structure rather than narrative) with most of van Emmerik's works. Other characteristics are the use of a minimum of material with mutually shifting patterns of repetition, transparent sound, self-quotations and the almost complete absence of melodies.

TON BRAAS

Emmerson, Simon (Thomas) (*b* Wolverhampton, 15 Sept 1950). English composer. He studied natural sciences and music education at Cambridge University (1968–72) and took the doctorate in composition at the City University, London in 1982. From 1972 to 1977 he was composer-in-residence at the Digswell Arts Trust, and in 1976 joined the staff of City University, where he has established and developed electronic music studios that have become one of the best facilities of its kind in the British Isles. In 1979 he was a founding member of the Electro-Acoustic Music Association of Great Britain (now the Sonic Arts Network), which he has continued to serve as a member of the executive committee. Nearly all his works make use of technology in conjunction with acoustic instruments. Live electronics are used to modify and extend the timbres of instruments or voices in an elegant and often unusual way (for example in *Spirit of '76*, *Ophelia's Dream I* and *Fields of Attraction*) as well as, sometimes, to bridge sound worlds from different cultures (e.g. *Pathways* and *Points of Return*). The more traditional role of recorded sounds on tape used as accompaniment is effective in *Time Past IV* and *Piano Piece IV*. Emmerson's music is often consonant without necessarily being tonal. He is an influential teacher and writer on electro-acoustic music. (*CC1*, C. ten Hoopen)

STEPHEN MONTAGUE

Emmert, Johann Joseph (*b* Kitzingen, nr Würzburg, 27 Nov 1732; *d* Würzburg, 20 Feb 1809). German composer. He was a schoolmaster at Schillingsfürst, where he also taught music to the children of the Hohenlohe family. By 1765 he had moved to Würzburg, where in 1773 he became university choirmaster and Rektor of either St Burkhard's school or of the Juliusspital. Much of his output consists of Catholic church music (mostly with German texts), though he also wrote a number of operas. His music is simple in style, making little use of counterpoint; the publication of Latin psalms (1766) is unusual among published church music of the period in that it is scored for two choirs, which sing alternate verses in a straightforward chordal style.

Emmert's son, Adam Joseph Emmert (*b* Würzburg, 24 Dec 1765; *d* Vienna, 11 April 1812), was employed by the Salzburg Privy Council as keeper of the archives, and later became an official at the Haus- und Hofarchiv in Vienna. His compositions, which show both Classical and Romantic characteristics, include several operas (*Don Silvio von Rosalva*, Ansbach, 1801; *Der Sturm*, Ansbach, 1806; *Der Schlaftrunk*), numerous sacred and secular songs and several chamber and keyboard pieces.

WORKS

Sacred: Ecclesia una, sive Psalmodia vespertina, 2 choirs, 2 vn, 2 tpt, timp, bc, op.1 (Augsburg, 1766); Messlieder (Würzburg, 1786); Te Deum … für Deutschlands Kirchen, in 2 abwechselnden Figural-Choralen, vv, insts (Salzburg, 1797); Messlieder (Würzburg, 1786); Choralbuch zu dem 1800 erschienenen neuen Würzburgischen Gesangbuche (Würzburg, n.d.); much church music with Lat. and Ger. texts cited by Gerber
Ops: Die Geopferte Unschuld (Spl), Schillingsfürst, *c*1760; Semiramis, Würzburg, 1777; Tomiris, perf. Würzburg; Eberhard, Würzburg, 1780; Esther, Judith [both described variously as ops and orats]

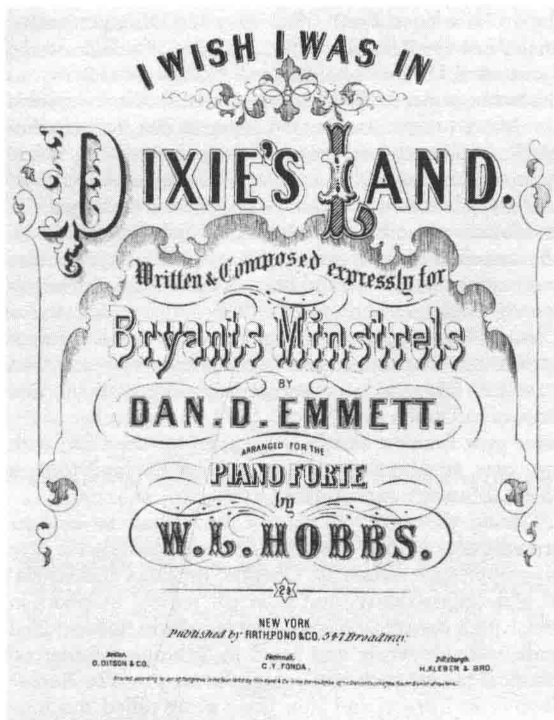
ELIZABETH ROCHE



Emmett [Emmit], **Dan(iel Decatur)** (*b* Mount Vernon, OH, 29 Oct 1815; *d* Mount Vernon, 28 June 1904). American composer and minstrel performer. He had little formal education, but in early youth learned popular tunes from his musical mother and taught himself to play the fiddle. At the age of 13 he became an apprentice printer and in 1834 enlisted in the US Army. At Jefferson Barracks, Missouri, he became an expert fifer and drummer, publishing his own *Fifer's and Drummer's Guide* in 1862 in cooperation with George Brace. On receiving his discharge from the army on 8 July 1835 he joined a Cincinnati circus, for one member of which he wrote the words of his first 'black song' (to the tune of *Gumbo Chaff*). In 1840–42 he toured with the Angervine and other circuses as a blackface banjoist and singer.

In November 1842 Emmett and Frank Brower (1823–74), a blackface dancer and singer who was the first black impersonator to play the bones, formed a fiddle and bones duo in New York. From 6 February 1843 they performed at the Bowery Amphitheatre with Billy Whitlock on the banjo, and Dick (Richard Ward) Pelham (1815–76) on the tambourine, as the Virginia Minstrels (for illustration *see* MINSTRELSY, AMERICAN). In contrast with earlier black impersonators, these four presented an entire evening of imitation black music, dancing, anecdotes and oratory, advertised as 'entirely exempt from the vulgarities and other objectionable features which have hitherto characterized negro extravaganzas'. After spectacular successes in New York and Boston, the Virginia Minstrels toured England, beginning with a performance at the Concert Rooms, Liverpool, on 21 May 1843. Emmett performed independently at Bolton, Lancashire, and then travelled with circuses before rejoining Pelham and Brower in Dublin on 22 April 1844. In September of the same year Emmett and Brower sailed for the USA; with two new members they began a New England tour at Salem, Massachusetts, on 23 October.

During the next 14 years Emmett had to counter growing competition from other minstrel groups. He gave his troupe such names as 'Operatic Brothers and Sisters' to add respectability, and inserted 'wench' numbers in which male dancers impersonated females to titillate jaded audiences. He wrote and acted in 'Ethiopian Burlettas' (musical farces) such as *German Farmer, or The Barber Shop in an Uproar*, and launched a genre called 'machine poetry' in which his semiliterate black characters pretentiously assumed the inventive and progressive qualities of the Industrial Age. In 1853 he became part-owner of Charles T. White's Minstrels, and in 1855 opened the first minstrel hall in Chicago, at 104 Randolph Street. In November 1858 he disbanded his troupe and joined Dan Bryant's Minstrels in New York, with whom he continued performing until the end of the 1861–2 season in Chicago. He wrote the tunes and words for the shows' finales, called 'walk-arounds' (identified by Nathan as secular imitations of the black 'shout'), played the banjo and other instruments, acted in comic skits and sang parodies of well-known serious artists.

Emmett's most successful walk-around, now known as *Dixie*, was first published in an authorized version (1860) as *I Wish I was in Dixie's Land* (see illustration); it had been pirated a month earlier in New Orleans by P.P. Werlein as *I Wish I was in Dixie*, with music credited to J.C. Viereck and words to W.H. Peters. It was first performed in New York at Mechanics Hall, Broadway, by Bryant's entire cast on 4 April 1859, as the 'plantation song and dance' concluding part 3 of the show. In it Emmett imitated the black call-and-response pattern; the chorus answers the soloist in the verse with 'Look away' and in the refrain with 'Hooray'.

Emmett lived in Chicago from 1867 to 1870 and from 1871 to 1888. At first he worked as a member of Haverly's Minstrels, but after losing his voice he played the fiddle in various saloons. His rough-hewn black tunes and lyrics offended genteel society of the time and he was gradually forgotten. His poverty prompted younger minstrels to stage two benefits (1880 and 1882) that together brought him over $1000 and in 1881–2 enabled him to be employed as a fiddler in Leavitt's Gigantean Minstrels. After a tour that was notably successful in the South because of *Dixie*, Emmett returned to Chicago, and in 1888 retired to Mount Vernon, Ohio. From 1893 to his

Title-page of the first authorized edition of Dan Emmett's 'I Wish I was in Dixie's Land' (New York: Firth, Pond & Co., 1860)

death he was aided by a weekly allowance from the Actor's Fund of America.

Between 1843 and 1865 Emmett published at least 30 songs, most of which are banjo tunes or walk-arounds, and between 1859 and 1869 he composed another 25 tunes which are still in manuscript at the Ohio Historical Society, Columbus. Collections published in 1843–4 contain 36 tunes sung by him, only six of which are securely attributable to him. His authenticated tunes, always in heavily accented duple meter and always in a major key, are matched with gnarled texts that never treat any downtrodden person in a kindly or dignified manner.

ROBERT STEVENSON

Empfindsamkeit (Ger.). A musical aesthetic associated with north Germany during the middle of the 18th century, and embodied in what was called the 'Empfindsamer Stil'. Its aims were to achieve an intimate, sensitive and subjective expression; gentle tears of melancholy were one of its most desired responses. The term is usually translated as 'sensibility' (in the 18th-century or Jane Austen sense, which derives from the French *sensibilité*). 'Sentimental' is another translation, sanctioned by Lessing when rendering Sterne's *Sentimental Journey* as *Empfindsame Reise*. One modern scholar, W.S. Newman, gives 'ultrasensitive' as an English equivalent.

German 'Empfindsamkeit' was part of a wider European literary and aesthetic phenomenon, largely British in origin (e.g. Shaftesbury's cult of feeling, and Richardson's novel *Pamela*, 1741), which posited immediacy of emotional response as a surer guide than intellect to proper moral behaviour. C.P.E. Bach (henceforth called simply Bach), who was close to Lessing and other progressive literary figures, best embodied the ideals of 'Empfindsamkeit' with respect to music. In his *Versuch über die wahre Art das Clavier zu spielen* (1753) he stated that music's main aims were to touch the heart and move the affections; to do this he specified that it was necessary to play from the soul ('aus der Seele'). The style of music he chose was often indistinguishable from the international idiom of finely nuanced, periodic melody, supported by light-textured accompaniment: it was a reaction to the 'strict' or 'learned' style and elsewhere was apt to go under the name 'galant'. A main difference was that the north Germans tended to avoid lavish decoration: both Bach and Quantz cautioned against the over-use of embellishments. Before them, Marpurg had written approvingly of the Berlin school, saying 'The performances of the Grauns, Quantz, Bach, et al., are never characterized by masses of embellishments; impressive, rhetorical and moving qualities spring from entirely different things, which do not create as much stir, but touch the heart the more directly'. The most easily identifiable 'rhetorical' device was instrumental recitative. It evolved in imitation of the elaborate or obbligato

recitative in *opera seria*, of which Hasse and his circle at Dresden were the most admired exponents in Germany. Bach provided a fine example in his 'Prussian' Sonatas, written in 1740. The so-called 'redende Prinzip' of Bach departs from recitative, but goes far beyond it in his keyboard and chamber music, for example, in the trio representing a 'Dialogue between a Sanguinary and a Melancolic' (1749). Another fundamental element in Bach's style, related to recitative by its freedom of rhythm, was the rhapsodic manner of the keyboard fantasy, as evolved by Frescobaldi and Froberger, kept alive by German organists, and passed on by Bach's father. While Bach's friends increasingly saw the need to make explicit by words or programme the rhapsodic and 'speaking' elements in his music (e.g. Gerstenberg's fitting of Hamlet's monologue to the music of the final *Probestück* accompanying the *Versuch*), Bach himself held back from verbalization.

In literature the most influential model of 'Empfindsamkeit' was provided by Klopstock's *Messias* (1748), a redefinition of the epic in which internal, subjective events predominate and the external drama exists only as a point of reference. The poet Ramler wrote the Passion cantata *Der Tod Jesu* in imitation of Klopstock. As set by C.H. Graun in 1755, it immediately became the most central and successful monument of musical 'Empfindsamkeit'. The drama is expressed mostly through the reflections and emotions of anonymous devouts, who use the present tense. Their musical speech is fashionably modern, relying on the aria types as well as the obbligato recitative of *opera seria*, of which Graun was the most important German master, after Hasse. His setting of 'Gethsemane!' (ex.1) shows this conjunction of sentimental meditation and theatrical musical language. The plethora of melodic sighs, the augmented 6th chord with Phrygian cadence for questions, the iterated quavers or semiquavers to express trembling, are all operatic clichés; more individual and expressive are the choice of darker flat keys and the easy enharmonic manoeuvring.

Ex.1 from Graun: *Der Tod Jesu*

Recit. Largo e mezzo forte

VIOLINS 1 2

VIOLA

Largo

Gethsemane! Gethsemane! wen hören deine Mauren so bange, so bange, so verlassen trauren? Wer ist der peinlich langsam sterbende? Ist das mein Jesus? Ist das mein Jesus? Bester

A critic writing in Cramer's *Magazin der Musik* in 1783 (i/2, p.1352) still preferred Graun's *Der Tod Jesu* to a more recent setting, saying that 'Gethsemane! Gethsemane!' 'brought one to tears because of its touching, heart-rending feeling'. Yet, even very early, voices were raised against the sentimentality that made Graun so popular. In the article 'Oratorio' for his *Allgemeine Theorie der schönen Künste* (1771–4), Sulzer, writing with advice from J.P. Kirnberger and J.A.P. Schulz, took exception to *Der Tod Jesu*, saying 'most arias are not differentiated enough from opera arias; precisely this softness and the exaggerated, almost voluptuous polish of the melodies, and in some places even playfulness kill the feeling [Empfindung]'.

In the same way Lessing, the man who founded sentimental, bourgeois tragedy in Germany, ironically condemned Klopstock's lyrics, saying that they were 'so voller Empfindung, dass man oft gar nichts dabey empfindet' (*Sämtliche Schriften*, iii, Brief 51). Schiller took a similar line when surreptitiously reviewing his own play, *Die Räuber* (1782), and saying that its incredibly sentimental heroine 'has read too much Klopstock'. Goethe pronounced judgment on the movement when, looking back at his *Werther*, he admitted its sentimentality was indebted to Sterne, and concluded 'there arose a kind of tender–passionate aesthetic which, because the humorous irony of the British was not given to us, usually had to degenerate into a sorry self-torment'.

Writing generally of 'Musik' in his encyclopedia, Sulzer put a finer point on the relationship of modern German style to the *galant* idiom: 'that music in recent times has the nice and very supple genius and fine sensibility [Empfindsamkeit] of the Italians to thank is beyond doubt. But also most of what has spoilt the true taste has also come out of Italy, particularly the dominance of melodies that say nothing and merely tickle the ear'. Schulz, who contributed music articles from the letter S onwards, spelt out this criticism further: 'The sonatas of the present-day Italians are characterized by a bustle of sounds succeeding each other arbitrarily without any other purpose than to gratify the insensitive ears of the layman' (article 'Sonata'). In order to give an example of music that went beyond such lowly aims, Schulz resorted to the keyboard sonatas of Bach, praising them because 'they are so communicative [sprechend] that one believes oneself to be perceiving not tones but a distinct speech, which sets and keeps in motion our imagination and feelings [Empfindungen]'. Bach's own remarks about the difference between his art and that of the modern Italians (among whom he included Schobert and his younger brother, Johann Christian) are recorded in a letter of 1768: 'Their music falls upon the ear and fills it up, but leaves the heart empty; in Italy now, as Galuppi himself told me, the mode no longer tolerates Adagios, but only noisy Allegros, or at most an Andantino'.

The implication that Galuppi, greatest master of the *galant* keyboard idiom in Italy and a personal friend of Bach's, was in sympathy with his ideals, lends further credence to the existence of a *galant*-'empfindsam' symbiosis; another implication is that the aesthetic ideals of the mid-century were yielding ground by about 1770 to a showier and stormier phase, so-called 'Sturm und Drang'.

Some historians have posited 'Empfindsamkeit' as a musical parallel to 'Sturm und Drang'. The dramatic fluidity sought by both encourages such a parallel. Bach wrote that he wanted to express many affects, closely following upon one another; and emphasis upon a fluid, transitional discourse, ranging quickly from one emotion to another, can be found in many of his pieces. Yet the intimate, almost private, aspect of Bach's art represents a quality that helps define 'Empfindsamkeit' and set it apart as a parallel phenomenon, one that anticipates and runs alongside the more popular appeal of 'Sturm und Drang'. Bach's favourite instrument was the clavichord. The boundaries of his artistic world and the ideals of his generation were not such as could embrace all the revolutionary visions of young Herder, Goethe and Schiller.

The difference was more of degree than of kind. Even as late as about 1785 Schubart, a typical 'Stürmer', wrote in the *Ideen* praising the clavichord as the 'empfindsame' instrument *par excellence*, calling it 'this lonely, melancholy, inexpressively sweet instrument ... whoever does not prefer to bluster, rage and storm, whose heart overflows often and readily in sweet feelings, he passes by the harpsichord and the piano and chooses – a clavichord'. Bach, unlike his friend Benda, drew back from melodrama, and even resisted attempts made by literary friends like Gerstenberg to set texts under his fantasies. They may be easily enrolled under the banner of *Sturm und Drang*; by his caution, his reluctance to indulge in theatrics beyond the scope of his keyboard, Bach may not.

Emsheimer, Ernst (*b* Frankfurt, 15 Jan 1904; *d* Stockholm, 12 June 1989). Swedish ethnomusicologist of German birth. After studying music privately in Frankfurt he studied musicology with Adler and Fischer at the University of Vienna (1924) and with Gurlitt and Besseler at Freiburg University, where he took the doctorate in 1927 with a dissertation on Johann Ulrich Steigleder. Subsequently he was employed in Leningrad (1932–6) as a consultant in musicology at the National Academy for the History of Art, the Hermitage Collection, and the Phonogram Archives of the Museum of Ethnography, from which he led an ethnomusicological expedition to the mountains of the northern Caucasus (1936). On settling in Stockholm (1937) he became musicological adviser to the National Museum of Ethnography and to the scientific expedition to the north-western provinces of

China led by Sven Hedin. In 1959 Emsheimer took part in another field trip to study the music of Albanians living in Yugoslavia and in 1973 he made an expedition to the Berbers in Morocco. From 1949 until his retirement in 1973 he was director of the Musikhistoriska Museet in Stockholm, where his work has been of great importance for Swedish musical life. He enlarged the museum's instrument collection, devised new techniques for displaying the collection in conjunction with a modern sound system, and restored early instruments to playing condition. Under him the museum became a centre of concert activity with emphasis on a high standard of performance based on a thorough study of contemporary performing practices. With Erich Stockmann he initiated and edited the series Handbücher der Europäischen Volksmusikinstrumente. The University of Uppsala awarded him the honorary doctorate in 1960 and an honorary professorship in 1967.

JOHN BERGSAGEL/HENRIK KARLSSON

E-mu [Eμ]. American manufacturer of electronic instruments. It was founded in 1972 by David Rossum with Scott Wedge in Santa Clara, California, and subsequently based in nearby Santa Cruz and from 1986 in Scotts Valley. In 1993 E-mu Systems was bought by Creative Technologies of Singapore, and in 1999 it was amalgamated with the latter's later acquisition, Ensoniq, as E-mu/Ensoniq. It has specialized in analogue and digital synthesizers (such as the Proteus, 1989, and Morpheus, 1993), samplers (beginning with the Emulator, 1981) and electronic percussion (including the Drumulator, 1983). *See* ELECTRONIC INSTRUMENTS, §IV, 5(ii–iii) and SYNTHESIZER.

HUGH DAVIES

En chamade (from Fr. *battre la chamade*: 'to sound a parley'). A phrase indicating a rank of pipes (usually reeds or regals) placed horizontally in the case front of an organ, e.g. 'trompette en chamade'. (*See* Clarìn, Dulcayna, Orlos and Trompeta in ORGAN STOP.) Although before the end of the 18th century Iberian organs had such reeds and regals, the phrase was used by neither Spanish nor Portuguese builders. It first appears in Isnard's contract of 1772 at Saint Maximin-la-Ste-Baume, Provence, for horizontal reeds imitating military trumpet-calls, like the vertical Feldtrompeten (sometimes placed in the case front) and Clarìns del mar of 17th-century organs in Germany and Spain. The phrase was popularized in the 19th century by Aristide Cavaillé-Coll to describe the reeds he heard as a boy in the southern borderlands, and which Jean-Pierre Cavaillé, his grandfather, had used in the organs he built in Catalonia; Aristide imitated them in his formative organ at St Sulpice, Paris. 20th-century reeds *en chamade* in England, Germany, Holland etc. rarely have the particular élan of the Spanish models, replacing resonance with power; also, on Spanish organs, external horizontal reeds and regals were always supplementary to interior vertical reeds.

The advantages of such stops *en chamade* are their clear, penetrating sound (cf the common direction 'Schalltrichter auf!' for orchestral trumpets); their easy access for tuning; their sheer contrast with the soft, singing flue stops of Spanish organs; their safety from dust; a convincing imitation of (or replacement for) real trumpets in cathedral music from about 1650; and an extravagant appearance. (*See* ORGAN, figs.39, 40 and 41.)

PETER WILLIAMS/R

Enchiriadis, Musica. *See* MUSICA ENCHIRIADIS, SCOLICA ENCHIRIADIS.

Encina [Enzina], **Juan del** [Fermoselle, Juan de] (*b* Salamanca, 12 July 1468; *d* León, late 1529 or early 1530). Spanish poet, dramatist and composer. He was born Juan de Fermoselle in Salamanca, where his father was a

shoemaker; it has been suggested that he was of Jewish descent. One of at least seven children, he, like several of his brothers, pursued a career that brought him into contact with the higher echelons of society. Diego de Fermoselle was professor of music at Salamanca University from 1479 until 1522, and may well have taught his younger brother. Juan became a choirboy in the cathedral in 1484, where another of his brothers, Miguel, was a chaplain. By 1490, when he, too, briefly held a chaplaincy at Salamanca Cathedral (a position he was forced to resign as he was not ordained), he had adopted the name Juan del Encina, probably his matronymic, but also perhaps a conscious reference to the Castilian holm oak as well as the ilex of Virgil's bucolic poetry which clearly exerted considerable influence over him. He would have coincided with the great Spanish humanist Antonio de Nebrija at Salamanca, where he studied law probably between 1488 and 1492, and it is assumed that he would have come under his influence. It has previously been accepted that he entered the service of the Duke of Alba, Don Fadrique de Toledo, immediately after graduating in 1492. However, it is possible that his first post was as a magistrate or *corregidor* in northern Spain, which would have been a royal appointment. If this were the case, Encina would not have become a member of the duke's household until 1495, which has implications for the chronology of his works, especially the plays he composed for performance at the ducal palace at Alba de Tormes, close to Salamanca; most of his works, including the first eight *eglogas*, were published in Salamanca in 1496. He may have entertained hopes of serving Prince Juan (*d* 1497), son and heir of Ferdinand and Isabella, who in that year had taken up residence in the city. In 1498 Encina applied for the post of *cantor* (*maestro de capilla*) at Salamanca Cathedral, but was unsuccessful; after much prevarication on the part of the chapter the position was divided among three singers, including his rival Lucas Fernández. He sought promotion elsewhere, and by 1500 was in Rome, securing benefices in the Salamancan diocese with papal support. Two years later, and despite the opposition of the cathedral chapter, a papal bull decreed that he should hold the benefice assigned to the *cantor*, which by then belonged to Fernández. Encina did not, however, return to Spain, having found Rome congenial and obtained the favours of successive popes and cardinals. By October 1503 he may have secured a place in the household of Alexander VI, and later in that of Cardinal Francisco Loriz (*d* 1506). In 1508 he was granted the archdiaconate of Málaga Cathedral by Julius II, and he attended his first chapter meeting in 1510, although the chapter curtailed his responsibilities because he was still not ordained. It did, however, entrust him with cathedral business, and over the next eight years he travelled several times to Rome, notably in 1512–13, when his play *Placida y Vitoriano* was performed at the house of a Valencian cardinal, and to the royal court in Valladolid. In 1518 he resigned his position at Málaga for a simple benefice at nearby Morón, and the following year he was finally ordained and travelled to the Holy Land in order to sing his first Mass in Jerusalem. Before his journey, of which he wrote an account in verse, he had been nominated by Leo X for the priorship of León Cathedral, and he attended his first chapter meeting there in November 1523. He held this position until his final illness in December 1529, his will being presented on 14 January 1530. It was his wish that he should be buried beneath the choir of Salamanca Cathedral, and his remains were moved there in 1534.

Encina has been portrayed as an ambitious man who set his sights on promotion through preferment; it is curious that, despite dedicating several of his works to members of the royal family, he was never appointed a member of the royal chapels, and it is striking that almost all his works were written and composed by the time he was in his mid-30s. Many of his songs, well over 60 in number, are preserved in musical settings in the Cancionero Musical de Palacio (*E-Mp* 1335), much of its wide-ranging repertory being attributed to composers who worked at some time in the royal chapels. Encina's involvement in the compilation of this anthology, if any, has yet to be ascertained. His *Cancionero* of 1496 includes lyric verse on a broad range of topics – occasional (including a lament probably on the death of Prince Juan), popular, devotional and didactic – and his first eight *eglogas*, as well as an adaptation in Castilian of Virgil's *Bucolics*. Five more plays were added to later editions. The concise but pioneering treatise on metrics, the *Arte de poesia castellana*, reveals a knowledge of earlier Spanish writings as well as Italian poetry, and is valuable for its clear definitions of contemporary Castilian metres and forms.

Although not strictly speaking the founder of the Spanish theatre, as has sometimes been said, Encina was the first to compose dramatic pieces systematically and specifically for performance. He designed a lyric-dramatic mode of presentation which his followers successfully elaborated. The earliest plays, sacred dramas celebrating religious festivals (Christmas, Shrove Tuesday, Passiontide or Easter), are tentative developments of the medieval mystery plays, notable for their popular, even rustic flavour. These elements are exploited with grace and tact in the later secular pastoral plays; a brashly rowdy play composed in dialect for a popular audience in Salamanca (1497) stresses the humorous aspects of conflicts between students and rustics. The later plays are dramas in which passionate or tragic love is the theme. Influenced by the Italian Renaissance, Encina introduced allegorical and mythological elements. Music is an integral part of the action in all the plays. They normally conclude with or introduce midway a four-part villancico sung and danced by the actors, and the play's synopsis or the text itself frequently specifies singing and dancing. Appropriate villancicos from Encina's repertory were probably interpolated for many are dramatically written and seem made for the purpose.

To the 60 or so songs attributed to Encina in the songbooks, a further nine anonymous settings of texts by him can be added, of which the music may also be attributable to him; only three settings of his poems by other composers are known to survive. Musical settings for ten further poems included in the *Cancionero* of 1496 are no longer extant. The surviving pieces, mostly villancicos, are three- and four-voice settings displaying a variety of styles, according to the type of text, within a shared idiom: clearly defined musical phrases for each line of text, which is set essentially syllabically and homophonically, with only the briefest of melismas on the penultimate syllable and a limited amount of independent movement between the voices in preparation for cadence points. The varied and flexible rhythms are

patterned on the accents of the verse, making the song texts clearly audible, while harmonic progressions are simple and strong. The extent to which Encina was responsible for evolving this idiom – which differs considerably from the earlier, chanson-influenced repertory of composers such as Urrede, Enrique and Cornago – has yet to be studied, but his oeuvre, dating from the late 1480s and early 1490s, certainly marks a watershed in song composition from the Spanish kingdoms. It is striking that a considerable number of his villancicos (including *Señora de hermosura* and *Una sañosa porfía*) are based on the folía and may well provide some of the earliest examples of this dance pattern.

Many of his songs share a spontaneous, quasi-improvised feel that may reflect their development from an unwritten, popular musical tradition that he notated and formalized for court consumption, just as most of his poems draw on popular, or popular-style, refrains which are then elaborated in the manner of the courtly love lyric. Other songs seem wholly inspired by popular tradition, while his six ballads or *romances* are more austere, even hymn-like, in idiom – at least as they are notated in the songbooks. Encina's songs illustrate to an unparalleled degree that happy interpenetration of 'learned' and 'popular' elements often characteristic of early Renaissance music and poetry. His originality lay in his special ability to combine poetic and musical rhythms and expression in an organic whole.

Enclume (Fr.). *See* ANVIL.

Encomium (Lat.; Gk. *enkōmion*). A work of prose or poetry composed in praise of an individual. In its original sense, encomium denotes a choral song, sung by a *kōmos* (group of revellers), praising the winner of a musical or athletic competition. The meaning was later extended to include any laudatory song, poem or speech. A eulogy, a funeral oration for those who died in battle, an epideictic speech in praise of a historical or mythical figure, a verse-epitaph praising the life of the deceased, a *skolion* (banquet song) in praise of the host: each could be classified as an encomium. Aristotle (*Rhetoric*, i, 1367b; *Eudemian Ethics*, ii. 1.12) specified that an encomium praises actual deeds (*erga*), not qualities of virtue or excellence (*aretē*). Plato (*Republic*, x. 607a) distinguished between encomia, which praise mortals, and hymns, which honour gods. Although Plato himself did not consistently maintain this distinction, the Alexandrian grammarians, who gathered and classified Archaic and classical Greek literature, found the categories useful. Victory songs (encomia in the radical sense) were classified as *epinikia*, poems to the gods as hymns, and the category of encomium became a repository for any remaining praise poetry.

MICHAEL W. LUNDELL

Encore. A French word meaning 'again', cried out by English audiences (not French ones, who use *bis*) to demand the repetition of a piece just heard or an extra item. This use of the word goes back at least to February 1712, when it attracted satirical comment in the *Spectator*: 'I observe it's become a custom, that whenever any gentlemen are particularly pleased with a song, at their crying out *encore* or *altro volto*, the performer is so obliging as to sing it over again'. In this period, the word had a fashionable status. Pope (1742) has the 'harlot form' of Opera telling Dullness ('in quaint Recitativo'):

> To the same notes thy sons shall hum or snore
> And all thy growing daughters cry *encore*. (*The Dunciad*, iv. 59).

In both concerts and operas the progress of a work was freely interrupted for the repetition of arias or movements.

Today, an 'encore' usually means an extra piece played at the end of a solo or chamber recital, or by a soloist after a concerto, in response to more than perfunctory applause. If American audiences cry out, it is usually 'bravo', not 'encore'.

PETER WALLS

Enculturation. This refers to the process of learning the culture of a people, specifically its language, norms, beliefs, and appropriate behaviours. Enculturation begins in childhood, but extends into adulthood, when the cultures associated with new statuses and social roles must be learnt. Musical enculturation, the learning of a music culture, includes such processes as cognitive development in children, teaching strategies, learning techniques, how performative behaviours are understood as social behaviour, learning how to interact with audiences and patrons, and discovering the symbolism or meaning of various aspects of musical style and presentation. Some of these issues, especially teaching strategies and cognitive development, have been studied in the fields of music education and psychology of music. Ethnomusicologists, who routinely use the culture concept in their work, have rarely addressed the broad range of issues implicit in the concept of enculturation.

End correction. Standing waves in a cylindrical pipe have a pressure antinode (point of maximum pressure fluctuation) at a closed end of the pipe. To a first approximation, an open end can be treated as a pressure node (point of no pressure fluctuation), but in fact the node is displaced beyond the physical end of the tube by a short distance known as the end correction. The effective length of the air column, which is used in calculating the wavelengths and frequencies of the standing waves, is the sum of the physical length and the end correction. If the pipe is open at both ends, two end corrections are required. The end correction at the open upper end of a thin-walled organ flue pipe is close to 0.61 times the pipe radius at low

frequencies; it decreases as the frequency increases, and increases with increasing wall thickness. Partially closing the end increases the end correction, lowering the sounding pitch. The end correction at the mouth of an organ flue pipe depends on the details of the mouth, and is normally greater than the pipe diameter.

See also SPEAKING LENGTH.

MURRAY CAMPBELL

Endechas (Sp., Port.: 'dirge'; sometimes sing., *endecha*). A funeral song and, from about 1500, an elegy or lament. With the exception of *endechas de canaria* (or *endechas canarias*), the genre followed no consistent poetic or musical form, although *endechas* of quatrains of six-syllable lines were common in the 16th century. *Endechas de canaria* were regularly in rhymed tercets and the music was based on that of the *canarias* (*see* CANARY). The earliest known composition specifically entitled *endecha* is a refrain-song possibly by Alfonso de Troya, no.187 in the Cancionero Musical de Palacio (compiled *c*1505–20); others in the collection are called 'lamentación', a term which was later often synonymous with *endecha*. Pisador's *Libro de música de vihuela* (1552) contains two *endechas*. Salinas equated the *endecha* with the *nenia* in classical Latin. The *endecha* tradition survives in Judeo-Spanish communities and in the Canary Islands.

JACK SAGE/SUSANA FRIEDMANN

Endellion Quartet. British string quartet. It was founded in 1979 by Andrew Watkinson, Louise Williams, Garfield Jackson and David Waterman. Entering the first Portsmouth International String Quartet Competition in 1979 almost immediately after its formation, it took second prize and the audience prize; in the same year it won the British National String Quartet Competition and made its first visit to the USA, winning the Young Concert Artists award. The following year it returned to the USA for concerts and since then it has enjoyed an international reputation, touring widely. Williams left in 1984, to be succeeded by James Clark and (since 1986) by Ralph de Souza. The Endellion is arguably the finest quartet in Britain, playing with poise, true intonation, excellent balance and a beautiful tone. In music of the Viennese Classical composers it has few challengers but it has won praise in a wide repertory, its Beethoven and Bartók cycles being especially admired. In 1996 it won the Royal Philharmonic Society award for the best chamber ensemble; and it has been honoured with a joint degree by Massachusetts Institute of Technology. Since 1992 it has been resident ensemble at the University of Cambridge, where it has a regular concert series. The group plays music by Goehr, Wood and Maw and has commissioned or given the premières of works by David and Colin Matthews, Judith Weir, Imogen Holst, Peter Benari, Silvina Milstein and Thomas Adès. In concert it has collaborated with Sir Thomas Allen, members of the Amadeus Quartet, Joshua Bell, Steven Isserlis, Tabea Zimmermann, Mitsuko Uchida, Anne Queffélec and Imogen Cooper. For the 1999–2000 season it commissioned meditations to accompany Haydn's *Seven Last Words* from the Poet Laureate, Andrew Motion, who himself took part in some of the performances. The Endellion's recordings include a Britten cycle, all of Tchaikovsky's chamber music for strings, quartets by Haydn, Mozart, Smetana, Dvořák, Bartók, Barber, Bridge and Walton, Amy Beach's piano quintet (with Martin Roscoe) and Adès's *Arcadiana*. Outside the quartet, Watkinson is well known as an orchestral leader and director; Jackson teaches the viola and chamber music at the RAM; and Waterman coaches ensembles at Prussia Cove, Cornwall, and Westonbirt, Gloucestershire. The Endellion's instruments are particularly well matched, the violins being by José Contreras of Madrid (1760 and 1772); the viola anonymous English, *c*1800; and the cello by G.B. Guadagnini, *c*1745.

TULLY POTTER

Enderle, Wilhelm Gottfried (*b* Bayreuth, 21 May 1722; *d* Darmstadt, 18 Feb 1790). German violinist, keyboard player and composer. He was the son of Johann Joseph Enderle, a wind player who took up an appointment in Nuremberg in 1728. He completed his studies in 1737–8 in Berlin, returned to Nuremberg an accomplished virtuoso and often made appearances outside his home town. In 1748, when his father died, he joined the Würzburg court as a violinist. On 9 April 1753 Landgrave Ludwig VIII appointed him Konzertmeister at Darmstadt under Graupner and Endler, and he was also music tutor to the household. Graupner died in 1760, and on Endler's death in 1762 Enderle became principal conductor. Between 1773 and 1776 the Hofkapelle was reduced in numbers, and during this period Enderle combined his duties with those of a principal musician at the Homburg court, after which he was entrusted with the rebuilding of the Darmstadt orchestra.

Schubart wrote of Enderle: 'He can produce notes and turns of phrase that still beggar description ... In his youth he possessed breathtaking virtuosity, and caused a general sensation'; but he also suggested that a certain inclination towards the amusing rather than the serious may have limited his acclaim. Enderle was also an outstanding keyboard performer, an excellent teacher, and a respected composer of three-movement symphonies, virtuoso concertos and numerous trios in pre-Classical style, and of several somewhat anachronistically Baroque festival cantatas for the Darmstadt court.

WORKS

Orch: Simphonia a piu stromenti (Paris, ?1770); 1 sym. in Simphonies a 4 et plusieurs parties, op.4 (Paris, 1761); 6 syms., incl. nos.9, 13, *B-Bc*, *D-DS*, *EB*; Hpd Conc., *Bsb*; 2 vn concs., *DS*; Pastorell (inc.), *EB*

Enderlin, Hieronymus. *See* FORMSCHNEIDER, HIERONYMUS.

Enders, Karel Vilém (*b* ?1778; *d* Prague, 23 June 1841). Czech bookseller and publisher. He had a bookshop first in Leipzig and then from 1809 (or 1810) until 1835 (or 1836) in Prague, where until 1832 he also ran a publishing house. He published mostly contemporary dance music, vocal and piano pieces by Prague composers, notably Václav Jan Tomášek. In 1817 he produced Jakub Jan Ryba's book *Počáteční a všeobecní základové ku všemu umění hudebnímu* ('First and universal principles for all musical art'), which was of fundamental importance in the development of Czech literature on music. He also attempted to publish the first Austrian bibliography, but failed for lack of support.

ZDENĚK CULKA

Enders, Karl. *See* ANDREAE, CAROLUS.

Endler, Johann Samuel (*b* Olbernhau, Erzgebirge, 26 July 1694; *d* Darmstadt, 23 April 1762). German composer. His father was organist and schoolmaster at Olbernhau. No documents concerning Endler's schooling are known, but many circumstances, including his connections to Christoph Graupner, suggest that he attended the Thomasschule in Leipzig. He enrolled at the university there in 1716. Archival documents regarding the Neukirche show Endler, still a student, substituting there as organist and director of church music in 1720. From 1721 to 1723 he directed Fasch's collegium musicum. While Graupner was in Leipzig in connection with his application for the post of Thomaskantor, he evidently offered Endler a post at Darmstadt, and the latter was installed at the court in 1723 as an alto singer and violinist. He was promoted to Konzertmeister before 1740 and then (before 1744) to vice-Kapellmeister under Graupner. After Graupner's death in 1760 Endler succeeded to his position, which he held until his own death two years later.

Three early church cantatas and one secular cantata (the political satire *Der Raritätenmann*, written in 1747 for the birthday celebration of Landgrave Ludwig VIII) survive; another secular cantata, *Der Nachtwächter* (1746), has been lost. Endler's remaining extant works are orchestral. Two-thirds of the sinfonias were written for special festivities and first performed between 1748 and 1761 at the landgrave's favourite hunting castle, Kranichstein. Often richly orchestrated, they exploit skilfully the court's especially large group of virtuoso brass and wind players. They consist of a modern Allegro movement followed by a suite of up to six further movements with dance, tempo and, occasionally, character titles. Concertante elements are apparent, except in the first movements. The overtures are similar, except that the first movement is in the form of a French overture, tonal unity is maintained throughout the cycle and a larger selection of dance movements is found. The autograph manuscripts of Endler's compositions, together with his excellent copies of other 18th-century works, are in the Hessisische Landes- und Hochschulbibliothek, Darmstadt.

WORKS

in D-DS and autograph unless otherwise stated

VOCAL

Church cants.: Da die Zeit erfüllet war (J.C. Lichtenberg), T, 4vv, str, bc, 1729; Ihr Lieben glaubet nicht einen jeglichen (Lichtenberg), 4vv, orch, 1729; Jesus stirbt! Ach, soll ich leben (G.C. Lehms), 5vv, orch, 1713, *D-DS* (mostly autograph)
Secular cants.: Der Nachtwächter, 1746, lost; Der Raritätenmann (J.A. Buchner), B, orch, 1747

INSTRUMENTAL

30 sinfonias; 3 ed. in The Symphony 1720–1840, ser. C, lix–lxxiv (New York, 1984)
7 ovs. [Nagel gives incipits for 10], orch; *c*10 marches; partita (C), hpd; 2 pieces, 1755, 1759; 5 riddle canons [anon. in Endler's script], facs. in *MGG1* (F. Noack)

Endpin [tailpin] (Fr. *pique*, *bâton*; Ger. *Stachel*, *Pflock*, *Fuss*; It. *puntale*). A wooden or metal attachment to the bottom of a cello or double bass to assist in lifting the instrument off the floor and holding it securely. A standard playing position for the cello, unlike that for the bass, was not established until around 1900. Pictorial evidence from the 17th, 18th and 19th centuries shows cellists standing and seated, with endpin (or other lifting-and-holding device) and without. Therefore the endpin has figured as an important variable in cello performance, with ramifications affecting tone, technique, style and gesture. Until the late 19th century, method books taught only one position for playing the cello, with the instrument held between the legs and supported mainly on the left calf. From the early 17th century onwards, however, numerous iconographic records (e.g. M. Praetorius, *Theatrum instrumentorum*, 1620, pl.xxi) show cellos being held up by a spike, stool, platform, box, barrel, the player's foot or even a combination of ways. J.S. Petri (*Anleitung zur praktischen Musik*, 2/1782, 415–16) reported that the use of the endpin was most prevalent among ripienists, especially those who prefer to play standing. This may explain why method books, directed primarily at soloists, ignored the endpin for so long.

In the 19th century there was more consistency between method books and iconography. The methods continued to ignore the endpin, and few players are depicted using one. One famous exception was A.F. Servais, who, owing to his girth or that of his large Stradivarius (accounts

differ), found relief in an endpin, and for this reason was erroneously credited with its invention. When method books first began to advocate use of the endpin, around 1880, it was again considered to be a new invention. It did not meet with immediate, universal acceptance; many well-known cellists such as Grützmacher, Piatti and Hausmann continued to adhere to the old position. Women cellists appear to have been pioneers in the adoption of the endpin, because of widespread disapproval of their holding the cello between the legs, a prejudice that persisted until well into the 20th century. The endpin allowed the cello to be held away from the body in positions that, around 1900, were deemed more decorous, either with the legs turned to the left in side-saddle fashion, or with the right leg almost kneeling behind the cello, a position in which Beatrice Harrison was photographed.

The perceived benefits of the endpin were: a more relaxed position, especially for the legs; increased stability, especially for shifting and playing in high positions; better access of the bow (unimpeded by the knees) to the *a* and *C* strings; freer vibration of the body of the instrument; and transmission of sound into the floor (with some debate as to whether wood or metal is the better transmitter; metal is now always used). Disadvantages perceived when the endpin was reintroduced in the late 19th century were the lazy posture or extravagant motions it allowed the player.

The endpin was originally fixed in length, and short; the adjustable endpin was introduced in the late 1890s, and length began to increase significantly thereafter. The most recent modification, not widely used, is the bent 'Tortelier' endpin, which raises the cello from a nearly vertical to a more nearly horizontal position (*see* BRITTEN, BENJAMIN, fig.9). Performers on period instruments tend to eschew the endpin, a practice consistent with method-book directions but at odds with much iconographic evidence, and therefore of questionable authenticity if applied uniformly, especially with regard to 18th-century music.

Endres, Karl. *See* ANDREAE, CAROLUS.

Endrèze [Kraeckmann], **Arthur** (*b* Chicago, 28 Nov 1893; *d* Chicago, 15 April 1975). American baritone. He studied in Paris with Jean de Reszke and made his début in 1925 at Nice as Don Giovanni. In 1928 he sang Karnac in *Le roi d'Ys* at the Opéra-Comique, then in 1929 he was engaged at the Paris Opéra, making his début as Valentin (*Faust*). He also sang Nevers (*Les Huguenots*), Athanaël (*Thaïs*), Herod (*Hérodiade*), Hamlet, Mercutio, Telramund, Kurwenal, Iago, Amonasro, Germont and Rigoletto. He created Mosca in Sauguet's *La chartreuse de Parme* (1939) and sang Creon in the first Paris performance of Milhaud's *Médée* (1940). At Monte Carlo he sang Nilakantha (*Lakmé*), Scarpia and the Duke of Kilmarnock in Alfano's *L'ultimo lord* (1932), and created Metternich in Honegger and Ibert's *L'aiglon* (1937). In 1946 he made his farewell at the Opéra as Jacob in Méhul's *Joseph*. He had a warm, lyrical voice especially well suited to the French repertory.

ELIZABETH FORBES

Endter. German family of printers and publishers. Wolfgang Endter the elder (1593–1659) began his career as a journeyman printer in Altdorf and Herborn before training as a bookseller in the shop of his father, Georg Endter the elder (1562–1630), in Nuremberg. He owed his leading position among German book printers and publishers during the Thirty Years War to his editions of the Bible and Protestant devotional works, whereas his brother Georg Endter the younger (1585–1629) and his descendants specialized in the printing and distribution of Catholic devotional literature. On being ennobled by Emperor Ferdinand III in 1651 Wolfgang the elder retired from his business in favour of his sons Wolfgang Endter the younger (1622–55) and Johann Andreas Endter (1625–70). After the death of Wolfgang the younger Johann Andreas continued to manage the firm on behalf of his brother's heirs; after his death the heirs separated. Wolfgang Moritz Endter (1653–1723), son of Wolfgang Endter the younger, has been credited with improvements in the technique of music printing, but he seems to have specialized entirely in bookselling and sold his share in the press and publishing business. The Endters' musicological importance rests on their numerous editions of hymnbooks and works of the Nuremberg school.

Enescu, George [Enesco, Georges] (*b* Liveni Vîrnav [now George Enescu], nr Dorohoi, 19 Aug 1881; *d* Paris, 3/4 May 1955). Romanian composer, violinist, conductor and teacher. Enescu (also known by the French form of his name, Georges Enesco) was Romania's greatest composer, the leading figure in Romanian musical life in the first half of the 20th century, and one of the best-known violinists of his generation.

1. LIFE. Enescu came from a modest middle-class family (his father was an estate manager). He started to play the violin at the age of four, and began composing as soon as he learnt musical notation (aged five). In 1888 he entered the Konservatorium der Gesellschaft der Musikfreunde in Vienna. There he studied with Sigmund Bachrich and Joseph Hellmesberger jr (violin), Robert Fuchs (harmony), Joseph Hellmesberger sr (chamber music) and Ernst Ludwig (piano). He also learnt the organ and cello, frequented the Hofoper (for Wagner performances conducted by Hans Richter) and played Brahms's works in the conservatory orchestra, in the composer's presence.

His first public performance, as a violinist, was at Slănic (north-eastern Romania) in 1889. Enescu graduated in 1893, then stayed for a year of further study in Fuchs's composition class.

From 1895 Enescu continued his studies at the Paris Conservatoire, where he studied composition under Massenet (1895–6) and Fauré (1896–9); he also warmed particularly to his teacher of counterpoint and fugue, André Gédalge. Other teachers were less congenial: Ambroise Thomas and Théodore Dubois (harmony), Diémer (piano) and Marsick (violin – there was some supplementary teaching by José White, whom Enescu preferred). Fellow pupils and friends at the Conservatoire included Ravel, Schmitt, Koechlin, Roger-Ducasse, Casella, Cortot and Thibaud. Enescu's main interest was composition; the first public performance of his works was an all-Enescu chamber concert, in Paris in 1897. His orchestral work, *Poème roumain* op.1, was conducted by Edouard Colonne in Paris in January 1898; two months later Enescu conducted it in Bucharest, and he was promptly hailed by the Romanian press as a figure of national importance.

After his graduation from the Conservatoire in 1899, Enescu began to lead the divided existence which would characterize most of his adult life: he was based in both France and Romania, and divided his energies between performance and composition. Paris was the main base for his activities as a violinist (and pianist); frequent partners included Cortot, Thibaud and Casals. He formed a trio with Casella and Louis Fournier in 1902, and the Enescu Quartet in 1904. Before World War I he toured several European countries as a violinist; he also conducted the Berlin SO and the Concertgebouw in the Netherlands in 1912. Summer months were usually devoted to composition in the Romanian countryside, but during this period he also became an active figure in the musical life of that country (where he enjoyed the special patronage of the royal family), and in 1912 he founded the Enescu Prize for Romanian composers. He stayed in his native land during World War I, forming a symphony orchestra in 1917; in 1921 he created the first national opera company in Romania, rehearsing and conducting its first production (*Lohengrin*, 31 December 1921).

For Enescu, the inter-war years were dominated by one great task; the completion of his own opera *Oedipe*. This was conceived in 1912, written in rough (two- or three-stave) draft in 1921, revised and orchestrated (1921–31) and finally performed (at the Paris Opéra) in 1936. The slowness of this whole process was caused partly by the punishing schedules of Enescu's concert tours. From 1923 these included regular visits to the USA; it was there, in the 1920s, that Enescu was first persuaded to make a small number of recordings as a violinist. American orchestras also offered him frequent opportunities to conduct (in 1936 he was one of the candidates considered to replace Toscanini as permanent conductor of the New York Philharmonic). A performance by Enescu in San Francisco in 1925 inspired the young Yehudi Menuhin, who came to Europe and studied under him from 1927 onwards. Enescu was always reluctant to become a pedagogue, but those who were deeply influenced by his teaching – formal and informal – included Ferras, Gitlis, Grumiaux and Haendel. He gave masterclasses at the Ecole Normale de Musique, Paris, in 1928, and at Yvonne Astruc's 'Institut Instrumental' (also in Paris) in 1938–9; after World War II he would devote more time to teaching, at the David Mannes School (New York), the Accademia Musicale Chigiana (Siena) and the summer courses at Brighton and Bryanston.

George Enescu

Enescu stayed in Romania during World War II, making several important recordings of his own works with his godson Dinu Lipatti. After the war the Communist Party gradually took control; Enescu went into exile in 1946. He was old, ill (with heart trouble, curvature of the spine and a hearing problem which affected intonation) and impoverished; he also had the burden of a mentally unstable wife (once a famous aristocratic beauty, Princess Maruca Cantacuzino, née Rosetti-Tescani), to whom he remained chivalrously devoted. For a few years he resumed his career as a violinist; several important recordings survive from this period, including the Bach solo sonatas and partitas. Apart from teaching, he gave more time now to conducting, especially on a series of visits to England (1947–53); but, as always, what he cared about most was composition. In July 1954 he suffered a severe stroke, causing partial paralysis. His last work, the Chamber Symphony, was completed with the help of his friend Marcel Mihalovici.

Enescu made a lasting impression on almost everyone who came into contact with him; this was both a musical and a personal phenomenon. His gifts included a prodigious memory: he knew much of the classical canon by heart, including every note of Wagner's *Ring*, and most of the Bach-Gesellschaft's edition of Bach's complete works. As conductor, chamber player and teacher he also had a gift for communicating a kind of reverence for the music itself; he avoided showmanship, aiming at a self-effacing performance in which all attention would be

focussed on the music, not the player or his technique. (His violin tone was warm and intimate, modelled on the cantabile of a human voice.) His humility towards the music of other composers was matched by modesty about his own works, and his career as a composer suffered from his dignified but damaging reluctance to engage in any form of self-promotion.

2. WORKS. Enescu's published output extends to only 33 opus numbers, though several of these are very large-scale works (the three symphonies and *Oedipe*). The demands of a busy career as a performer were not the only reason for this comparative paucity of finished output. Enescu was also an obsessive perfectionist: many of his published works were repeatedly redrafted before their first performances, and revised several times thereafter. Moreover, as recent research has made increasingly clear, the works which he did allow to be published were merely the tip of a huge submerged mass of manuscript work-in-progress (the bulk of which is held by the Enescu Museum, Bucharest). The leading authority on these manuscripts, Clemansa Firca, suggests that there may be 'several hundred' compositions in varying degrees of rough draft or near-completion. In some cases, too, the same thematic material would be re-worked in manuscript for decades before emerging in one of the published works.

Such inner continuities are obscured, however, by the striking stylistic changes which took place during Enescu's seven decades as a composer. His first student works (from Vienna and his early Paris years) show the heavy influence of Schumann and Brahms. French influence comes to the fore with his Second Violin Sonata (1899), where the fluid piano textures and delicate combination of chromaticism and modal cadences are strongly reminiscent of Fauré. This sonata, written at the age of 17, was later described by Enescu as the first work in which he felt he was 'becoming myself'. Yet, for the next 15 years or more, he continued to switch eclectically between a variety of stylistic idioms. His Octet for Strings (1900) combines rich late-Viennese chromaticism with ferocious contrapuntal energy; the First Symphony (1905) is an ambitious and sweepingly Romantic work with an explicit debt to *Tristan und Isolde* in the slow movement; but interspersed with these compositions were a number of neo-classical or neo-Baroque works, including the First Orchestral Suite (1903), the Second Piano Suite (1903) and the limpid *Sept chansons de Clément Marot* (1908), in which the piano part imitates, at times, the sonorities of lute music. The culmination of his series of neo-classical works was the Second Orchestral Suite (1915), whose bustling mock-Baroque figurations foreshadow Prokofiev's Classical Symphony (1917) and Stravinsky's *Pulcinella* (1919). Yet, almost contemporaneously, Enescu's dense and intricate Second Symphony (1914) explored the harmonic world of Richard Strauss's *Salome* and *Elektra*.

Traditional accounts of Enescu's musical development place great emphasis on the elements of Romanian folk music which appear in his works at an early stage – above all, in the *Poème roumain* (1897) and the two Romanian Rhapsodies (1901). (These last works were to become an albatross round Enescu's neck: later in his life he bitterly resented the way they had dominated and narrowed his reputation as a composer.) But he quickly tired of the limited possibilities offered by the task of 'setting' Romanian songs and dances; as he remarked in 1924, the only thing a composer could do with an existing piece of folk music was 'to rhapsodize it, with repetitions and juxtapositions'.

The real significance of his Romanian folk-heritage would emerge later in the growth of Enescu's musical language, as he searched for new ways of developing, and combining, pure melodic lines. Particularly influential here was the *doina*, a type of meditative song, frequently melancholic, with an extended and flexible line in which melody and ornamentation merge into one. (This was the type of song for which Bartók had coined the phrase *parlando rubato*.) The melodic line was, for Enescu, the vital principle of music: as he wrote in his autobiography, 'I'm not a person for pretty successions of chords . . . a piece deserves to be called a musical composition only if it has a line, a melody, or, even better, melodies superimposed on one another'. His urge to superimpose melodies led, in several early works, to some exorbitant uses of cyclical form: in the last movement of the Octet for Strings, for example, all the melodic elements of the work return, to be piled one on top of another. In his mature works, however, Enescu made increasing use of the less mechanically contrapuntal, more organic technique of heterophony – a form of loose melodic superimposition which was also rooted in Romanian folk music.

Some elements of Enescu's mature style began to emerge at the end of World War I, with the completion of the Third Symphony (1918) and the First String Quartet (1920). Both works display an organicist style of development, in which germinal themes, intervals and note-patterns are constantly adapted and recombined. As Enescu worked on his opera *Oedipe* during the 1920s, this method lent itself naturally to the elaboration of leitmotifs: one modern study (by Octavian Cosma) has identified 21 such motifs in the work, although their functioning is so germinal and cellular that it is possible for listeners to experience the whole work without being aware of the presence of leitmotifs at all. Another feature of the opera is the minutely detailed orchestration, which frequently makes use of solo instruments within the orchestral texture. This concentration on individual voices may help to explain why the output of his final decades is dominated by chamber music. Only two major orchestral works were completed after *Oedipe*: the Third Orchestral Suite (1938) and the symphonic poem *Vox Maris* (*c*1954). (Three works left in unfinished draft have, however, been completed recently by Romanian composers: the *Caprice roumain* for violin and orchestra (1928), completed by Cornel Ţăranu, and the Fourth (1934) and Fifth (1941) symphonies, completed by Paşcal Bentoiu.)

The great series of chamber works which crowns Enescu's output begins with the Third Violin Sonata (1926), and includes the Piano Quintet (1940), Second Piano Quartet (1944), Second String Quartet (1951) and Chamber Symphony (1954). Enescu stays within the bounds of late-Romantic tonality and classical forms but transmutes both into a very personal idiom; ceaseless motivic development is woven into elaborate adaptations of sonata form, variation-sequences and cyclical recombinations. Romanian folk elements are also present, sometimes in the form of percussive Bartókian dances,

but the most characteristic use of folk music here involves the meditative *doina*. In several works (the Third Orchestral Suite, the *Impressions d'enfance* for violin and piano (1940) and the Third Violin Sonata, as commented on by Enescu) the use of such folk elements was linked to the theme of childhood reminiscence: what Enescu aimed at was not the alienating effect of quasi-primitivism which modernists sought in folk music (Stravinsky, for example), but, on the contrary, a childlike sense of immediacy and intimacy. That, indeed, is the special character of many of his finest works.

WORKS

OPERA AND VOCAL

Opera: Oedipe, op.23 (lyric tragedy, 4, E. Fleg), 1931, PO, 13 March 1936

Choral: L'aurore (C. Leconte de Lisle), S, female vv, orch, 1897–8; Waldgesang (Carmen Sylva [Queen Elizabeth of Romania]), mixed vv, 1898; Die nächtliche Herschau (J.C. Zedlitz), Bar, vv, orch, 1900; Plugar (Rădulescu-Niger), mixed vv, 1900; Oda (I. Soricu), mixed vv, pf/org, 1904; Linişte [Silence] (A. Stamatiad), 3 equal vv, 1946; Vox Maris, op.31, sym. poem, S, T, vv, orch, *c*1954

Songs: 3 mélodies, op.4 (J. Lemaître, S. Prudhomme), 1898; 7 chansons de Clément Marot, op.15, 1908; 3 mélodies, op.19 (F. Gregh), 1916; 20 other songs (mainly Carmen Sylva), all before 1909

ORCHESTRAL

Poème roumain, op.1, 1897 [with wordless chorus]; Symphonie concertante, b, op.8, vc, orch, 1901; 2 rhapsodies roumaines, A, D, op.11, 1901; Suite no.1, C, op.9, 1903; Sym. no.1, E♭, op.13, 1905; Sym. no.2, A, op.17, 1914; Suite no.2, C, op.20, 1915; Sym. no.3, C, op.21, 1918 [with chorus and pf solo]; Suite no.3 'Villageoise', D, op.27, 1938; Conc. Ov. 'sur des thèmes dans le caractère populaire roumain', A, op.32, 1948

CHAMBER AND INSTRUMENTAL

For 8–12 insts: Str Octet, C, op.7, 1900; Ww Decet, D, op.14, 1906; Chbr Sym., E, 12 insts, op.33, 1954

For 4–5 insts: Pf Qt no.1, D, op.16, 1909; Scherzino, vn, va, vc, db, pf, 1909; Str Qt no.1, E♭, op.22/1, 1920; Pf Qnt, G, op.28, 1940; Pf Qt no.2, d, op.30, 1944; Str Qt no.2, G, op.22/2, 1951

For 3 insts: Aubade, C, str trio, 1899; Pf Trio, a, 1916

For 2 insts: Sonata no.1, D, vn, pf, op.2, 1897; Sonata no.1, f, vc, pf, op.26/1, 1898; Sonata no.2, f, vn, pf, op.6, 1899; Impromptu concertant, G♭, vn, pf, 1903; Cantabile et presto, fl, pf, 1904; Concertstück, va, pf, 1906; Légende, tpt, pf, 1906; Sonata no.3 'dans le caractère populaire roumain', a, vn, pf, op.25, 1926; Sonata no.2, C, vc, pf, op.26/2, 1935; Impressions d'enfance, D, vn, pf, op.28, 1940

Pf: Prélude, 1896; Scherzo, 1896; Suite no.1 'dans le style ancien', g, op.3, 1897; Variations, A♭, 2 pf, 1898; Impromptu, 1900; Prelude and Fugue, 1903; Suite no.2, D, op.10, 1903; Suite no.3 'Pièces impromptues', op.18, 1913–16; Sonata no.1, f♯, op.24/1, 1924; Sonata no.3, D, op.24/3, 1935 [Sonata no.2 does not exist]

Chromatic harp: Allegro de concert, 1904

Principal publishers: Enoch, Editura muzicală, Salabert

The above list includes only published works and works with opus numbers; for fuller lists see Foni and others (1964), 264ff, and Firca (1985–)

NOEL MALCOLM

Engardus. *See* EGARDUS.

Engel, Carl (i) (*b* Thiedewiese, Hanover, 6 July 1818; *d* London, 17 Nov 1882). German organologist and musicologist. His musical education began with the Hanover organist Enckhausen and continued with Hummel and Lobe. He moved to England in 1844–5, settling first in Manchester and then (permanently) in London; there he began the intensive reading which was to become the basis of all his later work, and began to form a library and an exceptional instrument collection. After the death of his wife in 1881 he sold his books and the majority of his instruments, most of which were acquired by the Victoria and Albert Museum. A limited number, however, were bought by A.J. Hipkins; these were presented to the RCM after Hipkins's death.

His first scholarly publication of 1864 coincided with his connection with the South Kensington (later Victoria and Albert) Museum, where he remained for many years as its organological adviser, producing a series of publications on the holdings. His *Descriptive Catalogue* of 1870 established principles of classification that were definitive in the field, and also provides sources of acquisition, detailing which of the instruments were his own. His work doubtless prompted a Loan Exhibition in 1872, for which he produced the catalogue; the 1874 edition of his *Descriptive Catalogue* was superseded only in 1968. His other writings emphasize European folk music. His lengthy article 'The Literature of National Music' details the contents of many national song collections, and devotes attention to the character of English melodies.

PHILIP BATE/MICHAEL MUSGRAVE

Engel, Carl (ii) (*b* Paris, 21 July 1883; *d* New York, 6 May 1944). American musicologist, administrator and composer of German birth. After studying at the universities of Strasbourg and Munich and as a composition pupil of Thuille in Munich, he emigrated to the USA (1905), becoming an American citizen in 1917. He was music editor for the Boston Music Company (1909–22), head of the Music Division of the Library of Congress (1922–34), president of the music publishing firm of G. Schirmer (appointed 1929) and honorary consultant in musicology to the Library of Congress (from 1934). Concurrently he worked as a columnist (1922–44) and editor (1929–44) of the *Musical Quarterly*. In 1934, with Sonneck and Kinkeldey, he founded the American Musicological Society, subsequently serving as its president (1937–8).

Engel was one of the first generation of American musicologists trained in Europe who applied the standards of continental musicology to American scholarship. He was closely associated with Sonneck (succeeding him as head of the Music Division of the Library of Congress, as president of G. Schirmer and as editor of the *Musical Quarterly*), but unlike him produced no major publications. Among his writings are *Alla breve* (New York, *c*1921, 2/1970), a series of brief lives of composers, and *Discords Mingled* (New York, *c*1931/*R*), a collection of essays, though only the latter is representative of his ability as a writer and scholar.

As a librarian Engel initiated the Library of Congress's tradition of sponsoring musical performances through the creation of the Elizabeth Sprague Coolidge Foundation, incorporated in 1925. This was one of the first projects to involve the American government in the arts. As a publisher he encouraged composers as varied as Schoenberg, Bloch, Loeffler, Griffes and Carpenter; and as a writer he combined a distinctive and fluent style with scrupulous care for accuracy and a wide range of interests. His compositions include songs and piano and chamber music, the *Triptych* for violin and piano being his most representative extended piece.

WAYNE D. SHIRLEY

Engel, Hans (*b* Cairo, 20 Dec 1894; *d* Marburg, 15 May 1970). German musicologist. He studied musicology with Sandberger at the University of Munich, obtaining the doctorate in 1925 with a dissertation on the development of the German piano concerto from Mozart to Liszt. In 1926 he completed his *Habilitation* at the University of Greifswald and was appointed reader in 1932. In 1935 he came to the University of Königsberg (now Kalingrad) as a supernumerary professor, simultaneously headed the institute for church and school music, and was made professor in 1944. After Königsberg came under Soviet rule, Engel went to the University of Marburg in 1946 to head its musicology department.

Launching his career with a specialization in the Italian madrigal, Engel soon became a longstanding champion of German music, producing studies of numerous German composers and even arguing for the German origins of Franz Liszt. He was an outspoken promoter of research on regional music history and dedicated himself to the histories of Pomerania and East Prussia while working in those provinces, overseeing periodicals such as *Musik in Pommern* and *Ostpreussische Musik* and editions such as Denkmäler der Musik in Pommern. In 1936 Engel became editor of the newly established *Deutsche Musikkultur*, a journal designed to direct musicological scholarship to a wider public. During World War II, Engel dabbled in applying race studies to musicology and strove to find musical and racial kinships between Germany and its ally, Italy. Thereafter, he focussed more attention on Mozart (he was a member of the Zentralinstitut für Mozartforschung from 1931) and music sociology. He was recognized by his colleagues for his diverse interests and encyclopedic knowledge and was honoured with a Festschrift in 1964.

PAMELA M. POTTER

Engel, Joel [Yuly Dmitrevich] (*b* Berdyansk, Crimea, 4/16 April 1868; *d* Tel-Aviv, 11 Feb 1927). Russian composer, critic, lexicographer and folklorist. He studied law at Kharkov University but soon turned to music, studying theory and composition with Taneyev and Ippolitov-Ivanov at the Moscow Conservatory (1893–7). From 1897 to 1919 he worked as a music critic for the newspaper *Russkiye vedomosti*. In 1901 his translation of Riemann's *Lexikon* into Russian with newly written sections on Russian music was published in Moscow. Although an early opera, *Esther*, was performed in 1894, his work as a critic overshadowed that as a composer. Under the influence of the Russian nationalist music critic Vladimir Stasov, however, he turned his attention to Jewish folklore, collecting, arranging, performing and publishing the songs of eastern European Jews. In 1909 his first album of ten Jewish folksongs appeared in Moscow; a second volume followed later in the same year. Engel continued to promote his new interest with public lectures and a series of articles in *Voskhod*. Extensive field-work followed, especially after the foundation in 1908 of the Society for Jewish Folk Music which counted among its members some of the best Jewish musicians of the day. In 1912 Engel joined folklorist S. An-Ski on an ethnographical expedition to Jewish villages in south Russia; later he published a collection of children's songs, *50 Yidishe kinderlider* (in Yiddish; Moscow, 1916). Engel's reputation as a composer rests with the incidental music to the 1922 Moscow production of An-Ski's dramatic legend *Dybbuk* which achieved international recognition through performances by that city's Hebrew-language Habimah Theatre. In 1922 Engel left the Soviet Union; during his stay in Berlin (1922–4) he helped found the Yuval Publishing House, where many of his compositions, including the orchestral suite from *Dybbuk* were published. During his last three years (1924–7) Engel settled in Tel-Aviv as a composer, teacher and choir conductor in support of his belief that the revival of Jewish song was prerequisite for any future art music in Israel.

EDITH GERSON-KIWI/BRET WERB

Engel, Johann Jakob (*b* Parchim, 11 Sept 1741; *d* Parchim, 28 June 1802). German music aesthetician, theatre director and librettist. The son of a minister, he attended the Gymnasium at Rostock and later the universities at Bützow (1762) and Leipzig (1764), studying mainly theology and philosophy. While at Leipzig he became interested in the theatre, writing a Singspiel libretto after Goldoni's *Lo speziale* (*Die Apotheke*, music by C.G. Neefe, 1771), as well as making small additions to Gotter's Singspiel *Der Dorfjahrmarkt* (music by G.A. Benda, 1775). Three further texts (*Der Diamant*, *Der dankbare Sohn* and *Der Edelknabe*) were published with *Die Apotheke* under the collective title *Lustspiele* (Karlsruhe, 1783).

In 1775 Engel accepted a position in the Joachimsthal Gymnasium at Berlin, where he later became professor of philosophy and liberal arts. In 1785 he was entrusted with the education of Alexander and Wilhelm von Humboldt; in 1787 he became the tutor of Crown Prince Friedrich Wilhelm, and was also appointed to the Berlin Academy of Sciences. With the accession of Friedrich Wilhelm II he became co-director, with K.W. Ramler, of the newly created Nationaltheater at Berlin. He resigned after seven years and retired to Schwerin and Parchim until 1798, when he returned to Berlin at the king's summons.

Engel expressed his most noted views on musical aesthetics in *Über die musikalische Malerey* (Berlin, 1780, dedicated to J.F. Reichardt) and, somewhat extended and modified, in *Ideen zu einer Mimik* (Berlin, 1785–6). Both

works appeared in French translation shortly after their first publication; the latter was also translated into Italian (1818–20) and adapted by H. Siddons into English as *Practical Illustrations of Rhetorical Gesture and Action* (London, 1807, 2/1822/*R*). Engel was concerned principally with the representation in music of extra-musical ideas and feelings. He contrasted objective representation ('tone-painting') with subjective ('expression', in a general sense), maintaining that the first is completely justified only in texted music, that musical onomatopoeia is always incomplete, and that music best represents general feelings rather than the objects of those feelings. He thus emphasized the importance of expression vis-à-vis objective tone-painting, a view which Sandberger linked with Beethoven's instruction at the beginning of the Pastoral Symphony: 'Mehr Ausdruck der Empfindung als Mahlerey'.

SHELLEY DAVIS

Engel, Karl (*b* Basle, 1 June 1923). Swiss pianist. He studied with Baumgartner at the Basle Conservatory and with Cortot at the Ecole Normale de Musique in Paris. After winning prizes at the Queen Elisabeth of Belgium Competition (1952) and the Busoni Competition in Bolzano (1953) he began an international career, specializing in the sonatas and concertos of Mozart, the Beethoven sonatas and the works of Schubert and Schumann. He also played chamber music with, among others, Casals, and was a discerning accompanist in lieder, notably with Prey and Fischer-Dieskau. He made many recordings, including Mozart concertos, Schubert and Brahms lieder and the complete piano works of Schumann. Engel was a professor at the Hanover Hochschule für Musik from 1955 to 1986 and subsequently taught at the Berne Conservatory.

RICHARD WIGMORE

Engel, (A.) Lehman (*b* Jackson, MS, 14 Sept 1910; *d* New York, 29 Aug 1982). American composer and conductor. He attended the University of Cincinnati and studied composition at the Cincinnati Conservatory. In 1929 he moved to New York, where he continued composition studies, first at the Juilliard Graduate School with Goldmark, then privately with Sessions. Engel founded and conducted the Lehman Engel Singers and the Madrigal Singers, and appeared widely with both groups in the late 1930s. *Four Excerpts from Job* (1932), one of his early works, appeared in the October 1932 issue of *New Music*; its style, atonal and canonic, suggests the influence of Schoenberg and Webern. His later music reflects an eclectic, more extroverted idiom, shifting to and from tonality and diatonicism, and marked by incisive rhythms. Most of his compositions, which cover a wide range of genres, were written between the late 1920s and the late 1950s.

Engel's reputation rests chiefly on his work in the theatre as a leading composer, conductor and musical director. He composed incidental music for numerous major theatrical productions and dance music for several distinguished choreographers, including Martha Graham. On Broadway he served as conductor and/or musical director for many shows, including *Wonderful Town* (1953, Bernstein), *Fanny* (1954, Rome), *Jamaica* (1957, Arlen), *Destry Rides Again* (1959, Rome), *I Can Get It for You Wholesale* (1962, Rome), and *Bajour* (1964, Marks); he also directed productions outside New York. In the field of opera he conducted the premières of Weill's *Johnny Johnson* (1936), Copland's *The Second Hurricane* (1937) and Menotti's *The Consul* (1950).

Engel initiated and directed BMI's Musical Theatre Workshops (1960–82) and held administrative posts with Columbia Pictures, the Concert Artists Guild, Arrow Music, the League of Composers, and other organizations. He wrote several books and delivered a series of lectures for the Smithsonian Institution on the evolution of American musical comedy. He also edited *Renaissance to Baroque: 3 Centuries of Choral Music*, published in seven volumes (1931–69). Among the honours he received are three Tony awards (1950, for Menotti's *The Consul*, and two in 1953) and awards from the England Theatre Conference (1977) and the Los Angeles Drama Critics' Circle (1981). His papers were donated to Yale University.

WORKS
(*selective list*)

Operas: The Pierrot of the Minute (1), 1927, Cincinnati, 1928; Golden Ladder (musical comedy), collab. W.A. King, J. Ross, L. Allan, Cleveland, 1953; Malady of Love (1, Allan), 1954, New York, 1954; The Soldier (3 scenes, Allan, after R. Dahl), 1955, New York, 1956; Serena (musical comedy, after S.N. Behrman), 1956

Ballets (all choreog. M. Graham unless otherwise stated): Ceremonials, 1932; Phobias (G. Sandor, F. Sorel), 1932; Ekstasis, 1933; Transitions, 1934; Imperial Gesture, 1935; Marching Song, 1935; Traditions (Limón, others), 1938; The Shoe Bird (R. Cooper, after E. Welty), 1967, Jackson, MS, 1968

Incidental music: Within the Gates (S. O'Casey), 1934; Murder in the Cathedral (T. S. Eliot), 1936; A Streetcar Named Desire (T. Williams, dir. Kazan), 1947; St. Joan (G.B. Shaw, dir. M. Webster), 1951; The Trojan Women (Euripides), 1951; Middle of the Night (P. Chayefsky, dir. J. Logan), 1956; Measure for Measure (W. Shakespeare, dir. Webster), ?1957; Twelfth Night (Shakespeare), 1957; The Tempest (Shakespeare), 1959 [for television]; *c*45 others

Other works: The Chinese Nightingale, cant, 1928; 4 Excerpts from Job, chorus, 1932; Str Qt, 1933; Pf Sonata, 1937; Sym. no.1, 1939; The Gates of Paradise, variations, pf, 1941; The Creation (Genesis), nar, orch, 1945; Ov. for the End of the World, 1945; Sym. no.2, 1945; Va Conc., 1945; Vc Sonata, 1945; Dialogue, vn, va, 1950; Vn Sonata, 1953; Roogies Bump, film score, 1954; Beyond Gauguin, film score, 1959

STEVEN E. GILBERT

Engelbert of Admont (*b* *c*1250; *d* 1331). Austrian theorist. A Benedictine monk of Admont, he studied at Prague (1271–4) and then at Padua (at the university and the Dominican school of theology). After 1285 he probably became Abbot of St Peter's, Salzburg, and from 1297 to 1327 he was Abbot of Admont. His *De musica* (ed. in Enrstbrunner: *Der Musiktraktat*) was obviously written to improve the musical knowledge of liturgical singers and their teachers. It draws on a collection of well-known treatises (including workd by Guido of Arezzo, Boethius and Isidor), surveying traditional music theory and terminology and explaining it in terms influenced by Aristotelian thought; yet, despite its didactic purpose, there is a strange discrepancy between the simple explanations of basics and the high level of presupposed philosophical knowledge.

Englebert divided *De musica* into a theoretical part (parts I and II) and a part concerned 'more with the practice' of music (parts III and IV). Part I presents definitions of music and sound, and the various nomenclatures used by earlier authors; part II explains the proportions of intervals and their species in relation to the diatonic context. Part III is concerned with 'ars solfandi', describing the solmization system in detail and prepairing, in its explanation of the tetrachord system of the Reichenau theorists, the doctrine of the eight 'toni musici'. Part IV, the main subject of which is plainchant, contains chapters conveying general concepts and the musical thinking of Englebert, for example the application of the Aristotelian terms 'motus naturalis' and 'motus violentus' to music. The work culminates with the last six chapters, his teaching on the 'distinctiones' in plainchant, in which he explains the necessity of structure in music and of singing with the natural requirements of perception.

ANDREW HUGHES

Engelmann, Georg (i) (*b* Mansfeld, nr Eisleben, *c*1575; *d* Leipzig, bur. 11 Nov 1632). German composer, organist and writer, father of GEORG ENGELMANN (ii). In 1593 he matriculated at the University of Leipzig, and he spent the rest of his life at Leipzig. About 1596 he was appointed organist of the university church, St Pauli, and then became musical director there, a position in which Sethus Calvisius collaborated with him for a time. In 1625 he also became organist of the Thomaskirche; Johann Schein and Tobias Michael successively held the position of Kantor during his years there. He held both his posts until his death, which resulted from the plague; Paul Fleming commemorated him in a Latin elegy.

Engelmann's published music was widely known in central Germany. His occasional motets, which are virtually all for six to eight voices and sometimes for two choirs, are competent, well-wrought works. His quodlibet is a long single work constructed from 72 musical and textual phrases of 53 different motets and German lieder by 12 composers – Lassus, Handl, Scandello, Meiland, Victoria, Schlegel, Ivo de Vento, Hieronymus Praetorius, Wert, Pevernage, Massaino, Knöfel – and some anonymous works. According to the title-page, the humorous mixture of Latin and German words and their associated music was composed for music lovers and friends in Leipzig.

Engelmann's three volumes of dances (1616–22) are specially noteworthy. They consist basically of pavans and galliards paired after the English manner, each pair being related tonally and often melodically and harmonically. Engelmann liked to give his dances fanciful names and he used anagrams to highlight connections between a pair; for example, a pavan called *Mirar* is followed by a galliard called *Rimar*. English (and also north German) influence is suggested too by traces of English jigg tunes. Although the opening passages of his pavans are motet-like in texture, Engelmann, like Scheidt and Thomas Simpson, generally adopted a more modern, freely polyphonic style, characterized by idiomatic string writing and brilliant, sometimes decorative figuration in the two highest parts.

As well as his interesting chronicle of musical and other events in Leipzig from about 1597 to 1632, Engelmann seems to have written at least one other prose work, for both Walther and Mattheson referred to his 'musical discourses concerning new and old music'.

WORKS

published in Leipzig unless otherwise stated

OCCASIONAL

Cantio nuptialis in honorem ... Dn. M. Melchioris Herlizii ... XXX Augustii 1596, 6vv (n.p., 1596)
Cantio in honorem ... Dn. Valentini Pischelii, 7vv (1600)
Dictum psalmi 147 ... honoris ... philosophiae candidatis ... quibus 25. januarij anno 1616. in inclyta Academia Lipsiensis, insignia & titulus magisterij publice conferebantur, 8vv (1616)
Hymnus jubilantium Lutheranorum Panegyricus: der 76. Psalm (Gott ist in Juda bekannt), 8vv, bc (1617)
Encomium sapientiae, ex capite 3. proverbiorum Salomonis (Beatus homo), 6vv, bc (1618), lost, but extract ed. in Wustmann
Ein Spruch aus dem 68. Psalm: Gott ist ein Vater der Waisen ... in eine Mottet ... verfasset ... zu den Hochzeitlichen Ehrenfreuden dess ... Matthiae Götzen ... und der ... Catharinen Schürer (Singet Gott, lobsinget seinem Namen), 8vv, bc (1619)
Eulogiai gamikai festivitati nuptiarum ... Dn. Laurentii Wilhelmi ...

cum Maria ... Georgii Richters ... filia (Cantores amant humores), 4, 9vv (1625)
Letzte Sterbens-Gedancken und Valet-Worte der ... Catharinen ... Schürerin ... in einen Trauergesang gefasset, welcher mit seiner ... vierstimmigen Choral-Melodey ... Ach Gott von Himmel sih darein: item, Wo Gott der Herr nicht bei uns helt (Clag, Trübsal, Elend überall), 4vv, in Epicedia Götziana (1631); extract ed. in Wustmann

OTHER VOCAL

Quodlibetum novum latinum, ex variis cantionum, maximam partem sacrarum, 5vv, bc (1620)
Jauchtzet dem Herrn alle Welt, 8vv (n.p., n.d.), inc.
Lobet und preiset den Herren, ?8vv, *D-Dl*
Gott schweig doch nicht also, 8vv, *Dl*
65 motets (7 printed), mostly 8 and more vv, lost (listed in Werner)

INSTRUMENTAL

Fasciculus [21] concentuum, cujusmodi paduanas et galliardas vulgo vocare solent, a 5 (1616); ed. H. Mönkemeyer (Celle, 1995); pavan and galliard ed. in Delli; extract of pavan ed. in Wustmann
Fasciculus sive missus secundus (22] concentuum, cujusmodi paduanas et galliardas vulgo vocant, a 5 (1617); ed. Mönkemeyer (Celle, 1995); 1 pavan ed. in Delli; 1 pavan and galliard ed. Thomas (London, 1990)
Fasciculus tertius [24] concentuum, cujusmodi paduanas de galliardas vulgo vocare solent, a 5 (1622); pavan ed. in Delli; balletto, galliard and intrada ed. in Wustmann

WRITINGS

Annales Lipsiensi, lost, formerly *D-LEm* (MS summary by E. Vogel extant, see Wustmann)
Theoretical works, lost (mentioned in *MatthesonGEP* and *WaltherML*)

KARL-ERNST BERGUNDER/FREDERICK K. GABLE

Engelmann, Georg (ii) (*b* Leipzig, between 1601 and 1605; *d* Leipzig, 1 Sept 1663). German organist and composer, son of GEORG ENGELMANN (i). He matriculated at the University of Leipzig in 1618 and was sworn in there in 1622. After his father's death he succeeded him as organist of the Thomaskirche, Leipzig, but only after two other candidates, the Merseburg Cathedral organist Caspar Schwarze and Gottfried Scheidt, had refused the post; he was first appointed on probation and was confirmed in office on 24 April 1634. In his later years he began to neglect his duties, and early in 1659 he was dismissed because of his continual heavy drinking. He died in total penury.

A volume of eight-part masses by Engelmann was announced in a book fair catalogue of 1643, but it is not known if it was published. His only extant works are two funeral songs, *Es heben all bereit* for four voices and continuo and *Giebstu nicht, o werther Gott* for five voices and continuo, both published at Freiberg in the year of his dismissal, 1659; the second was written to commemorate his son, Georg Ernst, who died at the age of 20.

KARL-ERNST BERGUNDER

Engelmann, Hans Ulrich (*b* Darmstadt, 8 Sept 1921). German composer and theorist. He studied composition with Fortner, Leibowitz and Krenek (from 1947), philosophy with Theodor W. Adorno and Max Horkheimer, among others, and musicology (DPhil 1952) at Frankfurt University. Following a stay in Iceland (1953–4), he worked as music adviser and composer at the Hessisches Landestheater, Darmstadt (1954–61), the Nationaltheater, Mannheim (1961–9) and the Städtische Bühnen, Bonn (1972–3). From 1969 to 1986 he taught composition as professor at the Frankfurt Musikhochschule. He has lectured on contemporary music at festivals and universities internationally. His honours include a scholarship from Harvard University (1949), the Confederation of German Industry prize (1955), the Lidice Prize of Radio Prague (1960), scholarships from the Villa Massimo, Rome (1960, 1967, 1983), the Stereo Prize of the German broadcasting industry (1969), the Johann Heinrich Merck Award (1971), the Goethe Medal (1986), the Order of the BRD (1991) and the Hessian Order *pour le merite* (1997).

Engelmann's output shifted in 1948 from freely atonal works to dodecaphonic and serial compositions. In 1961 he began to enlarge his compositional repertory further by incorporating techniques such as electronic sound generation, graphic notation, collage and montage. Many of his works also include jazz elements. His use of diverse techniques reached its climax in the pluralistic, multimedia dramatic works *Der Fall van Damm* (1966–7), *Ophelia* (1969), *Commedia humana* (1972) and *Revue* (1972–3), the dramatic style of which also reflects his interest in stereophonic radio opera. After a period during which he engaged primarily in the revision of earlier works (1974–9), he focussed his attention on smaller ensembles and developed a more homogeneous style.

WORKS
(*selective list*)

Stage: Doctor Faust's Höllenfahrt (chbr op, 1, Klabund, Engelmann), op.4, 1949–50, Hamburg, 1951, rev. Nuremberg, 1962; Magog (Musikdrama, 2, A. Müller and Engelmann), op.16, 1955–6; Der verlorene Schatten (lyrische op, 2, Engelmann, after A. von Chassimo), op.22, 1960; Der Fall van Damm (radio op, 3, M. Kutter), op.30, 1966–7, Cologne, 1968, rev. Münster, 1974; Ophelia (multimedia-theatre, M. Goldschmidt), op.36, 1969,

Hannover, 1969; Revue (Musiktheater, 2 pts, W. Swaczynna and Engelmann), op.43, 1972–3, Bonn, 1973; incid music for stage and TV

JAN KOPP

Engelmann, Johann Christoph. *See* KAFFKA, JOHANN CHRISTOPH.

Engerer, Brigitte (*b* Tunis, 27 Oct 1952). French pianist. She studied the piano first in her native city and then in Paris, winning a *premier prix* in the class of Lucette Descaves at the Paris Conservatoire in 1968 and a prize in the Marguerite Long-Jacques Thibaud Competition the following year. She then studied with Stanislav Neuhaus at the Moscow Conservatory and won prizes at the Tchaikovsky Competition (1974) and the Queen Elisabeth of Belgium Competition (1978). She has appeared in recitals and with orchestras throughout the world and made notable recordings of Russian music, including works of Musorgsky, Rachmaninoff and Tchaikovsky. Her unforced technique and poetic approach have also made her an outstanding interpreter of Schumann. She is an active chamber musician and has recorded Ravel's complete works for violin and piano (with Régis Pasquier) and the violin sonatas of Grieg and Schumann (with Olivier Charlier). She was appointed professor of piano at the Paris Conservatoire in 1994. (C. Timbrell: *French Pianism*, White Plains, NY and London, 1992, enlarged edn forthcoming)

CHARLES TIMBRELL

Engführung (Ger.: 'leading closely'). Thematic imitation at a short time interval, done in such a way that the statements of the theme overlap. In fugue and other contrapuntal forms it is called STRETTO.

England (i). Country on the north-western periphery of Europe. Although its borders and some of its institutions have changed little in a millennium, England nevertheless finds its identity, cultural as much as political, subject to an ever-shifting network of contributing peoples and governances. Some consideration to the terms and relationships that define England within Britain are given here.

Geographically, England is the largest, southernmost part of Great Britain, itself the larger of the two main land masses constituting the British Isles. Wales and Scotland are the other units of Great Britain, together with certain offshore islands long incorporated, namely the Channel Islands and the Isle of Man, both Crown dependencies of largely English culture, although they have their own laws, coins and assemblies. Politically, Britain – the United Kingdom, a democratic constitutional monarchy – has since 1922 included Ulster (Northern Ireland) and excluded Eire (southern Ireland), which became independent at that date; previously, the whole of Ireland was a possession of the British crown, colonial until political union in 1801. The kingdom of Scotland was politically independent of England until the Act of Union of 1707, though the two countries have shared a monarch from 1603. Wales was to all intents and purposes assimilated to England from 1485, though its language, unlike the other Celtic ones of Britain, retained official currency within the principality that it had become. To add to the historical complexity, England was effectively a colony of Normandy, governed by a French-speaking élite after William I's conquest of 1066, but by the time of his great-grandson Henry II, 100 years later, England and its monarch exercised control over the larger part of what is now France, though Henry was king only of England. Before the Norman Conquest, English identity must largely be a matter of Anglo-Saxon culture and language, imposed by invasion on earlier Celtic ones and modified in turn by a Danish admixture from later invasion. The paradox of English versus British identity is prominent in the figure of Arthur, a symbolic English national, yet historically a Celtic Briton fighting the Anglo-Saxons (as he appears in Purcell's semi-opera of 1691). Minus Ireland and Scotland, Britain comprised a group of Celtic tribes under Roman occupation for the first four centuries CE; they nevertheless joined as Britons in Boudicca's uprising of CE 61. English cultural identity dates arguably from around the time of Bede, possibly the first commentator to assume it. The English language developed from Anglo-Saxon but was not the vernacular of the governing classes until the 14th century. Now it is the foremost language of the world, but is spoken at home not just in noticeably different ways in the various traditional constituencies of Britain (including those of class and region) but by English citizens of increasing ethnic and cultural diversity.

England has always been the predominant entity within Britain, not least because its capital city, London (succeeding Winchester in the 12th to 13th centuries, although Westminster Abbey was already the coronation site before the Norman Conquest), has remained the capital of the United Kingdom and the hub of the overseas British

Empire. From its Roman foundation in the 1st century CE, London has always been the largest city in Britain. By the end of the 17th century it was the largest in western Europe, subsequently the largest in the world until the early 20th. In the new millennium London is still a leading metropolis and one of the greatest cultural centres of the world. It has dominated England's musical life and thus England has dominated Britain's, although seldom, if ever, Europe's or the world's prior to late 20th-century pop culture.

I. Art and commercial music. II. Traditional music.

I. Art and commercial music

1. Contenance angloise. 2. Orpheus Britannicus. 3. Absence of mind. 4. A musical renaissance. 5. English musical identity.

1. CONTENANCE ANGLOISE.

(i) Englishness in music. All the above factors have affected England's music, as have many others historically dependent upon them and perhaps a few external constants such as climate and geography. Thus musical terms of reference must be sought amid an interlocking and chronologically shifting set of identities at, above and below the level of England in structural and community terms. In a long-surviving monarchy linked for much of its history with a state church – a unique configuration in the present, though formerly paralleled up to a point in tsarist Russia – we should expect music to play a symbolic role as regalia, facilitating the country's corporate sentiment, trade, diplomacy, sense of history and so on. This role posits an inevitably hegemonic rather than ethnic or regional destiny for musical concepts of Britishness or Englishness other than the folk ones which it nonetheless embraces at critical moments. Yet just as the physical regalia have been melted down in the past, musical tokens are prone to remodelling over time and according to circumstances. Whether a populist national identity (that is, patriotic solidarity) can be assumed at all for Britain before the 18th century has been questioned, but 'England', already proudly peripheral, is a powerful construct in Shakespeare, who projects it back to the Middle Ages.

Music, as a performing art, is subject to institutional production, and musicology has not lacked accounts of how the nation's musical institutions (the Chapel Royal, for instance) function anatomically in the body politic. J.A. Westrup's 'England' article in *The New Grove* (A1980) and Caldwell's in *MGG2* (A1995) both offer comprehensive chronicles, Apel's in *The Harvard Dictionary of Music* (A1944) a thoughtful pocket survey. Beyond this, the discipline's emphasis on composers and their styles has tended to play into the hands of 19th- and 20th-century nationalism in its search for an intrinsic Englishness, spurred by certain contemporary perceptions of difference dating from as far back as the Middle Ages, above all in the sphere supposed to be most international: the pre-Reformation church. Englishness of style must certainly be addressed in this article, but the musical representation of England or Britain cuts other ways as well. As for the question of English music or British music, it is easier to raise conundrums than propose a rule of thumb. Perhaps all one can suggest, tentatively and with massive exceptions, is that from the 18th century musical representation of England tends to pertain more to the private sphere, of Britain, and indeed London, than to the public.

As early as the 1440s, in *Le champion des dames*, the Burgundian court poet Martin le Franc recognized in the contemporary English music of John Dunstaple and his fellows (Leonel Power, for instance) a discrete style, influential on the continental masters Du Fay and Binchois, 'characterized ... by "sprightly consonance" and a number of specific technical features' (Caldwell, A1991, pp.109–10). Two sweet-sounding 'sighting' (extempore) idioms, 'English discant' (two-part, contrary-motion counterpoint favouring the imperfect consonances, namely 3rds and 6ths) and faburden (parallel 6–3 homophony), contributed to this perception, as did 'gymel' when misunderstood abroad as improvised duetting in 3rds (it is, rather, an English *divisi* vocal scoring). Interacting with the more elaborate, cosmopolitan motet and chanson styles, they produced what Caldwell (ibid., 120) sees as the paradoxical mixture of 'euphony ... or, on the contrary, that relish for the harmonic clash of independently conceived lines' – the latter perpetuated, one senses, in the 'English cadence' flat and sharp 7th simultaneities of Tallis, the spiced chromatic collisions of Purcell, and the sombre triadic false relations of Vaughan Williams, all running counter to the diatonic strain.

Ever since Dunstaple's period, commentators and sometimes composers have been tempted to treat the idea

1. 'The minstrels who should solace a king': miniature from the treatise 'De secretis secretorum' by Walter of Milemete, 1326–7 (GB-Och 92, f.43r); their instruments are (from top to bottom) double pipe, fiddle, gittern (citole), timbrel, bagpipes, shawm, crowd, pipe-and-tabor, gong, portative organ, and (centre) positive organ and harp

of a special kind of sonority or other inherent property as the philosopher's stone of Englishness in music, Dahlhaus's 'immutable ethnomusical component'. Immutable it may not be, but the later Middle Ages and Reformation is as good a time as any on which to pin certain indigenous traits with causes and consequences before, in and beyond their era. Late Gothic sonority with its sense of space is one such trait, the cultivation of the English language and associated forms in songs, carols and anthems another. Both will be considered below.

(ii) The Gothic legacy. The uniqueness, longevity (roughly 1350–1530) and magnificence of the final English phase of Gothic architecture, the Perpendicular style, with its featherweight use of stone in fan vaults and huge windows, has often prompted comparison with the music written for such buildings. Certainly, English church music in the greater part of the century before the Reformation of the 1530s and 40s developed a spatial magnificence and complexity in patent stylistic isolation from the continent. This was in both arts partly the economic result of royal and aristocratic patronage: William of Wykeham endowed both the chapel buildings and choral foundations of Winchester College (1382) and New College, Oxford (1379), Henry VI did the same for Eton College and King's College, Cambridge (both 1440–41). In all four establishments there were 16 boy choristers plus a smaller number of adult clerks. Choral as opposed to solo polyphonic singing in church thereby developed early and far in England and gave rise to the unprecedentedly wide pitch range (*F* to *a″*), large number of polyphonic parts – six or seven routinely, sometimes nine or even 13 – and quirky, flamboyant textures of the votive antiphons of the Eton Choirbook of the late 15th century, an outstanding source preserving a unique virtuoso repertory virtually single-handed and to this day residing in its original home.

This style peaked with Fayrfax, Taverner and Sheppard and enjoyed a brief final flowering during Mary Tudor's Catholic reign (1553–8) in the antiphons of William Mundy and Tallis (including *Gaude gloriosa*), but it can still be sensed in Byrd's late Latin publications and presumably gave rise, in a different context, to Tallis's famous 40-part motet, *Spem in alium*, perhaps even, in the 20th century, to the doggedly British 'new complexity' foreshadowed in Brian, Sorabji and van Dieren and latterly pursued by Smalley, Ferneyhough, Dillon and others (Dillon acknowledging the Tallis influence). Certainly, the idiom was isolated from Renaissance limpidity developing at the hands of Josquin, and in the Anglican Reformation continental church music could in any case enjoy no place; but it might be argued that the contrapuntal and textural transparency of the latter, when finally taken up in England with the Italian madrigal (*Musica transalpina*, 1588), leading to the indigenous madrigal school – the only one outside the genre's country of origin – of Weelkes, Wilbye, Ward and others up to 1625, furnishes an excellent example of the English endorsing an idiom late and then excelling at it. Works such as Ward's *Out from the vale* and Wilbye's *Draw on, sweet night*, the former with its six-note diatonic dissonance, combine supremely expressive humanism with something residual of Gothic extremity.

The Eton Choirbook is one of the last of a series of manuscripts of English liturgical music from whose chance survival whole works, biographies and repertories have had to be extrapolated. Earlier ones, in a diminishing perspective of period, knowledge and musical accessibility, include the Old Hall Manuscript (*c*1400), the Worcester Fragments (13th- and early 14th-century conductus), and the Winchester Troper (*c*1000, associated like the famous Winchester organ with the cantor Wulfstan and containing the earliest surviving collection of Western polyphony, in the form of two-part organa). Further manuscripts in collections abroad make it doubly difficult to judge the extent to which English sacred polyphony in the Middle Ages, taking its cue from the localized Sarum (Salisbury) rite, was *sui generis*, or conversely influential on the Continent. The development of the cyclic cantus firmus mass of which the 'Caput' Mass of around 1440, tangentially ascribed to Du Fay but almost certainly English, is tantalizing evidence, is a case in point, imitated as it was by Ockeghem who thereby 'ensured the preservation of a certain Englishness in the mainstream of European music at a time when direct contact had failed' (Caldwell, A1991, p.158) owing to the political ousting from France abroad and the Wars of the Roses at home. Regardless of this particular work's authorship, one might still say with Bukofzer (C(i)1950, p.223) that 'the cyclic tenor Mass is the most influential achievement of the English school of Renaissance music', and consider further whether it marks the origins of 'symphonic' unification in Western musical thinking, an ambition whose scope already seems exultant, though with different structural means, in the extraordinary span of continuous musical time (up to 20 minutes) commanded in such a 'late Gothic' work as Mundy's *Vox patris caelestis*.

(iii) English melos. The English may have liked to discant on 3rds and 6ths because they were 'merry to the singer and to the hearer' (quoted in Apel, A1944, p.241), but the 'merrie England' myth in music goes back a lot further than the 15th century, to SUMER IS ICUMEN IN, the secular song (also with sacred words) preserved in a Reading Abbey manuscript probably of the later 13th. No matter that 6/8 is only one of its possible rhythmic interpretations; that, the minor-3rd cuckoo calls, major mode, affection for nature, rhetorical exuberance ('sumer' and 'cumen' on the upper tonic), oscillating harmony and drone bass make it the perfect English pastoral prototype, 'slightly too good to be true', as has been said of Grainger's *Country Gardens* as a folktune arrangement. Yet it is true, early date and all, and two more things about it bear consideration: its form and its melopoetics.

Sumer is icumen in is a rota, that is, a canon, in four parts. It is accompanied by a four-bar, two-part ostinato bass (*pes*), making six parts in all, otherwise unprecedented before the 15th century. Clever in its handling of all this (see *HarrisonMMB*, pp.141–4), it suggests an English love for music that turns around perpetually, whether with canon (or fugue), ostinato or refrain. Rondellus, the technique of canonic voice exchange common in English motets of the same period, is indeed how the *pes* of *Sumer* works. Often arrived at in the course of a canon, the onomatopoeic 'burden' is a feature of many of the recreational songs collected or composed by Thomas Ravenscroft – see *Derry, ding, ding, dasson* in *Melismata* (1611) – and is also implied in Shakespeare's *Full fathom five*. Purcell's catches, many of them obscene, and the gentleman's catch culture catered for by Playford and other publishers sees the impulse extended into the

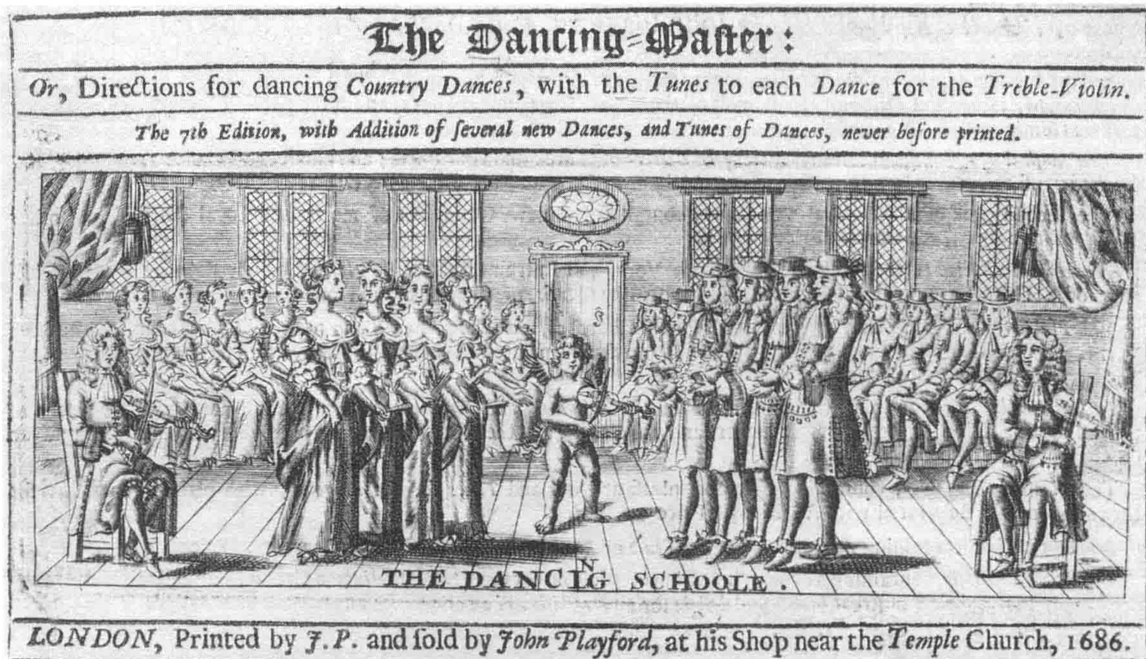
17th and 18th centuries, as a tavern or club pursuit related to the rise of concert life. Into the 19th century runs the glee, still retaining something of its remote link with clerical or monastic hilarity in the parts for male alto (60 male altos sang in the first performance of Mendelssohn's *Elijah* in Birmingham in 1846, and they cannot all have been from cathedral choirs) and in its fugal tendencies, dutifully chronicled as late as 1872 in the famous description of a musical meeting of the Bursley Mutual Burial Club in Arnold Bennett's novel *Clayhanger*. Parallel to all this, vernacular fugue and refrain come together comparably in the carol, courtly song and even the anthem.

The carol is associated overwhelmingly with Christmas and good cheer, but its indigeneity is best defined formally, as a song (originally danced) with parallel verses framed and separated by a recurrent section (again best called a burden), different from the refrain that can occur in addition as the last line of each verse. The *Agincourt Song* about the 1415 battle against the French (*Deo gracias, Anglia*, MB, iv/8) follows this prescription but also includes a second burden. Do its patriotic sentiment and (partly) English text make it a popular song or its polyphony a courtly or clerical one? Simpler polyphonic ploys of rudimentary imitation and canon characterize the burdens of some later songs such as, respectively, Cornysh's *Blow thi horne hunter* and *A robyn* (MB, xviii/35, 49), and this is perhaps where the link with the early anthem may be perceived, if a refrain-like sense of release and solidarity is felt in the repeated *B* section of Richard Farrant's *Lord, for thy tender mercy's sake* and other short pieces (see Milsom, C(ii)1980–81). Something similar forms the essence of the 18th-century fuging tune, a procedure still enjoyed today by Nonconformist congregations singing *Sagina* or even *Cwm Rhondda*, while the circling burden form survives in various Christmas favourites (the waits' carol *Past three o'clock*), in Victorian hymns (*All things bright and beautiful*), and in any 17th-century country dance tune, such as the Playford one pressed into service for *All things bright and beautiful*, built for indefinite repetition until a midway *fine*. Given the ubiquity of the daily school assembly in 20th-century Britain, it is not surprising that traces of these forms and the intricate distinctions of burden and refrain should be felt even in pop songs, such as the Beatles' *Eleanor Rigby*, *Can't buy me love* and *Help!*.

The melopoetics of *Sumer is icumen in* also tell us something. They make the most of the propensity of Anglo-Saxon words to intensify the stress of rhyme with association of sense – 'groweth'/'bloweth' 'seed'/'mead', even 'starteth'/'farteth' – and when the onomatopoeic dimension in which this association frequently resides (think of 'sneeze'/'wheeze') is extended to melodic congruence, a very tight lyrical premise ensues, unifying sound and sense. Compare the melodic settings of the rhymes given above: each involves an identical or corresponding (5th-removed) note and/or a similar contour. Nor is *Sumer is icumen in* the start of such melopoetics, for they can be found in the very first English songs, three attributed to St Godric who died in 1170, as with the coordinates of 'bur'/'flur', 'delie min sinne'/'bring me to winne', and 'mod'/'God' in *Sainte Marie* (HAM, 23a). Wagner, of course, exploited similar Anglo-Saxon properties of assonance and alliteration outside the English language in his *Stabreim* usage of the *Ring*, and we should have to take lyric devices back to the narrative ballad and epic of *Beowulf* and its period, and understand the structural role of harp (strictly lyre) accompaniment in minstrelsy, to uncover the roots of such art. The point is that it branched and flowered differently in English once the language lost its inflections and gained the flexibility of romance words, and to one later node, 18th-century nursery rhyme, must be added another, bourgeois comic opera, above all when the wit of Arthur Sullivan was added to that of W.S. Gilbert. Two of Gilbert and Sullivan's techniques, both cadential, need highlighting: the conflict of homely vernacular sense with lyrical or operatic decorum (as when Buttercup refers to 'toffee' and 'coffee' in a graceful waltz); and the use of dissociation between sound and sense – and normally incongruent grammar – through rhyme ('one cheer more'/'Pinafore'). These techniques were honed further by P.G. Wodehouse, possibly the first musical theatre lyricist to re-establish the practice of letting the tune be written before the words.

These melopoetics imply a simple equation between note and syllable, and one way to view the polar impulses

2. Opening of the top part of a motet setting of the Latin drinking song 'O potores', with illuminated initial, c1440 (GB-Lbl Eg.3307, f.72v)



of cultivated and vernacular expression in English music is in terms of melismatic or syllabic text-setting. It is the relationship between foreign opera and indigenous musical theatre in Purcell's and Handel's London. Later it is the florid rebellion of Britten in his song cycles, starting with *On this Island* (Auden, 1936), Tippett in his W.H. Hudson cantata *Boyhood's End* (1943) and both in their operas, against the syllabic 'just note and accent' of Finzi setting Hardy (*Earth and Air and Rain*, 1936) and of Parry, Butterworth, Gurney, Quilter, Warlock, Ireland and many others in the pseudo-vernacular lyrical markets of church, school and salon. Earlier it is composers' responses to the Reformation's demand for intelligibility superseding their Marian extravagance: Tallis's short anthem *If ye love me*, prompted by Archbishop Cranmer's 1544 dictum 'for every syllable a note', as opposed to his *Gaude gloriosa*.

2. ORPHEUS BRITANNICUS. Perhaps more than the growing national identity, in the later 17th century and throughout the 18th it was the reciprocal factors of England's growing mercantile power channelled (predominantly through London) and growing civilian freedoms that produced a national music, above all song. They did so through the twin commercial stimuli of publishing and the public venue (theatre, concert hall, assembly room and pleasure garden) and the opportunities for participation and instrument manufacture that complemented them.

(i) The public and metropolitan sphere. From this time almost to the present, folk culture, in addition to being seen as a series of unselfconscious and separate traditions within Britain, might also be viewed within a single more commercial one of 'national song' which embraced rather than separated the 'four nations' while acknowledging representatives of each. Thus was the world's first national anthem (*God save the King* – see Scholes, C(iii)1942) produced and popularized, as was *Rule, Britannia*, alongside English, Welsh, Irish and Scottish songs (*Heart of oak*, *All through the night*, *The rose of Tralee*, *Loch Lomond* and many others), all to be sung at hearths that were British.

Modern concepts of patriotism were certainly involved in this enterprise, which stretched back to tavern club songs such as *Here's a health unto His Majesty* on the one hand and, on the other, *Lilliburlero*, the 'new Irish tune' arranged or composed by Henry Purcell that 'was highly instrumental in singing out a Bad Monarch [James II]' in 1688 (quoted in Spink, C(ii)1992, p.6). Here and at the prompting of dramatic scenarios and song texts in works for the London stage, notably Dryden's *King Arthur*, mentioned earlier, Purcell took upon himself the transformation of the masque's symbolic glorification of court and state into an exercise in more populist myth-making (and see Aspden, B(i)1997, on the link between ballad narratives and English opera plots). It sings of Britain (*Fairest isle*), but the viewpoint is English, not least when Purcell uses a country-dance style 'topic' in *Your hay it is mow'd* and the pomp and circumstance of diatonic dissonance in *Our natives not alone appear* (see the subdominant major 7th at the final iteration of 'sceptred subjects'). A handful of early 20th-century songs by composers of art music, notably Parry's *Jerusalem* (text by Blake), Holst's *I vow to thee, my country* and Elgar's *Land of hope and glory*, has now largely superseded the earlier national corpus, but the model is still ultimately Purcellian and still only ambiguously British as opposed to English.

Most song finds its way to the public's heart via media entertainment of one kind or another, and if the English have always been concerned with how their melody relates to sung words, its relation to spoken ones, and to spectacle and action, has been equally critical. This must be investigated, in view of the failure of English opera.

3. *Title-page of 'The Dancing Master' (London: John Playford, 7/1686)*

4. Performance of a masque, possibly on 'Cupid and Death': etching by Francis Cleyn from John Ogilby's 'Fables of Aesop Paraphras'd in Verse' (London: Thomas Warren, 1651); a masque on this subject by James Shirley was staged in 1653

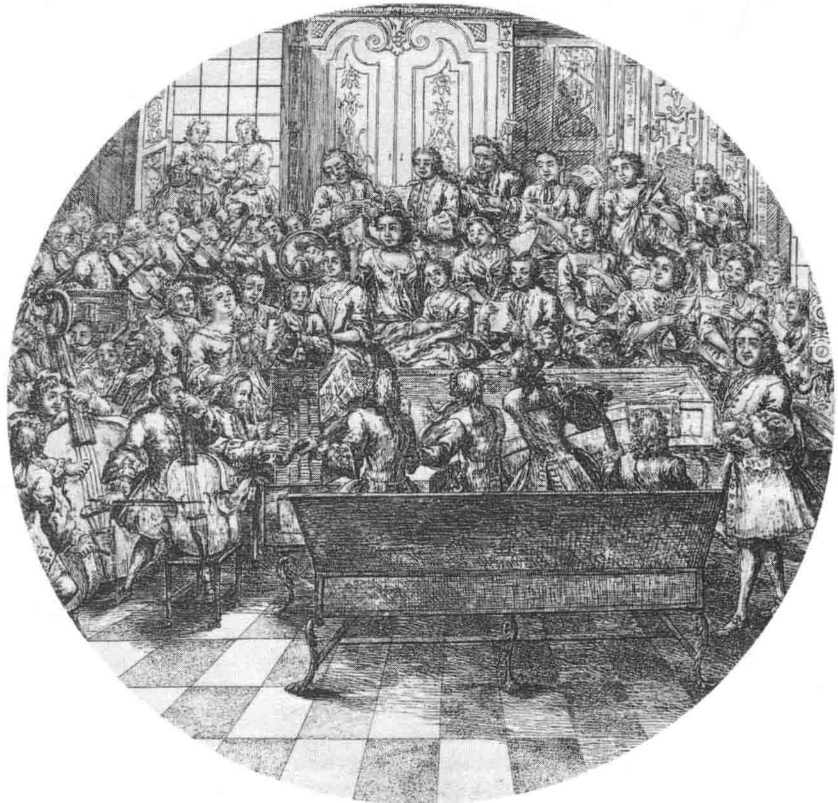
The first reason for that failure must be that, as an Italian art form arriving in London shortly before Handel and his former employer George I, both German, for the ruling classes there was no more obvious necessity for opera to be anglicized than there was for the king to learn English in a world in which most political business was conducted in French. Long thereafter, the aristocracy held to Italy as music's natural habitat. This explains why until the 1880s Wagner was performed at Covent Garden in Italian, and why, leaving aside the question of audibility, even today taste or snobbery decrees that the majority of seasoned English opera-goers prefer to savour its fare in the original language rather than submit to its rhetoric in their own.

Yet regardless of language, England might still have followed a lead and made *dramma per musica* its own. Some artists did try, but perhaps Handel was the wrong exemplar; instead, Steffani (working in Hanover) shows us what picturesque and vivid drama Georgian opera might have been capable of, had his contemporary Purcell not died young and had Steffani's own works been available as models to Purcell's brother Daniel, and to John Eccles, Gottfried Finger and John Weldon as they wrestled with Congreve's *Judgment of Paris* libretto for an English opera prize in 1700 – a circumstance itself revealing a national concern to keep up with the Joneses, or rather the Charpentiers and the Scarlattis. (Eccles later wrote *Semele*, an italianate opera in English, but it was not produced.) Handel's theatrical enterprise, forsaking

5. Rehearsal of an opera: painting by Marco Ricci, c1709 (private collection); one of a series of paintings on this theme executed while Ricci was scene painter at the Queen's (later King's) Theatre, Haymarket (it has been suggested that the central figure may be the castrato Nicolini)

Italian opera for English oratorio upon diminishing returns after about 1740, was as business speculation too financially precarious for a delicate fusion of tastes and traditions.

Perhaps, in any case, the English simply knew what they liked best (see Temperley, *GroveO*). Stevens says of the English late Middle Ages that music was 'widely used in ceremony' as regalia (strictly speaking, as its adjunct) but 'occupied a markedly subordinate position'. He adds: 'Music was there to draw attention to something worth seeing' (B(ii)1961, pp.239–40). From the medieval tournament or royal progress through the Jacobean masque and London's theatrical heydays of the 17th and 18th centuries to the Andrew Lloyd Webber 'megamusical', this may be a prescription for the preferred role of dramatic music in England. Where music and the stage are concerned, from the community street theatre of the late medieval mystery plays onwards (of which complete cycles survive for York, Chester, Wakefield and probably Norwich), the English seem nearly always to have felt that there is a time to sing and a time to speak, a time to marvel and a time to partake, a time to aim high, a time to bend low. In the Wakefield Second Shepherds' Pageant the comic shepherds, three-part musical improvisers to a man, wonder at the angels' elaborate polyphony ('Three breves to a long . . . /Was no crotchet wrong') which they try to emulate. Angels sing, shepherds speak or croak faburden, just as in Shakespeare high characters speak blank verse, low ones tumbling prose, and in later musical theatre romantic *ingénues* warble their operetta soprano opposite male leads of comic parlando.



The class structure of Britain, that apparently ongoing sense of fitness, decorum and division in hierarchy, sometimes of 'us' and 'them' (see Cannadine, A1998), as well as of compromise between different interests, would seem to decree this. So too would the historical conditions of English drama. London's commercial theatre emerged early as a matter of financial speculation on the part of company managers endeavouring to control a prodigious pool of freelance acting, writing and musical talent and manipulate a broad and large public, including the monarch, by acquiring royal patents or avoiding the Lord Chamberlain's censorship, the latter not abolished until 1968. Although the details are confusing, in general the patent system operated by licensing two or three privileged theatres in any given season from 1663 until 1843, housed at various times as follows: Lincoln's Inn Fields (1656–1732), Dorset Garden (1671–1709), Drury Lane (1674), Covent Garden (1732–), Lyceum (1798–), and two Haymarket theatres, His/Her Majesty's/King's (opening as Queen's, 1705–) and Theatre Royal (1720–). This had two consequences. First, spoken drama might be licensed at the one house, opera at the other (or the third), which highlighted opera's exoticism. Second, no other venue could without a special licence mount a straight play, or after 1737 any dramatic work, which had the effect of forcing music into the production first for entrepreneurial rather than aesthetic reasons and then as an interpolated masque or concert. Almost nowhere between the *Judgment of Paris* competition and John Reith's paternalistic broadcasting policy at the BBC in the 1920s and 30s do we see enlightened patronage incubating native aesthetic ambition for reasons of philosophical prestige; and one might propose further that the English have never sought an integrated philosophy of art but preferred to tolerate everything provided it keeps its place. It was only when Arthur Sullivan, the most successful theatre composer England had ever produced prior to Lloyd Webber, attempted to cross over to the 'serious' sphere with his opera *Ivanhoe* (1891) that he failed.

What flourished from the late 17th century in place of through-sung *opera seria* were oratorio (to be considered in the next section), the public concert, and music on the stage with speech and dance. Music houses, as coffee houses were soon to do, sprang up in London like taverns, or in them, during the Commonwealth, and John Banister

began a public concert series in 1672. In the 1680s and 90s concert rooms were being specially built, and by 1748 they included the Holywell Music Room in Oxford, still surviving. The indoor concerts themselves were at first sometimes more like mixed-media variety acts, and vocal items interspersed in instrumental programmes were ubiquitous until 1850, finally quitting the scene still later, well into the 20th century. Nevertheless, these were habits of the time, not barbarisms of place, and the establishment of the Philharmonic Society in London in 1813 was a major advance in the presentation of orchestral music, preceded as it was by such signs of public health as Haydn's enthusiastic reception in 1791–5. And if, as the 19th century wore on, England had difficulty in staying ahead in a rapidly developing medium (stinted rehearsal time, remarked on by Wagner, has been an ongoing problem with English orchestras), such landmarks as the foundation of the Hallé Orchestra in Manchester in 1858, the success of the Henry Wood Promenade Concerts (taken over by the BBC in 1927), the BBC itself, with its national and regional orchestras, and the presence, at the start of the 21st century, of five professional symphony orchestras in London offer a more positive picture, as does the building or refurbishment of major halls between the 1970s and 90s (Barbican, London; Symphony Hall, Birmingham; Bridgewater Hall, Manchester; Philharmonic Hall, Liverpool) to replace or supplement those of the Victorian civic movement.

Ballad opera is a convenient if inaccurate shorthand for a number of associated and interconnected genres: English comic opera, burlesque, pasticcio, pantomime and eventually, by the end of the 19th century, musical comedy, variety and music hall. What they have in common are a number of features that tell us much about England and the English: popular or hit tunes, sung by singing actors and star actresses in vernacular English; spoken portions of drama, sharing their satirical or sentimental wit with the homely qualities of the music; a metropolitan theatre or pleasure garden base, as show or extracted numbers (the *rus in urbe* populist model of Vauxhall and Ranelagh extending to other cities, notably Bath where the Linleys were active, and eventually to seaside resorts); the trappings of opera (lavish instrumentation, melodrama, alluring singing) without its foreign totality; management by commercially aware dramatists and impresarios; interdisciplinary collaboration, with script, dancing, comic routine or spectacle as important as music; the sceptical mockery of pretension, be it heroic opera, the English (or foreign) character, current fashions or politics, or myth; and, arising from all these, no fixed place in the canon of concert and operatic monoliths, to which they have continued to lose out.

(ii) The private and provincial sphere. For all the precocious growth of the public sphere of music in late 17th-and 18th-century England, in tavern concert, pleasure garden, oratorio and musical theatre, there was a counter-thrust of what went on behind closed doors – and perhaps there still is, to judge from the resonance of Finnegan's 'hidden musicians' thesis (C(v)1989) about music-making in modern Milton Keynes. In England there has long been a challenge set between the private love and practice of music and the public display of it for gain, a distinction between amateur and professional, sometimes

6. Private rehearsal of an oratorio, with orchestra, continuo, choir (including women) and soloists: anonymous engraving, c1735; it has been suggested that the figure in the right foreground is Handel

7. A musical party: painting by an artist of the English School, c1750 (private collection)

between metropolis and country, more to the indigenous taste (as with the nation's gentlemanly sporting traditions) than implications of lower and higher standards. At the point of triumph of the foreign virtuoso, particularly on the violin, from the 1660s onwards in Charles II's Restoration court and capital, Roger North lamented the summary dispatch of the country gentleman's viol consort, 'which', he wrote around 1695, 'would seem a strange sort of music now, being an interwoven hum-drum, compared with the brisk battuta derived from the French and Italian'. The old way was good because music, thereby 'kept in an easy temperate air, practicable to moderate and imperfect hands, who for the most part are more earnest upon it than the most adept . . . might be retained . . . in diverting noble families in a generous way of country living', rather than make them rush to London for the season to hear the latest overseas sensation (Wilson, C(iii)1959, pp.11–12). Yet the country and the city have continued to fight it out for the soul of English music, and for all London's domination, the land is small enough that musicians, rather like the 18th-century dancing master John Weaver, a man of international importance who not only began but concluded his career in Shrewsbury, have been able to commute and retreat. Tomkins, Byrd, Weelkes and many others held provincial cathedral appointments in addition to Chapel Royal ones and must have written much of their music in the country. Samuel Sebastian Wesley, perhaps England's most original 19th-century composer before Elgar, was born and trained in London but never held a mature appointment there. Elgar himself lived mostly around Malvern, Britten in Aldeburgh, while Peter Maxwell Davies has settled on Hoy in the Orkneys, although Vaughan Williams, paradoxically for one of idyllic reputation, started and ended his creative life a Londoner, moving to Surrey in between only because of his first wife's health. However, something other than ease of access must have impelled the earlier provincial dwellers, for English roads were notoriously bad until the late 18th century. And more recently Eric Coates, appropriately enough for the composer of metropolitan light classics such as *Knightsbridge*, *Oxford St* and *Covent Garden*, claimed that ideas came to him best in London, away from his Sussex cottage.

If the later 17th century witnessed the wholesale commercialization of music in England, to the benefit of the public sphere, by the end of the 18th the unprecedented level of consumption of music in the home was once again transforming musical exchange and meaning into something much more private. London harpsichord and then pianoforte manufacture, itself an increasingly industrial feat, was in symbiosis with a body of keyboard composers, many of them immigrants, and with an equally industrial publishing trade, second only to that of Paris at the beginning of the 19th century. Hence John Broadwood

and his mass production (400 pianos a year around 1800 as opposed to an average of 40 by the Viennese makers); Clementi and Cramer resident in London, not just as musicians but as entrepreneurs (both founded publishing houses); the London Piano School; and the Victorian parlour ballad, where the domestic instrument, bourgeois sentimentalizing, theatre hit and academic respectability met in the person of Sir Henry R. Bishop and his *Home, Sweet Home* (from a melodrama with songs, *Clari*, 1823). Bishop, the first professional musician to be knighted in England and professor of music at Oxford University (not that that meant much) had been a commercial theatre composer, and he could still fuse popular and cultivated tastes through the lingua franca of Italian bel canto.

But in the first decades of the 19th century, no sooner was Napoleon defeated than German romantic seriousness, already embraced on another front in the relations between Beethoven and the Philharmonic Society and about to bring Weber to Covent Garden and Mendelssohn to Abbotsford, Windsor Castle and Birmingham as well as London, realigned English musical self-acceptance as complacency and undermined it. So too, paradoxically, did the very romanticism of the national enterprise in song in so far as the repertory not only continued to co-opt the folk identity of the Celtic fringes (Ireland, Scotland, Wales) through the literary work of Percy, Macpherson, Burns, Moore and many others, but elevated it to such an extent that it left the English centre empty until it too was found an identity by Cecil Sharp.

Musical xenophilia, while hardly extending to the French or to revolutionaries such as Wagner, was one source of the perception of a *Land ohne Musik*. A second must have been the lack of two developed traditions, regional courts with opera and orchestra, and organ music with pedals (and that in a country with a Protestant state church), either of which would preclude a native Bach, an increasingly beloved figure in England perhaps partly for that reason. The weight of literature was a third: Balfe or Macfarren could not hope to match the rich texture of Dickens, itself inherited all the way from Shakespeare, whose Falstaff not even Vaughan Williams and Holst in the 20th century managed to capture in opera (although Dyson, with their stylistic help, caught something of Chaucer's national characterizations in his massive cantata *The Canterbury Pilgrims* of 1931). But the fourth and most fatal symptom was philistinism, that sense of keeping music in its place already alluded to. Matthew Arnold and other intellectual giants recognized this as the price paid for Victorian industrial prosperity. The kind of music that flourished most spectacularly in 19th-century England was accordingly music relating to the home and to the people's entertainment: the commercial song on the one hand, increasingly channelled, for wit or sentimentality, through blackface minstrelsy (hence increasingly transatlantic), and, on the other, any utilitarian vehicle for ensembles such as brass bands or amateur choirs, where the status of the performers or performance mattered more than that of the music. Oratorio as a national expression of musical sublimity was an exception, to be considered below.

3. Absence of mind. It was said by the 19th-century historian John Seeley that Britain acquired its empire simply in a fit of absence of mind: an exaggeration, no doubt, but if partly true, reason enough why the role of music in the representation of the British Empire was strangely insignificant or, more serious and more likely, has not been researched, perhaps because the terms of reference for musical greatness need suspending where such a phenomenon is concerned (however, see Leppert, C(iii)1987, and Woodfield, C(ii)1995, on India).

PROFESSIONAL CONCERT,
HANOVER-SQUARE.

THE FOURTH Performance will be on MONDAY NEXT, the 3d of March.

PART I. Overture—Rosetti. Quintetto, for two Violins, two Tenors, and Violoncello, by Messrs. Cramer Borghi, Blake, Hackwood, and Cervetto—Pleyel. Song, Mr. Bowden; Concerto Violin, Mr. Cramer; Song, Mrs. Billington; Concertante, for a Violin, Tenor, Violoncello, and Hautboy, by Messrs. Cramer, Blake, Cervetto, and Parke—Bach.

PART II. Symphony—Haydn. Song—Mr. Harrison. Concerto, French Horn—Mr. Punto. Song—Mrs. Billington. Symphony—Pichl.

The Doors to be opened at Seven o'Clock, and begin precisely at Eight.—The Subscribers are earnestly entreated to give positive orders to their coachmen to set down, and take up, with the horses heads towards Hanover-Square.

N. B. The early intimation the Committee gave the Nobility and Gentry of their intention to receive no more Subscriptions than the Room would conveniently admit of, encourages them to hope they shall not suffer in the opinion of those, who have been disappointed of Tickets, and re-[illegible]fully informs them, that on Monday the 18th of Fe-[illegible] the Subscription for the present season finally closed.

8. Advertisement for a Professional Concert to be held at the Hanover Square Rooms, London, 3 March 1788

(i) Music and the British Empire. We have only unconnected glimpses of the musical territory of Empire. Here are six, from the state, the military, the church, education, the media, and merchandise. Robbins (A1998, p.219) states that in British India 'the pomp and ceremony surrounding a Viceroy was a sight to behold'. Was it also a sound to hear? It certainly was in Hong Kong at its return to China in 1997. As in peace, so in war. Linda Colley (C(iii)1992, p.325) stresses the importance of music to Britain during the Napoleonic wars, at a time when we forget 'how limited a range of sound was normally available to the mass of people ... so [that] when recruiting parties brought their wind instruments, drums and cymbals into small villages, the effect was immediate and powerful'. As for the representation of Protestant Englishness in church music, the English hymn – although again it is also British, with major contributions from Scotland and Wales – built up over three or four centuries, has permeated the anglophone world. So have attendant ecclesiastical products, procedures and performing practices, by no means only in worship. Specific traditions of organ building and playing developed in the wake of Henry Willis's showpiece instrument at the Great Exhibition of 1851 (which went to Winchester Cathedral). The late 20th-century touring and recording success of ensembles such as the Tallis Scholars (and many others before them, plus cathedral choirs) and extreme popularity of Rutter's choral music in America and Australasia (as well as in Britain) posit a specific vocal timbre and harmonic style as pre-ordainedly English (and lucrative).

Our fourth snapshot: the British Empire exported both its competitive music festival movement and its examination system. The former would appear to be still much in evidence in Africa; the latter not only survives but flourishes uniquely, even bizarrely, in ex-Empire territories as the Associated Board of the Royal Schools of Music

continues to send examiners to the tropics. Capping all these examples, at least from a millennial perspective, is the continuing importance of the BBC and its music broadcasts, two types especially: the World Service on the radio and the televising of major state events. England exposed 750 million viewers from 74 countries to the sounds issuing from St Paul's Cathedral at the wedding of Prince Charles and Diana in 1981, and still larger numbers were witness to the cultural statement boldly made at the latter's funeral in Westminster Abbey 16 years later when Verdi and Tavener shared the musical liturgy with Elton John. In an age of instant global communication it is tempting but probably unwise to dismiss such single events as ephemeral.

Finally, the two-way transatlantic migration of anglophone popular song, mentioned earlier, is seldom seen, but probably should be, as a major artistic consequence of trade in the British Empire, long after the colonies' independence. The Broadway-West End axis of popular musical theatre in the 19th and 20th centuries is ample demonstration of the commercial scope of music under such conditions. Lord Lloyd Webber and Sir Cameron Mackintosh, heirs to the enterprise, are among the richest men in Britain.

(ii) Laissez-faire. The ironic fate of Sullivan's success, mentioned earlier, might point to Victorian laissez-faire hypocrisy: censuring people for the very choices they thrust upon them. At the turn of the 20th century, as Parry observed with abhorrence in his Oxford lectures, many an upper-class Philharmonic Society subscriber delighted in the vulgarity of the music hall. Equally, it might betoken no urgent need to define the relationship between theory and practice, between profession and hobby, between official and unofficial musical activity. In this London's artistic profusion has certainly had its effect. 20th-century composers such as Lutyens, Frankel and Arnold supplemented or earnt their living by writing scores for the nearby film studios, which unlike their North American counterparts they could do without a 3000-mile migration. Far more than in mainland Europe and North America, scholars move between worlds for which they are qualified and worlds into which a meritocracy or the old school tie or the moment of opportunity invites them: the academy, broadcasting, journalism and even performance. Similarly, orchestral players and classically trained singers double as session musicians, a London tradition stretching back, one might argue, to the choristers of St Paul's, the Chapel Royal and St George's Chapel, Windsor, whose secondary capacities were as actors and viol players on the Elizabethan stage, the consort song arising as an associated genre.

With the choirboys this multiple function was clearly part of an integrated education (and economic asset), not unlike the Italian *ospedali* in marketing the cultural by-products of a state resource or obligation, in that case of charity. English charity later produced a spectacular example of cultural display – what better medium for this than music and children's voices? – in Thomas Coram's Foundling Hospital in London, which received its royal charter in 1739 and attracted the patronage of Hogarth and Handel (who repeatedly performed *Messiah* there), while other London charity schools, which had long provided parish church choirs, paraded their young pupils to the annual joint service, concerning which Berlioz in the 19th century was as touched by the sound of their singing in St Paul's Cathedral as William Blake had been in the 18th by the sight of their procession. However, like the children of Christ's Hospital (founded 1553), Coram's beneficiaries were being trained in music but not to be musicians: to see music as handmaid to charity rather than as an honourable profession has been an English predisposition, indeed an extension of the benefit concert system in the case of the Three Choirs Festival (founded in about 1715) and one or two others. So has the tendency to use music as a passport to personal success – in the 20th-century choir school or university scholarship audition, where it functions like sport, or in the 19th-century female marriage bid, where it was effectively part of the dowry – rather than as the meaningful or gainful substance of that success. Again it appears that there is no integrated philosophy of art, or only a utilitarian one.

In general, education has had a habit of training the English person for everything and nothing, comprehensive if conservative in its techniques but undirected in its aims. The universities of Oxford and Cambridge, in particular, continue to nurture brilliant pioneers in fields other than

9. The band at the King's Theatre, London: one of four studies by John Nixon, pen and ink with grey wash, 1806 (private collection)

the one studied, not least because, despite their heavily musical culture, it was not possible to take a residential undergraduate music degree in most English universities until after World War II. Many a famous medical practitioner has played quartets in private with top professionals, just as many an early music performer or music critic read English or History at college. Yet only in England did the award of music degrees from the 16th century onwards provide 'an opportunity for the reconciliation of Boethius's supposedly incompatible three kinds of musician, performer, composer and academic, and of *musica speculativa* and *musica practica*', producing composers and works (such as Fayrfax and his *Missa 'O quam glorifica'*) both practicable and hermetically learned (Bray, C(ii)1995, pp.20–21)

(iii) Muscular Christianity. Wagner visited London in 1855 to conduct the Philharmonic Society, and hearing the Sacred Harmonic Society perform a Handel oratorio at Exeter Hall, wrote: 'It was here that I came to understand the true spirit of English musical culture, which is bound up with the spirit of English Protestantism. This accounts for the fact that an oratorio attracts the public far more than an opera . . . an evening spent in listening to an oratorio may be regarded as a sort of service . . . Every one in the audience holds a Händel piano score in the same way as one holds a prayer-book in church' – an *aperçu* glossed by Linda Colley, who says of the audience: 'what many of them were worshipping was Great Britain, and indirectly themselves . . . An extraordinarily large number of Britons seem to have believed that, under God, they were peculiarly free and peculiarly prosperous' (op. cit., p.34). Most of Handel's oratorios are about the Israelites of the Old Testament, the Chosen People struggling to subdue their enemies, sure in the belief of their utter righteousness and quick to condemn any of their own kind who transgress. Handel commemorations, particularly that of 1784 in Westminster Abbey, reinforced the message by enlarging the scale of performance to huge choirs (Wagner refers to 700 voices), and Mendelssohn fuelled the tradition once again from Germany with *Elijah*.

With Georgian confidence or Victorian pride, 18th- and 19th-century Britons could unquestioningly apply such moral representations to themselves, at least until their consciences were pricked by George Bernard Shaw, who found 'the prostitution of Mendelssohn's great genius to this lust for threatening and vengeance, doom and wrath . . . the most painful incident in the art-history of the century' (*The World*, 25 June 1890). When the most original music in mid 19th-century Britain is in the form of cantata-anthems by S.S. Wesley such as *Ascribe unto the Lord*, with its graphic dispatch of the heathen and lyrical sonata-finale resolution to the text 'The Lord hath been mindful of us', Shaw's point is well taken. By 1900, however, the oratorio tradition was a dead weight around the necks of English composers. The sheer number of choral societies and festivals, especially in the northern industrial towns and cathedral cities, meant that there was still money in it for them, via commissions or sheet music sales, but Elgar's contribution, heavily Wagnerian, is indicative: a maverick Roman Catholic masterpiece (*The Dream of Gerontius*, 1900) followed by an uncompleted epic trilogy on early Christianity (*The Apostles*, 1903, and *The Kingdom*, 1906; no *Last Judgment*), all for the Birmingham Triennial Festival. Britain as a declining industrial power could not be sure how to perpetuate this tradition of mass cultural expression. Its growth had supposedly kept idle hands out of the pub in insurrectionary times and occupied them instead with the self-improvement of sight-singing (pioneered by Sarah Glover, John Hullah and Joseph Curwen in various Sol-fa systems around the time of the Chartists), much as with the brass bands and amateur operatic theatres attached to (and paid for by) factory concerns, those of Black Dyke Mills, Grimethorpe Colliery, Cadbury at Bournville, John Lewis in London and many others surviving into the late 20th century or beyond. But its decline shows in the fracturing of the later choral repertory into isolated monuments (Walton's *Belshazzar's Feast*, Britten's *War Requiem*; Tavener and Tippett), and perhaps also in the demise of English comic opera after Edward German, himself an uneasy and eventually silent successor to Sullivan.

One smaller form of mass musical expression has seemingly never deserted England, at least to the extent that it is still a Protestant country in name and deed if not in faith: hymn-singing. Several overlapping traditions make up the Protestant legacy. The 150 Old Testament psalms were translated into metrical English at the Reformation, in the standard long, common and short metres, to be sung in the home and by congregations in

A 'PHIL.' PROGRAMME OF 1844

UNDER THE IMMEDIATE PATRONAGE OF

Her Majesty.

PHILHARMONIC SOCIETY.

FIFTH CONCERT, MONDAY, MAY 27, 1844.

PART I.

Sinfonia in B Flat (No. 4) - - - *Beethoven.*
Duet, "Stung by horror," Miss RAINFORTH and Herr STAUDIGL (Pascal Bruno) - - - *J. L. Hatton.*
Concerto, Violin, Herr JOACHIM - - · *Beethoven.*
Overture - - - - | Duetto, "Pazzarello, O qual ardir" Mr MACHIN and Herr STAUDIGL - - - | Quintetto e Coro, "Ah! godan lor felicitade," the principal parts by Miss RAINFORTH, Miss A. WILLIAMS, Messrs MANVERS, MACHIN, and Herr STAUDIGL - - - - } (Faust) *Spohr.*

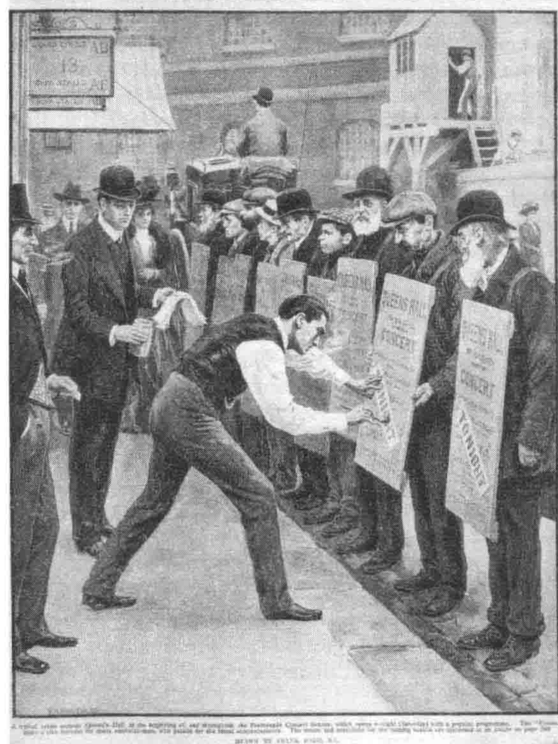
PART II.

Overture - - - | Scherzo - - - | Song, with Chorus, "You spotted snakes,' Miss RAINFORTH and Miss A. WILLIAMS - - | Notturno, March, and Finale-Chorus - } (A Midsummer Night's Dream.) *Mendelssohn Bartholdy.*
Song, with Chorus "Joy, 'tis a glorious thought," Herr STAUDIGL (Fidelio) - - - } *Beethoven.*
Hunting Chorus (The Seasons) - - - *Haydn.*

Leader, Mr LODER—Conductor, Dr F. MENDELSSOHN BARTHOLDY.

⁂ *To begin at Eight o'clock.*

THE NEXT CONCERT WILL BE ON MONDAY THE TENTH OF JUNE.



10. Programme of a Philharmonic Society concert conducted by Mendelssohn, 27 May 1844

church. The Sternhold and Hopkins *Whole Book of Psalms* after this fashion dates from 1562, with myriad later editions. Until the 18th century 'the old way of singing', still found in the USA and the Hebrides and consisting of slow improvised heterophony line by line following a leader's rendition, perpetuated these unaccompanied tunes.

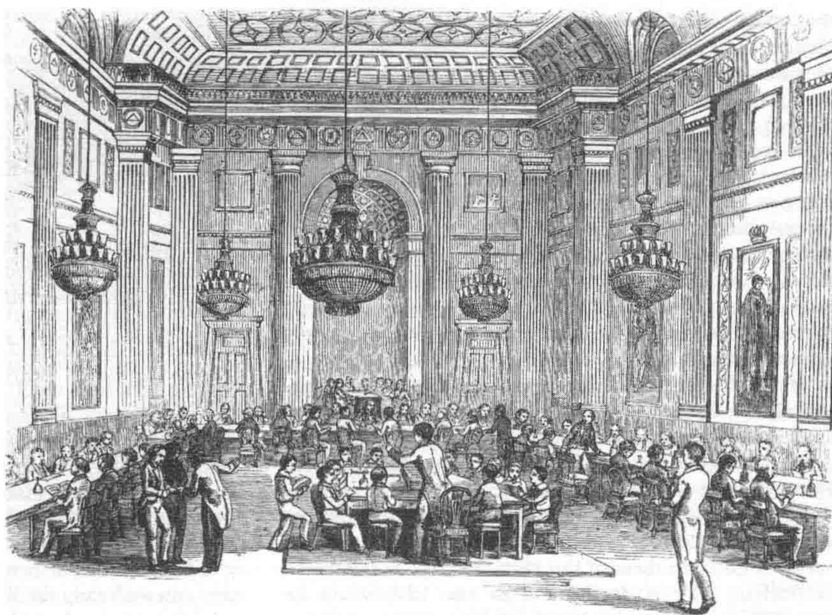
Meanwhile four-part accompanied versions of the metrical psalms began to appear early and found their way into later hymnbooks, and non-metrical four-part harmonizations of English psalm texts with 'gathering notes' became the Anglican chant tradition of cathedral and parish church, choral or congregational and still in use. Psalmody presented the psalms and other sacred verse texts as composed partsongs or accompanied tunes for use by the parish 'gallery' choir and accompanying instruments (not necessarily organ), themselves a development of the late 17th century lasting through to the 19th until stamped out by the Oxford movement with its ritualistic agendas (including a chancel choir and organ). At the same time the congregational hymn developed: metrical texts composed to supplement the psalms (for instance with New Testament content) which they eventually overtook, particularly with the writers Isaac Watts and Charles Wesley. Books such as *Chetham's Psalmody* (1718) had huge and long-lasting currency well into the 19th century, but with *Hymns Ancient and Modern* of 1861 the basis of the modern hymnbook, gathering up hymns and metrical psalms into a cumulative compendium, was established. Much of the foregoing applies to the nonconformist denominations as well as the Church of England (some of it, indeed, to the British Sephardim), and to the USA. What has been the effect of hymn-singing on English music? It would seem to privilege a sense of the harmonic moment or epigram, short-term emotion, rhetoric or closure with decorum yet feeling, above all with consistency; to make these prized sometimes above dialectical range and span; to enshrine the archaic or the familiar, both in word and note (or chord); to stimulate mass chanting (not least at football matches, from *Abide with me* to various rude contrafacta of cherished ditties).

(iv) Enterprise culture. The English contribution to music, especially within the Empire, has often been sustained by men (all too occasionally women), not all of them British, operating from London as committed and influential entrepreneurs, but not necessarily star composers or performers. This is one reason why the history of music in England is not easily written in terms of its great compositions, although cause and effect might be reversed to explain their rise to the top.

Names could be multiplied. The foremost makers of English musical culture would certainly include Sir George Grove, founder of this dictionary. He built lighthouses, railway stations and bridges; pivoted his career on the secretaryship of the Crystal Palace (home of the Great Exhibition); worked for a major publisher, Macmillan, on two ground-breaking encyclopedias (the other involving Palestinian archeology) and as editor of their monthly; pioneered practical musicology, from the writing of programme notes to the discovery of Schubert manuscripts; and headed the RCM, offering a role model for the non-executant musical administrator too often spurned since. Two expatriate Italians, Michael Costa and Vincent Novello, represent very different types.

11. Scene outside the Queen's Hall, London, with sandwich-men advertising a Promenade concert in the 1895 season, to be conducted by Henry Wood: engraving by Frank Dadd

Within 20 years of settling in England, by the mid-19th century, Costa, the embodiment of consolidated Victorian power, was conductor of the nation's four most prestigious music-making institutions: the Royal Italian Opera (and then its Covent Garden offshoot), the Philharmonic Society, the Birmingham Festival and the Sacred Harmonic Society. He represented an immaculate if conservative cosmopolitan professionalism, Jewish of culture though not of religion, on which nationalism later turned its back. Novello, peaking a decade or two earlier, was Catholic, connected with intellectual radicals (Leigh Hunt, Shelley and their circle), and head of a family dynasty. His son Alfred founded the publishing house, acme of mass cultural expansion, and *The Musical Times* (1844), the longest-running music periodical in the world; his daughter, the singer Clara Novello, steered an unlikely course between the performance of English oratorio and the liberation of Italy. He himself edited, published and, as embassy chapel organist, performed Mozart, Purcell and other neglected sacred repertories. All three Novellos retired to Italy.



An earlier contrast seems in order, between two more publishers. John Playford, in the preface to his *Musical Companion* of 1673, raised a complaint still familiar more than three centuries later when he asked his English readers whether, since 'we have at this day as able Professors of Musick of our own Nation, as any Foreigners . . . we [were] not generally too apt to disesteem the Labours & Parts of our own (though otherwise elaborate & Ingenuous) Country-men'. He encouraged his country-

men by publishing almost anything English that amateurs (in the strict sense of the word) might want to play, sing, dance and study: psalmody, lesson books and repertory for various instruments, and in *The Dancing Master*, the largest single repository of ballad tunes that has come down to us from that time. Ian Spink (C(ii)1992, p.20) thought that 'perhaps the musical well-being of the country in the second half of the century owed more to him than to any other person'. Thomas Morley, on the other hand, had invested his country's musical consumption precisely in overseas (Italian) stock when he masterminded the madrigal movement in the 1590s. Organist of St Paul's Cathedral, Gentleman of the Chapel Royal, pupil of Byrd, arranger of many Italian works in his own compositions, neighbour, probably acquaintance, of Shakespeare who made the setting of *It was a lover and his lass* still today all too evocative of schooldays, and government spy who escaped with his life on his knees before the representative of those he may have betrayed, he inherited his teacher's music printing monopoly and put together *The Triumphs of Oriana* (1601) by engaging the goodwill of his 23 musical compatriots who contributed, not to mention Queen Elizabeth, who was its dedicatee and subject. Music printing in England had been mostly limited to psalters before Morley stimulated tokens of luxurious as well as pious leisure. He also wrote and published the first English manual of composition, his witty and direct *Plaine and Easie Introduction to Practicall Musicke* of 1597 whose opening conversation gave rise to the myth of a nation of literate music lovers so satirically re-inscribed in the year following the second Elizabeth's coronation by Kingsley Amis in chapter four of *Lucky Jim*.

4. A MUSICAL RENAISSANCE. Purcell's achievement reminds us that the long quest for an English opera tradition after his death has been largely for a national – British – opera in the vernacular rather than an opera for England alone; yet the fact that those who came closest to fulfilling the quest in both the 19th and 20th centuries were in some sense outsiders to the dominant English culture suggests that the inhibition may have been one of specifically upper-class English male reserve rather than British moral temperament as such. Balfe (*The Bohemian Girl*, 1843), Wallace (*Maritana*, 1845) and Stanford (*Shamus O'Brien*, 1896) were Irish, MacCunn (*Jeanie Deans*, 1894) Scottish. Smyth (*The Wreckers*, 1904) was (upper-class) female, feminist and lesbian, Boughton (*The Immortal Hour*, 1914) working-class communist. Britten (*Peter Grimes*, 1945) and Tippett (*The Midsummer Marriage*, 1952) were gay.

On the other hand, representations of Englishness as well as Britishness may be found in several of these composers' operas – the pub, the nation of shopkeepers, small-town gossip and hypocrisy, the refulgence of sunlit woodlands, and the Queen in her park at Richmond are as English as faery magic, free-church moral intransigence and sympathy for the underdog are British. Nevertheless, one senses that England may never close the gap between genius and national culture through opera. The English-language and regional opera companies such as the ENO, WNO, Opera North and Glyndebourne are a major 20th-century success story (Covent Garden a more troubled national icon), but they are not associated with a secure indigenous repertory beyond Britten and Tippett, and Britten came too late to match Puccini.

20th-century consolidation has been in other areas. Admittedly these include opera singing and conducting (Norman Bailey, New Zealand-born Donald McIntyre, Gwyneth Jones, Rita Hunter, Reginald Goodall among the Wagnerians), but only as one facet of a postwar supremacy in performance (Jacqueline Du Pré, Janet Baker and Simon Rattle being perhaps its most striking examples) partly explicable as the fruit of educational opportunity under the new welfare state, most of the above coming from modest middle-class backgrounds rather than privileged traditions. The National Youth Orchestra (founded 1947) and various summer schools (such as Canford) still showcase this model, although with more financial investment from ambitious parents as subsidy has fallen away.

12. Concert by the Madrigal Society at the Freemasons' Hall, London, January 1846: engraving from the 'Illustrated London News' (24 January 1846); the conductor is at the front centre table with the choirboys of Westminster Abbey and the Chapel Royal, while the altos, basses and tenors sit at the left, back centre and right tables

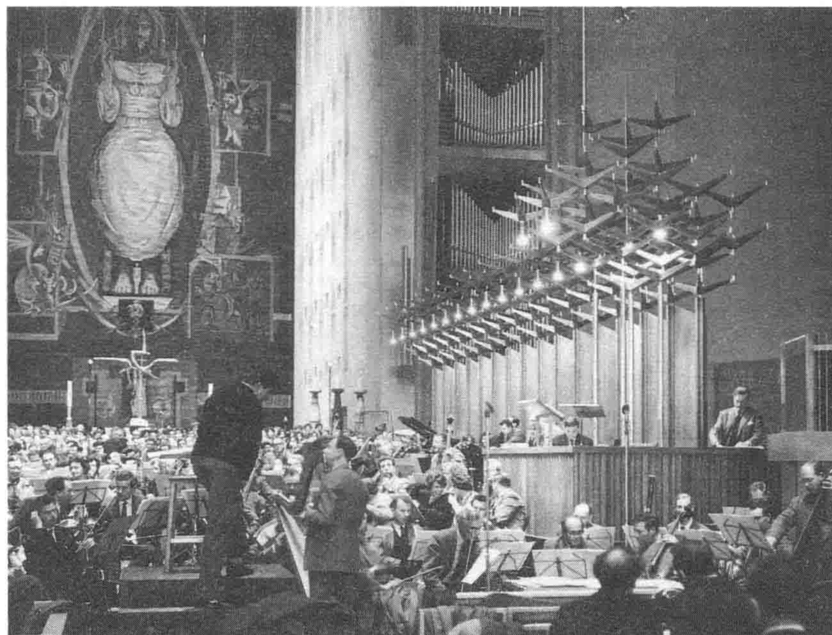
The training infrastructure, above all at the London and Manchester (and Glasgow) conservatories, was itself a return on national investment from the later 19th century onwards, however modest by Paris or Berlin standards. The RCM, another development traceable to the Great Exhibition (as part of Henry Cole's South Kensington project), opened in 1883. After Grove, its second director was Parry, its composition professor Stanford, through whose irascible hands passed almost all the 'English musical renaissance' composers – Vaughan Williams, Holst, Bliss, Bridge, Howells, Ireland, Moeran, Goossens, Clarke and countless more. In opposition to their teacher's cosmopolitanism, compounded of Verdi, Brahms and Saint-Saëns, they belatedly secured a romantic nationalism of idiom, largely by a Franco-Russian style alliance underneath the folky and Tudor trappings. But the relationship with Germany remained a problem, for without an operatic culture (Stanford called in vain for national subsidy) the South Kensington college, German by precedent, had to be a proving-ground for the Teutonic genres of song and symphony. Song for a while succeeded rather better than symphony (see §I, 1, above), and although by the end of the 20th century it looked as though Vaughan Williams's nine symphonies might have achieved their canonic aims (with three recorded cycles by foreigners in addition to the British ones), it remained something of a relief to discover Elgar, with the 'Enigma' variations of 1899, flourishing in provincial soil without the foreign compost of a college musical education. That he wrote in a largely Germanic idiom and was immediately taken up by Hans Richter helped: he could compete on international, not little-England terms. This in turn entitled him to say 'I write the folk songs of this country', meaning that the only great English composer would be one with the confidence to define, not the diplomacy to mediate, Englishness (the reviled message of his Birmingham professorial lectures of 1905–6). World War I truncated international acceptance on these terms, as it did for Delius, and neither composer had the stomach for modernism, whereas Vaughan Williams did, although it took 40 posthumous years to notice it. But by the end of the century, in a surprise cultural windfall, it was given to Elgar to offer art-music lovers what in their heart of hearts they most wanted: a new Romantic symphony, accessible without being phoney: his Third, commissioned by the BBC in 1932, fragmentarily sketched at his death and 'elaborated' – triumphantly completed – by (modernist) musicologist and composer, Anthony Payne.

It was another example of empirical crossover between theory and practice, a labour of love gaining its reward through some security of tradition and perhaps plain honesty, achieved with a tact belying its daring. Payne spoke throughout in Elgar's language while magically signalling the vista of years down to his own time at the end of the finale.

For good or ill, the so-called English gentleman amateur has always been willing to have a go, where in more modernized, professionalized societies he will have hit barriers and boundaries. There was a naive enthusiasm at work on the country estates of Josiah Wedgwood, Matthew Boulton and Abraham Darby that secured the industrial revolution. Science and art were sister pursuits, not rival gods, to them in the 18th century, as they were to William Morris at the end of the 19th when he attempted to reclaim artisan pride for manufacture. If one believes that by then C.P. Snow's 'two cultures' (mutually incomprehensible art and science) were afflicting English intellectual life, it is worth noting how broad a range of topic and expertise informed the early meetings and membership of the Musical Association (it became Royal under Edmund Fellowes's presidency in 1944), founded in 1874 very much in the interdisciplinary spirit of South Kensington, perhaps also with faint reverberations of the Royal Society (1660) and Royal Society of Arts (1754). A 'new musicology' programme had arisen through absence of mind, and certain elements of it survived to enrich 20th-century English culture, however uncompetitively in the short term. Morris and his guild socialism directly inspired Arnold Dolmetsch, father of the early music revival which has been one of that culture's greatest dividends. To this day anthropology watches over the enterprise in the Horniman Museum in south London, home of the Adam Carse musical instrument collection. A.J. Ellis, part model for Shaw's Professor Higgins, was a philologist whose researches into the history of pitch and temperament allied early music with acoustics. Something of the quaint English inventor attached to his kind, enough to rub off on the early recording and broadcasting industries. With the foundation of the Gramophone Company (HMV) in 1898, the recording industry, though driven by the USA, soon led the world from a British base. The broadcasting industry is still, nearly a century later, a source of national affection where the BBC is concerned, which, although it no longer has the complete monopoly it enjoyed until the 1980s, still receives TV licence fees. The two technologies, together with music and book publishing, enlisted a procession of 20th-century British taste-makers as producers and speakers: Fred Gaisberg, Landon Ronald, Percy Pitt, Percy A. Scholes, Hubert J. Foss, Walter Legge, Walford Davies, Antony Hopkins.

Their tradition was paternalistic, but the fracturing of tastes, markets, choices, generations and values in Britain after World War II, arguably a delayed tidal wave already implicit in 19th-century musical commerce, swept away the soothing (male) tones of cultural assurance. Art music, shamed by the 'two cultures', became virtual science, epitomized by William Glock's modernist reforms as BBC controller of music from 1959. Recorded popular music, now an industry rapidly overtaking all other entertainment media except film and perhaps musical theatre (both dominated by the USA), at least until the advent of the Internet, developed at the hands of a new – or was it an old? – kind of English musician, conservatory-trained but demotic, such as George Martin, who moulded the Beatles; here the art school ethos of the 1950s, its ally jazz, was doubtless influential. Light music, a curious token of bustling urban Englishness much promoted by the BBC, often from resort pavilions, in its first three or four decades (Sidney Torch, working with the BBC Concert Orchestra, and Eric Coates its leading exponents), swiftly withered, although signs of revival appeared in the 1990s.

5. English musical identity. Music in Britain probably enjoyed higher international standing at the beginning of the 21st century than it had for several hundred years. London, as one of the three or four major financial centres in the world, looks set to continue to host the arts, particularly the performing arts, just as it did in Handel's day when already the British monetary system was far in advance of the French. Today, the record companies'



13. Performance of Elgar's oratorio 'The Kingdom', Gloucester Cathedral, 6 September 1922, during the Three Choirs Festival; the composer stands to the left of the rostrum

catalogues bear as much witness to that national male trait, encyclopedic enthusiasm, as does this dictionary; in broadcasting the BBC remains uniquely authoritative and influential; early music culture represents an unequalled nexus (still thanks partly to the traditions of the Anglican Church, apt to take too little credit); pop music, from Merseybeat to the boy (and girl) bands, continues to ride the 20th-century tide of anglophone hegemony; and a century of renaissance has at last produced marketable composers such as Britten, Tippett and Vaughan Williams – even if Nadia Boulanger had never heard of Delius.

But composers no longer command English musical identity: they connect backwards (Peter Maxwell Davies and Birtwistle with their *Taverner* and *Gawain* operas, for example) but rarely sideways. Even if for a brief hippy moment in the late 1960s it seemed as though Davies's *Eight Songs for a Mad King* and Tavener's *The Whale* would achieve lateral fusion (much was made of Tavener's association with the Beatles), neither 'holy minimalism' nor whatever the modernist tradition now stands for has authorized an English crossover sound bearing anything like the imprimatur that Gershwin, Bernstein and then minimalism achieved in the USA (Nyman's film successes notwithstanding). Turnage and Weir speak only to a minority even within the élite, Blur's *Parklife* speaks to yesterday's young, Asian and West Indian musics speak on the whole of the originating race rather than the absorbing nationality. If there ever was an over-arching yet unforced English expression in music – the pleasure garden songs of the early 18th century might be the best place to look for it – no-one expects or even dares want such aural symbols now, although the situation may well change in the wake of Scottish and Welsh devolution.

Pevsner (A1956) believed that Englishness in artistic expression was, if elusive, a set of qualities and characteristics that reflected, by deliberation or unconsciously on the part of the artist, something unique in the English condition, which he defined by geography rather than statehood. Locating it was a tricky business, he admitted, given what he saw as the basic equation: that there is a spirit of the age, and there are national propensities, and art is contingent upon how the two interact. The interaction might be beneficial or detrimental, or might produce nothing at all; but when it did give positive results, their Englishness would be something inherent, definable, natural, honest and true.

One might now detect that at the start of the 20th century a good deal of shared sensibility and myth were

14. Final rehearsal for Britten's 'War Requiem', Coventry Cathedral, 29 May 1962; the conductor, Meredith Davies, speaks with Britten (the soloists were Dietrich Fischer-Dieskau, seated in the box, Peter Pears, standing, far right, and Heather Harper)

at work in English music, ideologically propelled. The oft-remarked English preference, from Wilbye to Parry, for 'clean' diatonic dissonance over 'dirty' chromaticism could be heard (the British never really took to *Tristan* – as opposed to *Meistersinger* – just as a call for Britten to turn serial in the 1930s went unheeded), as could, in triple time, a predisposition towards a stately sarabande residue over the urgency of the waltz. On the mythic level, the image of the Chosen People, of which perhaps every nation needs a version, held sway, based on premises such as the size of Empire, the early parliament and early centralization, the national wealth created by Elizabethan piracy, the industrial vanguard, the Protestant and 1688 Settlements, the lack of a 19th-century political revolution, and so on. It correlated then with a rather particular image in music, that of the pilgrim or spiritual traveller, easily identified in the works of Elgar, Stanford, Dyson, Holst and above all Vaughan Williams. The accumulated musical hermeneutics of 'marching' features common to certain works of these composers could be expounded. So could the idea they represent, in a non-musical web of meaning and association which involved such things as Chaucer and the wayfaring spirit, Bunyan or Langland (or even J.B. Priestley) and the moral conscience, a national topography encoded with a sense of direction (older, harder rocks and tribes to the north-west, younger and softer peoples and landscapes to the south-east, continental Europe further south-east still), muted emotionality induced by a primly kaleidoscopic climate, a seafaring missionary destiny, a common law involving public rights of way, and a political constitution of no fixed address, that is, unwritten. Today the historical and geographical facts remain, but further conditions and consequent characteristics, some suggested in the course of this article, may or may not be felt: Protestantism; the mindset of insularity; principle, dominance or superiority assumed or negotiated rather than declared. Intercutting with these propensities across many centuries, the images of town and country, professional and amateur, élite and vernacular, theoretical and practical, new and old, monolithic and cellular, extrovert and introvert, central and peripheral have somehow played a unique national part, one polarity generally dominating the other at first glance although rarely at second. Whether they will continue to play it time will tell.

II. Traditional music

1. Introduction. 2. Scholarship and revivals. 3. Songs: (i) Repertory (ii) Text and tonality (iii) Style. 4. Music and dance. 5. Performance contexts: (i) Traditional (ii) Folk clubs, festivals, sessions. 6. Gender, children, ethnicity.

1. Introduction. Precise definitions of the terms 'traditional' and 'folk' are the source of much controversy among scholars, collectors and participants of English folk/traditional music, with some participants even rejecting the usefulness of such terms. In this article they are used interchangeably, considering the oral vernacular musical tradition as process (contexts and performers through time) rather than as 'texts' in isolation. But music that is popular in small-scale or group contexts with a primary motivation of social transaction is distinguished from music popular in large-scale of mass contexts with commercial interests as a prime aim.

This article adopts a different perspective from that of much of 20th-century folksong scholarship, which has been highly influenced by collector and scholar Cecil J. Sharp. In *English Folk Song: Some Conclusions* (1907), Sharp argued that oral transmission was a defining element of folksong and propounded a post-Darwinian theory for its evolution based on concepts of continuity, selection and variation. This led to a preoccupation with identifying songs that fulfilled such criteria; these were of rural and communal origin, and were untainted by popular music. It also led to concentration by scholars on the modal characteristics of folk melodies.

English folk music has co-existed with popular 'mass' music at least since the 17th century (when classic ballads, such as *James Harris (The Daemon Lover)*, attributed to the broadside writer Laurence Price, became part of the traditional repertory), with each fuelling the other at different times (*see* Ballad, §I, 1–6). Manuscript and printed copies of songs and tunes have continued to underpin oral tradition to this day. For example, the renowned Copper family from Rottingdean in Sussex has used one book of song texts for their performances for several generations; Arthur Howard, a South Pennine shepherd, had envelopes crammed with chapbook songsters and songsheets dating back over a hundred years; and among Northumbrian pipers there has been a long tradition of musical literacy in which tunes have been passed on or exchanged in manuscript or printed form as well as by aural memory.

In this brief survey of traditional music in England, a map is sketched out of vernacular musical traditions both from synchronic and diachronic perspectives. The oral musical tradition is shown to be processual in that songs and music whose texts or tunes retain resonance and meaning for the singer, instrumentalist and community, are recreated by individuals within that community. Cultural identity – evident in text, tonality, style, meaning, function and context, as well as in the construction and composition of repertory – is illustrated. In line with recent research, application of fixed and timeless definitions to a dynamic cultural process will be avoided, the differing interpretations of scholars and collectors of the past and present outlined, and perceptions of participants of the tradition itself included. Folk or traditional music rarely exists independently of song and dance and therefore this discussion includes those aspects.

2. Scholarship and revivals. The contemporary vitality of folk music, performed in traditional contexts as well as in a network of folk clubs, festivals and sessions, owes its existence to the 'revival' that occurred in two distinct phases during the 20th century. The first had its origins in the 19th century when a small number of privileged middle-class enthusiasts with antiquarian and musical interests, intrigued by the singing culture of artisan and labouring groups in rural southern England, selectively notated (text and tune) certain examples of their tradition. In the 1820s and 30s, Davies Gilbert and William Sandys both published collections of Christmas carols from Cornwall, several of which were in oral circulation. In 1843 John Broadwood published the first folksong collection, *Old English Songs as Now Sung by the Peasantry of the Weald of Surrey and Sussex*, but the main activity dates from around 1890 when collections by Lucy Broadwood, Frank Kidson and Sabine Baring-Gould were all published, paving the way to the founding of the Folk Song Society in 1898. The most notable folksong collector in the decade before World War I was Cecil Sharp.

Generally song transcriptions were published in the same format as classical song – in vocal scores with piano accompaniment, arranged for and to be performed by trained singers. The erotic lyrics of the original were bowdlerized or toned down to avoid giving offence to the polite, predominantly middle-class society for whom the collections were intended.

In the melodies of the songs, the collectors sought an inspiration for indigenous composition that would help create a national idiom to counter the German domination of art music in the 19th century. Thus Ralph Vaughan Williams, Percy Grainger and George Butterworth, aware of the example of Bela Bartók in Hungary, were all actively involved in folksong collecting which became a resource for their composing. Others, such as Gustav Holst, while not caught up in the actual quest, nonetheless made use of the collections of their contemporaries.

In the decade before World War I, Sharp noted down and transcribed thousands of songs, tunes and dances, took a leading role in the Folk Song Society, founded the English Folk Dance Society, kept folksong in the public eye through articles and letters to the press, organized displays, gave lectures and directed dance festivals, in addition to undertaking fieldwork in the Appalachian Mountains, USA, and publishing his seminal book. He was instrumental in introducing folksong into the curriculum of state schools, which he saw as a process of 'giving back' the culture to its rightful owners. He was the most zealous and missionary of the collectors, believing that folk music had the power to purge and purify English popular culture of the commercial influences of music hall and Tin Pan Alley.

For the folksong collectors it was the beauty of the melodies that was the first priority, rather than the texts or performance styles of the singers from whom the songs had been notated. Two collectors were exceptions in this respect: Percy Grainger, because he valued the performance of a song and went to great lengths to capture it on phonograph recordings, transcribing it all in great detail; and Alfred Williams, who devoted his energies to representing the repertory of a singing tradition in its entirety, albeit as text only.

The legacy of this first phase of the revival included the English Folk Dance and Song Society (EFDSS), founded in 1932, a number of published collections, the inclusion of folkdances and reworked folksongs in the school curriculum, and a repertory of English romantic art music based on folk melodies. The academic *Journal of the Folk Song Society* was founded, which became the *Journal of the English Folk Dance and Song Society* in 1932, and

from 1965 to date the *Folk Music Journal*, and a library based on Cecil Sharp's own library (since 1958 the Vaughan Williams Memorial Library), both of which were (and are) organized by the EFDSS.

Between the two world wars there was a complacency based on the mistaken belief that the cultural salvage operation had been successful, that all the material worth finding had been collected, and even that folksinging had died out. Only the Irish composer E.J. Moeran, based in East Anglia, and the Harvard scholar James Madison Carpenter undertook any sustained fieldwork. The full significance of Carpenter's work, recording traditional songs, music, dances, drama and customs from many parts of Britain and Ireland, has still to be recognized and assessed.

After World War II and the ensuing period of austerity, there grew a national desire to celebrate British culture and tradition. This manifested itself in 1951 as the Festival of Britain, significantly the centenary of the Great Exhibition. Implicit in this display of national pride was the desire to secure those aspects of the heritage that might otherwise have been lost had the outcome of the war been different. Thus the impetus to research English folksong repertory was reborn.

Partly because of its technical expertise and the potential of the material for programme making, the BBC undertook to coordinate the fieldwork. Expertise for the project, referred to as the BBC Folk Music and Dialect Recording Scheme, was drawn from EFDSS personnel, namely Peter Kennedy and Seamus Ennis, who jointly headed the project, supported by a number of experts for different recording expeditions, such as the American collector Alan Lomax, Hamish Henderson in Scotland and Sean O'Boyle in Ireland. Hundreds of recordings (now in the BBC Sound Archives) were made. When broadcast, particularly those in the radio series *As I Roved Out*, questions were raised about the validity of the treatment given to the songs by Cecil Sharp and his fellow collectors, and this led to a movement to perform the songs in a more 'authentic' manner.

The two most influential figures of the post-war revival in folksong performance were writer and journalist A.L. Lloyd and playwright and songwriter Ewan MacColl. Both came from a background of left-wing socialism and radical Marxism, which championed the culture of working people in contrast to the middle-class élite. While accepting uncritically Sharp's evolutionary ideas about folksong, they constantly strove to reunite folksong and folksinger in the eyes of the public and their many followers. The narrative mastery of Harry Cox, a farm labourer from Norfolk, the infectious humour of Sam Larner, a Norfolk fisherman, the partsinging of the Copper family from Sussex, the subtle ornamentation of the gypsy singer, Tom Willett, along with Scots and Irish singers, were all held up as exemplars of tradition or 'song carriers' as MacColl dubbed them.

In the early years of this second phase of revival, young folk club singers, influenced by the skiffle craze, looked initially to American material. By the early 1960s, however, their focus had shifted to indigenous English material. This interest was served by record releases of traditional singers by Topic Records, especially *The Folk Songs of Britain* series of ten LPs. There was a hunger for appropriate material to build up repertories. Enthusiasts sought out scholarly ballad collections such as that by the American professor Bertrand Bronson, *The Traditional Tunes of the Child Ballads*. At this time, folk clubs came into being and folk festivals were first conceived. (Folkdance festivals had been organized since before World War I.)

In 1967, fresh insights into the subject were provided by A.L. Lloyd in his *Folk Song in England*, which was influenced by Eastern European ethnomusicology, particularly the Romanian Constantin Brailoiu, as well as the English social history movement, pioneered by such scholars as A.L. Morton and E.P. Thompson. Although subsequent scholarship in the field of folk music has served to refute or emphasize aspects of Lloyd's work, it remains the most comprehensive account.

3. Songs.

(i) Repertory. Types of songs favoured by contemporary traditional singers may be analysed from a historical perspective in terms of different layers of cultural accretion or assimilation. Such groupings of songs fall into loose genres in terms of their subject and textual themes.

The oldest group of songs in oral tradition, many of which have been classified by Francis James Child in *The English and Scottish Popular Ballads*, predate 1750 and most are narratives of an indeterminate age. Examples include *The Outlandish Knight* (Child 4), *The Twa Sisters* (Child 10), and *Edward* (Child 13). There are also a few sacred items, such as the Christmas carol *All you that Are to Mirth Inclined* and the cumulative song *The Twelve Apostles*. In some cases since the 16th century these songs were printed on contemporary ballad sheets or blackletter broadsides, so called because the printers used Gothic typeface.

During the late 18th and early 19th centuries, the type of songs classified by Cecil Sharp as 'folksongs' (as opposed to ballads) entered tradition. The largest group comprises narrative songs with tragic, amatory, historic and comic themes often based on an encounter (e.g. *The Death of Bill Brown*, *The Sucking Pig*, *Van Dieman's Land*, *The Dark-Eyed Sailor*, *The Bold Grenadier* and *Bold General Wolfe*). A small number are lyrical (non-narrative) in character (e.g. *I Wish, I Wish*, *Seeds of Love*, *Adieu my Lovely Nancy*). Some are convivial and associated with drinking (e.g. *Jones's Ale*, *The Barley Mow*); others relare to a specific occupation (e.g. *Jim the Carter's Lad*, *The Herring's Head*, *The Old Weaver's Lament*, *The Collier's Rant*). Recreation and sport feature in a further group of songs, particularly those connected with hunting (e.g. *Old Towler*, *The Horn of the Hunter*, *A Fine Hunting Day*). Worksongs are not common in England, with the important exception of sea shanties. These were used on sailing ships for specific functions, such as weighing or casting anchor – a windlass shanty (e.g. *Sally Brown*) – or hoisting the sails – a halyard shanty (e.g. *Blood Red Roses*).

In this same period a number of celebratory and dramatic customs, particularly perambulatory and house-visiting, became popular, and songs associated with them are often found among groups of singers in different localities. Examples include May, Wassail and harvest songs, as well as those associated with traditional drama, such as *The Derby Tup*, and street or field games, such as the Haxey Hood from Lincolnshire.

The Christmas carolling traditions of many villages, particularly in Yorkshire, Derbyshire and the West Country, date from this period and are typical of the

village music performed by church choirs and bands, both Anglican and nonconformist, at this time. The form of the music is more complex than the songs referred to above; the singing is usually in parts with a fuging section and, in a number of cases, instrumental accompaniment. Such music, forced out of the churches by the religious establishment, as epitomized by the Oxford Movement (as well as by Evangelicals), during the 19th century, was nurtured by families and informal groups in pubs and as part of Christmas house-visiting customs. In the context of revival, this music has been termed West Gallery Music or the Gallery Tradition in recognition of the physical location of the choir and band within the church.

From the second half of the 19th and early part of the 20th centuries, it is possible to identify four overlapping influences of traditional song – minstrel songs, parlour ballads, evangelical hymns and music-hall songs. A number of blackface minstrel troupes from the USA visited Britain from 1841 onwards, most notably the Christy Minstrels, and a number of their songs were taken into the repertory of traditional singers. These included sentimental and nostalgic items such as *Kitty Wells*, *The Blind Boy*, *Poor Old Joe*, the songs of Stephen Foster and zany songs in the *Jump Jim Crow* style, such as *Old Johnny Bowker*.

Among the most numerous songs recorded in the repertories of traditional singers since 1970 have been parlour ballads, so much a feature of entertainment in the Victorian and Edwardian household. These too are notable for their sentimentality, especially their preoccupation with bereavement or loss, often through the device of a dream or vision (e.g. *Break the News to Mother*, *The Miner's Dream of Home*, *When you and I Were Young, Maggie*). A few evangelical hymns from the 1870s (e.g. *Shall we Gather at the River*) are commonly found in traditional singing contexts, particularly from the collections made popular by American colleagues Ira D. Sankey and D.L. Moody. *The Old Rugged Cross* and *Bread of Heaven* (*Cwm Rhondda*) are also hymns that are commonly encountered.

Most songs taken by traditional singers from the British music hall were comic or risqué (e.g. *The Fellow Who Played the Trombone*, *Down the Road*, *The Parson and the Clerk*). By the late 1920s, many households had acquired a gramophone, and comic material learnt from this source directly or via the radio became part of the traditional repertory (e.g. *Down in the Fields Where the Buttercups All Grow*, *The Old Sow* or *Susanna's a Funnical Man*). Currently records, tapes and CDs are the most likely sources for new material (e.g. country and western favourites *Old Shep* and *The Blackboard of my Heart*), though often the recordings favoured by traditional singers are reworkings of older material (e.g. *The Sunshine of your Smile, Nobody's Child*).

Regional songs in which dialect is consciously employed (e.g. *Ilkla Moor b'a Tat*, *Rawtenstall Annual Fair*, *Cushie Butterfield*, *Any Old Iron*) owe their origins in part to the popularity of regional music hall, most notably in the north-east of England, and elsewhere including Yorkshire, Lancashire and the 'Cockney' East End of London. It is common for such songs to take the form of satires of stereotypical country people (e.g. *Gossip John*, *The Fly Be on the Turmut*) and ironically it is often people from the targeted communities who most value such songs.

Singers relish such self-reflexive humour and often include a number of parodies in their repertory, some of which are locally created. Often the song that is parodied is one that is held in high esteem in the community, such as *Grandfather's Clock* or *The Irish Emigrant*, and both original and parody sit comfortably side by side. Common examples in the repertories of traditional singers include *The Egg*, which makes fun of respected songs (e.g. *The Minstrel Boy*, *Excelsior*) and *The Tattooed Lady*, which completes a risqué topological tour at the expense of a popular song from 1901, *My Home in Tennessee*.

Another instance of creativity within the traditional model is the local satirical or gossip song that lists members of the community together with scurrilous comment or choice anecdote; an example of this form from Sheffield is *Fulwood Farmers and Neighbours*. In certain regions, songs of a more literary character, created by local poets or songwriters, have been recorded in tradition. *Barbary Bell* by Robert Anderson of Carlisle and *Friezland Ale* by Ammon Wrigley of Saddleworth are examples of this type, both being written in their respective vernacular dialects. Songs of or about a particular region, as well as favourite Irish songs, are also consciously appropriated by singers outside the specific milieu. Thus *The Galway Shawl* is sung by Shropshire singer Fred Jordan, and *The Song of the Swale* (from the Yorkshire Dales) features in the repertory of a number of Sheffield singers.

(ii) Text and tonality. In its broadest sense, the folklorist's understanding of 'text', as expounded by Jeff Todd Titon, includes all that is humanly constructed in the communication of a folk event, such as singing a song, telling a tale or performing a dance. With regard to a song, it would include background to learning, singer's comments and occasions for singing the song, as well as relations with audience or listener, and the song itself. In its narrowest sense, 'text' simply refers to the written representation of the song in words and musical transcription – necessarily a transformation, an objectification and a reduction.

Older songs, including ballads, are stanzaic and usually have a four-line isometric structure with a simple rhyme scheme (usually ABAB, AABB, or ABCB), each line organized into alternate lines of four and three feet (ballad or common metre). Long metre (four lines of four feet) is also prevalent. Some songs contain refrain lines; others have a more formal chorus section, notably the monumental chorus of the later parlour ballads. Such items demonstrate a more complex and varied structure.

The poetry of folksong is distinguished by its use of stock phrases and epithets, idioms and figurative language, repetition and formulae. Many texts show clear signs of being oral poetry, as evidenced by the use of incremental repetition, but this is not a universal characteristic of traditional verse. Much textual analysis has been undertaken in the light of narrative themes, character function, oral-formulaic theory and structuralism. Such approaches have been most effective when they have been informed by the relevant knowledge of English social history and not divorced from the significance of the musical frame. Meaning itself is relative to the singer, the audience and the occasion; the song helps us to understand the attitudes, assumptions and ideology of the performer. The enduring popularity of key songs such as *The Farmer's Boy*, *McCaffery*, or *The Highwayman Outwitted* cannot be

adequately explained in terms of immediate social or aesthetic relevance.

English traditional song based on the stanza is sung to a musical cycle or tune that is repeated. This cycle may be subject to variation by the singer to suit the text or as a mark of individual creativity. Common time (4/4) is most often found, along with 2/4, 6/8 and 3/4, but metres such as 5/4 are not unknown.

The melodies of most contemporary English traditional songs are in the major scale. The obsession of the early collectors with the small minority of tunes that were not in the major led to theories of modal survival, with links to medieval ecclesiastical practice. Such postulations, which were intended to imbue folk melodies with the patina of age, have been dismissed as being at best unhelpful. It is true that examples of tunes have been notated in the Aeolian, Dorian and Mixolydian modes, though rarely in the Phrygian and the Lydian. However, where a melody has been recorded in a particular mode, it is not always clear cut, nor is it always consistently employed within the same tune. In fact, such neat classifications may have been wishful thinking on the part of the transcribers.

An analysis of examples of recorded singing, such as that which Percy Grainger undertook, reveals a rather different picture. In the first place the unaccompanied nature of much English traditional singing, free from the expectations of harmonic accompaniment, demonstrates a scale that lacks the precision of the classical well-tempered model, particularly at the intervals of 3rd, 6th and 7th. Moreover, some song melodies are based on a scale in which not all the intervals of the diatonic scale are present; a common example is a hexatonic scale lacking the 7th interval. In a few cases, particularly in children's songs, there is not even a clear indication of the tonic.

Resemblances between the melodies of different songs have been explained as membership of tune families. For the purpose of comparison, tune contours have been abstracted to help identify such similarities. Other approaches have looked at the significance of the frequency of certain intervals in the scale and to the range of the tune to establish comparative data. The more recent concept of a musical matrix, an underlying codified pattern, as expressed by Peter Van Der Merwe (1989), together with his identification of a 'parlour mode' (and a 'blues mode') provide a new insight into this aspect.

Although unaccompanied singing has been the most common form of traditional singing that has been recorded during the past century and a half, this does not presuppose that it had always been the case. Unaccompanied singing, as Vic Gammon (1981) has suggested, may be a recent phenomenon caused by social fragmentation and economic circumstances. The evidence for this claim lies in the wide popularity of church and military-style bands in the early 19th century. Certainly harmony or partsinging is a well-established characteristic of English singing tradition, albeit neglected by collectors, and features in the tradition of the Copper family of Sussex as well as in the carolling traditions of the West Country and south Pennines. The influences here combine the late 18th century music of the parish church with the contemporaneous glee style, so popular in English taverns and inns.

Fieldwork in the last 30 years has documented a number of examples of accompanied singing, mainly to the piano, but also to the electric organ or accordion (diatonic and chromatic). Most of these are essentially in convivial and boisterous settings such as that recorded at suppers of the Holme Valley Beagles Hunt, which meets near Holmfirth in Yorkshire.

(iii) Style. An unaccompanied song, as performed by singers such as Joseph Taylor, Harry Cox, Phil Tanner, Frank Hinchliffe and Phoebe Smith demonstrates its own musical conventions, distinct from those of art music. The melody is varied and subtly embellished; the tempo and metre are changed to suit, and irregularities are incorporated effortlessly. Whether such variations are the result of artistic expression, awkward line lengths, forgotten or mis-heard elements is a moot point. Most probably it is a combination of all these factors. The extent of this creativity and variation in singing has been disguised by published folksong collections in which the editors often 'rebuild' or 'correct' so-called 'incomplete' or irregular texts (sometimes from broadside sources), or alternatively choose for publication only those examples that they judge to be 'complete'. Clearly an obligation is felt by editors to include songs deemed to be 'worthy' of performance.

Styles adopted by English traditional singers range from the highly introverted to the declamatory. In the former, the singer avoids eye contact or closes his or her eyes and shows no recognition of an audience. He or she betrays no emotion in facial expression and uses no gestures, often preferring to sit rather than stand. The song is delivered in an understated and undramatic rendition. In an extroverted declamatory rendition, the singer usually stands, eye contact is made and the song is dramatized by gestures, facial expression and vocal intonation. Elements of both styles may be evident in the same singer on different occasions or in different songs.

Ornamentation used by traditional singers varies but may include passing notes and slides (glissando), with occasional upper mordents, appoggiaturas, tremolo or vibrato. Most decoration is of an anticipatory kind, such as a slide into a note or a vocal scoop from a 3rd below. Some singers, such as Gordon Hall of Horsham in Sussex, emphasize the end of a phrase by a drop from the tonic to a 4th below. Vibrato and tremolo are used in moderation, often to accent the climax or endpoint of a phrase. A number of singers who make use of vibrato to a much wider extent, as well as other techniques associated with crooning, have been recorded among communities influenced by Irish or Scottish singers, particularly among travellers and in urban communities.

Strict tempo is adhered to by some singers, whereas others use a much freer approach by truncating or elongating the measure, or recasting it, as appropriate. Compound time may become simple; duple, triple and quadruple times may be interchanged. Often these changes take place in the pause between phrases or at the *caesura* (mid-line), though they are frequently woven into the fabric of the song; for example, truncation can give the song a sense of urgency. Renditions of rhythmic complexity are not exceptional, but are rarely obvious except to the trained listener or transcriber. Such effects, which include rubato, are largely performed unconsciously by the singer, whose focus is the narrative.

The vocal quality of traditional singers is not of primary concern to participants in the tradition; other factors such as the ability to memorize a song are considered far more crucial. Understandably there is an unevenness in vocal quality; voices are not trained. Judged by the external yardstick of art music, a few singers have fine voices whereas most have less remarkable voices and rely on other attributes for successful performance, such as timing and force of personality. Accurate pitching is also a quality that is much admired. Most singers perform with an open throat, slight nasalization and often towards the upper end of their range. Moreover, some exhibit a slightly rising pitch through the course of a song. Non-standard English or dialect usages are often evident in songs to a greater or lesser degree, but this depends on the singer and from where he or she originates.

4. Music and dance. While there is ample evidence that English traditional instrumentalists performed the music of popular songs, either for listening to or for audiences to sing with, their primary function was, and is, to accompany dance. There are three main forms of dance – the predominantly single-sex ceremonial display dancing (e.g. morris and sword dancing), mixed social dancing or country dancing, and solo stepdancing. Each has its own space: street, shopping centre, park or public open space for display dancing; community or school hall for social dancing; and public house or private party for stepdancing.

Unlike traditional singing, which is fairly ubiquitous, there are large parts of England where, outside of the folk revival, traditional music-making is scarcely in evidence, whereas in others, such as the North-East, it is flourishing. The music has been researched and studied much less than song. Cecil Sharp showed an avid interest in conducting fieldwork into ceremonial dance, but he did not devote the same energy to social dance.

Just as with song, English traditional or 'country' music can best be understood as the accretion and assimilation of popular English dance music over the past two centuries or more and its remaking and reworking into the vernacular tradition of different regions, much of it being used to accompany dancing of one sort or another. Perhaps the oldest group of tunes are jigs (6/8 and occasionally 9/8) and hornpipes (4/4), although the 18th-century form of the hornpipe was predominantly in 3/2 or 6/4 or a mixture of the two. Waltzes in 3/4 were introduced into fashionable society from 1812, while polkas in 2/4 and schottisches in 4/4 date from 1844 and 1848 respectively. All three forms subsequently became absorbed into the instrumental folk music tradition. Reels of the 'Scottish' type were not unknown and examples are commonly found in 19th-century fiddler's tune books.

Church bands of the 18th and early 19th centuries used music manuscript books, many of which have survived. Often at one end would be their sacred repertory of fuging-tunes, metrical psalms, anthems and such like, especially Christmas carols; at the other would be their secular music for country dancing, jigs, hornpipes and marches. The marches in duple and triple time became popular in the repertory with the development of the militia bands during the Napoleonic Wars and the subsequent emergence of the brass band in the 1840s.

The instruments of the church or village band, before the reforms of 1820–60, included a selection of what might be available, what was affordable and what could be made locally – strings (violin and cello), woodwind (tin whistle, flageolet, flute – transverse though rarely duct – clarinet, oboe, serpent and bassoon), keyed brass instruments (key bugle, ophicleide), and even some percussion (mainly drums). The manuscripts show quite clearly that their dance music was often played in parts, certainly treble and bass. The decline of English country music-making is ascribed to the rejection by the established (and nonconformist) church of the bands and mixed choirs, and their replacement by organs and surpliced choirs (boys) between 1820 and 1860. In the sacred context of Christmas carolling, such village bands continued to exist well into the 20th century in the West Country and South Yorkshire, and such a string band from Green Moor in South Yorkshire (1st and 2nd violin, viola and cello, in a septet) was recorded playing their carol repertory in 1994.

The duct flute in the form of the three-holed pipe played in conjunction with a small drum or tabor ('whittle and dub') has been used for dance music since the 16th century or earlier, most notably for the morris dance of the South Midlands. Other six-holed forms of pipe developed in the 19th century include the ubiquitous tin whistle. The fiddle was adopted as the main instrument for English vernacular music-making from the 18th century.

From 1850 onwards the popularity of the fiddle was challenged by such free-reed instruments as the concertina, both anglo (diatonic) and English (chromatic), the diatonic accordion (or melodeon) and the chromatic accordion (including after 1900 the piano accordion), as well as the mouth organ. Although the English concertina was developed in England by Charles Wheatstone between 1829 and 1841, it was the much cheaper anglo from Germany as well as German and Italian diatonic accordions that proved more popular with traditional musicians.

Other instruments that have featured in vernacular music-making in southern England are the dulcimer (particularly widespread in East Anglia), the banjo as a result of the influence of the blackface minstrel troupes, the mandolin (introduced by Italian street musicians) and the piano, used to provide a vamping accompaniment for other instruments (bass note plus chord, like the left side of the accordion). Percussion instruments that have been recorded include bones, spoons, tambourine, triangle, military drum, as well as the modern drum kit, since the early 20th century.

Although there are a few tantalizing references to the bagpipes in central and southern England, notably in church carvings, the sole surviving form is the bellows-blown Northumbrian smallpipes of the North-East, which date from the 18th century and have been the subject of revivals in the 19th and 20th centuries. The instrument has become emblematic of its region and a special organization (the Northumbrian Pipers' Society) was formed in 1928 to foster its development. This society organizes annual competitions which have led to a high degree of virtuosity and uniformity of style. The form that demonstrates this virtuosity most clearly has developed from the regime of competitions and equates to the theme (air) and variations, commonly a feature of art music since the early Renaissance period. The repertory of the Northumbrian pipers is distinctively regional with a strong Scottish influence, as evidenced by the popularity of reels, alongside hornpipes, jigs, polkas, waltzes and

(a)

(b)

15. Sword dance, accompanied by the concertina, at Handsworth, c1900, showing (a) the turn into the Lock and (b) the Lock itself

slow airs. There remains a strong tradition of composition among members of the society (as well as a second body, the Alnwick Pipers' Society) with a regular programme of publications. Two very talented pipers who have influenced the recent course of the tradition and commanded respect among their peers are Billy Pigg and Joe Hutton. Until the mid-19th century other forms of bellows-blown bagpipes or 'Union' pipes of a lower pitch were played in the North-East and the Scottish Borders, variously referred to as Border, Lowland or 'Cold Wind' pipes, and these too have been the subject of a revival since the 1970s.

The role in English vernacular music of the formally organized and constituted brass band, which developed from the militia band in the early to mid-19th century, should not be overlooked, particularly in the context of ceremonial dance, custom and parades. Such diverse events as processional morris dancing in north-west England and Derbyshire, May celebrations in Cornwall, the parades of Friendly Societies and other village fraternities, as well as the celebration of village wakes in northern England, have depended on the support of the local brass band during the past century or more and many still do.

These groups have also been responsible for a high level of instrumental teaching and musical literacy in many rural and industrial communities. A measure of the centrality of such groups is the spawning of parodic or comic bands and their contemporary manifestation, the carnival (or kazoo) bands of marching groups of young girls (majorettes).

The form of English traditional dance music is regular and is usually made up of eight- or four-bar phrases combined in prescribed forms to make 16-, 32-or 48-bar cycles (*AB*, *AAB*, *ABB*, *AABB* etc.). The tonality of the music is predominantly major, though a number of distinctive minor tunes have been recorded. The tempo is fairly strict, though arguably slower, more accented and articulated than Irish or Scottish traditional music. Recordings of English traditional musicians such as William Kimber (concertina), Stephen Baldwin (fiddle), Scan Tester (concertina), Bob Cann (melodeon), Billy Bennington (dulcimer), Fred Whiting (fiddle), Oscar Woods (melodeon; see fig.18 below), Dolly Curtis (melodeon), Will Atkinson (mouth organ) and Willie Taylor (fiddle) demonstrate the importance of such features as anacrusis, scotch snap and syncopation in giving the music emphasis and bounce.

Music of morris dancing is distinguished in some traditions by the incorporation of markedly slower augmented passages, usually at half speed, to enable the dancers to perform more intricate and energetic stepping such as high or cross capers. The characteristic lift and drive of morris dance music from the South Midlands or stepdance music from East Anglia or the West Country would seem to relate to the favoured instruments chosen by traditional musicians. This can be heard in the attacking short bowing of the fiddle player (such as William 'Jingy' Wells of Bampton) or the push and pull (blow and suck) of the anglo-concertina, melodeon and mouth-organ player.

Although the revival of morris dancing dates from before World War I under the guidance of Cecil Sharp and the newly formed English Folk Dance Society (founded in 1911, hereafter EFDS), as well as Mary Neal's Esperance Movement, and was later to be given independent status as the Morris Ring (founded in 1934), it was the post-World War II folksong revival that provided the major impetus for the proliferation of morris dance clubs in the 1960s and 70s. Such organizations, most of which continue to function, provide a high profile for English traditional music-making. Their aim was to revive and promote 'authentic' English morris dances, primarily from the South Midlands, as well as the morris dancing of the North-West, which is characteristically performed in clogs.

Favoured instruments to accompany the dance followed the pattern of traditional teams and include diatonic accordion known as melodeon (pitched in G and D), chromatic accordion, concertina (both anglo- and English), fiddle, and pipe and tabor. Some contemporary groups combine more traditional instruments with woodwind (clarinet and saxophone), guitar or mandola, percussion and brass instruments, which in the North-West have long formed the traditional accompaniment.

The development of folk or country dancing (also termed 'social' or 'community' dancing) and its accompanying music followed a similar pattern to the morris dance revival. It should be noted, however, that Cecil Sharp and the EFDS had promoted the fashionable 17th/18th-century 'country dance' of polite society in preference to contemporary manifestations. This form is sometimes referred to as 'Playford' after John Playford, who from 1651 published such dances and their music in instruction manuals.

Folkdance, revived before World War I, subsequently nurtured by the EFDS and the EFDSS, was given impetus in the late 1930s by the American Square Dance craze. This flourished after World War II through the 1950s to the early 60s, when it was the enthusiasm of folksong revival that created conditions for the rapid expansion of the movement.

The new groups of musicians who played English traditional dance music distinguished themselves from the more formal folkdance bands, who were EFDSS-influenced, by calling themselves 'barn dance' or 'ceilidh' bands and also by operating as semi-professionals. Their music had a great deal more lift and accentuation. The aim was to make such dancing more accessible to the general public or to the non-specialist with the use of a dance caller to provide figure-by-figure instructions. Such groups, in the contemporary context, generally feature two to six musicians and play a combination of traditional instruments alongside instruments drawn from Celtic and European folk music tradition, such as bagpipes, flutes and hurdy-gurdies, as well as modern electronic instruments, including electric guitars, keyboards and synthesizers.

The post-World War II morris dance and folkdance revivals generated in turn, in the mid-1970s, a more specialist movement devoted to the music itself, rather than as a vehicle for dance. The 'country music' revival, as it became known, was heavily influenced by the traditional music-making of East Anglia and southern England, as performed in pubs, often for solo stepdancing. Here a new emphasis was placed on popular song tunes, waltzes, polkas, schottisches and driving stepdance tunes in 4/4. Musicians banded together to promote such music and formal professional groups emerged, who performed on the concert stage and were featured in numerous commercial recordings.

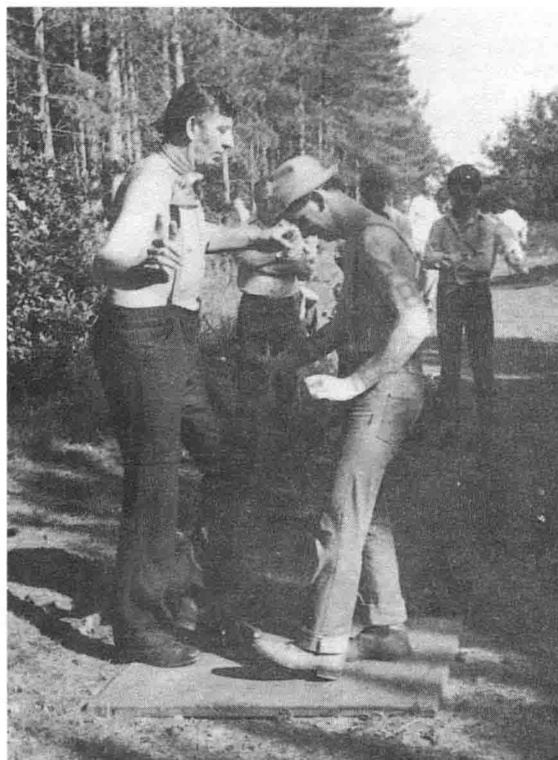
5. Performance contexts.



(i) Traditional. Traditional music does not exist on the printed page but in the performances of individual singers or instrumentalists, in the contexts of family gatherings, singsongs in public houses, meetings of social clubs and other social groupings. It is usually informal and predominantly amateur in character. Virtuosity is the exception: a singer is congratulated for singing 'a good song' rather than for being a good singer. Participation is the norm. In England, the traditional singer does not rehearse in the classical sense, but may choose to run through songs in private to ensure that the text has been memorized. Nor is there any system of formal teaching. In most traditional singing contexts, any member of the group may contribute a song. Thus the distinction between the roles of singer and listener is blurred, transitory or non-existent.

Among traditional singers, there is an unwritten code of behaviour bound up with the social dynamics of the milieux in which they perform. This manifests itself particularly in the respect shown to senior members of the group, particularly with regard to the ownership of songs or tunes. Hence a singer will not perform an older singer's song in that person's presence until he or she is no longer an active participant in that context or has died. Certain songs are, then, treated as inherited property and remain firmly associated in the mind of the performer with the singer from whom the song was learnt. It is common for a singer to acknowledge this fact in the introduction to the song.

In traditional contexts, the 'session' or 'tune-up' is often led by a respected singer or musician whose role is to ensure continuity by 'striking up' songs and encouraging others to take a turn. This is essentially an informal role without monetary reward. Unaccompanied singing is often dependent on the leader's ability to pitch songs to suit the company. The term 'striking up' derives from the action of striking a tuning-fork and such a person may be referred to as 'the striker' in some parts of the country. One contemporary context that is distinguished by the high level of commitment demonstrated by its supporters, by their strong sense of conviction and shared ideology is usually referred to as the world of the folk revival.

(ii) Folk clubs, festivals, sessions. Performance of folksongs and folk music are positively encouraged by the existence in most towns and larger communities of a folk club. These usually meet in hired rooms in public houses in the evening on a weekly or regular basis. The organizers of some of these clubs and their associates group together to stage annual folk festivals. A network of clubs spans the country and a calendar of festivals runs throughout the year. In addition, informal gatherings called 'sessions' or 'tune-ups' take place in the bars of public houses.

In folk clubs, semi-professional or professional guest performers share the evening's entertainment with organizers ('residents') and 'floor singers' (members or visiting

17. Travellers Dusty Smith and companion stepdancing in the forest close to Blaxhall, East Suffolk

performers who have come to sing or play in an unpaid capacity, though they may receive free admission). The programme is usually coordinated by an MC, who may also be an organizer and performer. Many clubs devote regular meetings exclusively to floor singers.

Most folk club singers learn new songs from other folk club performers or from their commercial recordings. It is less likely that they will learn a new song from a published folksong collection or that they will take the opportunity to learn directly from a traditional performer. There are, nevertheless, a small number of singers, including professional musicians, who carefully research their source material and pride themselves on its integrity.

Because the institution of the folk club exists as the result of a conscious revival or re-creation, the repertory is a mélange of folksongs performed in a traditional or contemporary idiom alongside newly composed material. Thus there may be differences between the musical traditions of an area and the music of the local folk club. This is not only apparent in terms of repertory but also in singing style, musical accompaniment and group dynamics.

A traditional singer is more likely to perform unaccompanied (or to a piano or electric organ) a song learnt in his or her locality from an older member or the community, in a style that relates closely to the singer's speaking voice, among a group of which he or she is a member. When a folk club performer chooses to sing a traditional song, it is usually to a guitar (or other string instrument, such as a mandolin, banjo, cittern, bouzouki or mandola) or free-reed accompaniment (concertina or melodeon), a song that is exotic (i.e. from another part of England or the English-speaking world), and to an audience consisting partly of strangers. Moreover, some folk club singers consciously adopt an accent that is distinct from his or her speaking voice (e.g. a Londoner adopting a West Country accent). Their voice production affects a nasalized quality by the deliberate technique of singing with a 'closed throat' (constricting the throat to prevent the passage of air through the nasal passages). The folk club singer's performance has been rehearsed and arranged; it is introduced, listened to in silence and applauded. The traditional singer performs with a measure of spontaneity; others do not necessarily listen in reverential silence but may join in and sing; the end of the song is not automatic signal for applause.

The atmosphere and repertory of a folk club varies with the philosophy and personality of the organizer(s), the nature of the singers available locally and the choice of guest singer. There is often an in-built tension in the type of material performed, which could range from the rural, conservative, romantic and idealistic material of the 19th century (classic 'folksong' as defined by Cecil Sharp) – a song eulogizing the triumphs of foxhunting or the heroics of a highwayman or pirate – to urban, radical, politically aware, contemporary, environmentally and socially conscious material – for example a song about the destruction to the environment caused by opencast mining or the cruelty of a husband who batters his wife.

'Sessions' take place in the bars (public space) of public houses, and anyone who has an appropriate instrument in the correct pitch – fiddle, accordion, melodeon, concertina, guitar, banjo, mandolin, tin whistle, flute, bagpipes (Northumbrian or Irish), percussion (spoons, bones, tambourine, bodhran, triangle) etc. – and the appropriate level of skill and appreciation of 'sound ideal' may participate. Composition of sessions and the acceptable 'sound ideal' vary according to regional location. In an east Suffolk 'tune-up', songs and instrumental melodies (with a preference for hornpipes and waltzes) are exchanged in equal measure, while in other areas music predominates and the full gamut of melodic forms is in evidence (hornpipes, jigs, reels, polkas, marches and waltzes), including those from the Irish as well as English tradition. Similarly, in east Suffolk 'tune-ups', a 'master of ceremonies' calls for 'lovely order' to ensure silence during songs or solo instrumentals, while during the communal playing of music, people feel free to chat and socialize.

Festivals incorporate folk club and session formats alongside concerts, folkdances, ceilidhs (used in England to describe an event during which dances may be interspersed with other performances, such as songs or dance demonstrations; also used to describe a style of dancing); workshops (for learning dances, songs or instruments) and street displays, such as those by costumed folkdance groups, notably morris dancers. Some actively encourage traditional performers to participate, which leads to a limited cross-fertilization of repertories. However, few English folk festivals reflect the musical traditions of the region in which they are located, preferring to feature traditional singers or instrumentalists from outside the locality, especially from Scotland or Ireland.

Performers and supporters of folk music at clubs, sessions and festivals – members of the 'folk scene' – are participants in a form of subculture that has contacts in North America, Europe and Australasia. It has also become allied with the emergent popular music of

18. Tune-up at the Ship, including Oscar Woods (melodeon), 'Slot' Phillipson (cello) and Reg Reader (hammer-dulcimer)

developing nations and their constituent ethnic groups. In England, such music is categorized as 'roots' or 'world' music. It is an indication of the compartmentalization of popular culture that instrumental music or song from the 'folk world' has been equally distanced both from Western art music and mainstream popular music, although it did enjoy a period of cross-fertilization with the latter during the 'FOLK-ROCK' years of the early 1970s (e.g. Fairport Convention, Steeleye Span, Mr Fox).

6. GENDER, CHILDREN, ETHNICITY. Women have played and play an important role in traditional singing, though their contribution as performers of traditional instrumental music has been almost non-existent. The reasons for this paradox are bound up in the expectations of the domestic role of working-class women in English society since the Reformation. Performing a multiplicity of domestic tasks as well as childrearing may reasonably allow for singing, especially when such tasks are tedious, repetitive or part of a routine; however, the leisure time necessary to perfect the playing of an instrument was not available in most households, nor was the independence available to visit pubs or other venues where music-making might feature.

Several of Cecil Sharp's most important singers from Somerset were women, such as Mrs Overd of Langport and Louie Hooper and Lucy White of Hambridge. Vaughan Williams noted (and recorded) songs from another prodigious female singer, Mrs Verrall of Horsham in Sussex. In the last 40 years several important female traditional singers have been recorded including Cecilia Costello, Phoebe Smith and Louie Fuller, as well as some talented revival singers. Whereas the preferred social context of singing for men for most of the 20th century has been the public house, women have generally performed their songs in the privacy of the home among family, friends and neighbours, the most intimate occasion being the singing of lullabies to infants in arms. Changing social attitudes have enabled women to play a far more active part in traditional music-making, dance and singing than had previously been possible, though the necessity for part-time and full-time labour and the consequent demands this has made on women must be viewed as a negative factor.

While it is true that women play a crucial role in the transmission of family songs and nursery rhymes to their children, most of the song culture that children acquire is part of play and is learnt from their peers in the school playground or in the street. Such songs provide the rhythm, framework or rules of games. They are used, largely by girls, for actions, counting, clapping games, skipping and games in a line, ring or teams. Some parody popular songs or delight in scatological or sexual humour. They form part of a code of behaviour that exists to delineate the pre-adolescent from the adult world. The task of charting out this largely hidden culture has been undertaken by a number of scholars, most notably Peter and Iona Opie.

There has been little research into the musical traditions of minority ethnic groups with the exception of the singing traditions of gypsy or other travelling people. In many ways, these groups share the same singing traditions as the settled community, though exhibiting a more conservative approach to repertory and a more extravagant style of singing. In some cases, English gypsy singers

establish ownership of their songs by building into the lyrics cant phrases or terms. Moreover, their manner of delivery is often more intense and drawn out, demonstrating Irish or Scots influences. Recent extensive research has been undertaken into the musical traditions of the Irish community in London (as well as some recording in Liverpool) and into the Asian communities in Bradford and Birmingham.

STEPHEN BANFIELD (I), IAN RUSSELL (II)

England (ii). English family of organ builders. Several complications and confusions concerning the family relationships and professional origins are reviewed by Edmonds. It is certain, however, that George England (*d* 1773) was at Wood's-close, Clerkenwell, London, in 1763, the address previously of Richard Bridge. According to Hopkins and Ribault, England married Bridge's daughter. It is, therefore, confidently asserted that he succeeded to Bridge's business on the latter's death in 1758. The style of England's organ building is similar to that of Bridge, continuing the tradition of Harris and Byfield. Important work by George England includes St George's Gravesend (1764), where the case, much pipework and other material survives (partially dismantled and unplayable), and St Stephen Wallbrook, London (1765), where the case survives. There are good grounds for questioning the oft-quoted critique of George England's tonal methods given by Hopkins that suggest a significant difference from his antecedents: the 'Principal one pipe smaller than his Open Diapason, his Fifteenth two pipes narrower, and every rank of his Mixtures to a varied scale' and the description of his four rank Compound stop with a Twenty-sixth giving 'a sound as of bells' are more appropriate to organs built at the end of the 18th century by George's nephew, George Pike England.

John England (*d c*1790), generally thought to be George's brother, succeeded to the business – partly in 1766, when George retired, and fully in 1774 after George's death. There were one or two loose partnerships in the period between 1774 and 1784, for example with Hugh Russell at St Michael Queenhithe, London (1779; the case survives at Christchurch, Chelsea), and with John Byfield and Hugh Russell at St Helen's, Abingdon (1780). John is listed at Stephen Street, Tottenham Court Road, from the late 1780s and was succeeded in about 1790 by his son George Pike England (*c*1768–1815), who worked from that address until his death.

G.P. England's work was the epitome of English organ building at the end of the 18th century, without the excesses to be found in Green's work; tonally, it was a conservative, understated style, firmly rooted in the work of its antecedents but showing some of the trends of the time – such as varied scaling for the constituent parts of the Principal chorus. This style was carried into the 19th century and inherited by Joseph Walker, so that it might be thought that the true lineage of native English organ building is to be traced through his connection rather than through the more brilliant, innovative style of the Snetzler-Elliot-Hill lineage. Important examples of G.P. England's work survive at St Peter and St Paul, Blandford Forum (1794; case and much pipework extant, conservatively rebuilt by Hill in 1874 and restored by Mander in 1970); also St James's, Clerkenwell, London (1792), St Margaret Lothbury, London (1801), St Andrew's Shifnal, Shropshire (1811) and St Agnes's, Cawston, Norfolk (originally at St Stephen's, Norwich, 1813). G.P. England was succeeded by his foreman and son-in-law, W.A.A. Nicholls.

DAVID C. WICKENS

Englander [Engländer, Englaender], **Ludwig** (*b* Vienna, 20 Oct 1853; *d* New York, 13 Sept 1914). American composer and conductor of Austrian birth. He received his musical education in his native city, where he reportedly studied with Jacques Offenbach. He emigrated to the USA in 1882, became conductor at the Thalia Theatre, New York, and began arranging other composers' works. His own first published score was *1776*, a three-act romantic comic opera in German (1884), but his first (and greatest) success was *The Passing Show* (1894), the earliest of the lavish topical American revues. Englander composed scores for about 55 shows, principally comic operas, writing as many as four a year during the period 1895 to 1904. More than 50 of his songs and a handful of piano pieces (mostly from the shows) were published. Although he was a prolific composer of well-crafted songs and dances, Englander's thorough grounding in Viennese operetta prevented him from adapting, towards the end of his career, to the Tin Pan Alley and musical comedy styles. The most popular songs in some of his shows were in fact written by other men: for example, 'Sweet Annie Moore' (*The Casino Girl*) was by John H. Flynn; 'Under the Bamboo Tree' (*Sally in our Alley*) by Bob Cole and J. Rosamond Johnson; and 'Any Old Time at All' (*The Rich Mr Hoggenheimer*) by Jean Schwartz. Englander's last work, *Madam Moselle* (1914), was a failure, and he died in relative obscurity.

WORKS
(*selective list*)

unless otherwise stated, all are comic operas; dates are those of first New York performance

DEANE L. ROOT

Engländer, Richard (*b* Leipzig, 17 Feb 1889; *d* Uppsala, 16 March 1966). German musicologist. After attending the Thomasschule in Leipzig he studied the organ (with Karl Straube), the piano (with Leonid Kreutzer), the cello and composition (with Paul Klengel), and was a pupil of Riemann at Leipzig University. In 1908 he went to Berlin where he worked under Kretzschmar and in 1914 obtained the doctorate with a dissertation on J.G. Naumann as an opera composer. He was assistant to Fritz Busch at the Dresden Staatsoper (1922–6), and throughout his years at Dresden to the time of his move to Sweden in 1939, played an active part in the musical life of the city. From 1926 he was lecturer in music history at the orchestra school of the Staatsoper. In 1948 he was appointed lecturer in music at Uppsala, and received an honorary doctorate from that university in 1955. For a short time in 1952 he deputized for Jeppesen at Århus University. In Sweden he turned his attention to research into Swedish musical history, in particular opera under the reign of Gustavus III, and again took a lively interest in practical music, in the concert hall, opera house and on the radio. In 1965 he was granted a titular professorship.

Engländer's personality and work were characterized by his equal inclination towards creative and scholarly activity. His ambition 'to unite the practising musician and the scholar in a single person' resulted in a many-sided involvement with practical music as a harpsichordist and pianist, chamber music player, coach, conductor and critic, and in a keen intellectual concern with the problems of the works in which he took part – not to mention his activity as a composer of variations, sonatas for cello and for viola da gamba, songs and choral works. As a scholar Engländer's principal interest lay in the musical history of Dresden during the Classical and Romantic eras, with its fusion of the German and the Italian spirits and the spread of its influence northwards. Thus his research into the central figure of J.G. Naumann led to his work on Swedish musical history of the same period, an area in which his book *Joseph Martin Kraus und die gustavianische Oper* (1943) made a contribution of fundamental importance.

ANNA AMALIE ABERT

Engler. German family of organ builders and instrument makers. They were active in Breslau (now Wrocław). The most famous member of the family was Michael Engler (*b* Breslau, 6 Sept 1688; *d* Breslau, 15 Jan 1760). His son Gottlieb (1734–93) also built some good instruments, and the most important work of his grandson Johann Gottlieb (1775–1829) was the design for the Breslau Cathedral organ (1801).

About 40 organs are known to have been built by Michael Engler, including fine three-manual organs for St Nicholas, Brieg (now Brzeg; 1730), the Cistercian church, Grüssau (now Krzeszów; 1736), St Moritz, Olmütz (now Olomouc; 1745), and St Elisabeth, Breslau (1760–61; completed by his son and son-in-law). Engler built large Prinzipal choruses up to 1⅓′ or 1′, and he incorporated a Tierce rank, but no Zimbel, in the manual Mixtures. In the Pedal department Mixture he included the less common Cornet instead of a Tierce rank, and to the usual 16′, 8′ and 4′ stops in the Pedal he added a wooden 16′ Quintatön (and a 16′ wooden Offenbass in larger instruments). The manuals always contained several 8′ stops, including Prinzipal, Gedackt, Quintatön, Gemshorn, and several flute and string stops; he also added tremulant stops from *f* or *g* (Vox humana, Unda maris). Only the larger instruments had reed stops in the manuals (Trompete 16′ and 8′, Oboe 8′, Schalmei 8′), but Pedal reed stops, depending on the size of the organ, included a Posaune at 32′ and 16′, Bommert at 16′ and 8′, and an 8′ Trompete.

The manuals usually had a compass of *CD–c‴*, and the Pedal *CD–c′*. The organs in Brieg, Grüssau and Olmouc were tuned to Chorton; to these he added a mechanism that could transpose the *Rückpositiv* or *Unterwerk* a tone lower to Cammerton – because of the absence of *C♯* only an extra *B♭′* (Chorton) pipe was necessary to complete the range. Two to four Pedal stops could also be transposed to Cammerton pitch using double sliders. The organ in Olomouc was incorporated into a five-manual organ by Rieger of Jägerndorf in 1961. The historical part can be played separately and is in reasonable condition.

RUDOLF WALTER

Englert, Anton (*b* Schweinfurt, 2 Nov 1674; *d* Schweinfurt, 22 Nov 1751). German organist, composer and teacher. He was the son of a town musician and attended the Lateinschule and Gymnasium at Schweinfurt. In 1693 he went to Leipzig, where he studied theology and took part in musical performances directed by Kuhnau and N.A. Strungk. After taking the master's degree, Englert was called back to his native town in 1697 to succeed Georg Christoph Bach as Kantor at St Johannis. He also worked as Präceptor at the Gymnasium, where he was appointed Konrektor in 1717 and Rektor in 1729. The demands of teaching may have induced him to exchange, in 1713, his Kantorat for the organist's post at St Johannis, which he held until his death.

According to Mattheson, Englert wrote several cantata cycles and a great number of other works, mostly sacred. Stylistically his music was indebted to Kuhnau's, as Schmidt observed in his description of 21 cantatas (then in *D-FRIts*, now lost).

WALTER BLANKENBURG/DOROTHEA SCHRÖDER

Englert, Giuseppe G(iorgio) (*b* Fiesole, Italy, 22 July 1927). Swiss composer. He studied theory and composition with Willy Burkhard at the Zürich Conservatory (1945–8) and the organ with André Marchal in Paris, where he settled in 1949. In 1955 and from 1958 to 1963 he took part in the international summer courses at Darmstadt, attending seminars given by Leibowitz (1955) and Cage (1958), among others. From 1970 to 1972 he taught at the University of Paris VIII-Vincennes, where he became a member of the computer department's 'Art et informatique' group in 1973. Although he has not composed any strictly serial works, the rigour of serial thinking has inspired Englert to define specific structural principles for each work, in an attempt to put the creative process beyond the whim of the composer. In 1973 he began to use a computer to work out these principles, both in electro-acoustic works (*Suite ocre*, 1984; *Sopra la Girolmeta*, 1991) and in scores for conventional instruments (*GZ 50*, 1979; *Babel*, 1981–2; *Chacones*, 1993–4). By means of these concepts, and without using aleatory methods as a rule, Englert has hoped to achieve new and unforeseeable results that surprise even himself. He employs each structural concept only once and places no value on the development of a recognizably personal style. 'My approach', he argues, 'which is inspired by the new ways of using and augmenting intelligence, leads me to avoid all that derives from what is called *nature*, my goal being to synthesize something entirely artificial but profoundly coherent' (*Computer Music Journal*, 1981).

CHRISTOPH KELLER

English Bach Festival. An annual series of concerts, opera productions and other events, which has regularly exceeded the implications of its title. It was founded in 1963 by Lina Lalandi, the Greek-born harpsichordist and singer. She originally based the festival in Oxford, making use of several notable university and other buildings. In 1968 six additional concerts were held in London, where a majority of the festival events has since taken place.

From the outset the joint artistic directors were Lina Lalandi and Jack Westrup; in 1971 Lalandi became sole artistic director. The duration of the festival, held in spring or summer, has varied from nine days (Oxford, 1963) to three weeks (Oxford and London, 1971). From the 1970s it comprised between 30 and 40 events. Funds have been provided by the Arts Council of Great Britain, some foreign government sources and a limited amount of private support. A rare combination of musical integrity, resourceful imagination and personal flair on the part of Lalandi enabled the festival to maintain an uncommonly high standard.

The festival's object was initially defined in the 1963 programme book: 'To present the music of Bach, his family and their contemporaries in as authentic a manner as historical research will allow; but this, though a guiding principle, is not a limiting feature'. Festival programmes have included all the principal works of Bach, and representative selections of other music of his time, mainly by French, German and Italian composers. Contemporary music was included in the first festival, and by 1966 'the presentation of varied aspects of contemporary music' was formally acknowledged as being additional to 'a coherent and instructive picture of his [Bach's] music in the context of his musical era'. Festival concerts of contemporary music have been responsible for the first British performances of several works by Xenakis and other Greek composers, Stockhausen and Ligeti, as well as Messiaen, Roussel and Skalkottas from a previous generation. In addition, the festival has given direct commissions to some British composers, including Don Banks, David Jones, Roger Smalley, David Bedford, Robert Sherlaw Johnson and Elisabeth Lutyens.

From about 1975 the focus of the festival has moved almost entirely to the revival of early opera, including works by Rameau, Purcell and Mozart, sometimes in concert performance, more often in stage productions with décor and costumes based on original designs. Their presentation has emphasized the observance of historically correct style, the employment of period instruments and the reconstruction of Baroque dance. The festival's most remarkable achievement has been its one-night staged performances at Covent Garden, beginning in 1977, with specially engaged casts and orchestra, sometimes repeated in a subsequent year. While critical opinion has at times expressed reservations on some musical or scenic aspects it has also saluted the enlightened impetus behind them. Productions taken abroad have strengthened the festival's growing international reputation in this field.

Igor Stravinsky, who succeeded Albert Schweitzer as honorary president of the festival in 1966, visited Oxford as its guest in 1964 to conduct performances of his Variations on 'Vom Himmel hoch' and his *Symphony of Psalms*. In 1972 Leonard Bernstein was appointed honorary president and conducted works by Stravinsky and Bach for the inaugural concert of the 1977 festival. No further honorary president for the festival has been named since the death of Bernstein in 1990. Supplementary festival themes have included the lesser-known works of Beethoven in his bicentenary year (1970), Byzantine music and Greek folk music (1971–3); Spanish music (1973–6) and French Baroque music (1965, 1974 and 1976–9).

NOËL GOODWIN

English Baroque Soloists. English period instrument chamber orchestra. It was founded in 1978 by John Eliot Gardiner and, in conjunction with the Monteverdi Choir, initially focussed on Monteverdi and Bach, and on Handel's oratorios. The orchestra took part in the first period-instrument recording, with Malcolm Bilson, of all Mozart's piano concertos, and subsequently in a series of live recordings of his seven mature operas. The orchestra's sensitivity in accompanying is evident on numerous other recordings, including fine performances of Haydn's late oratorios.

GEORGE PRATT

English Chamber Orchestra [ECO]. Name adopted in 1960 by the Goldsbrough Orchestra, founded in 1948 by Arnold Goldsbrough and Lawrence Leonard. *See* LONDON, §VII, 3.

English Concert. Period-instrument chamber orchestra. It was founded by Trevor Pinnock in 1973 and has gained an international reputation, touring widely in Europe, Japan and South America. Many of its early recordings achieved critical acclaim (among them Vivaldi's *Four Seasons* and Bach's Orchestral Suites and Brandenburg Concertos), while a number of subsequent recordings, including *Messiah* (with the English Concert Choir, 1988) and two of Telemann's Orchestral Suites (1995), have won major awards.

GEORGE PRATT

English fingering. The FINGERING of keyboard music with figures 1 to 4 representing four fingers, and + the thumb, of each hand, a system used in England and elsewhere in

the 19th century and now obsolete. The term contrasted with CONTINENTAL FINGERING, which provides the figures 1 to 5 for each hand, 1 standing for the thumb, a system in general use throughout the world today.

□

English flute. An older name for the RECORDER, used to distinguish it from the transverse flute, also called 'German flute'.

English Folk Dance and Song Society. English organization, formed in 1932 by the amalgamation of the Folk-Song Society and the English Folk Dance Society.

1. Origins and activities. 2. Impact and cultural context.

1. ORIGINS AND ACTIVITIES. The Folk-Song Society was founded in London in 1898 by a group of leading musicians in order to direct 'the collection and preservation of Folk Songs, Ballads and Tunes and the publication of such of these as may be advisable'. Between 1899 and 1931 the society published a journal (*JFSS*); its 31 issues constitute a major source of English folksong transcriptions and associated scholarship, contributed by pioneers in the field such as Lucy Broadwood, Anne Gilchrist, Percy Grainger, Maud Karpeles, Frank Kidson, E.J. Moeran, Cecil Sharp and Ralph Vaughan Williams. Although concerned primarily with English folksong, the journal also included Gaelic songs.

The English Folk Dance Society was founded by CECIL SHARP in 1911 'with the object of preserving and promoting the practice of English folk-dances in their true traditional form'. Using dances collected by Sharp and others as a basis, the society concentrated initially on performance and educational activities rather than publication, offering classes, courses, displays and lectures, training teachers, and granting certificates of proficiency; it also fostered country dancing as a social activity. Local branches, under the supervision of the central headquarters, were established throughout England and (from 1915) in America. Six issues of the *Journal of the English Folk Dance Society* were published between 1914 and 1931.

After Sharp's death in 1924 the leadership passed on to Douglas Kennedy, who went on to direct the English Folk Dance and Song Society after the amalgamation of 1932; he retired in 1961. The scope of activities broadened considerably during this period. From 1925 the annual 'All-England' festival brought to London folk dancers from all over the country to perform together in public. In 1935 the society held an International Folk Dance Conference and Festival, which led eventually to the formation of the International Folk Music Council (now the INTERNATIONAL COUNCIL FOR TRADITIONAL MUSIC). In June 1930 the society moved into Cecil Sharp House in Camden Town, London, purpose-built headquarters which the organization continues to occupy. The library, built up around Sharp's personal collection, is now a major research centre (in 1958, on the death of Vaughan Williams, then president of the society, it became the Vaughan Williams Memorial Library). In the years following World War II there were significant changes in the society's policies, most notably a shift in emphasis away from instruction towards social activities, and a growing decentralization, both precipitated in part by the widespread revival of popular interest in folksong; the society has continued to enlarge its scope to keep pace with contemporary developments. It publishes an annual journal; the *Journal of the English Folk Dance and Song Society* (*JEFDSS*), founded at the time of the amalgamation, has since 1965 appeared under the broader title of *Folk Music Journal*.

2. IMPACT AND CULTURAL CONTEXT. Both the English Folk Dance and Song Society and the two older organizations that merged to form it brought into focus some highly significant cultural trends of early 20th-century Britain; in addition they were the initial driving engines for a broadly-based folk revival that has left a permanent impression on the English-speaking (especially Anglo-American) world. About the turn of the century social anxieties, generated by rapid urbanization, industrialization and imperial expansion, prompted a widespread idealization of rural life and its values as an antidote to social fragmentation and the key to strong national identity. Folk music was a potent agent in this ruralist movement; yet while the founder members of the Folk-Song Society included such giants of Victorian music as Sir Hubert Parry and Charles Stanford, it was not until the emergence of a younger cohort, animated by missionary zeal, that the movement began to gather real momentum. In this the most promiment figures were Cecil Sharp and Ralph Vaughan Williams, who in 1904 led a campaign that galvanized the largely stagnant Folk-Song Society, and shifted its emphasis from antiquarianism to popular revival; this process was not without controversy, some of it acrimonious, but Sharp eventually emerged as the leader of the revival (Vaughan Williams remained influential as an organizer, but his name became more strongly associated with the compositional use of folksong). From 1905 the Board of Education gave increasing recognition to the value of folk music in school life, culminating in 1919 with the appointment of Sharp as an Occasional Inspector of Training Colleges in Folk Song and Dancing. He was brought in by H.A.L. Fisher, then President of the Board of Education, who became closely involved with the direction of the English Folk Dance Society, eventually serving on its National Advisory Council: such connections indicate how far (and how swiftly) the folk revival had penetrated the cultural establishment. This influence was extended into the English-speaking world overseas with the founding in 1915 of North American branches of the Folk-Dance Society, which added folk music to an increasingly important nexus of transatlantic 'Anglo-Saxonist' ties.

The movement further broadened its scope and activities in the inter-war years. In the post-1945 era, however, because it had become associated with the 'Establishment', the English Folk Dance and Song Society became a target of social revisionism. Matters were also complicated by the emergence of a second phase to the folk revival, more spontaneous and eventually more genuinely popular, which, heavily influenced by developments in America, saw folk music as a living art, linked with political and social protest and the modern industrial world, rather than a pristine relic of undiluted rural culture. Yet in many ways the tensions of the postwar era merely brought into the open contradictions which had been inherent all along. Recent scholars have accused the middle- and upper-class folklorists who dominated the movement of appropriating folk music as bourgeois entertainment, and of imposing patriarchal assumptions about what is good for the lower orders, ignoring the working classes' own clear preference for music-hall and other popular urban

repertories. It has also been suggested that the collectors exploited their human sources, especially in terms of publication royalties, which went to collectors and not singers. Marxist critics have viewed with suspicion the gradualistic socialism espoused by Sharp and other leading figures; likewise, Sharp's hostility to Mary Neal's 'Espérance' organization, which had connections with the suffragette movement, has drawn fire from feminist historians. More profoundly, scholars have questioned the philosophical fundaments of the revival, including the notion of folksongs and folkdances as collectable and reproducible artefacts rather than unique performative acts inseparable from complex social processes, the rigid separation of rural and urban musics, and the whole concept of 'the folk'. The methods of the early collectors have been challenged, on the grounds that they made unwarranted assumptions about modality and rhythm, slighted the variational complexity entailed in individual performances and took a cavalier attitude towards recording the words of songs. Finally, in blunt contradiction of the movement's nationalist impetus, it has been argued that many of the songs and dances collected cannot justifiably be classified as 'English' in origin, given complex historical interactions with other folk repertories, especially that of Ireland.

Yet it can be argued that the revisionists themselves fall into political distortion at times, failing to acknowledge the complexity of the impulses that drove the collectors on with such industry and zeal, and the genuine interest and concern that many showed towards their human sources. And however misleading the notated folk music we now have may be as a record of the social and musical processes in which it originated, it is nevertheless in most cases all that now remains of these rich interactions. Above all, it has generated musical experiences in which millions of performers, listeners, and composers have discovered a distinctive beauty and value – and without the collectors we would have nothing.

MAUD KARPELES/ALAIN FROGLEY (1), ALAIN FROGLEY (2)

English guitar. The most common present-day name of a type of plucked instrument popular in England from about 1750 to 1810, between the decline of the lute and the arrival of the six-string Spanish guitar (the five-course guitar was not popular in England in the 18th century). In common with the CITTERN it has metal frets and a movable bridge over which wire strings pass to pins at the bottom of the ribs, but its other structural features and triadic tuning are distinct. In its heyday it was called the 'guitar' or 'guittar', 'cetra' or 'citra', the term 'English guitar' being applied only from about 1780 when the need arose to distinguish it from the Spanish guitar. It was called *guitare angloise* in France between about 1770 and 1780 to distinguish it from the *guitare allemande* (see below) and *guitare espagnole*. Another developmental stage between the English guitar and the cittern may be the 'bell guitterne' described by Talbot (*c*1695, *GB-Och* Mus.1187; *see* CITHRINCHEN). The instrument has a flat or slightly convex back and metal strings. Its six courses are tuned *c–e–g–c′–e′–g′*, the bottom two being single-strung and the upper four double, a total of ten strings. The lower three courses are overspun. There are normally 12 brass frets (spanning one octave) on the fingerboard, and the most common size of the instrument has a sounding string length of 42 cm. In the 1760s J.N. Preston of London invented watch-key tuning (fig.1), which was better suited to the instrument's short metal strings than the original peg tuning (fig.2). Dublin-made instruments of the 1760s often use the worm-gear tuning later adopted by the Spanish guitar. On many instruments there are holes drilled through the fingerboard between the first four frets for a 'moving-bridge', i.e. *capo tasto* (normally made of ivory or ebony), fixed with a wing-nut and a

1. English guitar, with watch-key tuning, by John Preston, London, c1770 (Royal College of Music, London)

bolt, which facilitates transposition from the C-tuning upwards to D, E♭ or E to suit the tessitura of the singer being accompanied. Apart from Geminiani, who printed tablature, the music was written on one treble staff, sounding an octave lower than written – as with the modern Spanish guitar.

The English guitar's popularity reflected the desire of the wealthy class to play a simple musical instrument. Burney recounted (in 'Guitarra', *Rees's Cyclopaedia*, 1802–19) how its vogue about 1765 was so great among all ranks of people as nearly to ruin the harpsichord makers; but Jacob Kirkman retrieved the situation by giving cheap guitars to milliner girls and street ballad singers, thereby shaming the richer ladies into returning to the harpsichord.

The repertory of the English guitar consists principally of solo arrangements of theatre songs and dance-tunes. The best music is found in a few trios with violin and cello by Felice Giardini, duos with cello by Francesco Geminiani (both published in 1760), a sonata with violin (*c*1770), possibly by J.C. Bach, and sonatas and duos, by Rudolf Straube. The principal tutor was by Robert Bremner (Edinburgh, 1758); it says the guitar should be held in the lap, preferably steadied by a ribbon over the left shoulder; finger technique follows that of the lute: the right-hand little finger rests on the bridge close to the first string (though this detail was omitted from later editions), and plucking is done with the fingertips of the other fingers (not with a plectrum); thumb and index-finger technique is extended to include the middle and ring fingers; the tutor also gives instructions for tonal variations (from *ponticello* to *tasto*), and ornamentation (the soft and hard 'shake' and the 'beat').

To help those too lazy to acquire a right-hand technique, during the 1770s a certain Smith patented a key-box housing six keys similar to those of a piano, which when depressed caused leather-covered hammers to strike down onto the strings. In 1783 Christian Claus of London patented a more sophisticated 'keyed guitar', whose mechanism was housed inside the sound box instead of being poised above the strings; the hammers struck upwards through holes in the soundhole rose. This type of instrument was called a 'piano forte guitar' by Longman & Broderip in 1787. From 1798 Edward Light developed other instruments based on the English guitar (*see* HARP-LUTE (ii)).

In France in the 1770s the seven-course *cistre* or *guitare allemande* was comparable to the English guitar (the name *guitare allemande*, i.e. German guitar, may possibly indicate, however, that the instrument was modelled on German cithrinchens, particularly those made by Joachim Tielke of Hamburg). Charles Pollet printed a method for it *c*1775, giving the tuning as *E–A–d–e–a–c♯′–e′*. This A major tuning had been used in England,

but only in the 1757 and 1762 publications of G.B. Marella. Both the English guitar and the *guitare allemande* (which was probably the instrument used by the Swedish singer C.M. Bellman to accompany himself) have a modern descendant in the *guitarra portuguesa*, still played in Portugal.

English Music Theatre Company. English organization. It was formed in 1947 as the English Opera Group by Benjamin Britten, John Piper and Eric Crozier, after the success at Glyndebourne the previous summer of Britten's *The Rape of Lucretia*. The company intended to devote itself 'to the creation and performance of new operas ... and to encourage poets and playwrights to tackle the writing of librettos in collaboration with composers'. It was responsible for the foundation and artistic direction of the Aldeburgh Festival, and the formation of an Opera Studio in London.

The English Opera Group commissioned and produced a number of new works, including Britten's *Albert Herring*, *The Turn of the Screw*, *A Midsummer Night's Dream*, the three church parables, *Owen Wingrave*, and *Death in Venice*; Berkeley's *A Dinner Engagement*, *Ruth* and *Castaway*; Williamson's *English Eccentrics*; Walton's *The Bear*; Birtwistle's *Punch and Judy*; Crosse's *The Grace of Todd*; John Gardner's *The Visitors*; and Thea Musgrave's *The Voice of Ariadne*. It also mounted productions of *Idomeneo*, *Acis and Galatea*, *The Beggar's Opera*, *Yolanta* (Tchaikovsky), *Trial by Jury* and *La rondine*, as well as revivals of works by Purcell and Holst. In 1961 its management and financial responsibility were taken over by Covent Garden. Steuart Bedford and Colin Graham were appointed musical director and director of productions respectively in 1971.

In 1975 the English Opera Group was expanded and re-formed as the English Music Theatre Company with Bedford and Graham continuing as artistic directors of a permanent ensemble company of 24 soloists, a chorus of 24 and an orchestra of 20. The change in name reflected a broadening of repertory to include opera, operetta, musicals and new commissions. It gave regional tours and an annual season at Sadler's Wells Theatre, and performed at festivals, notably at Aldeburgh. The company ceased to function in 1980.

English violet (Ger. *englisch Violet*). A bowed string instrument that existed in various forms in the 18th century. Leopold Mozart (*Versuch*, 1756/*R*) described it as a kind of viola d'amore, but with a different tuning and with seven principal and 14 sympathetic strings. J.G. Albrechtsberger (*Gründliche Anweisung zur Composition*, 1790/*R*) wrote that it was similar to the viola d'amore, but had only six playing strings, lacking the low *A*. F.A. Weber described it in the *Musikalische Anthologie für Kenner und Liebhaber* (1788) and in the 'Abhandlung von der Viola d'amore oder Liebesgeige' (*Musikalische Realzeitung*, no.31, 1789) as an ordinary violin which, when tuned with one of many 'scordatura' tunings, could sound like a viola d'amore, although he made no mention of sympathetic strings. Its primary scordatura tuning was in A major, although Weber stated that it could be tuned in many different keys. It was still mentioned in 1802 by H.C. Koch (*Musikalisches Lexikon*). It was apparently unknown under this name in England but it might be identical with the VIOLETTA MARINA.

Englund, (Sven) Einar (*b* Ljugarn, Gotland, Sweden, 17 June 1916; *d* Ljugarn, 27 June 1999). Finnish composer. From 1932 to 1941 he studied with Bengt Carlson (composition), Leo Funtek (orchestration) and Martti Paavola (piano) at the Helsinki Conservatory (from 1939 the Sibelius Academy). After establishing himself as a composer with the first two symphonies (1946 and 1948), both reflecting the atrocities of war, he continued his studies in 1949 with Copland at Tanglewood. Other study trips have taken him to several European countries. For many years he earned a living by playing the piano in restaurants and composing music for theatre, radio plays and film. In 1956 he became music critic of the daily paper *Hufvudstadsbladet* (a role he fulfilled until 1976) and a year later was appointed lecturer in theory and composition at the Sibelius Academy. In 1976 he became honorary professor and in 1978 a member of the Royal Swedish Academy. As a pianist he frequently performed his two piano concertos in Finland and abroad, and accompanied his wife, the singer Maynie Sirén.

In an interview of 1963 Englund mentioned Stravinsky and Bartók as the two composers who had most influenced him. His preference for traditional forms and techniques (e.g. chaconne, passacaglia, fugue, sonata form), an expanded tonality and jazz rhythms (found in *Kiinan muuri* and the Second Symphony) are features that link his music with neo-classicism. Bartók's influence can be seen in Englund's rhythm and modal melody, although Englund never drew on folk music sources.

The main polarity in Englund's music is between a keen concern with musical 'logic' and craftsmanship and a passionate individualism that never loses sight of expressive immediacy. The former led him to develop a skilful

technique of thematic transformation, notably in the first two symphonies, while the latter prevented him from adopting the 12-note method which he considered 'wearying'. He consistently rejected fashionable trends and remained faithful to his ideal of genuine musicianship which characterizes all his works.

WORKS
(*selective list*)

Stage: Kiinan muuri [The Wall of China] (incid music, M. Frisch), 1949; Valkoinen peura [The White Hart], film score, 1954; Odysseus, ballet, (B. Cullberg after Homer) 1959; Sinuhe (ballet, E. Sylvestersson after M. Waltari) 1953–65; other film music, incid music for theatre and radio

ILKKA ORAMO

Engramelle, Marie Dominique Joseph (*b* Nédonchel, Artois, 24 March 1727; *d* Paris, 9 Feb 1805). French builder of mechanical instruments. Like his younger brother, the amateur entomologist Jacques Louis Florentin, with whom he is still occasionally confused, he was a monk, serving for a time as prior of the convent of the Petits-Augustins, Paris, and suffering persecution during the years after the Revolution.

After hearing an Italian musician performing keyboard sonatas at Nancy, Engramelle envisaged a machine which would preserve such performances and repeat them at will on the keyboard. His subsequent experiments resulted in two important developments: a form of shorthand for indicating exactly all forms of musical ornamentation, and the establishment of the principles of mechanical music through the conversion of music to pins and staples on a barrel. By the time Engramelle published his important study *La tonotechnie* – in which the procedure

Brief melody, with plan for Engramelle's studded barrel: from Bédos de Celles' 'L'art du facteur d'orgues', iv (1778), pl. CXIV; the proportion of black to grey in the strip representing each note indicates the degree to which that note would be sustained

was explained – in 1775 the craft of barrel pinning was already well established. His 'shorthand' clearly owed much to that used by François Couperin. Although Engramelle's process 'for geometrically dividing the notes' was greeted with mixed opinion (Fétis considered it 'une idée fausse'), the description of his invention of the numbered dial (*cadran*) and its application in 'notating' the cylinders of mechanical musical instruments represented an important step forward in his time and constitutes an invaluable source of information today on French and late Baroque performing practices. Engramelle's study also provides charts for pinning 12 pieces of music. From this can be drawn several interesting observations: all tempos are strikingly fluid; endings are clearly retarded; the inequality of *notes inégales* ranges in proportion from 3:1 to 9:7; staccato takes precedence over legato; there are minute gradations of staccato (which is, however, normally extremely short), and there are similarly fine shades of differentiation for legato; grace notes are short and invariably fall on the beat; no trills maintain the same rapidity throughout; and finally all such 'rules' are allowed broad freedom in their application

(see illustration). Engramelle's work was subsequently revised and expanded by François Bédos de Celles.

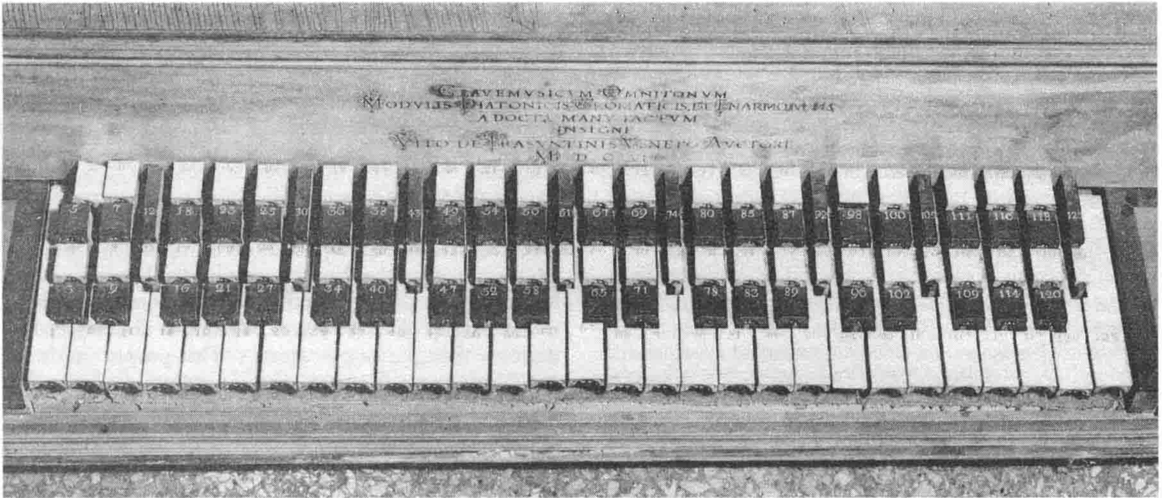
Enharmonic. A term used in modern theory to denote different ways of 'spelling' the name of one note: for example B♯ = C = D♭♭, C♯ = D♭ etc. An 'enharmonic change' is the respelling of a note in accordance with its changing function, for instance D♭ being renamed C♯ in the modulation from D♭ major to A major in Chopin's Second Scherzo op.31. An 'enharmonic modulation' involves the respelling of a key, usually when there is a change in mode, for example from C♯ minor to D♭ major in Chopin's *Fantaisie-impromptu* op.66. Two notes that sound the same but are spelt differently are said to be 'enharmonically equivalent'; thus enharmonic equivalents are musical homonyms. In principle, enharmonic relationships can exist only in a system of equal temperament, in which the octave is divided into 12 equal semitones; but even in intonation systems where, say, F♯ and G♭ are not performed at exactly the same pitch, their enharmonic association can nevertheless be perceived by the listener, and exploited by the composer. For a definition of 'enharmonic' as applied to ancient Greek music, *see* TETRACHORD.

JULIAN RUSHTON



Enharmonic keyboard. A keyboard with more than 12 keys and sounding more than 12 different pitches in the octave. Such keyboards may serve various purposes, to make available mean-tone temperament in tonalities involving more than two flats or three sharps (*see* TEMPERAMENTS); to make possible the playing of a number of chords in JUST INTONATION; and to produce microtones.

In many mean-tone tuning systems none of the usual chromatic degrees, C♯, E♭, F♯, G♯ and B♭, can serve as its enharmonic equivalent. Tonalities involving more than these five chromatic degrees would not be playable on keyboard instruments so tuned without a retuning of some of the raised keys. The simplest enharmonic keyboards merely duplicate one or more of the raised keys in order to provide additional chromatic degrees, making these retunings unnecessary. Thus the G♯ key may be divided into two parts sounding G♯ and A♭ respectively; E♭ may be split in order to gain D♯, etc. Enharmonic keyboards with one or two split keys per octave were not uncommon in 16th- and 17th-century Italy and some are recorded north of the Alps, for example Father Smith's organ in the Temple Church, London, or Zumpe's square piano of 1766 in the Württembergisches Landesgewerbemuseum, Stuttgart. They extended the range of playable modulations to tonalities involving up to three flats or four sharps. It should be observed, however, that the more extended the range of modulations becomes within one piece, the more need may arise for an enharmonic modulation. Because the enharmonic keyboard introduces an intervallic difference between enharmonic equivalents, it makes enharmonic modulations impossible if by this is understood a change of note name without change of its pitch. For instance, John Bull's famous chromatic fantasy on *Ut re mi fa sol la* (Fitzwilliam Virginal Book, vol.i, no.51), which starts in the mode of G and returns to that mode after 12 modulations, could be played on a keyboard of 17 notes in the octave but would sound awkward at the point where there is an enharmonic modulation, with an A major triad including a D♭ instead of a C♯. Only a well-tempered tuning could smooth that passage.

Prosdocimus de Beldemandis's *Libellus monocordi* (1413) and Ugolino of Orvieto's *Tractatus monocordi* (*c*1430) seem to imply a keyboard with the five raised keys divided. The tuning is described as a mere extension of the regular Pythagorean tuning up to five sharps and five flats. However, such notes as A♯, G♭ or D♭ could hardly have been used in the early 15th-century repertory:

1. *One section (C–B) of an enharmonic keyboard for mean-tone temperament with 14 notes, D♯ and G♯ being nearly a quarter-tone lower than E♭ and A♭. The G♯ and A♭ keys have been separated to show that the cap of the shorter lever overlaps the back of the longer one: from a harpsichord by Giovanni Battista Boni, Rome, 1619 (Musée des Instruments de Musique, Brussels)*

2. *Keyboard of the enharmonic harpsichord by Vito Trasuntino, Venice, 1606 (Museo Civico, Bologna)*

they were most probably intended to be played as B♭, F♯ and C♯ respectively, forming major 3rds below D and above D and A. (A Pythagorean diminished 4th, such as A♯–D, D–G♭ or A–D♭, is an excellent approximation of a pure major 3rd.) This keyboard thus provided the pure 5ths of the Pythagorean system and, for the chromatic degrees, alternative forms sounding pure 3rds to some of the diatonic degrees. It must therefore be ranged among the enharmonic keyboards aiming at just intonation for certain triads.

To achieve an extended just intonation on a keyboard instrument is a much more ambitious aim. A problem arises from the fact that, ideally, triads formed of pure 3rds and 5ths on such an instrument should also be connected to each other by pure 3rds and 5ths. If one connects chords on, say, C and E in just intonation, the one on E should be a pure major 3rd above the one on C, for E, the common note, is a pure 3rd above C in the C chord. But if elsewhere the chord on E is connected to the one on C through a root succession of 5ths as C–G–D–A–E, then E will have to be a Pythagorean 3rd above C if all five chords are to be connected by common notes a pure 5th apart. Thus the keyboard would need two E chords a comma apart, and an inordinate number of keys would be needed to permit completely just intonation in any one tonality. A related problem is that a few chord successions might cumulatively shift the pitch level by several commas, rendering participation in ensemble music prohibitively awkward.

Zarlino mentioned a harpsichord made by Domenico da Pesaro with raised keys inserted between E and F and between C and D, in addition to the five regular raised keys split into two. According to Zarlino, this keyboard was intended to permit the playing of quarter-tones – although Praetorius described a similar harpsichord owned by Karel Luython where the additional raised keys were tuned as E♯ and B♯, thus permitting the tonalities of F♯ and C♯. Many such keyboards with a large number of keys in the octave would appear to be able to fulfil more than one function, permitting for instance both just intonation and microtones. As shown above, however, even a large number of keys in the octave would not produce a complete solution of the problem of just intonation, a fact of which few ancient writers were aware. Keyboards with any number of keys between 24 and 60 in the octave were advocated by Salinas (1577), Fabio Colonna (1618), Mersenne (1636–7), G.B. Doni (1635–40), Galeazzo Sabbatini (*c*1650, quoted by Kircher), Athanasius Kircher (1650) and others. Interest in the enharmonic keyboard for just intonation was rekindled in the 19th century, often with a suitable understanding of the limited possibilities of such instruments. A.J. Ellis discussed experiments, often applied to reed organs, made by Helmholtz, Colin Brown, Liston, Poole, Perronet Thompson, Bosanquet and J.P. White.

Nicola Vicentino, who described his ARCICEMBALO with 35 keys in the octave in 1555, appears to have been one of the very few Renaissance or Baroque theorists to realize that the best purpose of an enharmonic keyboard would be the playing of microtones, and some of his compositions use the quarter-tone as a melodic interval. Several keyboards have been conceived to divide the octave into more than 12 equal parts. Best known is the 24-note division, producing equal quarter-tones. A division into thirds of a tone could include either 17 or 19 notes in the octave, depending on whether one or two thirds of a tone be taken to stand for the diatonic semitone (for other likely multiple divisions INTERVAL, Table 1). Some multiple divisions have been thought to correspond to exotic or ancient musical systems, but actually they appear to represent new systems which, though essential to the music written for them, have not been shown to form a significantly better compromise for general use than ordinary 12-note equal temperament.

All the enharmonic keyboards have been built on the same general principles: black key levers are split longitudinally and the front end of the block (the part the player sees) overlaps the adjacent sharp or flat, making it look as if each black key were divided into a front and a back part (see fig.1). Often, when the total number of keys is more than 19 per octave, it has been found expedient to divide some of the white keys or to build two keyboards one above the other, as in Vicentino's *arcicembalo*. An enharmonic harpsichord made by Vito Trasuntino in 1606, and now in Bologna (fig.2) has 31 keys per octave; each regular accidental key is divided into four parts, and additional keys divided into two are inserted between E and F and between B and C. The playing and

tuning of such instruments are of course particularly difficult. This, together with the fact that the multiple divisions that they make possible often do not seem to correspond to any profound musical necessity, explains why they rarely passed the experimental stage. For further discussion of unusual keyboards, *see* MICROTONAL INSTRUMENTS.

NICOLAS MEEÙS

Enicelius [Ennicellius], **Tobias** (*b* Leskow, Bohemia, *c*1635; *d* Tönning, Schleswig-Holstein, 1680). German composer. His presence as Kantor in Flensburg can be established from 1653. In 1655 he married Anna Catherina, daughter of Johannes Rhenius, assistant Rektor at Husum; Thomas Selle wrote a six-part motet for the occasion. In 1663 he applied unsuccessfully to follow Selle at the Johanneum Lateinschule in Hamburg. In autumn 1664 he left Flensburg to become Kantor in Tönning; his successor there was installed on 2 March 1680, and Enicelius must have died shortly before that date. His only extant musical work is a collection of 65 odes published in Kiel in 1667: *Melismata epistolica, oder Des theuren Poeten Martin Opitzens Sontags- und der fürnembsten Fest-Episteln, in die Music mit nur einer Vocal-Stimm, zweyen Quart-Flöten oder Violinen, einer Viol di Gamb und einem Generalbass zum Clavicymbel, Spinett oder Regal etc versetzet*. The texts (no music) survive of three other occasional works (in *D-KIu*). From the evidence of the *Melismata* Enicelius belongs among the early German masters, principally those composers of the sacred song with continuo, an art that he practised in the circle of the Hamburg poet Johann Rist and the composer Thomas Selle.

Enkōmion (Gk.). *See* ENCOMIUM.

Enlightenment (Ger. *Aufklärung*). A movement in 18th-century thought dedicated to raising the level of general education by combating superstition and inherited prejudices, and by placing human betterment above preoccupation with the supernatural. 'The proper study of mankind is man' (Pope, *Essay on Man*, 1733). The movement's origins are placed in English empiricism (Locke, Newton), French rationalism (Descartes, who was greatly admired for his clarity of expression and critical methods) and French scepticism (Bayle). Key figures in the diffusion of what was quite early called 'les lumières' were Montesquieu (*Lettres persanes*, 1721; *L'esprit des lois*, 1748); Voltaire, whose stay in England during the 1720s led to the eloquent defence of humanitarian ideals in the *Lettres philosophiques* (1734); and Diderot, who was the organizing genius behind the *Encyclopédie* (1751–72). In Italian letters Algarotti's *Newtonianismo per le dame* (1737), written under Voltaire's aegis, is regarded as a typical specimen of 'illuminismo'; it imparted scientific concepts in easy and graceful form, after the model of Fontenelle's *Eloges des académiques* (1729; see illustration). Voltaire praised Algarotti's work for achieving the Horatian ideal of 'instructing with delight'. Burney sang the praises of another Italian author in the same terms: 'A true poet, says Horace, unites the sweetness of verse with the utility

'L'astronomie et la géographie' and 'La chimie': engravings by Bernard Picart from Bernard Le Bovier de Fontenelle's 'Eloges des académiques' (1729)

of his precepts: and no author has penetrated so far into the refinement of the art as Metastasio'.

In Germany similar stirrings came to the fore in the popular philosophy of Moses Mendelssohn and Lessing who, following Diderot's example, produced bourgeois dramas intended to raise the moral tone of society. The founding of the various 'national' theatres in Germany and Austria sprang from a desire to improve both society and the vernacular language, the latter goal a vehicle towards achieving the former. Attempts at social reform along humanitarian lines reached a highpoint in the Vienna of Joseph II. The epitome of German enlightened thought was Kant's *Kritik der reinen Vernunft* (1781). Kant gave wide currency to the term itself with an essay 'Was ist Aufklärung?' (1784); his answer was couched as an exegesis of another Horatian precept: 'Sapere aude!'.

French Rococo art of the earlier 18th century represented an attempt to lighten the burden of grandeur left by the colossal undertakings, the superhuman scale of Louis XIV. Its emphasis upon a light and airy gracefulness was not without parallels in French music, particularly *opéra-ballet*, a genre to which Rameau contributed some of his finest work. His *Indes galantes* (1735) opened a sympathetic perspective on other cultures, while his *Fêtes d'Hébé* (1739) celebrated the mutual dependence of the sister arts in liberating the human spirit. Pastorales such as Mondonville's *Titon et l'Aurore* (1753) achieved an informal but elegant simplicity that typified the age of Louis XV.

In Italian opera the Arcadian reform of the libretto brought a turning away from the labyrinthine and often lurid plots of the 17th century towards simpler dramas, where human conflicts were paramount, and the intervention of superhuman powers rare (*see* OPERA, §IV). Metastasio combined utmost clarity and beauty of expression with a 'douce morale' (as Goldoni put it) – qualities specially prized by his contemporaries, who saw his dramas as a school of virtue. The delicate melodies, at once tender and passionate, with which such composers as Vinci, Pergolesi and Hasse clothed his verse spoke to the hearts of sensitive souls everywhere, and account in large part for the vogue of the *galant* in music, and for *Empfindsamkeit*. Goldoni achieved comparable stature in comic opera. His realism and his gentle satire of social mores were no less motivated by the double ideal of entertainment and improvement. His librettos, when set by masters like Galuppi and Piccinni, raised mid-century *opera buffa* to a level that inspired the creators of *opéra-comique*, and both genres affected the creation of German Singspiel. Gluck synthesized the comic and serious, both French and Italian, in reconstituting music drama along simpler, more elementally human lines, beginning with *Orfeo ed Euridice* (1762).

The international acceptance of Italian opera by critics and arbiters of taste was facilitated to no small degree by the literary polish lent by librettists as skilful as Metastasio and Goldoni, and by their successful application of the 'utile et ductiles' aesthetic. Scheibe applied the latter standard even to instrumental music, as when he posed the question: 'Who can listen to a Graun or Hasse symphony without pleasure and benefit?'. Answer: no-one in north Germany at that time, or at least no-one who shared the tastes of Frederick II of Prussia, including C.P.E. Bach. Frederick's ideals were enlightened (to the extent that circumstances allowed) and provided an example to other rulers who were important patrons of music, including Catherine of Russia, Carl Theodor of the Palatinate and Bavaria, and Joseph II of Vienna.

Diffusion of culture was one of the main goals of enlightened thought; it affected music in various ways. The public concert was largely an 18th-century invention. Increasingly large theatres were built to accommodate an increasing public for spectacles and concerts. Handel's oratorios were directed mainly at a middle-class audience. The production of music for the fashionable amateur to perform at home became a veritable industry. Much of the instrumental music in the *galant* style arose in answer to the needs of the 'Galantuomo'. Production of musical instruments, especially keyboard instruments, reached levels that had not been approached since the 16th century, a resurgence paralleled in the history of music printing. The immense output of songs with simple accompaniments or no accompaniment at all (the sentimental romance and ballade were typical) was destined for amateur circles; so were the unending volumes of keyboard arrangements devoted to operas, oratorios and other concerted music. Self-tutors in all aspects of music did not originate in the 18th century, but there was a new quantity and diversity of publications available. The historiography of music begun by Burney and others sought to foster, as well as to record, the progress of civilization.

The anti-rational and even anti-intellectual bias that set in as a counter-current during the third quarter of the century assumed vehement expression as early as 1750, in Rousseau's *Discours sur les sciences et les arts*, where civilization was attacked for having corrupted primitive virtue. Such an about-turn shocked many a sensibility raised on the essential optimism of enlightened thought. Gloom and pessimism, along with terror of the unknown, became a counter-cultural fashion. In the visual arts they found expression in shipwrecks, prisons and nightmares. In literature, and by way of drama with some extensions into music, they found potent expression in German 'Sturm und Drang'.

French aesthetics managed to accommodate both currents. Diderot encouraged poets, painters and composers to be 'sombre and savage'. Conflict between the rational and the emotional, so dear to later 'Romantics', was put down as a false dichotomy. The seemingly disparate claims of the heart and the mind were held instead to be complementary, as in the *Encyclopédie* (article 'Foible'): 'in the measure that the mind acquires more enlightenment [*lumières*] the heart acquires more passion [*sensibilité*]'. The interdependence of passion and reason was one of the main legacies of French 18th-century thought. Berlioz subscribed to a similar aesthetic, as when he wrote of his idol Gluck that he worshipped that master's works with 'un culte passionné, quoique raisonné, je l'espère'.

One of the recurrent images accompanying enlightened thought was that of the sun piercing the clouds of superstition and error. It characterized much philosophic writing from Diderot, through Raynal, to Condorcet, whose final paean to human perfectability was achieved in *Esquisse d'un tableau historique des progrès de l'esprit humain* (1794). Only after this point, with the onset of the Reign of Terror, and the reactions that it unleashed, was there a decisive rejection of the idealism represented by the 'lumières'.

Music does not lack parallels. The most striking come by way of the theatre. A turning back from the excessive preoccupation with the darker side of life and the frankly anti-social irrationality of 'Sturm und Drang' marked the last two decades of the century. Goethe led the way towards an affirmation of earlier ideals about human perfectibility, towards a balance between objective and subjective forces in art. His return to more universal standards gave rise to the notion of a 'Classical' era, which has since passed to music. Analogies are not lacking between his mature achievements and the Olympian works of Mozart's last decade or Haydn's most mature masterpieces. There are other reasons why the greatest works of Mozart and Haydn may be considered not only 'Classical' but enlightened. Both masters, together with Goethe and Joseph II, became freemasons and subscribed to the masonic ideals of universal brotherhood and the liberating power of knowledge. The symbolic role that light assumes in *Die Zauberflöte* has its parallel in the resounding 'Fiat lux' of *The Creation*, which, along with *The Seasons*, expresses serene confidence in a man-centred and divinely blessed universe. These sublime works provided the century with a 'lieto fine' consistent with its highest ideals.

DANIEL HEARTZ

Enna, August (Emil) (*b* Nakskov, 13 May 1859; *d* Frederiksberg, 3 Aug 1939). Danish composer. He was the son of a shoemaker, of Italian descent, who took his family from Nakskov to Copenhagen in 1870. At the age of 18, after working at a variety of jobs (including shoemaking), he began to learn the violin and the piano in earnest. As early as 1880 he appeared as a music director in dramatic performances, for some of which he also composed the music. He then studied with Christian Schiørring (violin) and the organist Peter Rasmussen (theory). Subsequently he became a member of the town orchestra in Björneborg (now Pori), Finland. In 1883 he returned to Denmark to become music director of Werner's Theatrical Society, a provincial touring company. By 1884 he had composed his first opera, *Agleia*, some piano music and other instrumental works, and by 1886 a symphony (in C minor) which aroused Gade's interest. With support from Gade he was awarded the Anckerske Legat, which enabled him to work in Flensburg (1888–9) on what became one of his best-known operatic works, *Heksen* ('The Witch'). This was produced in 1892, and subsequently performed abroad. With the production of *Kleopatra* in 1894, Enna's reputation as an operatic composer was firmly established. He continued to produce a steady stream of operas, as well as operettas, incidental music and a quantity of other instrumental and vocal music. He periodically appeared as a conductor in the theatre but was essentially a self-employed, self-taught composer. While his music is not especially profound, it derives inspiration from Wagner and Verdi, as well as from the Danish Romantic tradition. His sensitivity to theatrical nuance, his effective orchestration and his easy melodic gift earned him considerable success. He was granted the title of professor in 1908.

WORKS
(*selective list*)

OPERAS

Agleia, 1884; Heksen [The Witch], Copenhagen, 24 January 1892; Kleopatra (after R. Haggard), Copenhagen, 7 Feb 1894; Aucassin og Nicolette, Copenhagen, 2 Feb 1896; Den lille pige med svovlstikkerne [The Match Girl] (after H.C. Andersen), Copenhagen, 13 Nov 1897; Lamia, Antwerp, 3 Oct 1899; Ung elskov [Young Love], 1902, Weimar, 1904; Princessen på aerten [The Princess on the Pea] (after Andersen), Århus, 15 Sept 1900; Nattergalen [The Nightingale] (after Andersen), Copenhagen, 10 Nov 1912; Gloria Arsena, 1916, Copenhagen, 15 April 1917

Børnene fra Santa Fé [The Children from Santa Fe], 1918; Komedianter (after V. Hugo: *L'homme qui rit*), 1917, Copenhagen, 8 April 1920; Don Juan Maraña, 1922,

Copenhagen, 17 April 1925; Afrodites praestinde [Aphrodite's Priestess], 1925; Ghettoens dronning [The Queen of the Ghetto], 1932

OTHER WORKS

Orch: Sym., c, 1886; Vn Conc., D, 1897; H.C. Andersen festouverture, 1905; Sym., E, 1908

Choral: Historien om en moder [The Story of a Mother], vv, orch, 1907

Operettas, ballets, songs, pf pieces, incid music (Andersen, H. Drachmann, H. Rode, S. Rye, A. Strindberg)

Principal publishers: Breitkopf & Härtel, Dansk, Hansen, Hofmeister, Nordiska

Ennis, Seamus [Séamas Ó hAonghusa] (*b* Jamestown, Co. Dublin, 5 May 1919; *d* Naul, Co. Dublin, 5 Oct 1982). Irish traditional musician, singer and collector. Having learnt uilleann piping from his civil-servant father and worked in publishing, Ennis became a music collector for the Irish Folklore Commission in 1942. He made important Irish-language collections on paper, aided by his gifts as a performer. In 1947 he transferred to Radió Éireann, Irish state radio, to work with its new mobile recording unit, and in 1951 to the BBC in London where he was a major contributor as a collector and performer to the highly successful radio series *As I Roved out*, and to the collecting projects of Brian George and Alan Lomax among others. From 1958 he was a freelance performer and broadcaster. Chiefly known as an outstanding uilleann piper with a distinctive personal style, he was also a whistle player and singer, storyteller and translator from Irish. As a piper and as a founder-member in 1968 of Na Píobairí Uilleann (the Society of Uilleann Pipers), he was a major influence on an emerging generation of performers. As a broadcaster on radio and from the 1960s on television, and as a recording artist, he played a leading part in bringing the older music traditions of the countryside to a new postwar urban audience.

NICHOLAS CAROLAN

Enno, Sebastian [Sebastiano] (*b* Venice, 25 Jan 1621; *d* Venice, 14 Oct 1678). Italian composer, teacher and opera impresario. He was a canon at the cathedral of Venice, S Pietro di Castello, but the surviving evidence of his musical activities primarily concerns secular genres. He sang in G.A. Cicognini's and Francesco Lucio's *Gl'amori di Alessandro Magno, e di Rossane* at the Teatro SS Apostoli, Venice, in 1651 and had begun teaching music to private students by 1652. According to testimony given in 1678, Enno taught the composer Antonio Giannettini during the 1660s. That decade he also published his two songbooks, *Arie a una e due voci* (Venice, 1654, dedicated to Candido Bentio, vicar-general of the canons of Santo Spirito, Venice) and *Ariose cantate* (Venice, 1655, dedicated to Giacomo Ascarelli). In 1667 Enno mounted at the Teatro S Moisè *Alessandro amante*, a reworking of G.A. Cicognini's libretto *Gl'amori di Alessandro Magno* with music by G.A. Boretti: he had hoped to stage that opera at the Teatro S Apollinare the previous season, when he also prepared two women for operatic roles. Enno continued to train women for the operatic stage during the 1670s. According to testimony given in 1678, Enno taught the composer Antonio Giannettini during the 1660s.

Enno's *Arie* of 1654 contains nine strophic settings for solo voice and five duets and dialogues, while the *Ariose* of 1655 has eight solo cantatas, several based on strophic texts. The third and sixth include arias over a passacaglia bass, and the opening recitative of the fourth is marked as an optional da capo.

BETH L. GLIXON

Eno, Brian (Peter George St John Le Baptiste de la Salle) (*b* Woodbridge, 15 May 1948). English composer and producer. While attending art school in Ipswich and then Winchester he developed an interest in 'systems' music, and much of his work can be seen as continuing the work of composers such as John Cage. He first worked professionally from 1970 to 1973 with the seminal art-rock band Roxy Music, lending their first two albums, *Roxy Music* (Island, 1972) and *For Your Pleasure* (Island, 1973), a quirky surrealist edge. By treating the group's live sound electronically with a tape recorder and VC5 3 synthesizer, he defined a role for himself as an 'aural collagist'. After leaving Roxy Music in 1973, Eno developed this interest in the timbral quality of music further with the albums *No Pussy Footing* (Island, 1973; with King Crimson's Robert Fripp) and the seminal *Another Green World* (Island, 1975), the latter a brilliant combination of quirky songs and pastoral instrumentals. In 1975 his interest in aleatory music led him to produce with Peter Schmidt 'Oblique Strategies' cards, a collection of 'over one hundred worthwhile dilemmas', which formed a sort of musical tarot, each card containing a directive on how to proceed to the next creative stage. He then collaborated on three of David Bowie's most innovatory albums (*Low*, *'Heroes'* and *Lodger*), produced new-wave bands such as Talking Heads and Devo, and released two important ambient instrumental albums, *Music for Films* (EG, 1978) and *Music for Airports* (EG, 1979).

In the early 1980s Eno developed an intensely cerebral stance towards music and culture, collaborating with David Byrne (of Talking Heads) on *My Life in the Bush of Ghosts* (Polydor, 1981), which combined African

music and segments of radio broadcasts, and with Harold Budd and Daniel Lanois on *The Pearl* (EG, 1984). He also worked on installations (combinations of light, video, slides and sound), developed an interest in cybernetics and self-generating music systems, and embarked on lecture tours. In the second half of the 1980s and in the 1990s Eno was much in demand as a producer and collaborator, working with such artists as U2, James, Laurie Anderson, John Cale and Bowie. His ideal, in musical terms, is a piece which 'plays itself', an almost imperceptibly ever-changing musical work. His own work has often sought to deconstruct the notion of music being a reflection of authorial intention. Eno sees himself as a curator and coordinator of sounds rather than as an originator of new ones.

Eno exerted a decisive influence on the development of ambient music in the 1970s, and became one of the leading producers in pop and rock music. Although his ambient music has often been compared with such genres as muzak or new age meditative music, it is in fact more complex. His best work is usually in his collaborations, which show a maverick intellectualism, an innate sense of the bizarre and a rare ability to fit into listeners' lives. In 1978 he wrote that 'an ambience is defined as an atmosphere or a surrounding influence, a tint', adding that ambient music 'must be able to accommodate many levels of listening attention without enforcing one in particular: it must be as ignorable as it is interesting'.

Enrique [Enrique de Paris; Enrique Foxer; Enricus] (*d* Barcelona, by 27 Oct 1488). French composer, active in Spain. The earliest documents to mention him date from 1461, when he was a member of the recently constituted chapel of Prince Carlos of Viana, heir to the Aragonese throne. After Carlos's sudden death later that year, Enrique was enrolled into the newly formed chapel of the new heir, Ferdinand. He probably served in the young Ferdinand's chapel until his departure for Castile and marriage with Isabella, in 1469, at which point Enrique stayed in Catalonia in the service of the king, Juan II. By 1475 he also held a chaplaincy in the church of S Maria del Pi in Barcelona, a position he retained until his death sometime before 27 October 1488, when the benefice was granted to another member of the royal chapel. After Juan II's death in 1479, Enrique was once again enrolled in Ferdinand's chapel during his first visit to Valencia as king in October of that year. Enrique's appointment may have been honorary, since his name does not reappear in the payment lists of the Aragonese royal chapel.

Whatever his position, he clearly had close ties with the Aragonese court for at least 20 years, and his northern provenance may have been of considerable importance for musical developments there. Before Prince Carlos's death Enrique had copied two books of polyphony for the chapel; these were subsequently returned to him at his request. No sacred compositions by him survive, but two songs are attributed to him in two of the major Spanish songbooks of the period. One, *Pues con sobra de tristura*, is preserved in two versions, one for three voices (*E-Mp* 1335; ed. in MME, v, 1947) and the other for four (*E-Sc* 17-I-28; ed. in MME, xxxiii, 1971); in addition, a sacred version of the text is added in the Seville source, presumably intended to be sung to the same musical setting. This and the four-voice song *Mi querer tanto vos quiere* (*E-Mp*, *E-Sc*; ed. in MME, v, 1947; xxxiii, 1971) are in the courtly love tradition; they observe the canción form with four-line refrains and are representative of the melismatic, contrapuntal idiom of the earliest composers of Castilian-texted polyphonic song. A third song, *Pues serviçio vos desplaze*, is also attributed to Robert Morton in *I-PEc* 431, and is generally held to have been written by that composer.

TESS KNIGHTON

Enriquez (Salazar), Manuel (*b* Ocotlán, 17 June 1926; *d* Mexico City, 26 April 1994). Mexican composer. He studied composition with Miguel Bernal Jiménez in Mexico and Stefan Wolpe in New York. He was the director of the National Conservatory of Music (1972–4), the National Center for Music Research (1977–85) and the Music Department of the National Institute of Fine Arts (1985–91) of Mexico. He received the Premio Elías Sourasky (1972), the Premio Nacional de las Artes (1983) and the Diosa de Plata for film music (1972). He received commissions from the Beethovenhalle Orchestra in Bonn (*Trayectorias*, 1967), SWF (*Ixámatl*, 1969), ÖRTF (*Encuentros*, 1972; *él y. . .ellos*, 1972), the Inter-American Music Festival of the Organization of American States (String Quartet no.3, 1974), the French Ministry of Culture (*Tlachtli*, 1976), and the Latin American Music Festival in Venezuela (*Raíces*, 1977). His compositions have been performed at music festivals in Donaueschingen, Warsaw, Havana, Bourges and other places. He received fellowships from the Guggenheim Foundation (1971) and the Deutscher Akademischer Autauschdienst (1982–3). He was a member of Mexico's Seminario de Cultura and the Academia de Artes, and of the executive committee of the Consejo Interamericano de la Música. He taught composition at the University of California at Los Angeles and San Diego (1991). Apart from his composing activities he was also active as a violinist and administrator, promoting Mexican contemporary music abroad. In Mexico he founded several associations of composers and organized contemporary music festivals, including the Foro Internacional de Música Nueva, which he ran from its foundation in 1979 until his death.

Enríquez was one of the leading composers of Mexico from the 1960s to the late 80s. His catalogue of over 115 compositions comprises solo, chamber, electronic and orchestral music, cantatas, interdisciplinary works and music for film. From 1949 (Suite for Violin and Piano) to 1959 (String Quartet no.1) his music was in the penta-

tonic, neo-classical style of Mexico's late nationalism, employing dissonant folk-like tunes and a strong rhythmic drive which included frequent syncopation and hemiola. In the early 1960s he completed a series of compositions in a free 12-note style, in which he paid close attention to minimalist forms and instrumental colour, including *Klangfarbenmelodie* (*Preámbulo*, *Sinfonía II*, *Pentamúsica*, *Tres invenciones* and others). He then began to experiment with aleatory procedures and graphic notation, which he gradually applied to form, pitch and rhythm, while retaining clear control of articulation, dynamics and timbre (*Transición*, *Ambivalencia*, String Quartet no.2, *Díptico I*). During the 1960s and 70s his music relied heavily on long timbral blocks which alternated with aleatory, contrapuntal, colourful soloistic passages, even in orchestral works (*Si libet*, *Ritual*, Quartet no.3, *Fases*). Without abandoning aleatory procedures altogether, in his last works Enríquez returned to strong, lyrical melodic sections (*En prosa*, Quartet no.4) and eventually to passages in a clear neo-nationalist style embedded within freer, contrasting structures (Quartet no.5).

LEONORA SAAVEDRA

Ensalada (Sp.: 'salad'). A kind of QUODLIBET popular in 16th-century Spain. It is first mentioned in Gil Vicente's *Auto da fé*, which was performed on Christmas morning in 1510 before Manuel I of Portugal. The *auto* concluded with 'a salad that came from France', which has not been identified. Vicente used another *ensalada*, *En el mes era de Maio*, to conclude the *Auto chamado dos físicos* (*c*1512), the music of which is lost. The earliest musical *ensaladas* appear in the Cancionero Musical de Palacio (*E-Mp* 1335, *c*1500), the oldest being perhaps Garcimuñós's *Una montaña pasando*, a four-part setting that incorporates the song *Ay triste de mi ventura*, the refrain *Madre mía, muriera yo* and a fragment of the psalm *Super flumina Babylonis*. Two works by Francisco de Peñalosa are classified as *ensaladas*, the six-part *Por las sierras de Madrid*, in which four refrains from different songs are sung simultaneously, and *Tú que vienes de camino*, the text of which includes phrases in several languages.

The genre reached its height with the *ensaladas* of Mateo Flecha (i), who composed at least 11 in four or five parts, eight of which were published by his nephew and namesake, Mateo Flecha (ii), as *Las ensaladas de Flecha* (Prague, 1581[13]). All have a text based on humorous verse with irregular metre, written in Spanish, throughout which are inserted quotations from songs and refrains in Spanish, Catalan, French, Italian, Portuguese and Latin; the texts always contain a reference to Christmas. In many cases the quotations extend to the main melody; *La viuda*, for example, contains 11 verbal quotations of which at least four are also musical. The pieces are subdivided into sections – from seven to 12 – that alternate homophonic and imitative passages, providing the text with music of a descriptive character that requires frequent changes of rhythm. They vary in length from 215 to 400 bars in modern transcription.

Other composers of *ensaladas* include Bartolomé Cárceres, who, in *La trulla*, confined himself to linking various songs with transitional polyphonic passages. In this he differs from the elder Flecha, whose quotations form a subtle verbal and musical fabric in which it is difficult to distinguish his own work from that of others. The younger Flecha included Cárceres's *ensalada La trulla* in the 1581 volume of *Ensaladas*, which also contains two by Pere Alberch, one by Chacón and two others by Flecha himself, who was probably one of the last composers to use the genre. In contrast to the other known *ensaladas*, Flecha's *La feria* confines itself to quoting a fragment of a ballad that recurs throughout the work. Apart from an anonymous handwritten *ensalada*, *Salgan damas galanes* (*E-Mmc* 607), the other *ensaladas*

known to have existed – more than 20 – do not appear to have survived.

Sebastián Aguilera de Heredia used the term 'ensalada' as the title of one of his organ works because of the variety of styles and thematic material it contains. Enríquez de Valderrábano in his *Silva de sirenas* (1547) gave the title 'Soneto, a manera de ensalada' to an adaptation for voice and vihuela of the quodlibet *Corten espadas afiladas* (*E-Mmc* 13230).

MARICARMEN GÓMEZ

Ensaladilla (Sp.: 'small salad'). A type of Latin American villancico popular in the 16th to 18th centuries, consisting of a QUODLIBET of pre-existing villancicos tied together with bridges in recitative style. Whereas *maestros de capilla* were expected to compose anew all the villancicos for important church festivities each year (especially those for Christmas Eve Matins), they were allowed to use popular villancico tunes by other composers in the *ensaladilla*. The 17th-century Mexican poet Sor Juana Inés de la Cruz wrote many *ensaladilla* texts. Important examples survive by the Mexican composer of the same century Juan Gutiérrez de Padilla, *maestro de capilla* of Puebla Cathedral.

E. THOMAS STANFORD

Ensemble. The French word *ensemble* ('together' or 'the whole') gained musical currency through the expression *morceau d'ensemble*, meaning a piece in which everyone plays or sings. From the mid-18th century 'ensemble' also denoted the precision with which a group peformed, a usage appropriated by other languages. In modern operatic terminology, 'ensemble' denotes a musical number involving anything from two singers to the whole cast (and in German 'das Ensemble' also means the singing personnel of an opera house). In instrumental music German usage tends to restrict the term to light music for small groups or to the performing groups themselves, and English applies it loosely to any instrumental group, sometimes to orchestras (but not usually to the music played). The present article focusses on the term in operatic contexts.

In 17th-century French and Italian opera, short ensembles, some only brief interjections, were frequent. Reforms to the *opera seria* in the early 18th century (reducing the number of characters) and the increasingly defined formal structure of the post-Lullian *tragédie en musique* made ensembles rarer in serious genres, but they remained important in comic works and it is there that they attracted the richest and most varied treatment. During the first half of the 18th century the duet was the most common ensemble in all types of opera, typically for the main lovers in strongly emotional situations. Indeed, in many *opere serie* the lovers' duet was both the dramatic highpoint and the sole concerted number. From the mid-18th century larger ensembles were included more freely in various genres as librettists and composers explored their dramatic potential. Vocal textures became more intricate, formal structures more complex and character groupings more adventurous, and the sense of climax was exploited to greater effect. Ensemble finales grew from short, homophonic choruses for the assembled principals to extensive, multi-sectional movements leading the plot to its climax and resolution. The chain (or *buffo*) finale first appeared in a 1749 collaboration by Baldassare Galuppi and Carlo Goldoni, *L'Arcadia in Brenta*, and developed over the following decades to great sophistication in the operas of Mozart.

The ensemble can telescope dramatic events through the simultaneous expression of divergent emotions, increasing the dramatic momentum and vividly offsetting contrasting characters. Such pieces, designed to maximize confusion and bring matters to a peak, are known as ensembles of perplexity. Their construction requires skill in achieving a distinct diversity of language and music within a prevailing unity, techniques also needed in action ensembles that embody development or sudden change in the plot. These raised the status of the ensemble from the second half of the 18th century, allowing the setting to music of events earlier entrusted to recitative or dialogue. Perhaps the most common ensemble type, however, is the tableau in which the characters comment on the state of events. One example is the quartet 'Mir ist wunderbar' in Beethoven's *Fidelio*, where to the same music, sung in canon, one person expresses love, another alarm at the developing situation, a third jealousy and a fourth benignity; the action momentarily halts as the emotions of the characters are revealed. Outstanding later examples are the sextet in *Lucia di Lammermoor*, the *Rigoletto* quartet and the septet in *Les Troyens*.

Inevitably, some later 19th-century composers rejected these techniques. Wagner considered large ensembles artificial and few are found in his operas (notable exceptions are the quintet in *Die Meistersinger* and the trio concluding Act 2 of *Götterdämmerung*). The power resonant in the simultaneous display of virtuoso voices retained its allure, however, achieving one of its most sublime expressions in the trio in the final act of *Der Rosenkavalier*. Throughout the 20th century the approach to the operatic ensemble has remained varied. Set numbers are found in operas with traditional structures and in music theatre works, but in those exploring new terrain – anti-operas such as Ligeti's *Passaggio*, for example – there is limited scope for ensemble expression.

ELISABETH COOK

Ensemble Clément Janequin. French vocal ensemble. It was founded in 1978 by its musical director and countertenor Dominique Visse and specializes particularly in the performance of the 16th-century French repertory. Its dynamic performances place special emphasis on the dramatic enactment of the text. In 1998 membership consisted of Visse, Bruno Boterf, Vincent Bouchot, François Fauché and Renaud Delaigue, with the lutenist Eric Bellocq. Broader instrumental participation has increasingly been a hallmark in more recent recordings. Since the ensemble's inception, Parisian chansons (particularly by Janequin, Sermisy and Lassus) have remained the focal point of its repertory, both in concert and on disc, with forays into other 16th-century secular repertories (most notably Italian and Spanish), as well as French sacred music of the period (including Josquin, La Rue, Sermisy, Janequin and Le Jeune) and the music of Schütz. Recent projects have extended the ensemble's secular repertory into the 15th century.

FABRICE FITCH

Ensemble Gilles Binchois. French vocal ensemble. Founded in 1979 by its musical director Dominique Vellard, it specializes in the performance of medieval and early Renaissance repertories, both monophonic and polyphonic. The ensemble has a multi-national membership, flexibly conceived according to repertory, and employing both voices and instruments. It works in close collaboration with leading musicologists in each of the repertories concerned. In 1998 its members included Vellard, Anne-Marie Lablaude, Emmanuel Bonnardot, Akira Tachikawa, Gerd Türk and the flautist Pierre Hamon. Its performances are characterized by judicious use of instruments where deemed appropriate. The group's areas of special interest, reflected in its recordings, have included 15th-century song, the earliest polyphonic repertories up to and including Notre Dame (in which they have met with conspicuous success) and the latest researches into the interpretation of plainchant. In more recent years the ensemble has extended its repertory into the 17th century.

FABRICE FITCH

Ensemble music, sources of. *See* SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630.

Ensemble Musica Antiqua. Instrumental group founded in 1958 by RENÉ CLEMENCIC and known as Musica Antiqua until 1959.

Ensemble Organum. French vocal ensemble. Founded in 1982 by its musical director Marcel Pérès, it specializes in the performance of plainchant. The group's activity is driven by Pérès's research into the performing practice appropriate to the period and geographic area involved. These have ranged from 8th-century Byzantine, Ambrosian and Roman liturgies to 18th-century French (the latter including extemporized polyphony *super librum*). An important element of Organum's characteristic sound is the use of microtonal ornaments and inflections variously derived from Byzantine and North African traditional music, which Pérès regards as a major influence on the plainchant repertories of Western Europe. The ensemble has worked at different times with native practitioners of these traditions, notably Lycourgos Angelopoulos. Although principally concerned with chant, the ensemble has also explored early (Notre Dame and St Martial), 14th-century (Tournai Mass, Machaut's *Messe de Notre Dame*, Ars Subtilior) and Renaissance polyphonies (Ockeghem, Josquin), including instruments as appropriate.

FABRICE FITCH

Ensemble Vocal de Lausanne. Swiss vocal ensemble, formed by MICHEL CORBOZ.

Enström, Rolf (*b* Södertälje, 2 Nov 1951). Swedish composer. He studied musicology and philosophy at the universities of Göteborg and Stockholm, and music at the University of Örebro. He has established his leading position in Swedish music by virtue of his electro-acoustic compositions, which he began composing in the 1970s. His first success came with *Myr* (ISCM, Athens, 1979), a slide show in which music interacts with photographs. Music and image meet in a number of works in which he collaborated with the photographer Thomas Hellsing: *Fractal*, *Luftreflex – Luftskalle*, *Tjidjag och Tjidjaggaise*, *Asylen* and *Io*. In addition he has written several pieces combining instruments and tape, including *Open Wide*, *Vigil*, *Rama* and the music drama *Kairos*.

Enström's musical world is a complex combination of fantasies and ideas, with frequent references to literature, philosophy and science. Arthur C. Clarke's science-fiction novels, Husserl's phenomenology and the debate on man's place between nature and technology all play a role in his music.

HANS-GUNNAR PETERSON

Entartete Musik (Ger.: 'degenerate music'). The term 'entartete' was coined in the 19th century by the doctor and criminologist Cesare Lombroso with reference to an abnormal condition akin to moral and spiritual deterioration. Adopted by the Nazis during the 1920s, it became a loosely defined technical concept with which to condemn modern culture that, according to Hitler, manifested symptoms of national decline. Thus atonal music, jazz and above all works by Jewish composers were branded as 'degenerate', though in fact during the Third Reich reactionary critics applied the term indiscriminately to a wide variety of styles from the avant garde to popular operetta, particularly if the composer was deemed politically or racially unacceptable to the regime.

Following the example of the notorious *Entartete Kunst* art exhibition in Munich in 1937, Nazi cultural politicians mounted an *Entartete Musik* exhibition the following year in Düsseldorf in connection with the first *Reichsmusiktage* ('National Music Days'). Among the exhibits were portraits of 'defamed' composers (Schoenberg, Webern, Hindemith, Stravinsky, Weill, Krenek, Reutter), under which were printed crude slogans attacking the character and racial origin of each, theoretical works and articles by Schoenberg, Hindemith, Weissmann and others, scores by Schoenberg, Stravinsky, Hindemith, Weill, Krenek, Schreker, Eisler, Berg, Toch and Reutter, discredited modern music journals such as *Melos* and *Anbruch*, and books on jazz. In addition, special listening booths were installed in the middle of the exhibition hall to allow the general public to hear recordings of some of the music that was being publicly ostracized.

Essentially the brainchild of Hans Severus Ziegler, the director of the Weimar National Theatre, the exhibition was assembled rather hastily and without an accompanying catalogue. Nonetheless, Ziegler published an inflammatory pamphlet entitled *Entartete Musik-eine Abrechmung* (Düsseldorf, n.d.) as an adjunct to the exhibition, describing the event as a 'veritable witches' sabbath portraying the most frivolous intellectual and artistic concepts of Cultural Bolshevism ... and the triumph of arrogant Jewish impudence'.

Although it received far less public attention than *Entartete Kunst*, the *Entartete Musik* exhibition aroused controversy in the musical world and did not meet with the unequivocal approval of Peter Raabe, the president of the Reichsmusikkammer. Ziegler later moved the exhibition to Weimar, but it was never revived in other German cities.

In 1988, fifty years after its inauguration, the musicologist Albrecht Dümling and impresario Peter Girth reconstructed the *Entartete Musik* exhibition in Düsseldorf, in order to remind later generations of the evils perpetrated by fascist cultural politicians (catalogue ed. A. Dümling and P. Girth, *Entartete Musik: eine kommentierte Rekonstruktion*, Düsseldorf, 1988). The exhibition was shown in several countries throughout the world, and was instrumental in inspiring the Decca record company to issue their Entartete Musik series devoted to the work of many composers who were proscribed by the Nazis.

ERIK LEVI

Entr'acte (Fr.). A general term for music or other events written for performance between the acts of a play or opera, like the earlier 'act music', 'act tune', 'first music', etc. It may thus refer to the *intermedi* performed between the acts of spoken comedies in the 16th century, to the *comédie-ballets* of Lully, to the instrumental music Beethoven composed for performance between the acts of Goethe's *Egmont*, or to the instrumental interludes between the acts of Bizet's *Carmen* or Debussy's *Pelléas et Mélisande*. Many such entr'actes, for example Schubert's for *Rosamunde*, are now rarely heard in context and are commonly given as concert pieces.

See also BAILE; COMÉDIE-BALLET; INCIDENTAL MUSIC; INTERLUDE; INTERMEDIO; INTERMÈDE.

Entrada. *See* INTRADA.

Entraigues (*b* ?Entraygues-sur-Truyère; *fl* 1547–59). French composer. He probably took his name from his birthplace. An intabulation for lute of the chanson *Dame sante* was attributed to him in Jacques Moderne's publication of lute pieces by Francesco Bianchini (Lyons, 1547; ed. C. Dupraz and J.-M. Vaccaro, Paris, 1995). The rest of his works appear only in the publications of Le Roy & Ballard in Paris; two of them, settings of Ronsard's 'Sonet en dialogue' *Que dis tu, que fais tu* and Virgil's *Urbem praeclarem statui*, were frequently reprinted.

WORKS

Dame sante, 1547[27] (lute tablature); N'ayant le souvenir, 1551[24] (lute tablature), 1554[26]; Oyez amants la douloureuse plainte, 1554[27]; Qui dis tu, que fais tu, 1559[12]; Reveillez vous, bergerette, 1554[27]; Si Jesu Christ pour destruire péché, 1553[19]; Un mary frais avant en l'an, 1556[16]; Urbem praeclarem statui, 1559[12]; chansons ed. in SCC, x (1994)

SAMUEL F. POGUE

Entrée (Fr.). A term used in the 17th-century *ballet de cour* in France to refer to a group of dances unified by subject, such as 'entrée des Cyclopes' or 'entrée des Indiens'. Entrées divided the acts of a ballet into scenes. 'Ballets are silent plays', states the preface to the *Ballet de la prospérité des armes de France* (1641), 'and must likewise be divided by acts and scenes. The *récits* separate the ballet into acts, and the entrées of dances separate the acts into scenes'. According to Saint-Hubert (*La manière de composer et faire réussir les ballets*, 1641/*R*), a 'ballet royal' ordinarily had 30 entrées grouped into several acts, a 'beau ballet' had at least 20 and a 'petit ballet' 10 or 12.

The unifying plot of earlier *ballets de cour*, such as *La délivrance de Renaud* (1617), gave way increasingly after 1620 to a choreographic spectacle of great variety in which each section composed of several entrées had its own subject matter. These sections related in a general way to the collective idea expressed in the ballet's title, as in the *Ballet des quatre monarchies chrestiennes* (1635), where Italy, Spain, Germany and France constitute the work's four sections. Occasionally an entire section took the name of entrée. This genre, now known as the *ballet à entrées* (*see* BALLET DE COUR), was the structural model for the late 17th- and 18th-century *opéra-ballet*, whose acts were normally called entrées.

'Entrée' had yet another meaning in the *opéra-ballet* and in the *tragédie lyrique*. It marked the beginning of the divertissement of dances and songs found in most acts. It could refer to the entrance of a single character (e.g. the 'entrée de la Haine' in Lully's *Armide*, 1686) or more commonly of a specific group of people, the 'corps d'entrée' (e.g. the 'entrée pour les guerriers' in Rameau's *Dardanus*, 1739).

Entrées to divertissements present a wide variety of musical styles. Some are march-like (e.g. 'Les combattants' in Lully's *Alceste*, 1674), while others characterize a certain group of people (e.g. the 'entrée des Bohémiens' in Rameau's *La princesse de Navarre*, 1745). Still others are pure fantasy (e.g. the 'entrée des saisons et des arts' in Rameau's *Les fêtes de l'Hymen et de l'Amour*, 1747).

Lute intabulations of entrées from 17th-century *ballets de cour* are found in collections by Chancy, Bouvier, Jacques Gallot and others. Robert de Visée transcribed Lully's 'entrée d'Apollon' from *Le triomphe de l'amour* for guitar, and Rameau transcribed the 'entrée des quatre nations' from his *Les Indes galantes* for harpsichord. Independently composed entrées are found in harpsichord

suites by Luc Marchand (1748) and Nicolas Siret (1710, 1719). Neither the nine 'entrées de luth' in Robert Ballard's first lutebook (1611) nor the entrées in Georg Muffat's orchestral suites published in the *Florilegium primum* and *secondum* are drawn from known ballet sources.

JAMES R. ANTHONY

Entremés (Sp.). A form of short Spanish scenic entertainment, usually comic, which flourished in the 17th century and was performed between the acts of a larger, more serious theatrical work (*see* INTERMEZZO (ii)). It was popular in character, and commonly called for instrumentally accompanied songs and dances, but the genre also attracted literary figures as eminent as Tirso de Molina and Quevedo. The traditional place for the *entremés* in its strict sense was after the first act, though at other points similar forms were introduced – a *jácaras* (picaresque interlude) or *baile* (dance scene with poetry and music) after the second act and a *mojiganga* (burlesque) at the end. The term may have originated in the court of Aragon in the 14th century as a song or dance interlude between courses of a meal ('entremet'); it was also current in Catalonia in the 15th century to denote a popular entertainment, with solo songs, unaccompanied choruses or instrumental music, which enlivened religious or solemn festivities.

Entremets. *See* INTERMÈDE.

Entremont, Philippe (*b* Reims, 6 June 1934). French pianist and conductor. His parents were professional musicians and teachers, and gave him his first training. He then studied the piano with Marguerite Long, and entered the Paris Conservatoire, where he won *premiers prix* for chamber music in 1948, and the next year for the piano. In 1951 he won the Marguerite Long-Jacques Thibaud International Competition, and, after touring in Europe for two years, made a successful début in the USA with the National Orchestral Association on 5 January 1953; he subsequently appeared as soloist with many American orchestras, making some celebrated recordings which include the Gershwin Piano Concerto and the Ravel G major Concerto with the Philadelphia Orchestra under Ormandy and the Ravel Concerto for left hand with the Cleveland Orchestra under Boulez. A fluent, well-schooled pianist, of bright, inquiring nature and catholic taste, he plays a wide repertory and his recordings include Ravel's complete piano works and the complete works for piano and orchestra of Saint-Saëns. From the mid-1970s he began to concentrate more on conducting and in 1976 he became music director of the Vienna Chamber Orchestra; he celebrated his 20th anniversary as its lifetime music director in the 1995–6 season. He was music director of the New Orleans Philharmonic SO from 1979 to 1986, after which he became music director of the Denver SO (1988–9). In 1993 he was appointed principal conductor of the Nederlands Kamerorkest in Amsterdam and the following year became principal guest conductor of the Israel Chamber Orchestra.

DOMINIC GILL/R

Entry. The occurrence of a theme at any point in a composition, or the occurrence of a vocal or instrumental part after that part has previously been resting. Frequently the two senses are combined, as in a phrase like 'the tenor entry in bar 15', which may mean both that the tenor part has previously rested, and also that it now delivers a main theme.

In fugue, unless otherwise stated, the term 'entry' always refers to a statement of the theme (*see* FUGUE, §1). Here too the term may commonly be used in both senses mentioned above. Indeed, academic fugal conventions have insisted that each entry of the subject should be preceded by a rest in the relevant part (as advised by Morley, *A Plaine and Easie Introduction*, 1597, and Fux, 1725), but this rule is not always followed in live fugue. In the exposition, however, entries are mostly both of the subject and of the part concerned. The terms 'third entry', 'fourth entry' etc. almost always refer to the exposition, and they may be used particularly when discussing any unusual feature at these junctures, such as a different form of the theme. A 'middle entry' is one in a key other than the key or keys used in the exposition: the term is an unhelpful one. 'Final entry' has an obvious meaning, although by convention the implication is of a climactic entry in the tonic, so that it may be meaningful to say that a fugue 'has no final entry' (e.g. the D major Fugue in *Das wohltemperirte Clavier*, book 1).

ROGER BULLIVANT

Entwicklungsform (Ger.). A form that relies on continuity and growth; *see* ANALYSIS, §I, 3.

Entwurf (Ger.). Draft or SKETCH.

Enueg (Provençal). A minor genre of satirical poetry, chiefly associated with the troubadour known as the Monk of Montaudo (*fl c*1200). Using the same types of verse-form as the CANSO, it simply enumerates a range of vices and abuses of which the author disapproves. The word *enueg* means 'annoyance' in Old Provençal, and the phrase *m'enueia* or *enueia-m* ('it annoys me') tends to appear at least once in each stanza. The opposite of the *enueg* is the *plazer*, which lists actions and moral qualities that please the poet. Very few examples survive with music.

STEPHEN HAYNES

Envelope. Few musical sounds in the real world correspond to steady waves of uniform amplitude or loudness. The

variation of amplitude with time is termed the 'envelope' of the wave. *See also* SOUND, §6.

CLIVE GREATED

Environmental music [background music]. Definitions and interpretations of environmental music proliferated in the 20th century. Many speculations about music's origins stress the significance of natural sounds such as birdsong, and much evidence exists of the ingenuity with which pre-20th-century musicians and composers of all kinds have incorporated environmental sounds into their music. The unprecedented impact of new technologies and global communications heightened the absorption of environmental influences during the late 19th and early 20th centuries. Claude Debussy, for example, played pianistic impressions of Paris street sounds while still a student. His work as a mature composer came to reflect the influence of Javanese music heard at the Paris Exposition of 1889, and in 1913 he wrote: 'The century of aeroplanes has a right to a music of its own'.

That view was shared by the Russian and Italian futurists (*see* FUTURISM). A futurist performance in Baku, Azerbaijan, in 1922 choreographed factory sirens, steam whistles, foghorns, artillery, machine guns and aircraft into an epic of 'proletarian music'. Between 1913 and 1916 the Italian painter Luigi Russolo wrote a series of polemical essays published under the collective title *L'arte dei rumori*. These celebrated the industrial and military noises of the new century, anticipating the use of 'found' sound in such later developments as *musique concrète* and digital sound sampling.

While Russolo imagined a stirring new music interwoven with the abstracted sounds of modern warfare, others were pioneering technologies that could deploy music to help create a soporific ambience. This notion of music as a utilitarian and unobtrusive background to other activities was predicted with typical wit in 1920 by Erik Satie with his *Musique d'ameublement*, or 'furniture music'. In his music for the ballet *Parade* (1917), a collaboration between Jean Cocteau, Pablo Picasso and Leonid Massine, Satie had combined melodies from American and French popular songs with the sounds of pistol shots, typewriter, steamship whistle and siren. He intended his furniture music as a programme to be ignored, and speculated on a future in which music might mask dissonant ambient noise, fill awkward silences and add background sound to wedding ceremonies and house interiors.

Satie's vision of a soundtrack accompaniment to daily life was already close to realization. In 1922 George Owen Squier, a Michigan-born military officer who had conducted research into wireless systems, launched a company that would attempt to pipe music, advertising and public service announcements into homes and businesses. As well as foreseeing the late 20th-century home entertainment reality of cable communications, Squier coined the name Muzak, a fusion of the words 'music' and 'Kodak'. During the 1930s the Muzak company, based in New York City, began systematic broadcasting to hotels, clubs, restaurants and shops. This programme of centralized transmission came to be rationalized into a system of stimulus codes, supported by scientific studies that demonstrated links between music, productivity and safety in factories.

Just as radio and cable facilitated this revolution in mood music, other technologies inspired musicians to use the sounds of the world as elements of composition or performance. Muzak's 'canned' music, used increasingly in lifts, airports, aircraft, supermarkets and other public spaces where controlled tranquillity was to be desired, was structured within a narrow dynamic and emotional range in order to avoid surprise or discomfort. This targeted approach to mood manipulation ran counter to innovations in electronic composition. In France, PIERRE SCHAEFFER began experimenting with the manipulation of disc recordings of sound effects such as train noises in 1948. He called his technique *musique concrète*, to distinguish the concrete sound materials of the studio from the written notes of the score. Although Schaeffer was a pioneer of electronic music, his purpose was not so far removed from the sound paintings of jazz composers such as Duke Ellington, who used more conventional instruments to evoke and transform sound images of the urban environment.

Even further removed from the soothing purpose of Muzak was the theorizing and musical practice of JOHN CAGE. In books of collected writings, aphorisms and lectures such as *Silence* (containing essays first published in 1939), Cage unfolded a philosophy of chance composition which invited environmental sounds into music. He was content to allow these sounds to exert a disruptive force, rather than attempting to homogenize them. *4′ 33″* (1952), one of his most celebrated compositions, is the pivotal environmental work of the 20th century. The performer is instructed to time three sections of silence, adding up to 4 minutes and 33 seconds. Nothing else happens, other than the audience's becoming acutely aware of the sounds of the immediate environment.

Cage's example led many musicians to abandon rigid compositional systems and pursue indeterminate or open methods. These new initiatives were linked to art movements such as happenings, land art, conceptual art, kinetic sculpture and underground film, and also overlapped with related trends in free jazz, improvisation and experimental rock. The Fluxus movement proposed musical events that questioned all definitions of music, using settings that relocated art into unfamiliar, absurd and even impossible environments. Walter De Maria's *Art Yard* (1960, New York), for example, imagined composers such as La Monte Young digging a hole in the ground in front of spectators.

The influence of this type of work, along with the audio ecology researches of R. MURRAY SCHAFER and the Vancouver-based World Soundscape Project, contributed to the growth of a loosely defined movement now known as sound art or audio art. Detaching itself from the organizing principles and performance conventions of music, audio art explored issues of spatial and environmental articulation or the physics of sound using media that included sound sculptures, performance and site-specific installations. In the 1990s, audio art overlapped with manifestations of ambient music, defined in the 1970s by BRIAN ENO and revived in the late 1980s in the wake of techno and acid house. The late 20th-century environment – a veritable ocean of audiovisual signals from cable and satellite television and the Internet, accompanied by the sounds of an accelerating revolution in digital communications – realized even the most improbable dreams of the musical avant garde.

Eoliphone. The term used by Ravel in *Daphnis et Chloé* for the WIND MACHINE.

Eősze, László (*b* Budapest, 17 Nov 1923). Hungarian musicologist. After studying German, Italian and aesthetics at Budapest University (1941–5) he took the doctorate in 1945 with a dissertation on Liszt and German Romanticism, and a piano teacher's diploma in 1947 at the Budapest Academy of Music; he also studied the piano with Gieseking and Elly Ney (1943–4). He joined the staff of Editio Musica Budapest in 1955, becoming its chief editor (1957–61) and artistic director (1961–87).

Eősze's main topic of research is the life and work of Kodály. He has discovered various documents concerning Kodály's youthful works, and has assembled the most complete list of Kodály's musical and literary work. He is also interested in the history of opera, particularly the work of Verdi and Wagner: he has published books on the composers and has lectured at international Verdi and Wagner congresses. His *Az opera útja* (1960) is the first Hungarian history of opera; it discusses the history of the genre according to national schools. He has also discovered documents relating to Liszt's stay in Rome and found some unknown Liszt manuscripts in various collections in Rome. From 1975 to 1995 he was executive secretary of the International Kodály Society and editor of its Bulletin. He was awarded the Erkel Prize in 1979.

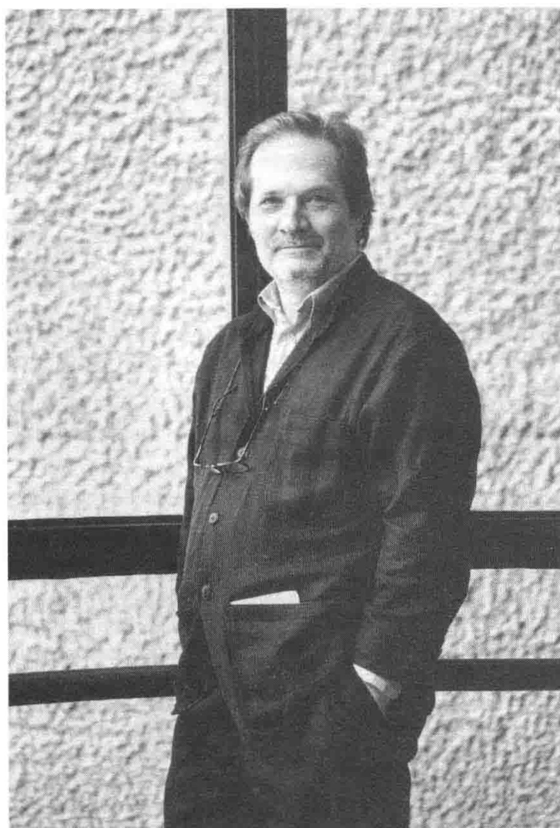
PÉTER P. VÁRNAI/ZSUZSANNA DOMOKOS



Eötvös, Peter [Péter] (*b* Székelyudvarhely [now Odorheiv Secviesc], Transylvania, 2 Jan 1944). Hungarian composer and conductor.

1. LIFE. Eötvös had his first music lessons, in the piano, the violin, percussion and the flute, in Miskolc. At the age of 11 he composed a cantata which he showed to Ligeti; he won his first composition prizes at the age of 12, and Kodály accepted him at the Academy of Music in Budapest at the age of 14. He was strictly schooled in the disciplines of traditional tonality by János Viski, and greatly impressed by Pál Kardos's insistence on absolute precision in rhythm and intonation. By his own account, the most lasting influences on his musical thought came from Albert Simon, Bartók, Stockhausen, Boulez, Kurtág, Gesualdo, electronic music and jazz (Miles Davis, in particular). While still a student, Eötvös was music director of the Comedy Theatre, Budapest (1962–4). He also composed numerous scores for films and stage plays,

most of which he conducted himself. After attending the Darmstadt summer courses, he was awarded a Deutscher Akademischer Austauschdienst grant, which enabled him to study in Cologne (1966–8) with Wolfgang von der Nahmer (conducting diploma with distinction 1968) and Bernd Alois Zimmermann (composition). From 1967 to 1968 he worked as a répétiteur at the Cologne Opera.

Eötvös's first contact with Stockhausen, a crucial event in his career, was as a copyist; among other things, he made the fair copy of *Telemusik* for Universal Edition. From 1968 to 1976 he was a member of Stockhausen's ensemble, performing on the electrochord (a 15-string zither connected to a VCS-3 synthesizer) and other instruments; he took part in numerous performances and recordings, both as an instrumentalist and as a sound technician (in *Sirius*, for example). He conducted all of Stockhausen's orchestra and ensemble works and directed the world premières of both *Donnerstag* (1981) and *Montag* (1988) from *Licht*. He has also collaborated on other 20th-century stage works (by such composers as Maderna, Nono, Stockhausen and Stravinsky) with distinguished producers, and has given many first performances, including those of Birtwistle's *Earth Dances*, Boulez's *Don* (revised version), and of works by Steve Reich, Jonathan Harvey and others.

From 1971 to 1979 Eötvös worked as an assistant in the electronic studio of WDR. During these years, he concentrated on live-electronic techniques. He had his own studio in Öldorf, where he and his friends (including Gaby Schumacher, Maiguashca and Joachim Krist) put on multimedia concerts (the 'Öldorf Summer Night Musics'). At Boulez's invitation, he conducted the opening concert of IRCAM in 1978, and was musical director of the newly founded Ensemble InterContemporain from 1979 to 1991. He has also been connected with Ensemble Modern (from 1983), and has served as principal guest conductor of the BBC SO (1985–8) and the Budapest Festival Orchestra (1992–5). He founded the Internationales Eötvös Institut for young conductors in 1992 and became chief conductor of the Hilversum Radio Chamber Orchestra in 1994. He has lectured at the International Bartók Seminar in Szombathely (1985–96) and held chairs at the Musikhochschulen of Karlsruhe (from 1992) and Cologne (from 1998). He has also served as artistic advisor and guest conductor at international festivals, visiting lecturer in many European music centres and a jury member at international competitions. His honours include appointment as Officer de l'Ordre de l'Art et des Lettres (1988), the Bartók Prize (1997) and commissions from broadcasting bodies (WDR, Cologne; SDR, Stuttgart; Hessen Radio, Frankfurt), ensembles (InterContemporain, Paris; Varianti, Stuttgart), music festivals (Schleswig-Holstein, Styrian Autumn) and institutions such as Lyons Opera.

Peter Eötvös

2. Works. Eötvös's compositions give a prominent role to theatrical perspectives and the movement of sound in space. In addition to works that can be described as theatrical in a narrow sense (*Harakiri*, 1973; *Il maestro*, 1974), a theatrical conception informs pieces in which verbal expression operates on a plane beyond semantic comprehension (*Märchen*, 1968; *Korrespondenz*, 1992), or in which the gestural expressiveness of movement associated with sound assumes the significance of ritual recurrence (e.g. the circling of the percussionist among his instruments in Psalm cli, 1993). The effects of sound moving in space are created not only by the way players are positioned on the stage, but also by the electronic amplification of one or more instruments. In *Shadows* (1996), for example, an amplified solo flute and clarinet are positioned centrally in front of two groups of strings which provide a stereophonic effect of distant sound; woodwind (the flute's 'shadow') and brass (the clarinet's 'shadow') are at the very front of the stage, with their backs to the audience. A celesta, an instrument Eötvös has often included in his orchestration, and percussion instruments (a small drum giving signals and a large drum acting as its 'shadow') represent an imaginary sound-region, in which the pianissimo sound of the soloists is transmitted via loudspeakers.

Many of Eötvös's compositions use gestures resembling speech to project meaning through suggestion or association, like the shaping of a phrase by its intonation. *Märchen* (1968), a composition using speech on stereo tape, layers texts from Hungarian fairy tales canonically at the tempo ratio 5:4:3. Independently of its semantic meaning, the work is suggestive based on the shape of its speech intonations, a quality it shares with *Drei Madrigalkomodien* (1963, 1970, rev. 1990). In *Korrespondenz* for string quartet (1992) instrumental phrases relate to fragments of text from the correspondence between Mozart and his father. Leopold, whose words are presented by the cello, and Wolfgang, whose words are presented by the viola, seem to converse through instrumental recitative which assigns certain intervals to certain vowel sounds. The French phrases in Leopold's letters are

reproduced in the cello by ironic distancing and speech-like flautando-glissando effects. The orchestral work *Chinese Opera* (1986), structured around the accumulation and displacement of sound masses, asks players to articulate text with their instruments. Here, pitch modulations suggest the speech line, and 'vowels' and 'consonants' sound in the brass, creating an analogy to speech as if it were examined in slow motion and through a microscope.

A 'microscopic' observation of music, as if from inside intervals and their ratios, also underlies *Intervalles – Intérieurs* (1981). In the tape part of the work (two electronic organs with input from a special modulation technique), which also functions as an independent composition (*Elektrochronik*, 1974), typical melodies and rhythms are generated by characteristics of the intervals themselves. The five instrumental parts, which provide a virtuoso commentary on these organ sounds, are based primarily on the golden-section interval between minor and major 6ths. *Elekrochronik* is one of many live-electronic compositions of the 1960s and 70s that Eötvös has either withdrawn or integrated into later works. It is characteristic of his highly self-critical methods; he frequently revises his compositions, in some cases more than once.

Always searching for new sonorities, Eötvös has experimented with different instrumental ensembles and enhanced orchestral textures by grouping players in new ways. His refined sense of sonority, one not satisfied with traditional tone colours, has led him to the electrical amplification of instruments (e.g. *Steine*, 1985–90; *Psychokosmos*, 1993), the combination of sound sources, such as electronic keyboard, synthesizer or cimbalon and orchestra, or the alteration of spatial dispositions. In *Atlantis* (1995), for example, ten percussion players are situated around both the audience and the orchestra, with the strings positioned to the rear and the saxophone, electronic keyboards and 3 synthesizers to the fore, producing a 'utopian' sound outside space or time. *Psychokosmos*, a kind of layered self-portrait, refers back to earlier sketches and materials, particularly from the periods 1960–63 and 1972–5. A criticism of the significance of the conductor in current performance practice is suggested by pieces such as *Steine* or *Triangel* (1993), in which musicians are expected to take a greater interest in each other's sounds, and realize tasks assigned to them within a highly specific overall form, determined within the framework of Eötvös's heightened sense of proportion.

WORKS
(*selective list*)

Dramatic and multimedia: Harakiri (Clownstück, after I. Bálint), Jap. nar, woodcutter, 2 rec/shakuhachi, 1973, Bonn, 1973; Il maestro (Clownstück), 1 pfmr + 2 pf, 1974, Budapest, 1974; Radames (chbr op, A. Ghislanzoni, A. Jeles, L. Najmányi, M. Niehaus, Verdi), 1975, Cologne, 1975; Drei Schwestern (op, C.H. Henneberg and Eötvös, after A. Tschechow), 1996–7, Lyons, 1998; Der Blick (multimedia), 1996–7; Multimedia, 1997

Orch: Steine, 1985–90, rev. 1992; Chinese Opera, 1986; Brass, the Metal Space, action game, brass, 2 perc, 1990; Psychokosmos, cimb, orch, 1993; Triangel, perc, orch, 1993; Shadows, amp fl, amp cl, chbr orch/ens, 1996

Vocal: Hochzeitsmadrigal, 1963–76; Moro lasso, 1963–72, rev. 1990; 3 Madrigalkomödien (C. Gesualdo), 12vv chorus, 1963–90; Endless Eight I, 12 solo vv, elec gui, 2 hmn, 2 perc, 1981; Endless Eight II 'Aperion musikon', 8 solo vv, 2 SATB, synth, 2 perc, 1988–9; Atlantis (S. Weöres), Tr, Bar, cimb, 3 synth, orch, 1995; 2 Monologues (Tschechow), Bar, orch, 1998

Chbr and solo inst: Kosmos, pf, 1961; Windsequenzen, fl, ob, 2 cl, b cl, tuba, db, gran cassa, wind imitation, hmn, 1974–5, reorchd 1987, rev. 1996; Korrespondenz, str qt, 1992; Ps cli, 1–4 perc, 1993; Thunder, b timp, 1994 [from Triangel]; Countdown, 4 timp, 1996; PSY, fl, vc, cimb/pf/hp/b mar, 1996 [Trio from Psychokosmos]; 2 Poems to Polly, vc, 1998

El-ac: Märchen (Mese), tape, 1968; Cricket music, tape, 1970; Now, Miss! (after S. Beckett: *Embers*), vn, synth, tape, 1972; Intervalles – Intérieurs, cl, trbn, vn, vc, perc, tape, 1981

MARTINA HOMMA

EP [Extended play]. A 7-inch vinyl single, usually featuring three or four tracks as opposed to the two on a standard single. Originally in the 1950s an EP was regarded as a third of an LP. For example, the Everly Brothers' album, *Songs our Daddy Taught us* (London), issued in November 1958, was also released in monthly instalments as three separate EPs early the following year for those who could not afford or did not want to purchase the complete album. EPs were often packaged with attractive covers and outsold albums until the early 1960s. In the punk era of the late 1970s the EP was revitalized as a format and was popular with labels that had new bands who perhaps might not have enough material for an album. Very often the EP was also used by established artists for cover version projects, as with Bryan Ferry's *Extended Play* (Island) in 1976 and three EP releases by Everything but the Girl in the early 1990s. The EP format made the transition from vinyl to CD in the late 1980s and early 1990s, and became popular with dance acts that wanted to include various re-mixes of the headline song on the one single. By the late 1990s, however, the concept of the EP had been superseded by the 'maxi CD single' format, which extended the single release to EP length and could include over 25 minutes of music.

DAVID BUCKLEY

Epēchēma. *See* ĒCHĒMA.

Ephrata Cloister. A communal settlement of German immigrants established at Ephrata in Lancaster County, Pennsylvania, in 1732 by CONRAD BEISSEL. The society practised adult baptism through trine immersion, celebrated the Lord's Supper with a foot-washing ceremony and a communal meal known as the Love Feast, and honoured the Sabbath on Saturday. The community consisted of a brotherhood and a sisterhood, both celibate, and a third order of married 'householders', who

worshipped weekly with the monastics. Eventually the congregation became known as German Seventh Day Baptists.

The cloister at Ephrata was recognized throughout the colonies for its unique music. Beissel introduced singing and writing schools as methods for self-improvement and discipline. He required his singers to consume a limited, rigid diet to assure a flexible, clear voice. Lacking formal music training, Beissel developed his own harmonic system; he composed hundreds of hymns and anthems and instructed his followers to compose their own hymns according to his method. The chorale-like, syllabic hymns, in which rhythmic stress follows the natural accent of the words, were written for four to seven voices. Chord progressions are governed by the melodic contour of the soprano part rather than the bass line. Beissel's system thus produces unexpected chord inversions, unconventional doublings and odd progressions. Hymnbooks were printed or copied by hand on paper manufactured at Ephrata. As part of the writing school, the members adorned the pages with a decorative, illuminated calligraphy known as *Fraktur*. The *Turtel-Taube* hymnbook of 1747, which contains Beissel's works and those of his followers, is recognized as the first book of original hymns published in the colonies.

The Ephrata communal culture declined after Beissel's death. One congregation of German Seventh Day Baptists remains, in Salemville (established 1847) in Bedford County.

DENISE A. SEACHRIST

Ephrem Moire (*d c*1100). Hymnographer of the Georgian Church. *See* GEORGIA, §II, 3.

Ephrem [Ephraem] **Syrus** [Ephrem the Syrian] (*b* Nisibis [now Nusaybin], *c*309; *d* Edessa [now Urfa], 9 June 373). Exegete, preacher and poet. He was known by the sobriquet 'the lyre of the Holy Spirit'. Born to Christian parents in Nisibis, he became a deacon before 338; unlike the majority of his outstanding Greek and Latin patristic contemporaries who were bishops, he remained a deacon and spent his life preaching and teaching. He left Nisibis sometime after the Persians captured it in 363, moving to Edessa where he stayed for the rest of his life, possibly establishing a theological school there. He was a figure of such immense influence that soon after his death his biography was much elaborated with apocryphal events, and his literary output was greatly expanded by spurious works. Modern scholars such as Edmund Beck and Bernard Outtier have arrived at a reliable biography, and Beck has edited all the authentic Syriac works.

Of particular interest to music historians are Ephrem's poetical works. They fall into two broad categories: *mimre* – homilies written in metre, that is, in lines divided into two halves of equal syllables; and *madrāshe* – hymns, at least some of which were probably intended for singing. The latter are usually strophic, in a variety of metres, frequently with refrains; prominent among the subjects they treat are the combatting of heresy, the praise of virginity and the celebration of principal liturgical feasts. Sozomen, the early 5th-century historian, narrated that Ephrem's hymns were written to combat the heretical hymns of BARDAISAN (*d* 222), who had composed a book of psalms in imitation of the Hebrew Psalter and whose son Harmonius had provided the tunes. Ephrem, then, was supposed to have set his own poems to the tunes of the heretical hymns and to have had them sung by choirs of virgins. There is, apparently, at least some truth to the story: Ephrem himself mentioned the heretical hymns of Bardaisan and Harmonius, and Jacob of Serugh credibly confirms that Ephrem taught the Daughters of the Covenant, a community of devout women at Edessa, to sing his hymns.

Ephrem is generally considered to be one of the greatest Christian poets of any period or region. It has long been assumed that he exercised considerable general influence upon Eastern Christian hymnography, and in recent years a specific influence upon the *kontakia* of Romanos the Melodist (6th century) has been established.

JAMES W. MCKINNON

Ephrikian, Angelo (*b* Treviso, 20 Oct 1913; *d* Rome, 30 Oct 1982). Italian conductor and composer. After studying the violin and composition privately, he founded, with Antonio Fanna, the Istituto Italiano A. Vivaldi in 1947, and in 1948 the orchestra of the Scuola Veneziana, specializing in the performance of his own editions of many 18th-century works. From 1960 to 1974 he was artistic director of the Arcophon record company, for which he recorded the madrigals of Gesualdo, as well as much 18th-century Italian instrumental music. In 1971 he became conductor of the Filarmonici del Teatro Comunale di Bologna, with which he toured Italy, Hungary, Romania, Yugoslavia, Austria and East Germany. His compositions include a Concerto for strings (1957), a Viola Concerto (1958), *Stabat mater* for soloists, chorus and orchestra (1961), Concertino for seven instruments (1962), *Venezia-Omega* for violin, flute and tape (1969) and a string quintet (1974). He also edited works by Peri, Vivaldi, Boccherini, Galuppi, Alessandro Scarlatti and Pergolesi.

PIERO RATTALINO

Ephymnion (Gk.). A term used from antiquity to denote a refrain; in Byzantine chant, more specifically, a short concluding refrain to the *oikoi* (stanzas) of a *kontakion*. *See* BYZANTINE CHANT, §10(ii).

Epicedium (Lat., after Gk. *epikēdeion*: 'funeral ode'). A term used interchangeably with THRĒNOS by the Greeks, and later more often applied to the verses of funeral odes than to musical settings of them. *The Queen's Epicedium* ('No, Lesbia, no, you ask in vain') by George Herbert was set by John Blow on the death of Queen Mary II and published in 1695. Purcell too wrote a superb setting for voice and continuo of a Latin translation of this poem ('Incassum, Lesbia, incassum rogas'), which appeared in his *Three Elegies* of the same year.

MICHAEL TILMOUTH

Epics. Epics have been studied by scholars of several disciplines, including ethnomusicology, literature, folklore, social anthropology and classics. The term 'epic' has been used within the European literary tradition to refer to works such as Homer's *Iliad* and *Odyssey*, Virgil's *Aeneid*, the *Nibelungenlied* or *Chanson de Roland* and Milton's *Paradise Lost*. When applied to areas outside Europe or in disciplines other than literary ones, the concept rarely coincides semantically with this one. It often refers to an oral tradition involving specialist bards, or a tradition that moves between the written text and oral performance.

1. CONCEPTS. Until the 1960s, oral epics were thought to exist only in Karelia, northern Asia, Central Asia and the Balkans. Recent fieldwork has suggested that the term may also be used for genres performed in sub-Saharan Africa, South-east Asia, the Middle East and South Asia. While no precise definition exists, there is a strong consensus that an epic should be narrative, poetic and heroic. These elements apply to epics in Slavonic and Romance languages as well as those from Central and Inner Asia. Debates have raged about the inclusion of African, South Asian and South-east Asian materials.

These debates have revolved around content, form and modes of transmission. Classically, in terms of content, epics are tales in which human characters, endowed with superhuman qualities and powers, undertake and execute superhuman tasks. 'Heroes', usually male, are aided by extra-human resources such as magic, divinities or spirits, or animals prompted by supernatural forces. Epics are usually broad in the scale of action time as well as political and cultural geography, are set in historical experience, and often express political or cultural histories. Some arguments against the inclusion of materials from Africa, South Asia and South-east Asia revolve around whether narrative is the primary focus. Lengthy praise-poems of South Africa, for instance, have epic elements but concentrate on laudatory and apostrophic aspects, and the South Asian Mahābhārata and Rāmāyaṇa are primarily religious in function. Moreover, sharp divisions between the human and the divine are rare in South Asian traditional narratives, making the heroic concept problematic. Classic epic heroes are often deified after death and thereby cross the divide between human and divine. This is also a feature of Inner Asian epics.

In terms of form, debates have involved the nature of improvisation and composition in performance, whether the works are poetry or prose and whether they are sung or not sung. Some African materials from equatorial areas have been considered prose narratives (with heroic themes), rather than poems, interspersed with sung pieces. In northern and eastern areas, it has been argued that historical narratives occur because of Arab influence rather than being the 'natural' form for non-literate peoples. The debate moved on to discuss whether eulogy and lament are forms of 'pre-epic' poetry or whether praise-poems might be called 'epic'. It has been argued that the sung/not sung distinction is more relevant to South Asian traditions than the poetry/prose distinction, since Indian poetic metres do not necessarily correspond with the rhythmic structures found in music and it is these that prevail in many South Asian epic performances.

Finally, it has been debated whether true epics have to be transmitted orally. African materials, such as 'The Tale of Lianja' from the Mongo-Nkundo peoples of north-western Congo, were probably a loosely related bundle of separate episodes, told on separate occasions rather than a single work. They only become an 'epic' after being recorded in written form. However, this could also be the case with Inner Asian epic cycles such as Geser and Janggar, where individual chapters have been recorded from separate bards.

Taking into account the above debates, this article uses a broad definition of epic in which bards may be professional or non-professional and in which contexts are diverse. The concept is used to embrace: the heroic narrative songs and poems of Europe; African epics that include sung and chanted sections, dances, dramatic action, musical interludes and praises; South and South-east Asian traditions where epic themes of the Mahābhārata and Rāmāyaṇa provide a code for living and permeate other performance traditions of music, dance and song; and the encyclopedic epics of Central and Inner Asian peoples which incorporate all vocal musical genres with basic musical accompaniment and which may move in and out of the written and oral traditions or may exist simultaneously in both.

2. TRADITIONS. The presence of orally transmitted heroic songs in the Scottish Highlands of the 18th century encouraged James Macpherson (1736–96) to fashion influential prose poems after Ossianic themes. A similar

literary trend developed in the South Slavonic tradition with Andrija Kacic-Moisic (1704–60), a Franciscan monk whose chronicle of his people includes portions in the style of epic songs. In 19th-century Finland, Elias Lönnrot stitched together narrative songs he had collected orally in creating the Kalevala epic, inserting incantations and wedding cycle songs for the sake of expansion, and a similar practice has occurred with other traditions in Africa and Asia, though not in the South Slavonic or Homeric epics. In modern times, epic songs have been found in eastern and south-eastern Europe, although such well-studied examples as the Russian *bïlinï* (or *starinï*, to use the people's term) died out early in the 20th century despite attempts to renew them during the Soviet period before World War II. In traditional epics it is the story which is primary, but musical performance elevates the public style of vocal delivery epic such that it attains a power unmatched by language alone. In purely musical terms the 'melody' might be perceived as banal or repetitive, but it is also a powerful framing device by which the heroic tale attains heightened artistic communication.

The traditional south-eastern European epic style has been studied intensively since the 1930s, when Milman Parry offered his theory of oral composition concerning Homer's epic poems. Parry, introduced to epic performance in Bosnia by the Slovenian scholar Matija Murko, believed that the problem of disputed authorship (the composition of the *Iliad* and *Odyssey* by one author, or by several) could be solved by reference to the living tradition in Bosnia. Accordingly, Parry and A.B. Lord encountered illiterate male performers who could perform epics of several thousand lines to the accompaniment of the one-string bowed *gusle* (*lahuta* in Albania), or plucked *tambura*, using a technique of verbal and story-building formulae, often in the context of the festival of Ramadan. While Christian epic singers could also be found in Bosnia, Muslim singers frequently had a repertory of 30 songs, one for each day of Ramadan, and had learnt the technique of re-composing the tales in performance by oral means. Avdo Mededovic, the singer recorded by Parry and Lord in 1935, had a repertory of 58 epics; performances of 13 of these amount to 44,902 lines (sung) and 33,653 (dictated). The longest recorded epic contains 13,331 lines, more than 16 hours of performance time. The total time for all Avdo's recorded material is about 53 hours. The *lautari* of Romania have been equally prolific: Petrea Cretul Solcan (1809–after 1883), a Roma *lautar* from the port town of Braila in Muntenia, was known for his large repertory of epic, ritual and lyric poetry. He sang some 12,000 lines of epic for the Romanian folklorist G.D. Teodorescu during 1883–4. Epic performance, however, is now found only in Oltenia and Muntenia, in southern Romania: the singer Vasile Tetin from Teleorman county performs numerous lines in a parlando style, a device said to be used by older singers to conserve their strength.

Avdo Mededovic's epics were generally longer than those of other performers because of the South Slavonic tradition of ornamenting songs through rich description: a technique of expansion using musical and poetic formulae. Learning the texts and melodies first and then the musical accompaniment, he absorbed his art as a boy from skilled performers, including his father, who was influenced by another 'ornamental' performer, Cor Huso Husein of Kolasin. Lord described Avdo's voice as hoarse, but it is possible that he was adopting a special vocal timbre, as occurs in other epic traditions. His singing often ran ahead of his fingers as he played the *gusle*, and there were times when he simply ran the bow slowly back and forth over the strings while singing the ten-syllable lines. He was clearly a poet and singer of tales first, a musician second. The traditional demands of epic – length and structure – pull the singer naturally towards the skills of memory, elaboration, improvisation and poetic composition. These qualities operated simultaneously for a singer like Avdo performing in the context best suited to the appreciation of heroic tales: the all-male audience in the coffee-house during Ramadan. Another Muslim singer, Salih Ugljanin, an Albanian, was a bilingual singer in Serbo-Croat and Albanian and performed epics for Parry at the same speed in both languages.

Musical and poetic formulae allow the epic singer to concentrate on the structure of the tale. These formulae are not always for mnemonic purposes: Romanian epic singers, for example, will repeat musical formulae but will also attempt to break rhythmic monotony. Extemporization as a general principle colours the epic singing in Europe of which we have accounts. In Russia, it seems that Marfa Kryukova (1876–1954) used improvisation in reformulating tales and literary works into *bïlinï*, but these must have been the result of a certain amount of compositional effort before performance. Some Russian singers felt a need to recount a 'correct' version of a *bïlina* and would not record it until they had revived it in their memories. To a large extent this was out of respect for the tradition rather than a mere avoidance of creativity.

Agrafena Kryukova would not offer a *starina* without first thinking about it because she was afraid of deviating from a set pattern of performance. Collectors observed the same behaviour when recording from her daughter, Marfa Kryukova. Both mother and daughter introduced a great deal of their own material into the traditional *bïlinï* they sang. This material was not extemporized, but rather conceived beforehand. Both singers had a talent for improvisation and inclined towards it in their singing, though editors during the Soviet period kept a watchful eye on the content of *novinï* (modern epics). Similar ideological manipulation occurred in Ukraine: the *duma*, sometimes thought to derive from the recitative style of funeral laments, may have originated as a praise-song with court bards of the Kievan Rus′ period. The performers of *dumï* were traditionally blind itinerant singers (*kobzarï*) who accompanied themselves with a *bandura* or *lira* (hurdy-gurdy). These musicians were systematically silenced under Stalin.

The epics of the Balkans, significantly, are linked to those of Central and Inner Asia through subject matter, a common horse culture, and instruments, as well as social context. Some aspects of Balkan epic may indeed have come from Central Asia with migration or by caravan routes north of the Caspian, perhaps skirting the Black Sea or crossing Asia Minor. In the Asian tales there is a greater emphasis on shamanic and otherworldly elements. The bearer of epic song in Turkey is the *ashiq* ('lover'), or minstrel, whose repertory includes both 'lyrical' and 'heroic' epics such as the Köroglu cycle from the Near East and Turkestan. Turkmen versions of Köroglu are related to Azerbaijani and Uzbek variants. In Turkmen traditions, related by language, religion and culture, epic

performers are known as *bakhshy* and *dastachy-bagshy-lar*. The vocal style includes a clear manner of recitation, a low, husky timbre in the recitative parts of the epic (*dastan*) interspersed with melodic sections. The Kazakh epic is also related closely to Turkmen and Uzbek traditions. Epics are performed by the *aqîn* ('poet') or *zirsi* or *ziraw* (from *zir*: 'epic song') with the *dombira* (two-string lute) or the *qobiz* (horsehair fiddle), the latter distantly related to the Slavonic *gusle*. The seven-syllable verse line has an ancient pedigree that goes back to the 11th century and is part of the common Turkic heritage of Kazakh oral poetry. One singer, Raxmet Mazxodzayev (1881–1976), learnt epics orally but also some poems from manuscript and Kazan editions.

Manas is an encyclopedic epic that includes all the genres of Kirghiz vocal expression. It consists of three cycles, the first dealing with Manas himself, the others with his son and grandson. Mime and drama form part of the performance, and some versions are very long: a version of some 400,000 lines was transcribed from one performer, Sayakbay Karalayev. Performances of Manas are constructed by combining a variety of recitation styles, without instrumental accompaniment. An evening may begin with the *zhorgo syoz* manner, with measured pace and evolving melodic line, then a long recitation of musical motifs. More prosaic narrative styles include the *zheldirme* (gallop), a type of rapid agitated recitation. The performer of Manas (*manaschi*) controls the mood of the audience by means of flexibility of narrative style. In pre-communist and contemporary West Mongolia, epic performance was seen as a ritual activity. The bards (*tuul'ch*) negotiated with spirits of nature and an imagined otherworld which, if the epic was performed correctly, were believed to influence the health, happiness and fate of those listening. In addition to ritual acts surrounding performance, its timing – at night during certain seasons of the year, usually in the homes of herders – is important, and the vocal quality used, as well as the percussive effect of the accompanying two-string plucked lute *topshuur* (see illustration), emphasizes that the communication is a spiritual one.

In the former Soviet Union, including Central Asia, traditional performance genres were manipulated in the cause of Marxist-Leninist theory and suspect minstrels were either silenced or made to conform to the party line. Beginning in the 1930s, the status of epic performers (*zhyrau*) in Kazakhstan was reduced by the Soviets to ordinary amateur activity and Soviet epics were composed: Uzbek *bakhshy*, for instance, performed long poems about Lenin, Stalin and collectivization. In the Soviet era, traditional epics were 'revised' and new epics written. This process affected the skilled singers of *bïlinï* and *novinï* such as Marfa Kryukova, who, however, was still able to use the techniques of oral composition. Epic style survived even while the content was being drastically changed.

In East, South and South-east Asia epic traditions still flourish. In Rajasthan, for example, the epic of Pābūjī is traditionally performed by low-caste Nāyaks as a religious ritual in honour of its hero, a deity widely worshipped by Rebari camel-herds and shepherds, and by rural Rajputs. The performer is also a priest (*bhopo*). Performance of the epic can be accompanied by a drum, finger-cymbals and a drone chordophone, with interspersed passages of spoken explanation (*see* INDIA, §VII, 1(ii)(b)). Although

Performance of the 'Manas' epic by Seseer, accompanied by a topshuur, West Mongolia

the Hindu Mahābhārata and Rāmāyaṇa do not appear to have reached as far as the Philippines, epics are found there in Islamic communities and indeed in almost all major language groups. They form a repository of oral history dealing with hero-ancestors, genealogies, origins of the world and the people's relationship to major deities as well as, among Islamic peoples, the prophet Muhammad. Among the Maguindanao, performance of the heroic epic (*tutol*) begins with a melismatic greeting to Allah, with held notes, trills, mordents and a long descending melodic line. In northern Kalinga women singers of the epic Gasumbi use seven-syllable lines in describing the exploits of the hero Gawan, fitting traditional melodies of different musical genres into the epic. Among the Maranao, the epic Darangan is the domain of specialized singers who at social gatherings vie with one another in extemporizing allusions and double meanings. Epics are also common in Palawan. They may be performed at weddings or as evening village entertainment, and can last for several nights. In the Mansaka epic (*manggob*), the singing style requires extra vowels and syllables to be added to words. These additions obscure the words themselves so that even a native speaker who is unfamiliar with the epic will not be able to follow the story. The performance of epic among the Sawa is in private, sometimes only the narrator with an apprentice being present; and the former intones the verses while lying on his back. Among the Palawan, epics comprise long lines with the text sung syllabically and clearly enunciated. Changes of tonal structure and pitch identify

the various characters in the epic. Reciting notes and short melismatic passages are integral to the technique of epic performance, for which apprentices are given long and arduous training.

In Africa and the Arab world 'epic form' lives on in the *sira* ('travelling') of the Bani Hilal Bedouin tribe, a genre with no exact European equivalent which chronicles the tribe's migration from their homeland in the Arabian peninsula. Many conclusions of Parry and Lord about structure are paralleled in Arabic tradition: traditional rhyme schemata help to structure scenes and episodes; the oral formulae facilitate the 'translation' of narrative material from one rhyme scheme to another; and the melodic line structures verse length and communicates the singer's depiction of characters within the narrative. The performer in this tradition accompanies his singing on the two-string *rebab*.

In sub-Saharan Africa epic singing, closely related to praise-songs, is often combined with dramatic performance and instrumental accompaniment. Epics are found in two major areas: the Mande speakers and groups such as the Fulani (or Fulɓe) in West Africa, and Bantu-speaking groups from the Gabon Republic (Fang or Faŋ) to the Democratic Republic of the Congo. Epics have also been recorded among the Sotho of South Africa, the Swahili of East Africa, the Benamukuni of Zambia, the Ijaw of southern Nigeria and the Adangme of Ghana. The two major traditions of epic seem to be among the Mande speakers of West Africa and some Bantu speakers of Central Africa. In both areas epics exist at a trans-tribal level in groups that are more or less related. Epics are found among the Bambara, Fang, Mongo, Lega and Nyanga peoples, where hunting is ideologically important.

Wherever northern influence in sub-Saharan Africa is strong a tense vocal style is combined with a melismatic solo line; elsewhere a more relaxed voice predominates. Among the Nyanga of the Democratic Republic of the Congo, the epic singer accompanies himself with a gourd rattle, while three aides add percussive rhythms on a dry housebeam or bamboo. The Mongo bard (Democratic Republic of the Congo), his face and body adorned with geometrical designs and specially attired as in other related traditions, is accompanied by a small *lokole*-drum or two blocks of wood, each beaten in a different rhythm. The Fang performer may use an elaborate chordophone called *mvet*, or can be accompanied by others playing on dry bamboo, a piece of banana stipe, a rolled-up hide, or again by slit-drums or membranophones. The accompanying group includes the wives and children of the bard.

In several regions the epic is sung or chanted: the Mongo and related groups sing certain portions and narrate others. Nyanga bards sing the entire text of the Mwindo epic, short episodes succeeding each other. The narrative can be broken by pauses for eating and drinking, for dance performances, dramatic action, musical interludes and praises. The performance of epic and praise-singing involves patronage, though with post-colonial change in the social structure patrons are now sought out rather than existing through formal attachment: Hausa praise-singers compete intensely for the patronage of officeholders within the traditional government. As praise-singers, the Fulani *griots* (whose privilege the epic is) address eulogies to chiefs and other wealthy patrons with the accompaniment of the three-string lute (*hoddu*) or single-string fiddle (*nyaanyooru*), extolling the exploits of ancestors and singing epics of the Fulani past. Silamaka, the central figure of the best-known epic, is a historical figure. In recounting the tale, the bard mingles the narrative events with praises, aphoristic expressions, conversations and challenges. As a professional (*maabe*) performing for the Fulani nobility in Burkina Faso, the singer Tinguidji, for instance, regards himself as a court musician.

Structurally, musical rhythm plays a central role in the relationship between music and language: in Mande-speaking epic performance (in Senegal, Sierra Leone, Gambia and Guinea) instrumental rhythms dictate the accentuation of speech and the prosodic structure of the line. The 21-string bridge-harp (KORA) is mostly used by the Mandinka professional musician (*jalolu*) in Mali, though xylophones, drums or a four-string banjo-like instrument may be preferred. The audience is involved in the performance, and among the Hamba of the Democratic Republic of the Congo a listener provides the rhythm by beating two sticks together. In Liberia, the Kpelle celebrate the Woi epic, the story of a superhuman hero and his adventures. The singers of the epic rely on onomatopoeic language to suggest a regard for timbre and for qualitative features in general, adding proverbs to inspire the musicians and bodily movement to infuse drama, thereby raising the audience's sense of involvement in Woi's adventures. As in all African traditions, specialists in a caste-like structure reinforce community identity through a range of techniques for the performance of heroic epic.

Epinal, Gautier d'. *See* GAUTIER D'ESPINAL.

Epinette (Fr.). (1) *See* SPINET.

(2) *See* VIRGINAL.

(3) A generic term for a string keyboard instrument in France until well into the 17th century.

Epinette de Vosges. A partly fretted zither or *bûche*, related to the *scheitholt, langspil, langeleik*, HOMMEL and APPALACHIAN DULCIMER. Though probably not specifically French in origin, it was called after the French mountain region where it survived. In characteristic form, it consisted of a shallow box slightly tapered in width and with one heart-shaped and one roseate soundhole; along this five metal strings were stretched from a pegbox at the narrower left-hand end to metal pins at the wider end (see illustration). 13 to 17 metal frets in diatonic sequence were set directly in the belly under the two strings nearest the player; these were tuned in unison, approximately *g′*, the open strings generally being tuned to combinations of Gs and Cs in the same octave or that below. The two fretted strings were stopped in unison with a small rod held in the left hand and slid from one fret to another, or in 3rds with the left-hand thumb on the nearest string, and index and middle finger together on the second. A goose quill or other flexible plectrum held in the right hand sounded all five strings with backward and forward strokes. Since the 1950s hybrid instruments incorporating

Epinette de Vosges, French, late 18th century (Horniman Museum, London)

features from other partly fretted zithers have also been called *épinette de Vosges*.

JOAN RIMMER

Epinikion [epinicion, epinicium] (Gk.; Lat. *epinicium*). In ancient Greece, a choral ode in honour of a victor either in games or in battle. Such odes were written by Bacchylides, Pindar and other poets and usually fell into three parts: an account of the victory, a mythical development of the subject and a eulogy of the victor, to which were added exhortations and moral reflections. The ode was sung when the victor returned to his city, perhaps in the procession to the temple where his wreath was consecrated.

The epinikion is the point of origin of the songs of triumph frequent in operas, e.g. in Act 2 scene ii of Verdi's *Aida*, where Radames is acclaimed by priests and people as he enters Thebes after defeating the Ethiopians. The epinikion which constitutes the first scene of Handel's oratorio *Saul* (one of the few instances where the term is actually found in a libretto) tells of David's victory over Goliath. It was in the portrayal of such scenes, which required a rich panoply of choral and orchestral forces, that the potentialities of Handel's newly fashioned oratorio style were most evident.

MICHAEL TILMOUTH

Epiphonus (Gk.: 'one sound on another'). In Western chant notations a neume signifying two notes, the second higher than the first and semi-vocalized. The *epiphonus* is the LIQUESCENT form of the *podatus* (*see* PES (ii)). Liquescence occurs on the consonants *l*, *m*, *n*, *r*, *d*, *t* and *s*, when these are succeeded by another consonant; on the double consonant *gn*; *i* and *j*, when these follow another consonant; on *m* and *g*, when these have a vowel on either side; and on the diphthongs *au*, *ei* and *eu*. The second note of the *epiphonus* is sung to the consonant or vowel in these circumstances as a semi-vocalized passing note to the next (higher) note. (For illustration *see* NOTATION, §III, 1(ii), Table 1.)

DAVID HILEY

Episcopius [de Bisschop], **Ludovicus** (*b* Mechelen, *c*1520; *d* Straubing, Bavaria, 29 April 1595). Flemish composer later resident in Germany. He received his first musical training at the choir school of St Rombouts Cathedral, Mechelen; the director of music was Theo Verelst, whose pupils included Philippe de Monte and Cipriano de Rore. From 1538 to 1541 Episcopius was a student at Louvain University. He later became a priest and was awarded a degree in theology. In 1545 he was appointed choirmaster of St Servatius, Maastricht, where he also received a benefice. In 1575 he was replaced by Jean de Chaynée – the reason for the change is unknown – but after Chaynée had been murdered, on 14 October 1577, he was reinstated. About 1582 he left for Munich. He no doubt hoped that his acquaintance with Lassus would lead to an appointment there, and indeed he is recorded as a chaplain in Lassus's choir in 1584. He retired to Straubing in 1591 and became a canon. He was a competent composer with a sound technique. His sacred music consists of the Missa super *'Si mon service a merite'* for four voices (in *D-Mbs*), one motet for three voices in RISM 1560[7], four motets for four and five voices (in *A-Wn*) and a four-part *Salve regina* (in *D-AAm*). There are eight Flemish chansons by him, for four to six voices, in RISM 1554[31]. Four reappeared in 1572[11], together with three further ones (these seven, for four to six voices, are ed. F. van Duyse, Amsterdam, 1903; some ed. in Cw, cxxii, 1977); one, the six-part *Ic sou studeren in enen hoeck*, is a potpourri recalling Janequin's *Les cris de Paris*.

Episcopus, Melchior. *See* BISCHOFF, MELCHIOR.

Episema (pl. *episemata*; from Gk. *epi*: 'on' or 'beside' and *sēma*: 'sign', 'mark'). In Western chant notations an additional sign used in conjuction with neumes. The term was first used by Dom André Mocquereau (*Le nombre musical grégorien ou rhythmique grégorienne: théorie et pratique*, i, Rome, 1908, p.161) to refer to the small strokes that may supplement neumes in the notation of St Gallen, being added to the end of a neume or, as it were, sitting upon it. The significance of the *episema* is not entirely clear, but it probably indicates a lengthening or other form of emphasis of the note to which it applies (for illustration, *see* NOTATION, §III, 1, fig.20). In modern chant books from Solesmes an *episema* in the form of a short vertical stroke is used to mark the position of the ICTUS.

□

Episode. A portion of a FUGUE during which the SUBJECT as a complete entity is not sounding, although motifs derived from it may be present. A fugue is generally laid out as an opening EXPOSITION followed by alternation between episodes and groups of thematic statements. Of all the characteristics of a 'classic' fugue, the episode is historically one of the last to appear in fugal composition. A great preponderance of 17th-century fugues include virtually no passages at all during which the subject is absent. Interest in the use of episodes seems to have arisen simultaneously with the rise of tonal harmony and its application to fugue at the beginning of the 18th century. Consequently episodes often have a modulating function in that they take the fugue to a related key in preparation for thematic statements in that key. Some writers particularly prize thematic unity in fugue and recommend that all episodes be based in some way on material from the subject, but the episodes of a great many fugues include no such derived material. One of the first writers to describe the phenomenon of episodes was Johann Mattheson in *Der vollkommene Capellmeister* (1739), where he designated them (as Germans continue to do) as *Zwischenspiele*. Some writers use 'episode' to designate that which others call a 'codetta', namely, the brief segment of free counterpoint that sometimes separates the first two thematic entries at the beginning of the exposition from the next one.

PAUL WALKER

Epistle (from Gk. *epistolē* and Lat. *epistola*: 'letter'). Generic term for the reading or readings that precede the Gospel in the pre-eucharistic synaxis of the Eastern and Western liturgies. The term derives from the fact that the Epistle is frequently taken from one of the epistles of Paul, but it is nonetheless applied to other scriptural readings, too, including those taken from the Old Testament. Similarly, the term 'Apostolus', a reference to the 'Apostle' Paul, was frequently used in patristic literature to refer to the Epistle.

1. History. 2. The recitation tones. 3. Troped, farsed and polyphonic Epistles.

1. HISTORY. It remains a safe assumption that the early Christian practice of liturgical reading from the Bible was a continuation of what took place in the Jewish synagogues. The earliest description of a pre-eucharistic synaxis, that of Justin Martyr (*d c*165), mentions both New and Old Testament readings: 'the memoirs of the Apostles and the writings of the Prophets are read as long as time permits' (*First Apology*, 67). Two other common assumptions about the Epistle, however, have come to be seriously questioned: that Epistles were at first read according to the system of *lectio continua*; and that all ancient liturgies had at least two readings, one each from the Old and New Testaments.

There is little positive evidence to support the belief that *lectio continua* or *scriptura currens* – the resumption of the reading of a text from the point where it had been discontinued at the previous service – was the standard Christian practice before the growth of the liturgical year inspired the development of a Proper cycle of readings. Readings were selected each day at the discretion of the presiding bishop, and it is at best only a plausible hypothesis that the bishop might have made his choice according to some variation of *lectio continua*. Certainly, at a time when the biblical canon had not yet been fixed and Christians tended to think more in terms of individual books or groups of books than a unified Bible, it is less likely that the entire Old or New Testaments would have been read in this way than individual books.

Even less tenable is the assumption that one of two related patterns of readings was standard in all ancient Christian liturgies: either the four-reading system of two Old Testament pericopes, modelled after the Synagogue practice of one reading from the Law (the Pentateuch) and another from the Prophets, along with a symmetrical pair of New Testament readings, one from the epistles of Paul and one from the gospels; or the simplified three-reading system of Old Testament, New Testament and Gospel. The medieval Roman and Byzantine systems of only two readings, an Epistle and a Gospel, came about, according to this view, by a reduction of the ancient plan. Analysis of the 4th- and 5th-century literature has shown that no such rigid patterns prevailed at the time (Martimort, 1984 and 1992). Rather there was variety from place to place in the number and type of readings, and indeed variety within the same location from one liturgical occasion to the next. Most instructive in this respect is the so-called Armenian Lectionary, which provides the early 5th-century readings of Jerusalem (see Renoux). The most common pattern was that of two readings, one each from the Pauline epistles and the gospels; this was employed, for example, in most festivals of the *Temporale*, while Old Testament saints and the Virgin Mary had a three-reading group beginning with one from the Old Testament. St Augustine, another rich source of evidence, usually cited just two readings in his sermons: one from the Old Testament, or more often the 'Apostle', and a second from the gospels; while the contemporary *Apostolic Constitutions* (II, 57.5–9 and VIII, 5.11–12) call for at least four, beginning with 'the Law and the Prophets'.

There is an argument of special interest to music historians that has frequently been invoked to support the position that multiple Epistles prevailed in all the ancient liturgies; it rests on the dual assumption that a psalm in the pre-eucharistic synaxis always served as a lyric response to a reading and that in the early Church there were always two psalms sung during this service. A careful reading of the patristic literature, however, reveals

that both aspects of the assumption lack a factual basis. There are occasional references to more than one psalm, but usually one only is mentioned. Never is a psalm described as a response to a reading: rather it is spoken of as an independent reading itself. Augustine's comment in Sermon 165 is typical: 'We heard the Apostle, we heard the Psalm, we heard the Gospel: all the divine readings sound together'.

As Proper Epistles came to be assigned to dates in the expanding Church year, it became necessary to record them in writing. The same roughly three-step process observed with Gospels applies equally to Epistles: markings in the margins of biblical texts; lists (*capitularia*) of Epistle incipits and explicits; and books with fully written out pericopes, that is, epistolaries (*see* GOSPEL, §2). The second type, the *capitularium epistolarum*, did not have the benefit of a system of numerical divisions such as the Gospel's Eusebian sections or canons, and simply had to rely on the title of the book with incipit and explicit.

Among the Latin liturgies the quantity of early evidence is substantially greater for Gallican readings than it is for Roman ones. Most of the Gallican evidence conforms to the threefold scheme of Pseudo-Germanus: Prophetia – Apostolus – Evangelium. Gallican lectionaries, however, differ among themselves as to specific readings, and the Gallican system was supplanted by the Roman in the Carolingian liturgical reforms of the late 8th century. In the Würzburg Epistolary, Roman Epistles appear to have been largely fixed; readings for about 625 are provided: the Epistles of Paschal Time are drawn from the *Acts of the Apostles* and the Catholic Epistles, Lenten Sundays from the Pauline epistles, and Lenten weekdays from the Old Testament; Christmas Time festivals chiefly from the Pauline epistles and the prophet Isaiah. There are no assignments for the Sundays after Pentecost, but these were presumably chosen by the celebrant from the series of 42 unassigned pericopes from the Pauline epistles that appear at the end of the lectionary.

2. THE RECITATION TONES. The recitation tone of the Epistle was often notated in full in later tonaries, or in collections of common tones such as the *Cantorinus* (Venice, 1540) or the *Compendium musices* (Venice, 1509). Older lectionaries and epistolaries sometimes included accents or neumes, in black or red ink, indicating the syllables on which the memorized cadence formulae were to begin. In all these various sources the recitation tone consists of a single reciting note ('tenor') bounded by an intonation formula and a concluding formula. The middle of the period is marked by a colon or semicolon, indicating an intermediate cadence; the end of the period, marked by a full stop, bears the final cadence (*metrum*). If a phrase is interrogative, the cadence is inverted and the melody rises. An ornamented terminal cadence (*finalis*) concludes the recitation. (See ex.1; for regional variants, see *MGG1*.)

The traditional recitation tones were retained in the German Lutheran Church while Latin was still in use. In Luther's *Deutsche Messe* of 1526 (ed. J. Wolf, Berlin, 1934) the normal recitation tones were replaced by a kind of psalm tone whose cadences were chosen according to the punctuation of the text (ex.2). At the end of the *Deutsche Messe*, however, Luther proposed another recitation formula (ex.3), which, according to a letter he wrote to Justus Jonas on 2 February 1526, he preferred to the other. The first of these tones spread through

central Germany and Saxony; the second, less widespread, is found in the lectionary of Brunswick (1620) and in the *Kirchengesänge* (Wittenberg, 1573).

For some time the Anglican Church retained the recitation tone used in the English Church from the reform of the Sarum rite in 1197 by Richard Poore and Edmond Rich. The first Prayer Book, published under Edward VI in 1549, required all the readings to be sung in English to a 'plane tune', with 'distinct reading' so that the people might understand the text. This passage was omitted from the second Prayer Book of 1552, but the previous usage seems nonetheless to have been maintained. In the 19th century, under the influence of the Oxford Movement, unofficial works such as the *Priest Music* proposed a return to the Roman, or to the Sarum, manner of recitation.

3. TROPED, FARSED AND POLYPHONIC EPISTLES. From the 12th century but particularly in the 13th, missals, especially French ones, sometimes contain farsed Epistles, that is, Epistles whose text has been expanded with

explanatory glosses or commentaries in Latin or, on occasion, in Old French. Such Epistles were generally written out in full because of the difficulty fitting the recitation tone, usually divided between two deacons, to the extra non-biblical text. They solemnized the feasts for which they were prescribed, and the dramatic element they brought to the liturgy may well have influenced the early development of medieval drama. Their most notable occurrence is within the Christmas cycle, which grew more elaborate during the Middle Ages through the inclusion of popular customs. On Christmas Eve the chant of the Sibyls, *Laudes Deo dicam per secula*, was read (ed. in Blume, 1906, p.173, no.384; see Villetard, pp.111, 168), a practice still found in some churches in Catalonia (see H. Anglès: *La música a Catalunya fins al segle XIII*, Barcelona, 1935/*R*, p.288) and Portugal (see S. Corbin: *Essai sur la musique religieuse portugaise au Moyen-Age*, Paris, 1952, p.285).

The dramatic element of the farsed Epistles was further developed in polyphonic Epistles, which seem to have originated as a result of dividing up the reading of the Epistle among several readers (e.g. the Christmas genealogy in *F-Pa* 438 from St Martin-des-Champs; *see* GOSPEL, §3(ii)). At Christmas, lessons were sung in polyphony both at Matins and during the Mass. The prophetic lesson *Populus gentium*, for example, prescribed for the first nocturn of Matins and, in some areas, also for the midnight Mass (notably in the lectionary of Alcuin), was sung polyphonically particularly in Germany (see Göllner, i, pp.297ff). Other polyphonic Epistles from the Christmas cycle survive uniquely in *I-IV* 71 (see Göllner, i, pp.162, 166, 335); the Epistle *In omnibus requiem quaesivi* for the Assumption (15 August) is set in two-voice polyphony in the St Martial troper and proser *F-Pn* lat.1139 (see Göllner, i, pp.176, 336 and pl.xix). Some other isolated polyphonic Epistles survive, notably for the Dedication of a Church (see Göllner, i, pp.172, 336).

These polyphonic Epistles may seem anomalous, since lessons are normally by definition recitations chanted by a single singer; but polyphony was regarded as a form of ornamentation or enrichment in order to render the monophonic chant (and *a fortiori* the simple liturgical recitative) more solemn.

Epistle sonata. Mozart's 17 'epistle sonatas', or variously 'church sonatas', 'organ sonatas', simply 'sonatas' (Mozart's manuscript) and *Sonate all'Epistola* (letter to Martini, 4 September 1776), are all single Allegro movements in sonata form with short development sections, written between about 1772 (K67–9/41*h*–*k*) and 1780 (K336/336*d*), for strings, organ (solo or continuo) and, latterly, other instruments (e.g. K278/271*e*, probably for Easter Sunday 1777, for two oboes, two trumpets, two violins, cello, double bass, timpani and organ). At what point in the Mass they were played is uncertain but it was probably between the reading (or intoning) of the Epistle and the Gospel. The particular classical style and form appear to be peculiar to Salzburg Cathedral, where there were small organs in the galleries hanging on the crossing piers suitable for playing such works; but the tradition for instrumental music at this and similar points in the Mass is long and varied. Burney reported at Milan that 'the music was pretty; long and ingenious symphonies to each … division of the Mass', from which it is a short step to independent miniature sonatas. Other northern Italian churches specifically influencing the architectural and musical character of Salzburg Cathedral (e.g. S Giustina, Padua) had string sonatas forming interludes, from at least about 1650; at S Marco, Venice, solo violinists were expressly employed for playing a solo sonata during the ELEVATION. This itself reflects the cheaper and therefore more common practice of playing organ interludes during Mass, for example as prescribed in Frescobaldi's *Fiori musicali* (1635). Many of the keyboard toccatas, canzonas and 'sonatas' found in 17th- and 18th-century sources from Catholic Europe were probably intended for this purpose. Traditionally, from

at least Banchieri onwards (1611), the moment during Mass when organ or string band was most free to play self-contained works was during the Elevation; but in the large Baroque churches of Habsburg Europe it may have been the pause while the priest moved across from the Epistle side of the choir (south) to the Gospel (north) that occasioned the Epistle sonata.

PETER WILLIAMS/JOHN CALDWELL

Epistolary (from Lat. *epistolare*). A liturgical book of the Western Church containing in the order of the church year the complete texts of the readings from the Epistles and the Old Testament chanted at Mass. *See also* LITURGY AND LITURGICAL BOOKS, §II, 2(ii).

Epithalamium (Lat., from Gk.: 'bride chamber'; It. *epitalamio*). A marriage song or poem usually in praise of the bride and bridegroom; sometimes an instrumental piece intended to be played at a wedding or evocative of the ceremony. The verses of several epithalamia by Sappho in the form of choral songs survive. It is thought by some that Psalm xlv was a wedding song for the marriage of Solomon. There are examples of the genre from all periods. Du Fay's *Resvelliés vous, et faites chiere lye* was written in 1423 for the marriage of Carlo Malatesta and Vittoria Colonna. An *epitalamio* begins the *Trionfi di musica* (RISM 1579[3]) dedicated to the Grand Duchess of Tuscany and consisting of pieces performed at her wedding to Francesco de' Medici; it comprises a sonnet and a sestina, each stanza of the latter being set by a different composer (among them Andrea Gabrieli, Merulo and Vecchi). The most celebrated English poem bearing the title, Spenser's *Epithalamion* (1595), was not set to music by contemporary musicians, nor were the verses for which he coined the title *Prothalamion* (i.e. a song sung before a wedding), published the following year.

Drawn by peacocks, Juno appropriately blessed the marriages of the lovers in the epithalamium 'Thrice happy lovers' in Act 5 of Purcell's *The Fairy-Queen* (1692). In the third of Kuhnau's *Biblische Historien* (1700), *Jacob's Heyrat*, a section mainly in the treble register of the keyboard represents the wedding song of Rachel's companions. Epithalamia, even if not so designated, are not uncommon in operatic contexts: for example, 'Treulich geführt' in Wagner's *Lohengrin* (Act 3 scene i) is one in all but name. The title *Epithalamion* has also been used for orchestral compositions by Fartein Valen (op.19, 1933) and Roberto Gerhard (1966).

MICHAEL TILMOUTH

Eppstein, Hans (*b* Mannheim, 25 Feb 1911). Swedish musicologist of German descent. He studied the piano and music theory with Max Sinzheimer in Mannheim and Julius Weismann in Freiburg (teaching diploma 1931), and musicology (1929–34) at the universities of Heidelberg (with Besseler), Freiburg (with Gurlitt) and Berne (with Kurth), taking the doctorate at Berne in 1934 with a dissertation on Nicolas Gombert's motets. After working as a schoolteacher (1934–6) he emigrated to Sweden, where he became an editor (1948) and editor-in-chief (1953–7) of the *Tonkonsten* music dictionary, director of the music department of the Framnäs Folkhögskola in Öjebyn, north Sweden (1957–63), and lecturer in music history at Göteborg Conservatory (1965–6). In 1966 he took a second doctorate at Uppsala University with a dissertation on Bach's sonatas for solo instrument and harpsichord; he was also senior lecturer in musicology there (1966–77). He became editor of the series Monumenta Musicae Svecicae in 1972, and a member of the Swedish Royal Academy of Music in 1979. His publications include books on Brahms and Schütz and articles on the works of Bach and Kraus.

VESLEMÖY HEINTZ

Epstein [née Polacheck], **Dena J(ulia)** (*b* Milwaukee, WI, 30 Nov 1916). American music librarian and musicologist. She graduated from the University of Chicago (BA

1937), then took courses in library science at the University of Illinois (BS 1939, MA 1943). She was art and music cataloguer at the University of Illinois (1939–43), senior music librarian at the Newark Public Library (1943–5) and a music cataloguer and reviser at the Library of Congress (1946–8). She was curator of recordings and assistant music librarian at the University of Chicago from 1964 until her retirement in 1986. Epstein was president of the Music Library Association from 1977 to 1979. She received the citation for distinguished service to music librarianship from the Association in 1986, and in 1996 the organization created the Dena Epstein Award for Archival and Library Research. Her writings have focussed on music in the United States, particularly music publishing and black folk music, and various aspects of music in libraries.

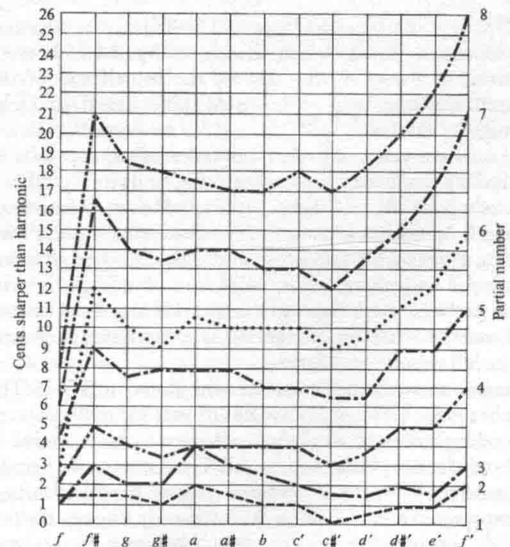
PAULA MORGAN

Equale. A piece for equal (i.e. similar) voices or instruments, for example two sopranos or a violin quartet. In the 18th century the form was restricted to pieces of a solemn nature for a quartet of trombones to be played before, during or after a state funeral; this practice was particularly common in Austria. The only familiar examples of the genre are the three short *equali* that Beethoven wrote for performance in Linz Cathedral on the Feast of All Souls 1812; arranged for male voices with words from the *Miserere*, they were also performed at his funeral in 1827.

See also VOCI PARI, VOCI MUTATE.



MAURICE J.E. BROWN

Equalizer. *See* FILTER.

Equal temperament (Fr. *tempérament égal*; Ger. *gleichschwebende Temperatur*; It. *temperamento equabile*). A tuning of the scale based on a cycle of 12 identical 5ths and with the octave divided into 12 equal semitones, and consequently with 3rds and 6ths tempered, uniformly, much more than 5ths and 4ths (*see* TEMPERAMENTS, §1). Equal temperament is now widely regarded as the normal tuning of the Western, 12-note chromatic scale.

The term has been used in various contexts with slightly different meanings. Ellis used it for a theoretical scheme in which each semitone equals 100 cents, 1200 cents totalling an octave with a frequency ratio of 2:1. But piano tuners systematically depart from this model because their octaves are normally larger than 1200 cents (*see* TUNING, Table 1). A piano tuner makes the octaves sound 'right' melodically as well as harmonically – some tuners favour for melodic purposes more 'stretch' in the octave than others, particularly in the high treble and low bass – and makes the rate of beating of the 3rds and 6ths vary as smoothly as possible in the course of going up or down the scale chromatically. Achieving this smoothness, which many pianists take for granted as essential to the proper sound of the instrument, entails departing from the 100-cents-per-semitone model, especially in the tenor-baritone range where differences in string thickness and in timbre between overspun and plain strings must be compensated for. This and the need to camouflage an occasional faulty string accounts for many of the apparently whimsical departures from the 100-cent model (see illustration), which caused L.S. Lloyd in 1940 to publish an article wryly entitled 'The Myth of Equal Temperament'. Organ Diapason pipes are much less problematical in this respect, and the use of an electronic tuning aid is correspondingly less likely to compromise the quality of the tuning.

Modern industrially produced woodwind instruments are designed to play in equal temperament, but performers can readily inflect the intonation to suit their musical tastes and ensemble requirements. Likewise, players of the lute, guitar or viol may depart considerably from the scheme of equal semitones embodied in the fretting of their instruments (*see* TEMPERAMENTS, §9). For these performers, as for singers and violinists, the concept of equal temperament provides a simple intellectual model of the chromatic scale rather than a scheme of intonation that is strictly adhered to.

Irregularities in the inharmonicity of overtones on the piano for the notes f–f': after E.L. Kent, 'Musical Acoustics, Piano and Wind Instruments' (Stroudsburg, PA, 1977), 58

Scholars occasionally confuse equal temperament with late 17th- and 18th-century irregular tuning schemes that provide a circle of 12 good 5ths but, unlike equal temperament, contain a significant element of intonational nuance among various keys (*see* WELL-TEMPERED CLAVIER).

Occasionally the term 'equal temperament' has been used loosely as a generic term for divisions of the octave into any number of equal parts.

For the history of equal temperament in performing practice and for bibliography *see* TEMPERAMENTS, §§5, 8, 9 and bibliography (esp. Ellis, Barbour and White).

MARK LINDLEY

Equal voices. *See* VOCI PARI, VOCI MUTATE.

Eques Auratus Romanus. *See* LORENZINO.

Equiluz, Kurt (*b* Vienna, 13 June 1929). Austrian tenor. He became alto soloist with the Vienna Boys' Choir, and studied music at the Music Academy. In 1950 he joined the State Opera Chorus and soon became a valued comprimario with Scaramuccio in *Ariadne auf Naxos*, a part he made his own, singing it also at Florence and Salzburg. He was admired for his cameos in *Die Meistersinger* (Balthasar Zorn) and as Pedrillo in *Die Entführung*. His distinctive, well-focussed voice can be heard in several small roles on records (including Scaramuccio in the famous recording with Karajan), but the most memorable part of his legacy is probably his singing of the Evangelist in Bach's Passions and his contributions to the complete cycle of Bach cantatas directed by Harnoncourt and Leonhardt. Equiluz was professor of oratorio at Graz from 1964 to 1981, when he joined the Vienna Music Academy to teach oratorio and lieder. He continued to give recitals well into his 60s.

J.B. STEANE

Erard. French firm of piano and harp makers and music publishers.

1. Piano/harp manufacture. 2. Publishing.

1. PIANO/HARP MANUFACTURE. The firm was founded by Sébastien Erard (*b* Strasbourg, 5 April 1752; *d* La Muette, nr Passy, 5 Aug 1831), the fourth son of the church furniture maker Louis-Antoine Erard (*b* Delemond, Switzerland, 1685; *d* 1758). As Sébastien Erard was only six years old when his father died, accounts of his having acquired his woodworking skills in his father's workshop cannot be substantiated. He was, however, brought up within a community of skilled artisans, with uncles, cousins, his godfather and older brother all being employed as joiners, cabinetmakers and gilders, for the most part in an ecclesiastical context. He may have known and worked with the younger Strasbourg-based members of the Silbermann dynasty.

Erard most probably arrived in Paris in 1768. The Duchesse de Villeroy (1731–1816) was an early patron, providing him with workshop premises at her mansion in the rue de Bourbon, and in 1777 he made for her an impressive five-octave bichord piano modelled on a Zumpe square. In 1779 he built his only known harpsichord, the *clavecin mécanique* [*clavecin à expression*] (now in the Musée de la Musique, Paris). Thereafter he began to exploit the new market for five-octave pianos, so successfully overcoming the fashionable aristocratic preference for 'pianos anglais' that he was obliged to call on the help of an older brother, Jean-Baptiste Erard (*b* Strasbourg, 7 July 1749; *d* Passy, 10 April 1826). Together they moved first to 109 rue de Bourbon, and in November 1781 to 13 rue de Mail, which remained the headquarters of the firm until its eventual closure. Attempts by the jealously conservative guild of Parisian luthiers to stem the Erard enterprise in 1784 were overcome by the personal intervention of Louis XVI, who awarded Sébastien Erard a special dispensation dated 5 February 1785.

Royal commissions followed. Erard's special transposing piano designed for Marie Antoinette has not survived, but the instrument he made for her in 1786–7 is, without doubt, the finest extant French 18th-century piano (now in the Cobbe Collection, Hatchlands, Surrey). The form and action are exactly those of an English square piano, but the cabinet work is of a sophistication not encountered on any surviving contemporary English instrument. The brothers formed an enormously successful business partnership in January 1788, operating henceforth as Erard Frères, and in January 1791 they became proprietors of the rue du Mail premises they had previously rented. Registers for 1788 and 1789 record 254 and 410 pianos respectively. However, the French Revolution dramatically affected sales, and in 1790 only 76 instruments were produced. Erard's achievements at this time include a *grand forte piano* announced by the *Annonces, affiches et avis divers* on 10 December 1788, and the perfection of a double action (a modified version of Zumpe's improved action) in 1790. He also introduced prototype instruments, which he called *fortepiano en forme de clavecin*, in 1790 (private collection, France) and 1791 (Musée de la Musique, Paris); these did not enter general production until after the Revolution. They had a compass of five and a half octaves (*F″–c‴*), with a single escapement action, three strings per note, and four pedals for lute, *forte*, celeste and *una corda*. Only ten Erard pianos are listed in Bruni's 1795 inventory of musical instruments seized from the homes of the *émigrés et condamnés*, but of all the pianos taken, the most valuable was an Erard model of 1787, estimated at 8000 francs.

Sébastien Erard's achievements in the improvement of the piano are paralleled by those he made in the construction and mechanism of harps. He does not appear to have made many harps before being obliged to leave revolutionary France for London, but he had already observed in a letter that 'the mechanism of this instrument is too complicated; I have changed and much simplified it; this means it doesn't break strings like before. Once I have obtained the right to show my discovery, I will bring out my harps'. Although he probably first visited London as early as 1779 it was not until 1790 or 1791 that he finally settled there, founding an establishment at 18 Great Marlborough Street in 1792. There he concentrated on the manufacture of harps, which previously had almost all been imported from France, and it was there too that in November 1794 he acknowledged the first ever British patent for a harp (*Improvements in Pianofortes and Harps*, patent no.2016). He strengthened the neck by laminating the wood with the grain running in the same direction, and his new rounded soundbox replaced the previous staved construction. The tuning mechanism, instead of being enclosed within the neck, was placed between two brass plates and attached to it, thus giving the instrument additional rigidity. Most remarkable was the new fork mechanism, which, when engaged by the

pedal, brought two forked pins into contact with the strings, thus shortening them the degree of a semitone; the sharpened strings remained parallel with the others, causing fewer breakages, and accuracy of intonation was greatly improved (*see* HARP, §V, 2(i)). The harp was tuned in E♭, and could be played in eight major and five minor keys. Erard introduced his new single-action harp to Paris on his return to France in 1795; his first French harp patent, however, dates only from 1798.

In London the harp had remarkable success. Sales took off from November 1800, when the Princess of Wales paid £75 12s. for harp no.357. The decoration, which appears to have been standardized early, comprised a circle of rams' heads around the capital of the fluted column, and the most popular model of harp, as noted in the London Order Books (RCM, London), was 'noire, bordures etrusques'. The brass plate was engraved with the serial number, address and anglicized form of the maker's forename. Between 2 February 1807 and 24 April 1809 single-action harps amounting to £20,152 14s. 8d. were sold. By September 1810 Erard's London outlet had sold 1374 harps.

In Paris, under the Consulate (1799–1804), pianos continued to be the firm's prime concern. Two main models of grand piano, still known as *forte-pianos en forme de clavecin*, were produced (with compasses of five and a half, and six octaves respectively), in addition to squares. An Erard piano completed in November 1800 was presented to Haydn in 1801, and in 1803 an almost identical one was given to Beethoven (Oberösterreichisches Landesmuseum, Linz). These pianos were trichord, equipped with an English mechanism, and, like the pre-revolutionary ones, had four pedals. The last two movements of Beethoven's Concerto in C minor op.37 were rewritten for this piano, and it also inspired the Waldstein and Appassionata sonatas.

In 1807 Sébastien Erard returned to London where he spent five years concentrating on developing the harp. By that time its only remaining defect was that it lacked adequate means of modulation, owing to the single-action mechanism. Although Erard took out several successive patents in England and France between 1801 and 1808, it was not until 1810 that he perfected the first double-action mechanism based on the fork principle (patent no.3332). Tuned in C♭ this harp could be played in 15 major keys and 12 minor ones, and with little modification Erard's principles are still used by modern pedal-harp makers. 3500 of the 43-string 'Grecian' model, so-called because of its ornamentation, were sold between 1811 and 1820. (*See* HARP, §V, 2(ii) for a more detailed technical description).

In the meantime, Sébastien Erard's Paris concern was seriously compromised by the imposition of trade and industrial restrictions due to the Napoleonic wars, and in 1813 it was declared bankrupt; business was allowed to continue, however, and all debts incurred by the Paris enterprise were reimbursed by 1824 thanks to the profits made in England. Direction of the London establishment from May 1814 until 1829 was taken over by the son of Jean-Baptiste, Pierre [Orphée] Erard (*b* 10 March 1794; *d* 15 Aug 1855), who took out his own patent for harp improvements in 1822.

In Paris, Sébastien successfully subjected his inventions to examination by a Commission drawn jointly from the Académie des Sciences and the Académie des Beaux-Arts in April 1815. From 1815 to 1820 he worked at combining the expressive touch of the English-type escapement action with a more facile repetition, and eventually achieved this with his repetition mechanism, for which Pierre took out a London patent on 24 October 1822 (*see* PIANOFORTE, §I, 6, fig.20). A seven-octave piano with the new mechanism was awarded a gold medal at the Paris Exposition of 1823, and the 12-year-old Franz Liszt made his sensational Paris début on one of Erard's new instruments, following it up with his first London appearance on 21 June 1824. Liszt was so impressed by the precision, speed, vigour, clarity and sensitivity of touch made possible by the new instrument's repetitition action, that he was inspired to compose his *Huit variations* op.1, dedicating them to Sébastien Erard. Sébastien was made a Chevalier of the Légion d'Honneur in 1824, and an Officer in 1827. He continued to direct the Paris establishment after the death of Jean-Baptiste in 1826. Rather than occupy himself with business affairs, however, he retreated to his private workshop; he continued to design and invent new improvements but neglected to supervise their eventual manufacture, a role previously undertaken by Jean-Baptiste. In 1827 he experimented with a new repetition action for his square pianos, and the same year undertook a commission from Charles X for an 'orgue expressif' for the Palais des Tuileries, engaging the help of the Englishman John Abbey (1785–1859) on the project. Sadly, the newly completed organ was damaged in the July revolution of 1830, just after installation, and Erard never received his payment.

An inventory taken at the rue de Mail site on Sébastien's death in 1831 shows that there were 80 specialist workers employed in 19 workshops, of which 16 were devoted to the piano. At the remaining three harp workshops, four workers were employed for woodwork, one for assembly and one for gilding. The stock included 50 completed pianos and 13 harps. A separate inventory reveals approximately 260 paintings of exceptional quality, many of which are now housed in the world's most famous museums, including Dürer's *Adoration of the Magi* (Galleria degli Uffizi, Florence) and Rembrandt's 1634 portrait of his mother (National Gallery, London). Pierre was obliged to sell his uncle's collection to pay off debts of £15,000, reputedly incurred by Sébastien in setting up the manufacture of the new grand pianos with repetition, in addition to death duties.

After his uncle's death Pierre Erard took charge of business in both Paris and London. In 1834 he returned to Paris, where the improved upright piano he had introduced in 1824 was awarded a gold medal at that year's Exposition, and he himself was made a Chevalier of the Légion d'Honneur. He also continued to make square pianos, still popular as elegant salon instruments. In December 1835 he was granted a seven-year extension of his 1822 patent for the double-escapement action grand piano. Six months later he took out a patent for his 'Gothic' harp, so-called on account of its decoration (see illustration). The soundboard was lengthened by four inches to accommodate 46 strings, which could be more widely spaced. Heavier wire-wound bass strings were introduced from *E′* downwards and the harp's overall compass was *C″* to *f‴*. The lower part of the body shell was strengthened so that it was approximately double the usual thickness, and the notches for the pedals were cut into the actual body of the harp.

Harp ('Gothic' model) by Pierre Erard, London, 1858 (Victoria and Albert Museum, London)

From 1839 onwards the bulk of the Paris manufactory was turned over to the production of upright pianos; the construction of the grand piano was eventually standardized around 1841, and in 1843 the difficult problem of a successful double-escapement mechanism for the square piano was finally satisfactorily solved. By 1844 there were 300 workers at the rue de Mail site, extra workshops had been established in the rue Saint-Maur-Popincourt, and 25,000 instruments had been produced. In 1850 a new patent was taken out for a metal framing system for the grand, and a new concert grand was constructed. In 1855 the manufacture of pianos and harps was relocated to purpose-built premises at La Villette.

After the death of Pierre Erard in 1855 the business passed into the hands of his widow Camille (1813–89). M. Bruzaud was nominated successor in London and Mme Erard appointed her brother-in-law Antoine Eugène Schaffer (1802–73) to direct the Paris enterprise. In 1883 she entered into a business agreement with Amedé Blondel, and the firm operated as Erard et Cie. An illustrated trade pamphlet of 1878 shows four grands, four uprights, and two models of harp, including the ornately carved 'Louis XVI', and a 47-string Gothic model. Harps made in London and Paris were numbered differently, so that the French-built harp no.2344 imported in 1894 bore the English no.6610 (private collection, Wales). Erard's Kensington factory was sold by auction on 9 September 1890, and the business in London gradually declined, though a few harps continued to be made at the rear of the Great Marlborough Street premises until the late 1930s. In 1895, at the request of Louis Diémer and his Société des Instruments Anciens, the Paris branch of the firm produced a harpsichord modelled on a 1769 instrument by Pascal Taskin (now in the Russell Collection, Edinburgh). Exhibited in Paris and Vienna, this instrument is now in the Musikinstrumenten-Museum, Staatliches Institut für Musikforschung [Preussischer Kulturbesitz], Berlin.

From 1903 until 1959 the firm was known as Blondel et Cie (Maison Erard), from 1935 to 1956 as Guichard et Cie (Maison Erard), and from 1956 onwards as Erard et Cie S.A. It amalgamated with GAVEAU as Gaveau-Erard in 1959, continuing harp manufacture on a small scale until the early 1970s under the name of Erard. In 1978 the premises in the Salle Gaveau and the goodwill of the harp-manufacturing section of Gaveau-Erard were acquired by Victor Salvi.

The effect of the Erard harp was crucial to the development of 19th-century harp writing, with the experiments and innovative techniques introduced by the English virtuoso ELIAS PARISH ALVARS revealing more technical and expressive possibilities for the double-action harp than Sébastien Erard could ever have imagined. Ravel's Introduction *et Allegro* for harp, flute, clarinet and string quartet (1905) – one of the major works of the harp repertory – was the result of an Erard commission. Many illustrious pianists played Erard instruments, including Louise Dulcken, Kalkbrenner, Steibelt, Pixis, Moscheles, Henri Herz, Thalberg (whose *L'art du chant appliqué au piano* owes a great deal to the expressive possibilities of Erard's pianos) and Liszt. Mendelssohn was given an Erard piano in June 1832.

2. PUBLISHING. The firm's publishing activities were in the hands of Marie-Françoise (1777–1851) and Catherine-Barbe (l779–*c*1815) Marcoux, nieces of Sébastien and Jean-Baptiste. In about 1798 they began trading at 37 rue du Mail, Paris (the same address as Erard frères). From about 1806 their main address is given as no.21 and from about 1818 as no.13 rue du Mail (respectively the *atelier* and shop of Erard frères). In September 1833 Julius Delahante announced that he had taken over the business; until 1840 both he and the Mlles Erard are listed in directories, still at 13 rue du Mail, but not thereafter.

In 1802 the Erards took over the remaining stock of 393 numbers of Bailleux's *Journal d'ariettes italiennes*, originally published by subscription from 1779 to 1795; to this they added three further volumes of their own, probably between 1802 and 1805. It is possible that they also acquired other items from, or even the whole of, the remainder of Bailleux's stock. Their earliest publications included violin concertos by Andreas Romberg and Rodolphe Kreutzer; cello concertos by Bernhard Romberg; piano concertos by Dussek, Cramer and Steibelt; several sets of piano sonatas by Clementi, Cramer, Ferrari and Steibelt; the first printing of John Field in France

(op.1 sonatas); and the first French full score of Haydn's *The Creation* (1800). Between 1800 and 1805 the firm published full scores of eight operas, including Spontini's *Milton* and *Julie*, and others by Boieldieu, Dalayrac and Plantade. These were followed in 1807 and 1809 by Spontini's *La vestale* and *Fernand Cortez*, the firm's most important publications; thereafter their output seems to have diminished greatly. They concentrated on instrumental music, making only occasional operatic excursions, for example Spontini's *Olimpie*, a revised edition of *Fernand Cortez* and Hérold's *L'illusion*. All the firm's publications were engraved.

ANN GRIFFITHS (1), RICHARD MACNUTT (2)

Erart [Erars], **Jehan** (*b* 1200–10; *d* ?Arras, 1258 or 1259). French trouvère. He was a commoner employed by wealthy Arras burghers. Since the name Jehan Erart appears twice in the *Registre de la Confrérie des jongleurs et bourgeois d'Arras*, under the dates 1258 and 1259, and since the poems ascribed to Erart in the Manuscript du Roi (*F-Pn* fr.844) are entered in two different sections of the manuscript, it is possible that more than one trouvère of this name existed; there is, however, no substantial evidence for the conjecture. Erart wrote a 'complainte' on the death of one patron, Gherart Aniel, in which he asked Pierre and Wagon Wion to help him obtain the support of Henri and Robert Crespin, members of an Arras banking family. He named two Arras trouvères, Guillaume le Vinier and Jehan Bretel, in his poems, and is himself mentioned by the Arras canon, Guibert Kaukesel.

A total of 25 poems are ascribed to Erart in various manuscripts; only one is extant in more than four sources, and nine are *unica*. In addition to the 'complainte' (designated 'serventois' in the poem), he wrote *chansons courtoises* and pastourelles. It is thought that *L'autrier par une valee*, *Mes cuers n'est mie a moi* and *Piec'a c'on dist par mauvais oir* may be motet dupla, although they are not found within motet sources proper. The majority of the chansons employ the same line length throughout, whereas all but two of the pastourelles are heterometric. *L'autrier chevauchai mon chemin* and *Lés le breuil* appear to be complex, non-strophic poems, even though music is provided for the first section of text only. The composer shows a definite preference for lines of five to eight syllables; only *Encor sui cil qui a merci s'atent*, *Nus chanters mais le mien* and *Pré ne vergier ne boscage foillu* employ more stately decasyllables. Nine of the pastourelles conclude with refrains, including five with variable refrains.

The melodies associated with Erart's poems are for the most part in fairly simple style. Only the melody of *L'autrier par une valee* in the Chansonnier de Noailles (*F-Pn* fr.12615) exceeds the range of a 9th, and this may not be by Erart; a few tunes remain within the range of a 6th. There is a clear preference for modes with a major 3rd above the final; melodies in seldom used modes also occur, including some with finals on *e*, *b* and *a* (employing *b*♭). When melodies are given for variable refrains, these do not end on the same note. Most melodies follow bar form, the initial segments sometimes being distinguished by *ouvert* and *clos* endings. There is comparatively little reference in concluding sections to material presented earlier. *L'autrier chevauchai*, *L'autrier une pastourele*, *Lés le breuil*, *Mes cuers* and *Pastorel* employ non-repetitive structures. None of his works survives in mensural notation, but the very regular disposition of ligatures within *Bone amour qui son repaire* and *Puis que d'amours m'estuet chanter* and the stark simplicity of

certain of the pastourelles would suggest modal interpretation.

THEODORE KARP

Erasmus, Desiderius (*b* Rotterdam, 27/28 Oct 1469; *d* Basle, 12 July 1536). North Netherlandish humanist. According to Glarean, Erasmus said that as a boy he sang in the choir at Utrecht under the direction of Jacob Obrecht. There is no archival evidence for this, and no extant documents show that Erasmus had any particular affinity with music. The familiarity with musical terminology implicit in his works may be attributed partly to the teaching of music customary within the framework of humanistic education. Erasmus's text for the *déploration* for Johannes Ockeghem (composed by Johannes Lupi, first published in 1547) suggests from its tone of warm admiration that he was personally acquainted with the composer. Erasmus himself was honoured at his death with a dirge by Benedictus Appenzeller, court composer in Brussels to Queen Mary of Hungary.

As far as can be deduced from the various observations made by Erasmus in his writings (often only in passing) his outlook on music was based mainly on his own understanding of the world of antiquity. Thus, even in musical matters, Pliny, Plato and Aristotle are cited as his authorities. Another element that influenced his views on music was theological: his puritanism in music must be understood as a combination of his belief in biblical doctrine on the one hand, and his reaction to the abuses of contemporary church music on the other. He condemned the chansons of his day without exception on the grounds that they had obscene texts, and, following from this, the use of secular melodies as cantus firmi in sacred polyphony. He deplored the use of the organ in church, and considered that magnificent polyphonic music consorted ill with the monastic ideal of silence with which he was familiar from his student years in the Augustinian monastery at Steyn. He also strongly criticized the manners and behaviour of the singers. He called for 'harmonias sacris dignas', a 'music worthy of holy things'; with this dictum he anticipated the statements on music made by several synods and provincial councils. The spirit of Erasmus's ideas is fully reflected in the musical policy of the Council of Trent.

Erasmus directed his attention principally to Gregorian chant. His preference for certain hymns in the repertory was determined by their place in the liturgy, their provenance and the literary value of their words, but also by their purely musical qualities. Here, too, he made the clearest possible claims: he criticized faulty accentuation of the texts and lengthy melismas, and demanded that the words be clearly understandable. In such ways he showed that his reforming spirit was humanist in character.

Erasmus's international career enabled him to speak of musical practice in many countries. His opinions are thus important for present-day readers, for whom his criticism permits an insight into the practice of both secular and sacred music. This is more illuminating and of greater significance for the study of music history than his speculation concerning the doctrine of intervals and the ethical virtues of the modes, which was based entirely upon medieval theory.

ALBERT DUNNING

Erasmus of Höritz. *See* HORICIUS, ERASMUS.

Erato (i). The Muse of song and dance and of erotic lyric, sometimes represented with the lyre. *See* MUSES.

Erato (ii). French record company. Philippe Loury of Editions Costallat launched the Erato label by licensing recordings from Haydn Society in 1952. Charpentier's *Te Deum*, conducted by Louis Martini, was recorded in

1953, followed by his *Magnificat* a year later. Martini, along with Jean-François Paillard, Philippe Caillard, Louis Frémaux, Kurt Redel and Karl Ristenpart, conducted an extensive and innovatory programme of Baroque music, while Marie-Claire Alain began a long association with the label, recording the organ works of Bach more than once, and the Hungarian pianist György Sebök recorded 19th-century solo and ensemble repertory. The mutual exchange with Haydn Society ended in 1955, after which Erato recordings were licensed from Westminster, Epic, Decca and several other US labels. From 1963 the Musical Heritage Society issued virtually the entire catalogue in the USA. There was some limited exchange with Hungaroton, Argo, Supraphon and Hispavox. In Germany Erato recordings were issued on Christophorus from 1962, and from 1966 on EMI's Columbia and, later, Electrola labels.

Erato issued stereo discs from the end of 1958. The label produced a special series in conjunction with the magazine *Jardin des arts*, and in 1965 a Baroque thematic series, Châteaux et Cathédrales. Michel Corboz, Claudio Scimone and Marcel Couraud were added to the roster of conductors, with Theodor Guschlbauer attending to the music of the Classical period; Corboz conducted an extensive Monteverdi series. In the late 1960s the label issued recordings of contemporary French music, conducted by Marius Constant and others, in cooperation with French radio. Standard orchestral repertory was assigned to Charles Dutoit, Jean Martinon and Alain Lombard, while John Eliot Gardiner conducted Baroque music and Joel Cohen performed music of the medieval period. The flautist Jean-Pierre Rampal, who first recorded for Erato in 1955, was a leading soloist from 1966 to 1980, and Maurice André made numerous solo recordings on the trumpet. About 1970 Erato also drew on the Muza catalogue for Chopin's complete works and the Claudius catalogue for Bach's cantatas conducted by Helmuth Rilling. In January 1973 Erato became associated with RCA, which later took a sizable financial interest in the firm, and RCA assumed worldwide distribution of Erato. Since then Erato has engaged leading artists in a broad range of serious music of all periods. At the end of 1989 Warner Records acquired the firm, enhancing Erato's position as a major label.

JEROME F. WEBER

Eratosthenes (*b* Cyrene [now Shaḥḥāt, Libya], *c*276 BCE; *d* Alexandria, *c*196 BCE). Greek scholar. He was educated at Alexandria by the poet Callimachus and the grammarian Lysanias, and at Athens encountered the philosophers Arcesilaus and Ariston of Chios. In about 246 BCE Ptolemy III Euergetes summoned him to Alexandria, where he served as tutor to the royal family and director of the library.

Only fragments of his writings survive, including a work entitled *Katasterismoi* about constellations (although Eratosthenes' authorship of this has been doubted), a didactic poem *Hermes* (which includes discussion of the harmony of the spheres), expositions concerning the measurement of the earth, and, above all, a three-volume *Geography*. He covered a wide range of subjects, including philology, grammar, literary history, chronology, geography, astronomy and mathematics, as well as the mathematical theory of music; the latter was the subject of his dialogue *Platōnikos*, in which he reputedly dealt with the fundamental concepts of mathematics following Plato's *Timaeus*. THEON OF SMYRNA (ed. Hiller, 81.17ff) and also PORPHYRY in his commentary on Ptolemy's treatise on harmonics (i.5: ed. Düring, 1932/*R*, 91.14ff) cited a distinction drawn by Eratosthenes in the *Platōnikos* between one calculated arithmetically in the Aristoxenian manner (*diastēma*) and one calculated by ratio; Theon also quoted a definition of proportion from Eratosthenes (Hiller, 82.16ff).

Eratosthenes' calculation of the tuning of the degrees of the tetrachords was reproduced by PTOLEMY (ii.14), Theon and Porphyry and is of particular importance. The intervals are as follows: diatonic tetrachord – 9:8, 9:8, 256:243; chromatic tetrachord – 6:5, 19:18, 20:19; enharmonic tetrachord – 19:15, 39:38, 40:39. According to Ptolemy, Eratosthenes adopted Pythagorean ratios for the diatonic tetrachord: a whole tone is thus equal to a 5th minus a 4th (i.e. 9:8), and a semitone or limma to a 4th minus two whole tones (i.e. 256:243). He then calculated the intervals for the other tetrachords using arithmetical and harmonic means: in the chromatic tetrachord the small whole tone is divided into the two semitones 20:19, 19:18; and in the enharmonic, the semitone 20:19 (90 cents, almost exactly the same as the Pythagorean limma, 256:243) is divided into the quarter-tones 40:39 and 39:38. All these ratios are superparticular (the numerator or antecedent exceeds the denominator or consequent by 1), apart from the limma and the upper interval in the enharmonic tetrachord, a major 3rd (19:15, or 409 cents), whose size approaches the Pythagorean ditonus (81:64, or 408 cents). In the chromatic tetrachord, Eratosthenes included a pure harmonic minor 3rd (6:5), which was subsequently retained by Didymus and Ptolemy, rather than the pure major 3rd (5:4) employed by Archytas in the enharmonic tetrachord.

LUKAS RICHTER

Erb, Donald (James) (*b* Youngstown, OH, 17 Jan 1927). American composer. After service in the US Navy during World War II, he attended Kent State University (BS 1950) and then studied composition with Marcel Dick at the Cleveland Institute of Music (MM 1952), Boulanger in Paris (1953) and Heiden at Indiana University, Bloomington (DMus 1964). He was appointed to the composition and theory faculty (1953–61), was composer-in-residence (1966–81), Distinguished Professor of Composition (1987–96) and became professor emeritus in 1996 at the Cleveland Institute; he was also composer-in-residence with the Dallas SO (1968–9) and professor of composition at Indiana University (1975–6, 1984–7) and Southern Methodist University, Dallas (1981–4). He has been the recipient of numerous awards, prizes, fellowships and commissions.

Erb's approach to composition is mainly intuitive, but is based upon a strong foundation of musical craftsmanship. His conception of form is fundamentally organic: he frequently uses a specific intervallic configuration or cell, melodic or rythmic motives, and/or sonic gestures as the basis for a whole movement or work. He employs these 'seeds' to generate growth through developmental processes – using varieties of textures and sonorities as well as limited aleatoricism – towards a goal-orientated succession of climaxes, analogues to the concept of variation. Although his works always have a tonal foundation, he uses contemporary means, such as pitch repetition and pedal points, to establish a sequence of fluctuating tonics. His works are analogous to traditional forms and exhibit clear musical structures. His interest in incorporating improvisatory and aleatory elements in his music reflects his great interest and background in jazz.

In the 1960s, he developed his mature style based on exploring the sound capabilities of traditional instruments and electronically synthesized sound, as well as relationships between the two. *Reconnaissance* (1967) was one of the first compositions of its day to utilize the interaction of real-time performance with electronically generated sounds. Such works as *Fallout* (1964), *Kyrie* (1965), *Fission* (1968) and *The Purple-Roofed Ethical Suicide Parlor* (1972) reflect his response to the Cold War and the Vietnam conflict, and contain violent sonorous explosions. In the 1970s he embarked on a series of virtuoso concertos which made increased technical demands on performers.

His works from the 1980s and 90s reveal a greater emphasis on counterpoint and chromaticism than in his earlier works. Furthermore, he has used chorales and hymns in such works as the Concerto for Brass and Orchestra (1986), *Watchman Fantasy* (1988), *Children's Song* (1995) and *Sunlit Peaks and Dark Valleys* (1995). His *Ritual Observances* (1991) for orchestra was written to honour the bicentennial of the death of Mozart; as a basis for this work Erb uses music from the first eight bars of the 'Lachrymosa' of Mozart's Requiem. In all of these works the borrowed passages are seldom clearly audible and fragments are usually used as compositional germs.

JOHN G. SUESS

Erb, Karl (*b* Ravensburg, 13 July 1877; *d* Ravensburg, 13 July 1958). German tenor. Entirely self-taught (he was a civil servant until his voice was discovered), he made his début in Kienzl's *Der Evangelimann* at Stuttgart on 14 June 1907. From 1908 to 1910 he gained valuable experience at Lübeck before returning to Stuttgart for the seasons 1910–12. In 1913 he joined the Hofoper in Munich, after a successful guest appearance as Lohengrin. His reputation grew rapidly as he matured and increased his repertory, which eventually numbered some 70 parts (including the principal Mozart roles, *Parsifal, Euryanthe, Der Corregidor, Iphigénie en Aulide*). A highpoint in his career was the first performance of Pfitzner's *Palestrina* in 1917, in which he took the title role with great distinction. He left Munich in 1925 but continued to give guest performances in opera until 1930 (his last role was Florestan under Furtwängler in Berlin). From that time he devoted himself entirely to lieder and concert singing, though he had long been admired for his renditions of the songs of Schubert and Wolf in particular; he was also famous for his interpretation of the Evangelist in the Bach Passions. In 1927 he and his wife Maria Ivogün sang the principal roles in *Die Entführung aus dem Serail* at Covent Garden.

Erb continued to sing and record at an advanced age. To fine, natural musicianship he added incomparable diction. His voice was soft-grained yet powerful and from an early age it seems to have had the distinctive nasal quality evident in the recordings of his middle and later years. Though he made all too few recordings in his prime, some notable treasures have been preserved. These include his Evangelist in Günther Ramin's abridged recording of the *St Matthew Passion* (1941) and the title role of Wolf's *Der Corregidor* (made in 1944), as well as sensitive and moving accounts of lieder by Schubert, Schumann, Brahms and Wolf (for the Hugo Wolf Society). Among writers who paid tribute to Karl Erb were Romain Rolland and Thomas Mann – in the latter's novel *Dr Faustus* Erb may be recognized as the model for Erbe, the 'tenor of almost castrato heights', who in masterly fashion sang the role of the narrator in Adrian Leverkühn's oratorio *Apocalipsis cum figuris* under Klemperer in a fictitious ISCM concert at Frankfurt in 1926.

PETER BRANSCOMBE

Erba, Dionigi (*d* Milan, 29 Nov 1730). Italian composer. He may have been related to the old noble Erba family originating at Como and thus also to his contemporary, Cardinal Benedetto Erba Odescalchi, Archbishop of Milan. But it is unlikely that he was his brother, as Eitner maintained: in fact he is never mentioned in biographies of Cardinal Benedetto, nor in histories of the family; nor, in the very detailed account of the event, was he said to be present at the festivities organized for the solemn entry of the archbishop into Milan in 1713; and his surname is never referred to as Erba Odescalchi. From 1692 he was *maestro di cappella* of S Francesco, Milan, and from 1697 of S Maria presso S Celso there. The anthology in which his *Cor triumpha exulta, respira* appears also contains works by the Milanese composers Alessandro Besozzi (i), G.B. Brevi and Francesco Ballarotti, who collaborated on operas with Erba. His name is remembered mainly because of a *Magnificat* for two choirs, oboe, strings and organ that was once mistakenly attributed (by Robinson) to Handel. It is, however, by Erba, though Handel did make a copy of it (now in *GB-Lbl*) and borrowed copiously from it in his oratorio *Israel in Egypt*, in, for instance, the double chorus 'The depths have covered them'. The question is definitively discussed by Dean.

WORKS

known only from librettos unless otherwise stated

Arione (op, O. d'Arles), Milan, 1694 [recit and some arias only; collab. C. Valtolina, A. Scarlatti, G.B. Brevi, F. Ballarotti and others]
Antemio in Roma (op, A.R. Bella Villa), Novara, 1695 [Act 2 only; collab. Alessandro Besozzi (i), Giacomo Battistini]
La necessità soccorsa dal glorioso Santo di Padoa (orat), Milan, 1725, collab. 12 other composers
Cantate a gloria del santissimo sacramento, Milan, 1710, 1718, 1725, 1729

Magnificat, 2 choirs, ob, str, org, *GB-Lbl* (Handel autograph), *Lcm*; ed. in G.F. Handel: Werke, suppl., i (Leipzig, 1888)
Cor triumpha, exulta, respira, 1v, bc, 1692[1]

MARIANGELA DONÀ (with DANIELA BORRONI)

Erbach [Erbacher], **Christian** (*b* Gaualgesheim, nr Mainz, 1568–73; *d* Augsburg, between 9 June and 7 Sept 1635). German composer, organist and teacher. Three documents from his own time give his age variously as 40 in 1610, 42 in 1615 and 50 in 1619, thus placing his birthdate between 1568 and 1573. He stated in 1609 that he had devoted himself to music from his earliest years. His first published composition appeared in Victorinus's *Thesaurus litaniarum* (RISM 1596[2]). By this time he may already have entered the service in Augsburg of Marcus Fugger, whose patronage he praised in the dedication of his first book of *Modi sacri* (1600); this collection includes a work written for Fugger's wedding in 1598. In 1602 he was appointed to positions in Augsburg that had previously been held by Hans Leo Hassler: organist at the church of St Moritz (on 27 March) and city organist and head of the Stadtpfeifer (on 11 June). Stating that he had recently recovered from a serious illness, he dedicated his *Mele sive cantiones sacrae* (1603) to Fugger's son Johann and nephews Otto Heinrich and Johann Ernst; he also dedicated all but one of his other printed collections to important citizens of Augsburg or nearby places (only the *Teutsche Lieder* lacks a dedication). His appointment with the city was renewed in 1609, 1614 and 1620. Recommended by the new Kapellmeister, Georg Mezler, as 'the best organist and composer in Germany', he became assistant organist at Augsburg Cathedral in 1614 (he had once played there during a diocesan synod in 1610). He was well received by the cathedral chapter, who paid him for some compositions in 1619. He became principal organist in 1625. His duties in this position included instructing selected pupils from the cathedral

choir school in composition and organ playing. (For an illustration possibly of Erbach playing the organ, *see* AUGSBURG.)

Erbach had begun to take pupils before 1611. He now enjoyed a wide reputation as a teacher and attracted both Catholic and Protestant pupils from Augsburg and other cities (he himself was a Catholic). Among more than 15 musicians known to have studied with him are Daniel Bollius, Johann Klemm, Johann Aichmiller and Georg Philipp Merz; the last two both did so after becoming Kapellmeister of Augsburg Cathedral (in 1617 and 1627 respectively). According to Philipp Zindelin he expected his pupils 'to have a clavichord or harpsichord on which to practise daily'. His curriculum included the intabulation of music of 'all kinds of eminent composers', for example Lassus. He also earned the respect of his colleagues as a judge of organs – he was called on several times to evaluate the work of organ builders in Augsburg – and as a composer.

The turmoil of the Thirty Years War deeply affected Augsburg during Erbach's last years. In 1631 he became a member of the exclusively Catholic city council for a few months. When the Swedish army occupied the city in April 1632, however, the whole council was replaced with Protestants. Erbach was still employed by the city in September 1634, but a year later, on 7 September 1635, his last quarterly salary payment was received by his widow: he had been dismissed on 9 June 1635 by the cathedral chapter, whose diminished funds could not support an organist at that time. He probably died shortly afterwards, for his successor as city organist, appointed on 27 May 1636, said he had applied for the post a year earlier.

Italian influence is evident in Erbach's keyboard music, which is similar in style to Hassler's, as well as in his vocal music, especially in the large polychoral motets and the smaller sacred canzonettas. The corpus of some 120 keyboard works comprises mostly toccatas, ricercares and canzonas, though several other forms are represented too. Three pieces that formed the repertory of an automatic organ built in Augsburg in 1617 – the 'Pommerscher Kunstschrank', which was destroyed in 1945 – were formerly attributed to Erbach, but his authorship is now questioned. His vocal music is almost entirely sacred. The three books of *Modi sacri tripertiti* (1604–6) contain cantus firmus settings of the introits, alleluia verses and communions for mass at most of the important feasts in the liturgical calendar. The Italian influence in his vocal music is particularly that of Venetian music, which appears to have conditioned many of the textures and the polychoral scoring of the earlier works for large ensembles. Vocal concertos with basso continuo are found in several anthologies.

Erbach had a son, also called Christian (1603–45), who is known as a composer only through two motets printed in collections of the time.

WORKS

WILLIAM E. HETTRICK

Erbach, Friedrich Karl, Count of (*b* Erbach, Odenwald, 21 May 1680; *d* Erbach, 20 Feb 1731). German composer.

He was the 15th child in the family. He served as an officer in the Low Countries but had no appetite for military service. After his accession in 1720 he devoted most of his time to his musical and literary interests. He maintained a court Kapelle which was amplified on special occasions by wind instruments from the Darmstadt court Kapelle.

Erbach was a close friend of G.P. Telemann, who was probably his composition teacher, and of the Frankfurt traveller and musical amateur J.F.A. von Uffenbach, who described meetings with the count in his travel diary and celebrated their friendship in two cantata texts to which he set music by Handel. They met at Telemann's weekly concerts in the Frauensteins' house at Frankfurt, at chamber music in the palace and gardens at Erbach and at convivial gatherings and hunts in the Odenwald. In 1727 the count sent his 30 divertimentos to Telemann in Hamburg for correction; soon afterwards (in the autumn) Telemann went to Erbach and stayed there for some time. The count dedicated the divertimentos to the Landgrave Ernst Ludwig of Hesse-Darmstadt, in gratitude for the present of his own orchestral works of 1718. 14 of them are trios in hybrid forms that combine features of the church and chamber sonata. The six duos for cello or bassoon are freer and shorter. Stylistically, the pieces are all modelled on Telemann. There is now no trace of the 'musikalisches Werk von starken Konzerten' which was dedicated to Uffenbach.

WORKS

Divertimenti armonici: 12 sinfonie, 2 vn, b, *D-DS*; 12 sinfonie, 2 fl, b, *DS*; 6 duetti, 2 vc/bn, *DS*, ed. in HM, cxxii (1954)
Concerts [dedicated to Uffenbach], lost
Andächtiges Singopfer, 1729, lost, cited in Simons [contains cant. texts for complete liturgical year]

ELISABETH NOACK/DOROTHEA SCHRÖDER

Erben, (Johann) Balthasar (*b* Danzig [now Gdańsk], 1626; *d* Danzig, bur. 3 Oct 1686). German composer. Mattheson stated, probably incorrectly, that he taught Christoph Bernhard, who was only a year younger than himself. When he applied in 1653 for the post of Kapellmeister of the Marienkirche, Danzig, the city council decided instead to give him a grant so that he could travel for the purposes of study. He went to Regensburg where, according to his accounts of his travels, he met Froberger. On the latter's recommendation he considerably extended his journey, not only through the towns of south and west Germany but as far as the Netherlands, England, France and Italy. According to Eitner, Georg Neumark (in RISM 1657[3]) described him as town organist at Weimar, but this does not seem to be so. The news that the post of Kapellmeister at the Marienkirche, Danzig, had again become vacant reached him in Rome in 1657, whereupon he returned and in 1658 applied for the post for a second time, this time successfully. He held it until his death and was in effect 'Kapellmeister of the City of Danzig', for this was the leading position in the centrally organized musical life of the city: in addition to the church music at the Marienkirche he was also responsible for the civic music at the Artushof. He carried out his duties with great diligence, as is demonstrated not only by his own reports but also by a choir regulation of 1659 stipulating that the civic musicians must take part in the church hymns. His efforts as both composer and organizer meant that Danzig church music reached new heights. In his later years, however, he had to battle against the unpropitious times, and his ever worsening position is reflected in repeated petitions to the council.

A number of Erben's works must have been lost. In 1688 his widow offered the Danzig city council a 'fair quantity of musical works written in his own hand and most of them his own compositions', but the council declined them. As well as a few instrumental pieces, however, enough of his church music survives to indicate his importance for the development of the genre in Danzig. His inclination towards rich scoring, supported by expressive harmony, affective chromaticism and intensive counterpoint is particularly noticeable. Most of his sacred concertos are settings of biblical texts, in particular from the psalms, while the others use hymn texts; the two types of words are never found in the same work. Chorale variations *per omnes versus*, previously not found in church music, are a speciality of Erben.

WORKS

MS works in S-Uu unless otherwise stated

VOCAL

Halt auff! grosses Himmelsliecht, aria (L. Knaust), lv, 3 va, bc (Königsberg, 1668) [on the abdication of King Jan Kazimierz of Poland]
8 melodies, 1652[6], 1657[3]

Ach, dass ich doch in meinen Augen, lv, 2 vn, va, violetta, 2 va da gamba, bc (tablature); Ante oculos tuos Domine, lv, 3 va, bc (tablature); Audite gentes, 6vv, 2 violettas, bc (tablature); Confitebor tibi Domine, 3vv, 2 vn, bc (tablature); Dixit Dominus, 6vv, 2 vn, 3 violettas, va da gamba, bc; Domine Jesu Christe exaudi, 5vv, bc; Erbarm dich mein, o Herre Gott, 5vv, 4 va, bc, *D-Bsb*; Es woll uns Gott genädig sein, 5vv, 4 insts, bc; Gelobet seist du, Jesu Christ, 5vv, 2 vn, 3 insts, violetta, bn, bc (tablature); Habe deine Lust an dem Herren, 3vv, 2 vn, bc, *Bsb*; Herr Christ, der ein'ge Gottes Sohn, 5vv, 5 insts, bc, ed. F. Kessler, *Danziger Kirchenmusik: Vokalwerke des 16. bis 18. Jahrhunderts* (Neuhausen-Stuttgart, 1973); Ich freue mich im Herrn, 1v, 5 va, bc (tablature); Laudate Dominum, 6vv, 2 vn, 2 va da gamba, bc; Magnificat, 6vv, 2 vn, 3 va, vle, bc (hpd) *Bsb*; Miserere mei Deus, 6vv, 4 va, bc; Nisi Dominuus, lv, 6 insts, bc (tablature); O Domine Jesu Christe, adoro te, 4vv, bc; Peccavi super numerum arenae maris, 6vv, 3 va, vle, bc (tablature); Quam dilecta tabernacula tua, 5vv, 2 vn, 2 va da gamba, bc; Salve suavissime Jesu, 1v (later version, 2vv), 2 vn, 2 va, bc; Sei getreu bis in den Tod, 3vv, 2 vn, bc, *Bsb*; Solvite jam grates, 6vv, 2 vn, 2 violettas, vle, bc (tablature); Sustinuimus pacem, 6vv, 4 va, bc (tablature)

SUSETTE CLAUSING

Erben, Henry (*b* New York, 10 March 1800; *d* New York, 7 May 1884). American organ builder. He was the son of Peter Erben (1771–1861), who became organist of Trinity Church in New York. In 1816 Erben was apprenticed to his brother-in-law, Thomas Hall, an organ builder who had been previously associated with John Lowe of Philadelphia; the two went into partnership in 1824 under the name of Hall & Erben. The partnership was dissolved in 1827, after which Erben built under his own name. He was an aggressive businessman and, despite early setbacks (including disastrous factory fires in 1835, 1841 and 1849), by mid-century he had become the leading organ builder in New York. An industrial census of 1855 records Erben's firm as employing 45 workmen and having built 110 organs during a 12-month period. His work was to be found throughout the country, and between 1849 and 1863 he operated a branch factory in Baltimore to supply an extensive southern trade. In 1872 Erben suffered another devastating factory fire in which two workmen were killed and, although he rebuilt his works, his production never again achieved its mid-century levels. From 1874 to 1879 he worked in partnership with William M. Wilson under the name of Henry Erben & Co., and from 1880 to 1884 Erben's son Charles was his partner. He was succeeded by a former workman, Lewis C. Harrison (1838–1918).

Erben was a colourful, outspoken individual, often critical of his competitors; a shrewd businessman and an influential politician who was occasionally embroiled in legal battles. His organs are characterized by sound construction and bright, cohesive chorus-work. Although some of the larger organs of the late period employed the Barker lever action, Erben never experimented with pneumatic or electric actions. His best-known organ was perhaps the large instrument built in 1846 for Trinity Church, New York, for which he was awarded a gold medal by the American Institute. Other notable instruments included those in Second Presbyterian Church, Philadelphia (1838), Christ Church, Mobile, Alabama (1859), St Patrick's Cathedral, New York (1868), and Plymouth Congregational Church, Chicago (1870).

BARBARA OWEN

Erbse, Heimo (*b* Rudolstadt, 27 Feb 1924). German composer, active in Austria. He received his first musical education in Weimar, but had to give up the idea of an instrumental career when he was severely wounded in Russia in 1943. After the war, he studied conducting and opera direction in Weimar. He became assistant director in Jena in 1947 and director in Sondershausen the following year. In 1950 he began composition study with Boris Blacher in Berlin (1950–52); he later worked with Werner Egk and Oscar Fritz Schuh, among others. He wrote several pieces of incidental music for the theatre, as well as film scores. When his opera *Julietta* op.15 (1957), first performed at the Salzburg Festival in 1959, received negative reviews from some critics, he partially retreated from public musical life. Having acquired a farmhouse in Taxenbach in the Austrian Alps in 1957, he became an Austrian citizen in 1964. He relocated to Baden, near Vienna, in 1989. His awards include the Prize of the Bavarian Academy of Art, Munich (1954), the Berlin Arts Prize for Music (1956) and the Appreciation Prize of the Austrian State (1973).

Erbse's works display the influence of Blacher in their transparency, emphasis on linear development, accentuated rhythms, pronounced ostinatos and strongly chromatic tonality. Among his first successful works were the Sonata op.3 for two pianos (1951) and the *Sinfonietta giocosa* op.14 for large orchestra (1956). His first and second symphonies, op.23 (1963–4) and op.29 (1969–70) respectively, can be considered continuations of the Classical-Romantic symphonic tradition. After a break in his output from the late 1970s, Erbse composed the Third Symphony op.42 in 1990. From that time on, he composed a symphony almost every year. Most adhere to a four-movement pattern, make use of classical formal structures, develop cellular motifs of often conspicuously large intervallic leaps, feature melodic lines with sparing harmonization, and exhibit frequent interplay between sections of the orchestra, or diverse combinations of voices. He has also composed for smaller forces. (*LZMÖ*)

WORKS

Dramatic: Fabel (chbr op, Erbse), C, 1952, Berlin, 1952; Julietta (op semiseria, 4, Erbse, after H. von Kleist: *Die Marquise von O* …), op.15, 1957, Salzburg, 17 Aug 1959; Ruth (ballet, 2, Bible and G.M. Hoffman), op.16, 1958, Vienna, 1959; Der Herr in Grau (komische op, C. Merz), op.24, 1965–6; Der Deserteur (op, 2, Erbse), 1983; incid music, film scores

CHRISTIAN HEINDL

Erculeo [Ercoleo, Erculei], **Marzio** (*b* Otricoli, nr Terni, 1623; *d* Modena, 5 Aug 1706). Italian writer on music, composer, teacher and singer. He studied music at the Collegio Germanico, Rome. By 1638 he was a soprano in the chapel at the court of Duke Francesco I d'Este at Modena and served as a castrato soprano until the chapel was disbanded by the regent Duchess Laura in July 1662. After petitioning the duchess he was reinstated at court as 'musico ecclesiastico di SAS' on a much-reduced stipend. During the regency period (1662–74) he wrote the text of an oratorio, *Il battesimo di San Valeriano martire*, for the Feast of S Cecilia (?1665) and in 1672 applied unsuccessfully for the beneficed post of choral chaplain at Modena Cathedral. When Duke Francesco II came to power in 1674, Erculeo fell from favour at court. For the rest of his life he taught singing to the seminarists at the schools of the Congregazione della Beata Vergine and S Carlo, where Pacchioni had been one of his pupils. His three books of the 1680s derive primarily from his work as a singing teacher, and the last two are specially interesting for the light they throw on the performance of Gregorian chant at the period. His discussion in *Il canto ecclesiastico* is illuminated by a number of pieces of music by him.

Erdbogen (Ger.). An earth bow or GROUND HARP.

Erdelawer, Hermann. *See* EDLERAWER, HERMANN.

Erdeli, Ksenia (Alexandrovna) (*b* Mirolyubovka, Ukraine, 8/20 Feb 1878; *d* Moscow, 27 May 1971). Russian harpist and teacher. She was trained at the Smolnïy Institute, St Petersburg, and from 1891 studied the harp under E.A. Walter-Kyune. She was a member of the Bol'shoy Theatre orchestra in Moscow, 1899–1907. In 1908 she played as a soloist in Ziloti's symphony concerts in St Petersburg, and gave the first performance in Russia of Ravel's *Introduction et allegro*. She taught at the Smolnïy Institute from 1911, and at the St Petersburg Conservatory, 1913–17. She was again with the Bol'shoy, 1918–38, and was a professor at the conservatory until her death. Erdeli's playing had a rare beauty of tone, her technique was brilliant and refined. Her compositions and transcriptions of Russian and foreign works were a valuable contribution to harp literature. The first harpist to give solo concerts in Russia, she was the founder of the Soviet harp school; her pupils included her niece Ol'ga Erdeli and Vera Dulova. She published her memoirs *Arfa v moyey zhizni: memuarï* (Moscow, 1967). She was made People's Artist of the USSR in 1966.

I.M. YAMPOL'SKY

Erding-Swiridoff [née Erding], **Susanne** (*b* Schwäbisch Hall, 16 Nov 1955). German composer. She studied English language and literature at Stuttgart University and, from 1974 to 1979, music at the Stuttgart Musikhochschule, where she was a composition pupil of Milko Kelemen. She also studied composition with Dieter Acker in Munich, Peter Maxwell Davies at Dartington and Agosto Rattenbach in Buenos Aires, and undertook further studies in Oxford, Cambridge, New Haven and Montreal. She became a teacher at the Stuttgart Musikhochschule in 1979. In 1988 she married the writer Paul Swiridoff. In her music, which has received many awards, she synthesizes experimental techniques, involving microtones and variable pitches, with a refined sense of expression and form.

WORKS
(*selective list*)

Stage: Yellan (ballet), 1981–2 [arr. of orch work]; Joy (chbr opera, R. Kift), 1983; Der Schneemann (op, W. Jens), 1990; see also chbr work, Moment Musical

Orch: Yellan, 1981; Conc., vc, 2 orch groups, 1983; Modi giocosi I, youth chbr orch, 1985; Kassandra, 1986; Tierra Querida, vc, orch, 1986; Modi giocosi II, youth chbr orch, 1990

Erdmann, Eduard (*b* Wenden, Livonia [now Cēsis, Latvia], 5 March 1896; *d* Hamburg, 21 June 1958). German pianist and composer. He studied composition with Tiessen and the piano with Ansorge in Berlin. From 1925 to 1935 he directed the piano masterclass at the Musikhochschule, Cologne. An international performer, both as a soloist and with the Australian violinist Alma Moodie, Erdmann specialized in the performance of New Music, playing works by Tiessen and Schoenberg on tours of South America. Despite restrictions placed upon musical performance by the Third Reich, he continued his activities as a pianist, turning to music of the Romantic period, particularly the posthumously published sonatas of Schubert. He became a professor of piano in Hamburg in 1950, where his pupils included Paul Baumgartner. As a composer, Erdmann followed his own stylistic path. A performance of his First Symphony at the 50th Music Festival in Weimar (1920) established his reputation as

a pioneering Expressionist. He introduced a work for piano at the Neue Musikgesellschaft, Berlin, and a string quartet at Donaueschingen. Other works received premières at music festivals in Salzburg (1923), Prague (1924) and Vienna (1931). With the rise of the Third Reich, however, his works were banned. It was not until 1946 that they were performed again in public. Later works, such as the *Konzertstück* (1946) for piano and orchestra and *Capricci* (1951), were recognized as late vintages of Expressionism and did not meet with the success of his earlier compositions.

WORKS

Stage: Operette (operetta, G. Specht), 1925

Orch: Am Gardasee, tone poem, orch, 1914; Rondo, 1918; Sym. no.1, 1920; Sym. no.2, 1924; Pf Conc., 1930; Ständchen, small orch, 1930; Konzertstück 'Rhapsodie und Rondo', pf, orch, 1946; Sym. no.3, 1947; Capricci, 1951; Ein kleines Kaleidoskop, 1951; Sym. no.4, 1951; Serenade, orch, 1953

Vocal: Himmel und Erde (after C. Morgenstern), 1v, pf, 1915; 4 Lieder (E. Mörike, E. Geibel), 1921; 6 Lieder (A. Holz, D. von Liliencron), 1921; 5 Lieder, 1921; 2 Lieder (F. Nietzsche and others), 1921

Chbr and solo inst: An den Frühling, vn, pf, 1912; 5 Klavierstücke, 1920; Bagatellen, pf, 1921; Sonata, vn, 1921; Str Qt, 1937; Str Qt, 1952

KLAUS JUNGK

Erede, Alberto (*b* Genoa, 8 Nov 1909). Italian conductor. He studied the piano and cello in Genoa and composition at the Milan Conservatory, then conducting with Weingartner at Basle and with Fritz Busch at Dresden. His début was with the Accademia di S Cecilia at Rome in 1930; he joined Busch on the music staff of the first Glyndebourne Festival (1934), returning each year until 1939 and conducting performances of *Le nozze di Figaro* and *Don Giovanni* there in 1938–9. He was also musical director of the Salzburg Opera Guild (1935–8), with whose ensemble he first toured the USA in 1937, when he made his New York début with the NBC SO. In 1939 he conducted the première of Menotti's *The Old Maid and the Thief*, originally a radio opera, for NBC. The war years were spent conducting opera and concerts in Italy, where he was chief conductor of the RAI SO, Turin (1945–6).

Erede became a familiar figure in London as musical director of the New London Opera Company at the Cambridge Theatre (1946–8). In 1950 he was engaged by Rudolf Bing for the Metropolitan Opera, and he conducted there regularly until 1955. He was general music director of the Deutsche Oper am Rhein from 1958 to 1961, and in 1968 he followed Toscanini and de Sabata as the third Italian to conduct at Bayreuth, in *Lohengrin*. His close ties with West Germany were recognized by the award of the Federal Order of Merit. In 1961 he became chief conductor of the Göteborg SO, and continued to appear widely as a guest conductor, including opera performances at Covent Garden (the first being *Il Trovatore* in 1953) and the Edinburgh Festival (where he conducted performances by the S Carlo company from Naples in 1963). In 1988 he returned to the Rome Opera after a 20-year absence and brought a rare unity of style to *Simon Boccanegra*. He recorded a number of complete operas, mainly in the 1950s, of which those by Verdi, Puccini and others set new standards of performance in the early days of LPs in their characteristic blend of firm rhythm and a sensitive feeling for detail. He was also a sought-after conductor for solo operatic discs by Tebaldi, Gobbi and others.

HANSPETER KRELLMANN/NOËL GOODWIN

Eredi [Heredi], **Francesco** (*b* Ravenna, 10 Oct 1575 or 8 Jan 1581; *d* after 1635). Italian composer. Fabbri (1988) prefers the 1575 birth date. Eredi taught briefly at the seminary in Ravenna in 1599, and his *Il primo libro de madrigali a cinque voci* (Venice, 1600) for five voices is associated with the local nobleman Lodovico Rasponi; it also includes an eight-voice madrigal 'nelle nozze di Cesare Rasponi', Lodovico's brother. In 1623 Eredi was appointed *maestro di cappella* of Ravenna Cathedral: the appointment was directly connected with the dedication to the Archbishop of Ravenna of his *Integra omnium solemnitatum vespertina psalmodia* (Venice, 1623) for five voices and continuo. He seems to have stayed in this post until his death, also working for other institutions in Ravenna. Apart from a five-voice madrigal (in RISM 1604[8]), his only surviving music is *L'Armida del Tasso posta in musica*, op.3 (Venice, 1629), for five voices and continuo, dedicated to Ciro Pantaleone. Eredi provides two cycles setting 19 *ottave rime* from Tasso's *Gerusalemme liberata* (xvi.56–66, omitting 57–8; xx.123–34, omitting 132–3) concerned with the love of the enchantress Armida for Rinaldo. The text is set in the style of the continuo madrigal with different vocal groupings variously representing the 'speaking' characters, although there is some writing for solo voice for dramatic effect. The long dedication plays on the name of the dedicatee (exhorting him to emulate the Persian King Cyrus's love of music) and, inevitably given the subject matter, on music (*canto*) as a most powerful charm (*incanto*).

TIM CARTER

Eredia, Pietro. *See* HEREDIA, PEDRO.

Eremita [Heremita], **Giulio** (*b* Ferrara, ?*c*1550; *d c*1600). Italian organist and composer. He was not a Camaldolese monk, as has been claimed in several biographical notices. Eremita was his family name and he was employed as an organist in Rome by Cardinal Luigi d'Este (Marenzio's employer) from before 1576 until at least July 1581. He was not employed by the Ferrarese court, but he may have stayed in Ferrara when Cardinal Luigi left there in July 1581. This suggestion is supported by the dedications of his madrigal books of the 1580s, by his inclusion in Ferrarese anthologies (RISM 1591[9] and 1592[14]) and by the publication in Ferrara of two of his madrigal books in

1584 and 1586. He may have been an organist in a Ferrarese church or a virtuoso in a Ferrarese academy.

A sampling of a few of his madrigals from the 1580s indicates that he was a thoroughly conventional madrigalist whose style includes much metrically regular homophony and some quasi-polyphonic play with small motifs over a firm harmonic foundation. He wrote almost exclusively canzonetta-madrigals, a type popular to the exclusion of almost all others in northern Europe and England at that time. Perhaps for this reason, his work was more often included in the anthologies of northern Europe than in those of Italy.

WORKS

ANTHONY NEWCOMB

Erfordia, Johannes de. *See* JOHANNES DE ERFORDIA.

Erfurt. City in Germany, capital of Thuringia. The settlement, situated on the Gera in the Thuringian basin, was designated by St Boniface in 741 as the seat of two monasteries, and quickly developed into an economic and cultural centre. It grew in the Middle Ages, and boasts several fine churches (the Reglerkirche, Barfüsserkirche, Andreaskirche, Predigerkirche, Kaufmannskirche, Neuwerkkirche, St Severikirche and the Augustinian monastery) and secular buildings. The Cathedral of the Blessed Virgin Mary, begun about 1350, with the 'Gloriosa' bell that weighs about 15 tonnes (founded 1497), dominates the town's skyline. The many Kantors and hymnologists who lived in Erfurt have left a rich store of music manuscripts, treatises and medieval documents. From the time of Meister Eckhart, a 13th-century philosopher, theologian and mystic, Erfurt intellectual life was influenced by strong and occasionally revolutionary movements of a bourgeois or plebeian character. In the university, founded in 1392 and after Cologne the oldest German university, 'Musica Muris' (a course based on the writings of Johannes de Muris) was a fixed discipline. The famous *Amploniana* manuscript collection of the rector Amplonius Rating became the focus of study of the Erfurt circle of humanists which included Mutianus Rufus and Eobanus Hesse. Under their influence the cultivation of secular music by the students and citizens was securely established. The Kalandsbrüderschaft, a medieval body of religious and lay men, and the pre-Reformation boys' choir, founded a strongly traditional style of hymnology (for corpus of musicological documents, see Handschin). Luther received his practical and theoretical education at the Augustinian monastery, as a student from 1501, *magister* from 1505 and monk until 1508; he was a pupil of the composers and theorists Nikolaus Marschalk and Antonius Musa. The city has records relating to folk music and dance music, guild activities, minstrelsy and the Stadtpfeiferei, a corporation which for a long time was directed by the Erfurt Bachs, the forebears of J.S. Bach. The Reformation led to a renewed growth of musical life in Erfurt; this was founded on flourishing traditions of music printing and publishing, and of instrument making which began in Erfurt in the Middle Ages (Castendorfer, Sömmering, Compenius etc.). This pattern of musical life continued despite periods of war and misery. Apart from members of the Bach family, who were organists in almost every church, notable musicians who were active in Erfurt included Hieronymus Praetorius, Johannes Agricola, Johann Meyfarth, Johann Pachelbel, Michael Altenburg and Jakob Adlung.

This bourgeois municipal character also survived the town's periods of greater political significance in the 18th and 19th centuries (it was a congress city in the Napoleonic era and enjoyed splendid performances by the Parisian Ballet). From the Classical period the style of music in Erfurt was determined by the progressive bourgeoisie; the city's notable musicians included J.C. Kittel, the last Bach pupil, J.W. Hässler, Ludwig Meinardus, J.J. Bellermann, A.G. Ritter and M.G. Fischer. The printing of music in Erfurt became famous again through the work of Gotthelf Wilhelm Körner, editor of the organ journal *Urania* and of the *Orgel-Archiv* (begun 1844). The former Ballhaus (ballroom) became a permanent theatre. Erfurt was included as an administrative area of Prussia from 1802 to 1944, with a brief interruption under Napoleon I, and thereafter was part of the province of Thuringia. Civic musical life continued to develop with the founding in 1826 of the Musikverein, to which a Gesangverein with a Gesangschule, a full orchestra and a string quartet were affiliated. The music teaching covered by the university, which was dissolved in 1816, was continued by the conservatory, where Richard Wetz (1875–1935) taught composition and music history between 1911 and 1914. He was also a highly regarded composer. From 1900 he directed an *a cappella* choir that he had founded, and after 1906 he directed the Erfurt Musikverein and the Singakademie. Two Erfurt composers who made their names with major orchestral and chamber works, particularly during the years of the German Democratic Republic, were Johann Cilensek (a lecturer at the Erfurt conservatory from 1945 to 1947 and subsequently professor of composition at the Musikhochschule in Weimar) and Kurt Kunert, for many years first flute in the Erfurt municipal orchestra.

The musical life of the city today is represented chiefly by the city's theatres and the Philharmonisches Orchestra Erfurt. The opera house received much inspiration from Ude Nissen, Generalmusikdirektor from 1957 to 1988; his successor, Wolfgang Rögner, was appointed in 1989. There are also other musical ensembles, such as the Erfurt Chamber Orchestra and the Andreas Chamber Orchestra, the Sinfonietta Nova, the Singakademie and the Erufurt Männerchor, as well as several church choirs. Two regular music festivals are held in the city: the Thüringer Bach-Wochen and the Musica Rara festival. The Städtische Musikschule has now replaced the conservatory, and there is an Institut für Musik at the Pädagogische Hochschule. The city's academic library, the Wissenschaftliche Allgemeinbibliothek, contains much important source material for musical history.

G. KRAFT/DIETER HÄRTWIG

Ërgashev, Anvar Yuldashevich (*b* Dushanbe, 19 April 1954). Uzbek composer. He studied at the Tashkent Conservatory with B. Yevlampiyev (piano), M. Tadjiev (composition) and K. Usmanov (conducting). From 1977 he has taught in music schools and colleges in Tashkent and Ferghana. He worked as a conductor at the Uzbek State Theatre of Opera and Ballet (1994–6) before being appointed director of the Uzbek Youth Theatre (1996–8) and then principal conductor of the National SO of Uzbekistan (1998). Epic elements associated with Uzbek folklore are fused into a language also characterized by lyricism and comedy; a number of his works depict folk heroes or other mythical subjects and often reflect the composer's interest in the sounds and stylistic archetypes of ancient Uzbek ritual. He is equally successful whether writing music for the theatre, concert hall or pop group.
